K. Sřom: *Karel Ančerl* (Prague, 1968) [with sound disc]

ARTHUR JACOBS/CHARLES BARBER, JOSÉ BOWEN

Anche (Fr.: 'reed'). The French term for the prepared reed of a wind instrument, as distinct from *roseau* meaning 'reed' in a general or botanical sense. (The latter word is used by the reed growers and is extended by French suppliers to cover cut and split sections of the plant stem up to the actual stage of shaping.) The plural, *anches*, is also used in French organ registration to designate the reeds (*see* REED-WORK and REGALS).

PHILIP BATE

Anchieta, Juan de (*b* ?Urrestilla, nr Azpeitia, 1462; *d* Azpeitia, 30 July 1523). Spanish composer. He was the second son of Martín García de Anchieta and Urtayzaga de Loyola (an aunt of Ignatius Loyola) and may have studied at Salamanca University, where the music professor from 1481 to 1522 was Diego de Fermoselle, the elder brother of Juan del Encina. After his appointment on 6 February 1489 as a singer in Queen Isabella's court chapel at an annual salary of 20,000 maravedís Anchieta travelled constantly, for Isabella often moved her court (15 times between 1491 and 1503).

Anchieta's salary was raised to 30,000 maravedís on 30 August 1493. Two years later Isabella named him *maestro de capilla* to her 17-year-old son Don Juan (1478–97). His excellent services to the young prince prompted the queen to reward him with several ecclesiastical preferments. After her death in 1504 Anchieta was transferred with other members of the Castilian royal household to the service of her daughter Joanna, whose consort was Philip the Fair; in their entourage he visited Flanders, and from January to April 1506 he was in the south of England during the return voyage to Spain. The court's singers on this journey also included Pierre de La Rue, Alexander Agricola and Marbrianus de Orto.

From 1507 to 1516 Anchieta earned 45,000 maravedís annually as 'Queen Joanna's chaplain and singer'. A bitter family feud erupted on 20 February 1515, when the two younger Loyola brothers assaulted Anchieta during a visit to his home; Ignatius attempted to flee but was caught and briefly imprisoned at Pamplona. In 1499 Anchieta had been appointed an absentee benefice-holder at Villarino, in the diocese of Salamanca, and a year later rector of the parish church of S Sebastián de Soreasu in Azpeitia; he was made Abbot of Arbas in 1518. That year his nephew García de Anchieta was named his successor as rector of S Sebastián de Soreasu, but was assassinated shortly afterwards.

On 15 August 1519 Charles V issued a declaration that the 57-year-old Anchieta was too old for further service at court, but confirmed the annual salary of 45,000 maravedís that he had received until 1516. A court payment record of 23 October 1520 described Anchieta as 'ill in his house at Azpeitia'. In April 1521 he secured a papal rescript permitting him to transfer the income from his Villarino benefice to a new foundation of Franciscan sisters in Azpeitia; the sisters made him their business manager and promised him a privileged burial-place in their convent church. Anchieta signed his will on 19 February 1522, making his niece Ana de Anchieta his universal heir and leaving his homonymous son 400 gold ducats. Contrary to his wishes, he was buried at S Sebastián de Soreasu, a decision that set off a dispute that lasted for 12 years.

Anchieta's earliest extant composition is the four-part *romance En memoria d'Alixandre* written in the summer of 1489. His *Missa 'Ea iudios a enfardelar'*, written in 1492 but now lost, was mentioned by Francisco de Salinas, who quoted the popular song on which it was based. The piece that seems to have remained popular for the longest is *Dos ánades*, a spirited three-voice villancico that Francisco de Quevedo (*Cuento de cuentos*, 1626) described as still frequently sung, though old-fashioned. Cervantes paid tribute to the same work in his comic tale *La ilustre fregona* (1614).

Anchieta's works lack the variety and ingenuity of device found in those of Peñalosa, his greatest Spanish contemporary. Designed for large choirs rather than for highly trained small ensembles, Anchieta's music confirms Bermudo's description of Spanish style in *Libro primero de la declaración de instrumentos* (1549) as graceful and sonorous. Even when quoting a tune such as *L'homme armé*, found in the tenor of the Agnus Dei of his *Missa [quarti toni]*, he never invested it with any of the learned devices dear to Peñalosa and to the Netherlandish composers whom Anchieta had met in his travels and whose music he surely knew. He used imitation but never in a recondite way, nor at intervals other than the unison, octave, 4th or 5th; he was interested not in puzzles but in sound.

Anchieta's quotation of plainchant, as in the tenors of the two motets for Ash Wednesday, ornaments the melody only slightly and at cadences. Harmonic and rhythmic repetition give a unity to these motets, and reiteration of melody and rhythm occurs throughout his music: the *Missa [quarti toni]*, for example, makes insistent use of a dotted three-note figure E–F–G. In the long Credo of the *Missa Rex virginum* he used variation of texture in accordance with a set scheme: one pair of voices, the other pair, then all four; the pattern is repeated six times and is clearly deliberate. Most triads are in root position; first inversions are almost always approached by step in the bass. Passages of parallel first-inversion chords are prominent in only one work, the three-voice *Magnificat* setting.

Samuel Rubio proposed adding eight works – a truncated troped Kyrie (*Qui expansis*) and seven motets – to the slim total of 16 pieces attributed to Anchieta in nine Spanish manuscript sources; all but one of these anonymous works survive in the Cancionero de Segovia (*E-SE* s.s). The attributions are supported by Rubio's study of Anchieta's compositional technique. Four Passions, surviving anonymously in the church of Santiago, Valladolid, are also thought to be by Anchieta: based on chant melodies published in Cardinal Ximenes's *Passionarium Toletanum* (Toledo, 1516), these four-voice responsorial settings, homophonic throughout, predate all others of their kind written in Spain.

ROBERT STEVENSON

Ancient Concerts. Concert series given in London from 1776 to 1848 by the Concert of Ancient (Antient) Music. *See* LONDON, §V, 2.

Ancina, (Giovanni) Giovenale (*b* Fossano, region of Cuneo, 19 Oct 1545; *d* Saluzzo, Cuneo, 31 Aug 1604). Italian music editor, composer and possibly writer on music. He was born into a leading aristocratic family of Melle, about 30 km from Fossano. He was educated at home and, from 1559, at Montpellier and then entered Turin University to study medicine, philosophy and rhetoric; he may also have studied music, since five of his 118 submissions for the doctorate were concerned with music. In 1566 he went to Pavia to continue his medical studies. On 29 January 1567 he graduated with outstanding results in arts and medicine from Turin University, and a few months later he was admitted to the university's college of doctors as a supernumerary lecturer. At the end of 1570 he left lecturing to become tutor and physician in the household of Count Madruzzi di Challant. When the count became an ambassador of the Duke of Savoy he accompanied him to Rome, where he arrived on 10 November 1574. Here he began to study theology and was strongly influenced by Filippo Neri, whom he met in the spring of 1576. He became keenly interested in Neri's work and ideas, and on 1 October 1580 he entered the Congregazione dell'Oratorio founded by Neri; he was ordained on 9 June 1582. On 29 October 1586 Neri sent him to the newly established house of the oratory at Naples, where besides undertaking pastoral and charitable work he wrote much devotional poetry. In the autumn of 1596 he was recalled to Rome, and in 1597 Pope Clement VIII offered him a vacant bishopric in northern Italy, which, after initial resistance, he accepted. He was proclaimed bishop by the consistory of Saluzzo on 26 August 1602 and enthroned on 1 September, but he was not officially permitted to enter his diocese until 6 March 1603. His death in the following year was apparently due to poisoning. He was beatified by Pope Leo XIII on 9 February 1890.

Ancina's significance in the history of music lies in his propagation and encouragement of sacred poetry and music as part of the religious renewal begun by Neri. Inspired by the Counter-Reformation, he collected the best and most popular pieces of music and supplied them with new sacred texts in place of the secular originals. The contrafacta written into a manuscript copy (in *I-Rv*) of the madrigal anthology *L'amorosa Ero* (RISM 1588[17]) are an early example of this technique. His most important enterprise was *Tempio armonico della beatissima vergine* (RISM 1599[6]), an anthology of three-part *laudi* by the foremost contemporary composers; at the back of the volume are some texts specifically intended for improvised setting by Giovanni Leonardo dell'Arpa. A second collection, for four and five voices, and a third, for six to nine and twelve voices, were planned but never published. Ancina was personally acquainted with almost all the leading Roman composers of his time, and among the manuscripts in his hand (now in *I-Rv*) is the only surviving source of Cavalieri's *Lamentationes* and a collection of spiritual canzonettas for five to eight voices, many of which are by Giovanni Animuccia. The same collection of manuscripts includes two treatises on music, *Regole del canto figurato e del contrapunto* and *Solfeggiamento e studi di musica*, which may be by Ancina. He also provided the texts of many *laudi* that appeared in Rome about 1600. As a composer he is less significant, though his five *laudi* in *Tempio armonico* are inventive, expressive, technically accomplished and not at all inferior to companion-pieces by more famous composers.

KLAUS FISCHER

Anciuti, Joannes Maria (*fl* Milan, 1709–41). Italian woodwind instrument maker. His full name is known to us only from the mark on a double bassoon. His other surviving instruments, which are often made of ivory, include recorders and double recorders, oboes, a bass flute and, possibly, a flute. A search of the Milan archives has failed to reveal anyone by the name of Anciuti living in the city during the 18th century. However, it is possible that this maker was using a pseudonym: an appropriate one for a maker of reed (It.: *ancia*) instruments. This was an expedient sometimes used in the 18th century by makers who wished to evade the rigid rules of the guild. Alfredo Bernardini has noted that an oboe in the Museo degli antichi strumenti musicali, Rome marked BELTRAMI/IN MILANO has similar characteristics to oboes signed by Anciuti, and it is worth conjecturing that Joannes Maria could have been a member of the Beltrami family of wood-turners, active in Milan during the 18th century. The Lion of St Mark device appears on numerous examples of his work, suggesting a link with Venice, although this cannot yet be confirmed.

RENATO MEUCCI

Ancliffe, Charles (*b* Kildare, 1880; *d* Richmond, Surrey, 20 Dec 1952). British composer and bandmaster. A bandmaster's son, he trained at the Royal Military School of Music (Kneller Hall), graduating at the age of 20 with the award of the gold baton for composition. For 18 years he was bandmaster of the 1st Battalion, South Wales Borderers, retiring in 1918 to take a civilian position as conductor of the Scarborough Military Band. Given this background, it was natural that he would write a number of marches, two of which (*Ironsides* and *The Liberators*) have achieved lasting popularity. He also wrote a number of intermezzos, suites (including three for piano) and songs.

It is as a composer of waltzes, however, that he is most remembered: *Nights of Gladness* (1912) was adopted as the signature tune of the BBC programme of the same name. So popular did his waltzes become that they were arranged as medleys, such as *Ancliffe in the Ballroom* or *The Ancliffe Valeta*. After a short introduction, the typical Ancliffe waltz proceeds as a loose rondo in which no episodes are repeated. The tunes of *Carnival Nights*, for example, have a sturdy strength which owes more to Johann Strauss than to the sophisticated syncopations of Tchaikovsky.

WORKS
(*selective list*)

Waltzes: Nights of Gladness, 1912; Smiles, then Kisses, 1913; The Fairest in the Land, 1914; The Dream Princess, 1915; April Buds, 1916; Thrills, 1917; Irish Whispers, 1918; Shy Glances, 1919; Unforgotten Hours, 1920

Marches: For Valour, 1915; The Liberators, 1916; Castles in Spain, 1917; Old Soldiers, 1937; Ironsides, 1940

Int: Burma Maid, 1913; Secrets, 1913; The Valley of the Poppies, 1916; Down in Zanzibar, 1917; Cinderella's Wedding Dance, 1918; Fragrance, 1920; Penelope's Garden, 1921

Orch suites: The Purple Vine, 1917: 1 The Vintagers, 2 The Purple Vine, 3 Evening at the Inn; Below Bridges: 1 Wapping Old Stairs, 2 Stepney Church, 3 Poplar

Military band: Fairest in the Land, gypsy serenade; Hans the Stroller, Dutch silhouette

Pf suites: Suite Poetique; Elfland; Southern Impressions

Many songs, incl. Ask Daddy, Someday in Somebody's Eyes, I cannot live without you

Principal publishers: Boosey & Hawkes, Chappell

GEOFFREY SELF

Ancona. City in Italy. It is the capital of the Marches region. Among the earliest musicians recorded as active in the cathedral of S Ciriaco are Nicolò Branchino (1559) of Pesaro and the Flemish composers Hector Vidue (*c*1562) and Giovanni Ferretti (?1573–9), all perhaps preceded by the Anconan Francesco Lupino. Among those in Ancona in the 17th century were Fabio Costantini, Nicolò Cherubini (1629–40), Biagio Gherardi (1645–50) and Giovanni (?1687) and Pietro Paolo (1691–1701) Moresi. Eliseo Ghibel (1581), Giacomo Finetti (1608–12) and Francesco Boccella worked at the church of SS Sacramento; a collection of Boccella's instrumental music (1653) was among the works printed by the publisher Ottavio Beltrano, who established himself in Ancona in 1651–4. The press of Claudio Percimeneo published works by the Augustinian monk Scipione Lazzarini (1674–5) and the 16-year-old Maria Francesca Nascimbeni, one of Lazzarini's pupils, whose *Canzoni e madrigali morali e spirituali* Percimeneo also published (1674). By the second half of the 17th century oratorios were being performed in various churches in the city; music was also performed in the convents.

Musical entertainments took place in the homes of patricians, in the Palazzo Municipale, in the Loggia dei Mercanti and notably at the Arsenale, a harbour building adapted in the late 16th century as a Carnival performance space; *opere-torneo* and *intermedi* were staged there on the initiative of the city's nobility, particularly Prospero Bonarelli della Rovere, founder of the Accademia dei Caliginosi (1624). He made a law requiring *drammi per musica* to be provided during Carnival; later cultivated by Bonarelli's son Pietro, the Accademia continued its activities intermittently until about 1775.

The Comune turned part of the Arsenale into a new Teatro Pubblico, inaugurated in 1665 with Cavalli's *Giasone*; works of local provenance and from Venice and Rome were staged there until a fire destroyed the theatre in 1709. A new theatre, La Fenice, opened in 1711–12. Operas were staged mainly during Carnival. La Fenice was closed in 1818 and for some time performances were staged at the Palazzo Acciaioli. A wooden open-air theatre erected in 1808 by Marco Organari was extended and covered, remaining in use until about 1845. Meanwhile, opera seasons transferred to the Teatro delle Muse. It opened in 1827, with a spring season of at least two *opere serie* and a lesser Carnival season (*opere buffe* or *semiserie*). It was active until 1943, giving about 50

performances a season for the first 50 years, notably (from 1830) under the direction of the Ancona composer Giuseppe Bornaccini (1805–81).

Concert performances also took place at the Società del Casino Dorico (founded in 1754 and known by that name from 1806), based at the Teatro delle Muse. Its members included Emanuele Nappi (1767–1836), who ran a violin school. The Nappi music library, which contains many Tartini manuscripts, is in the Biblioteca Comunale L. Benincasa. The workshop of the instrument maker Emiliano Gotti was succeeded by that of Giuseppe Baldantoni (1784–1873), which produced more than 200 bowed instruments.

From the mid-19th century, operas, ballets, operettas and concerts were also given in the Teatro Vittorio Emanuele (1860–*c*1927) and the Politeama Goldoni (1880–*c*1911); both were later turned into cinemas. The Arena Stamira was in use from 1934, and then replaced by the Teatro della Fiera (1949–59). These buildings have now disappeared; of the Teatro delle Muse, damaged by bombing in 1943 and demolished 30 years later, only the imposing neoclassical façade remains. Reconstruction work was in progress in the 1990s. The Società Corale V. Bellini was founded in 1888 and is still active. Since 1914 the Società Amici della Musica G. Michelli has organized the city's concert season, now based at the Teatro Sperimentale L. Arena. Ancona has no conservatory; a public music school, the Istituto Musicale G.B. Pergolesi, has existed since 1920.

ELVIDIO SURIAN/MARCO SALVARANI

Ancona, Mario (*b* Livorno, 28 Feb 1860; *d* Florence, 23 Feb 1931). Italian baritone. Having made his début in 1889 at Trieste as Scindia in *Le roi de Lahore*, in 1890 he sang the King (*Le Cid*) at La Scala, his only appearance there. He created Silvio in *Pagliacci* at the Teatro Dal Verme, Milan, in 1892 and the same year sang Alphonse (*La favorite*) at the New Olympic Theatre, London. He made his Covent Garden début as Tonio in the British première of *Pagliacci* in May 1893, singing the same role in his Metropolitan début later that year. He sang Riccardo (*I puritani*) at the Manhattan Opera House on its opening night, 3 December 1906. Ancona appeared all over Europe and the USA, in a wide repertory embracing Mozart (Don Giovanni, Figaro), Verdi (Germont, Rigoletto, Renato, Amonasro, Iago, Don Carlo in *Ernani*), Wagner (Wolfram, Telramund, Hans Sachs), Puccini (Lescaut, Marcello), Mascagni (Alfio, David in *L'amico Fritz*) and many French roles, including Nevers (*Les Huguenots*), Escamillo and Valentin (*Faust*). He retired in 1916. An elegant, stylish singer, he possessed a voluminous, dark-toned voice sustained by an impeccable technique, which can be heard to advantage on his recordings of 'Eri tu', Iago's Credo and the Prologue to *Pagliacci*.

ELIZABETH FORBES

Ancot. Flemish family of musicians.

(1) **Jean Ancot** (i) (*b* Bruges, 22 Oct 1779; *d* Bruges, 12 July 1848). Composer and teacher. He was a choirboy at St Donatian and then went to Paris, where he studied the violin with Kreutzer and Baillot and harmony with Catel. He returned to Bruges in 1804 and established himself as a teacher of violin and piano. According to Fétis, he composed a great quantity of music (most of it never published and now lost), including military band music for political and nationalist celebrations, two masses and other church music, four violin concertos and three string quartets.

(2) **Jean Ancot** (ii) (*b* Bruges, 6 July 1799; *d* Boulogne, 5 June 1829). Composer, violinist and pianist, son of (1) Jean Ancot (i). He studied with his father and appeared as a soloist on both the violin and the piano in 1811. His first concertos were composed about 1815; in 1817 he went to Paris to study at the Conservatoire. In 1823 he went to London and was appointed pianist to the Duchess of Kent, but returned two years later, settling eventually in Boulogne. He published over 200 works in Paris, London and Germany, including six overtures for orchestra, concertos for violin and for piano, piano sonatas and other pieces (of which *L'ouragan* was particularly popular), many pieces for piano and violin, and several vocal works.

(3) **Louis Ancot** (*b* Bruges, 3 June 1803; *d* Bruges, Sept 1836). Pianist, teacher and composer, son of (1) Jean Ancot (i). He also studied with his father. After a continental tour he arrived in London and became pianist to the Duke of Sussex. Later he taught the piano in Boulogne and Tours before returning to Bruges. He published a number of works for piano.

JOHN LADE

Ancus (? from Gk. *angkos*: 'valley', or *angkōn*: 'bend'). In Western chant notations, a neume signifying three notes in descending order, the last of which is semi-vocalized. The *ancus* is the LIQUESCENT form of the CLIMACUS. Liquescence arises on certain diphthongs and consonants to provide for a semi-vocalized passing note to the next pitch. (For illustration *see* NOTATION, Table 1.)

DAVID HILEY

Anda, Géza (*b* Budapest, 19 Nov 1921; *d* Zürich, 14 June 1976). Swiss pianist of Hungarian birth. He studied at the Franz Liszt Academy in Budapest, where his teachers included Dohnányi, Weiner and Kodály. He won the Franz Liszt Prize in 1940 and in 1942 made his concert début with Mengelberg in Brahms's Second Piano Concerto. The following year he appeared with the Berlin PO under Furtwängler in Franck's Symphonic Variations, but shortly afterwards fled to Switzerland, where he made his

home. In 1947 he began to make an international reputation, playing an exceptionally wide repertory. In 1952 he appeared once more with the Berlin PO, this time under Solti, and made his Salzburg Festival débuts both in concert (with Fricsay) and in recital. His subsequent annual appearances in Salzburg included concertos, recitals and masterclasses. In 1953 Anda commenced a series of recordings for Columbia in London, and in 1960 he recorded Bartók's three piano concertos and Rhapsody with Fricsay for Deutsche Grammophon, classic performances which, for many, have never been excelled. Between 1967 and 1972 he recorded the complete Mozart piano concertos, directing them himself from the keyboard. He gave regular masterclasses, notably in Lucerne and Zürich, and in 1971 undertook major tours of Canada, the USA and South Africa. He was made a Chevalier of the Ordre des Arts et des Lettres in 1965 and an honorary member of the RAM in 1970. The possessor of a unique tonal sheen, a transcendental technique and a refined cantabile (Furtwängler called him 'a troubadour of the keyboard'), Anda was a fastidious stylist who, in a work such as Brahms's Paganini Variations, could resolve the most strenuous difficulties into a crystalline poetry. He also possessed a mischievous streak, and could spin off Dohnányi's arrangement of the *Valse lente* from Delibes' *Coppélia* with an unmatched stylized elegance. A pianist of uncommonly catholic tastes, he is remembered above all for his charismatic readings of Bartók and Schumann.

BRYCE MORRISON

Andamento (It.: 'walking'). A fugue subject of extended length. The word was apparently first so defined by G.B. Martini in volume ii of *Esemplare, ossia Saggio fondamentale pratico di contrappunto* (1775), where it is contrasted with ATTACCO, an extremely brief fugue subject, and SOGGETTO, a fugue subject of medium or average length. Martini offered as an example of *andamento* a theme that was six 4/4 bars long. Later writers have cited such examples as subjects from Handel's fugal choruses (e.g. the 'Amen' fugue in *Messiah*) and Bach's fugue subjects for organ (e.g. from the G minor Fantasia and Fugue BWV542). Martini's three terms found only limited use outside Italy, but they have been included in every edition of *Grove's Dictionary* beginning with the supplement to the first edition, where they were treated at length by W.S. Rockstro.

PAUL WALKER

Andante (It.: 'at a walking pace', 'easy-going', 'fluent', 'uniform'; present participle of *andare*, 'to walk'). A tempo (and mood) designation, often abbreviated to *and.*[e] and sometimes even *ad.*[e], particularly in the 18th century. Though one of the most common tempo designations in the 19th century, its entry into musical scores was relatively late, and its use in the 17th and 18th centuries was often as an indication of performance manner rather than of tempo. For Brossard (1703) and Grassineau (1740) it referred primarily to bass lines and specifically to what are now (aptly) called 'walking' bass lines. One of the very few tempo or expression marks in J.S. Bach's keyboard music is *andante* for the B minor prelude in book 1 of the '48', which has just such a bass line. *Andante* there and in many other 18th-century sources is not a tempo designation but an instruction for clear performance of the running bass, and a warning not to play *inégale*. The anonymous *A Short Explication* (London, 1724) says: 'Andante, this word has respect chiefly to the thorough bass, and signifies, that in playing, the times must be kept very just and exact, and each note made very equal and distinct the one from the other'. And Brossard's definition included the comment 'cheminer à pas égaux' as though specifically to preclude *inégalité*. With this in mind, Walther's additional observation (1732) that it could also apply to upper parts is particularly interesting.

Andante was first unequivocally described as a tempo designation by Niedt (1706), who called it 'very slow' ('gantz langsam'), though Mattheson corrected this in the revised second edition to a more orthodox definition. But it does not appear, for instance, in the graduated list of tempo marks at the end of *A Short Explication* (1724), where the space between *largo* and *allegro* is occupied by VIVACE: *andante* is given only as a method of performance, as cited above. *Andante* seems to have been fully accepted as a tempo designation only with Leopold Mozart (1756). It was a gentle relaxed tempo for Haydn and for W.A. Mozart, who wrote to his sister on 9–12 June 1784: 'none of these concertos has an Adagio, but just Andantes' ('sondern lauter andante seyn müssen'). This comment also exemplifies the common use of *andante* as a noun, describing a slow movement of only moderate solemnity.

Più andante and *molto andante*, found particularly in Brahms and Schubert, usually indicate something rather slower than *andante*, though many of the same ambiguities obtain as for ANDANTINO. Perhaps the most startling use of *molto andante* is in the finale to Act 2 of Mozart's *Le nozze di Figaro* at the moment when the Count has unlocked the closet door and revealed – to everybody's surprise and comic relief – not Cherubino but Susanna, who plays on the situation with biting sarcasm in a 3/8 section whose tempo designation *molto andante* is surely used to denote an extremely controlled and ironically measured tempo contrasting with the preceding *allegro*. Yet taken literally, *molto andante* would mean faster than *andante*, whereas *andante vivace* inplies a lively style of playing an *andante*.

As one of the five main degrees of movement in music named by Rousseau (1768) and later theorists, *andante* became ubiquitous in the 19th century and appeared with all kinds of qualifications from *andante sostenuto* and *andante con moto* to *andante religioso* (Liszt, final section of *Ce qu'on entend sur la montagne*) and even in macaronic forms such as *andante très expressif* (Debussy, opening of *Clair de lune*).

DAVID FALLOWS

Andantino (It., diminutive of *andante*, but current only in musical contexts). A tempo and mood designation nowadays considered a little faster than *andante*; but Rousseau (1768), for instance, described it as an *andante* with 'a little less gaiety in the beat'. This ambiguity, which stems from whether *andante* is perceived as a fast or a slow tempo, troubled Beethoven, who wrote to George Thomson, his Edinburgh publisher, on 19 February 1813:

In future, if there are any andantinos among the melodies you send me for setting, I would beg you to indicate whether that *andantino* is intended to be faster or slower than *andante*, because that word, like

many others in music, is of such imprecise meaning that on one occasion *andantino* can be close to *allegro* and on another almost like *adagio*.

Zaslaw ('Mozart's Tempo Conventions', *IMSCR XI: Copenhagen 1972*, 720–33) provided convincing evidence that for Mozart and his contemporaries *andantino* was normally slower than *andante*: Rousseau (1768), Wolf (1788), D.G. Türk (1789), Mason (*c*1801), Clementi (1801), Starke (1819) and Hummel (1828) all agreed on that; moreover Türk and Hummel went so far as to draw attention to it and to castigate those who thought otherwise. 19th-century practice appears to make *andantino* faster, and for Brahms in defining the tempo of the third movement of his first Symphony it was adjacent to *allegretto*.

In earlier editions of *Grove* Ebenezer Prout mentioned three movements in Mendelssohn's *Elijah*, the first of which, 'If with all your hearts', is marked *andante con moto*, the second, 'The Lord hath exalted thee', merely *andante*, and the third, 'O rest in the Lord', *andantino*: all three have the same metronome mark, crotchet = 72. As Prout remarked, it illustrates the 'uncertainty which prevails in the use of those time-indications'; but it is also a consequence of the different texture and density of the music which in turn directly influence tempo, performed tempo and perceived tempo.

There seems little evidence for the commonly found assertion that *andantino* can refer to a somewhat shorter *andante* movement (see I. Herrmann-Bengen, *Tempobezeichnungen: Ursprung, Wandel im 17. und 18. Jahrhundert*, Tutzing, 1959, p.181).

For bibliography *see* ANDANTE and TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Anderberg, Carl-Olof (*b* Stockholm, 13 March 1914; *d* Malmö, 4 Jan 1972). Swedish composer, pianist and conductor. During the period 1936–8 he studied composition in Stockholm, Copenhagen, Paris and London, and later in Salzburg and Vienna. He was a piano pupil of Olof Wibergh in Stockholm and studied conducting with Paumgartner, Walter and Weingartner at the Salzburg Mozarteum. In 1934 he made his début as a pianist and composer in Malmö with the later discarded Concertino. He was conductor of the Hippodromtheater, the Malmö operetta theatre (1939–42, 1949–50), and in 1946 founded a chamber orchestra which he directed until its activities ceased in 1950. Thereafter he lived as a freelance composer in Malmö, latterly spending much time in Cologne and Vienna; he sometimes appeared as a pianist or conductor, particularly with the Malmö Ars Nova. His electronic works were composed in his own studio, FEM.

Anderberg's music of the 1930s and 40s showed French influence, but later he went through a 12-note serial period, stimulated by his profound analyses of Schoenberg's piano music. In this way he integrated new techniques into an individual style, solidly craftsmanlike in the orchestral works and instrumentally brilliant in the chamber music. Many of his works were suggested by literature or by contemporary events, the latter particularly in later years: the piano concerto (1968) uses quotations from the *Internationale*, the *Horst Wessel Lied* etc. to illustrate reactions to the Czech crisis. He published *Hän mot en ljudkonst* ('Towards a new sound art', Malmö, 1961) and many articles.

HANS ÅSTRAND

Anders, Hendrik (*b* Oberweissbach, Thuringia, 1657; *d* Amsterdam, bur. 14 March 1714). Dutch composer, organist, violinist and carillonneur of German origin. He settled at Amsterdam and became organist at the Lutheran church in 1683, but was dismissed for bad behaviour and drunkenness in 1694; he was frequently asked for advice about organs and bells and was also a musician at the city theatre. He seems to have played an important part in *zangspelen* (Singspiele), along with such composers as Johannes Schenk and Servaas de Konink. These *zangspelen*, with texts by contemporary Dutch poets including Dirck Buysero and Cornelis Sweerts, are short, light, spoken plays interspersed with sung stanzas. Nothing is known about their performance and no complete scores have survived, though a number of items are extant in songbooks. These are in binary form and either French or Italian in style. Anders's two books of instrumental music were possibly intended for use as incidental music in the theatre. His op.1 is rather in the French idiom; the other book is modelled on Italian examples.

WORKS

VOCAL

music lost unless otherwise stated

Harders-zang (zangspel, A. de Moulin), 1687

De verliefde Rykaard (zangspel, C. Sweerts), ?1694; 9 songs in Mengelzangen en zinnebeelden (Amsterdam, 1694)

Min-en Wynstrydt (zangspel, D. Buysero), The Hague, 1697

Venus en Adonis (zangspel, Buysero), *c*1697

Apollo en Dafne (zangspel, Sweerts), *c*1697; 4 songs in Verscheide nieuwe zangen (Amsterdam, 1698)

Lykschalmeye bij de dood van ... Willem III (Buysero), Rotterdam, 1702

Several songs in Boertige en ernstige minnezangen (Amsterdam, 1705) and Stichtelijke Gezangen (Amsterdam, 1710)

INSTRUMENTAL

Trios, allemande, courante, sarabande, gigue, etc., op.1 (Amsterdam, 1696); ed. G. Vellekoop (Apeldoorn, 1982)

[12] Symphoniae introductoriae, 3–4 insts, op.2 (Amsterdam, 1698)

RUDOLF A. RASCH

Anders, Peter (*b* Essen, 1 July 1908; *d* Hamburg, 10 Sept 1954). German tenor. He studied under Grenzenbach and Mysz-Gmeiner in Berlin, making his solo début at Heidelberg in 1932. In the following years he sang with the opera companies of Cologne, Hanover and Munich, joining the Berlin Staatsoper in 1936. He was then a lyric tenor, acclaimed in such roles as Tamino, which he also sang at the Salzburg Festival of 1943. His voice became stronger, and he added such heroic roles as Lohengrin and Florestan to his repertory, appearing at the Edinburgh Festival of 1950 as Bacchus in *Ariadne auf Naxos* and at Covent Garden (1951) as Florestan and Walther in *Die Meistersinger*. He died after a car accident. Anders left many records, impressive for fine tone and technique, conviction in his operatic works, intelligence in lieder and charm in operetta.

J.B. STEANE

Andersen, Anton Jörgen (*b* Kristiansand, 10 Oct 1845; *d* Stockholm, 9 Sept 1926). Swedish cellist and composer of Norwegian birth. He began his musical studies with the organist Rojahn. After playing the cello in the theatre orchestras of Trondheim (1864) and Oslo (1865), he moved to Sweden at the age of 21. There he studied composition with Johan Lindegren at the Swedish Royal Academy of Music and was a cellist in the Hovkapell from 1871 to 1905. From 1876 to 1911 he also taught the cello and the double bass at the conservatory, being appointed professor in 1912. He was elected to the Royal Academy of Music in 1882.

Like many of his contemporary Swedish composers, Andersen was strongly influenced by the Austro-German tradition. His works, mostly unpublished, include five symphonies, one of which calls for 14 cello and three double bass parts, a string quartet, a sonata for cello and piano (Stockholm, 1876), other instrumental pieces scored largely or solely for cellos and double basses, as well as solo and choral songs.

ANDERS LÖNN

Andersen, Poul-Gerhard (*b* Varde, 17 Dec 1904; *d* Copenhagen, 5 June 1980). Danish organ builder. He was apprenticed in 1926 to Marcussen & Søn in Åbenrå, and only five years later was appointed managing director of the firm's Copenhagen division. In 1963 he founded his own workshop in Copenhagen, and under his own name built many distinguished and characteristic instruments based on the ideals he had developed during the preceding decades. He was one of the pioneers and theoreticians of the Danish Organ Reform Movement; he took a special interest in organ architecture, and always preferred to design his own instruments in order to create what he described as 'an intimate coherence between aural and visual architecture'. Examples of his work are the organs at the church of Our Saviour, Copenhagen (rebuild, 1965); the church of Gustavus Adolfus, Helsingborg, Sweden (1968); St Olai's Cathedral, Helsingør (1969); the church of Our Lady, Nyborg (1973); and Lund Cathedral, Sweden (choir organ, 1977).

OLE OLESEN

Anderson, Barry (Michael Gordon) (*b* Stratford, NZ, 22 Feb 1935; *d* Paris, 27 May 1987). British composer of New Zealand birth. He went to England at the age of 17 to study the piano at the RAM (1952–6). He remained in the UK and in 1969 began teaching at Morley College, London, where he became interested in live electronics and the work of Stockhausen. In 1973 he formed the West Square Electronic Music Ensemble (1973–87) from students at Morley, and in 1975 it gave its first professional performance at St John's, Smith Square. In 1979 he co-founded the Electro-Acoustic Music Association of Great Britain (now Sonic Arts Network) and became its first chairman. His music was influenced by the post-Webern aesthetic, particularly in the three Piano Pieces with live electronics, *Colla voce* and *Arc*. As a composer Anderson was largely self-taught; this, along with his early lack of confidence as a New Zealander abroad, made him sometimes appear more at ease helping other composers realize their works than composing his own. He made six elaborate realizations of Stockhausen's *Solo* as well as ghost-writing the electronic component for numerous works by other composers. His largest project in this area was the composition at IRCAM of the extraordinary electronic sounds for Birtwistle's opera *The Mask of Orpheus*, which occupied him for four years. Strenuous commitments such as these and the pressure to complete his own works on time ultimately took a toll on his health. He died a few hours after the world première of *Arc*.

STEPHEN MONTAGUE

Anderson, Beth [Barbara Elizabeth] (*b* Lexington, KY, 3 Jan 1950). American composer. She studied at the University of Kentucky, the University of California, Davis (BA 1971), where she was a pupil of Larry Austin, John Cage and Richard Swift, and Mills College (MFA 1973, MA 1974), where her teachers included Robert Ashley and Terry Riley. In 1974 she completed the oratorio *Joan* as a commission for the Cabrillo Music Festival. Active as a writer and editor, Anderson was co-editor of *Ear* (1973–9), and one of its principal contributors. On moving to New York in 1975 she founded *Ear Magazine*; her criticism has also appeared in the *Soho Weekly News*, *Heresies* and *Intermedia*. She teaches college music courses and accompanies dancers at the Martha Graham School of Dance and the American Dance Studio, among others.

By the early 1970s Anderson had composed graphic scores (*Music for Charlemagne Palestine*), text-sound pieces (*Torero Piece*) and tape works (*Tulip Clause*). Later in the decade her music became more popular in orientation, exhibiting greater rhythmic regularity and an overtly romantic style. She often adopted a principled arbitrariness in composing, determining pitches through code transfer of a linguistic or numerical pattern. She has also shown consistent interest in feminist imagery and history and is particularly fond of music as theatrical entertainment. Since 1984 she has characterized her compositions as 'swales', compilations of diverse newly composed music.

CHARLES SHERE

Anderson, Emily (*b* Galway, 17 March 1891; *d* London, 26 Oct 1962). Irish editor and translator. She was educated privately and at the universities of Berlin and Marburg, and in 1923, after a short period as lecturer in German at University College, Galway, entered the Foreign Office where she served until 1951, having been seconded to the War Office from 1940 to 1943 for intelligence work in the Middle East. She dedicated most of the scanty leisure of her working life and all her retirement to the successive tasks of editing and translating the letters of Mozart and his family and the letters of Beethoven. Her tireless, worldwide search for original sources of the text was complemented by scrupulous accuracy and thorough annotation. She developed a style of timeless English which she handled in as lively and readable a manner as was consistent with fidelity to the German. Despite an occasional lapse in musicological detail, the two editions were a fine achievement and likely to remain the standard English version for some time to come. Of the two, the Beethoven was perhaps the more remarkable because his illegible handwriting had produced so many inaccurate readings in earlier texts that Anderson, besides mastering his orthography, had either to inspect personally all the extant autographs or else procure photographs. Of the 1750 Beethoven letters, she published 250 for the first time. In her will, she bequeathed to the Royal Philharmonic Society money to found an international prize for violin playing. (Obituary, *The Times*, 29 Oct 1962.)

ALEC HYATT KING

Anderson, Gordon A(thol) (*b* Melbourne, 1 May 1929; *d* Armidale, 30 June 1981). Australian musicologist. He studied at the University of Adelaide under John Bishop, J.B. Peters and Andrew McCredie (BMus 1958, BMus Hons 1969, MMus 1970, DMus 1977). His scholarly activity concentrated on the music of the 13th century, particularly that of Notre Dame, and he produced a large body of articles and editions from 1969 to 1981. From 1970 to 1972 he was a research fellow at the Flinders University, Adelaide, and in 1973 he took up a lectureship in music at the University of New England, Armidale. Although he lived far from original sources and was able

to visit Europe only once, he made a significant contribution to his field. Anderson played an important part in the establishment of an Australian Musicological Commission.

WERNER GALLUSSER/THOMAS B. PAYNE

Anderson, Julian (David) (*b* London, 6 April 1967). English composer, teacher and writer on music. While still at Westminster School he began studying privately with John Lambert, continuing at the RCM, where he took the BMus. He then studied with Goehr at Cambridge. He also attended the Contemporary Composition Course at the Britten–Pears School in 1992 and was Britten Memorial Fellow at Tanglewood in 1993, profiting from the guidance of Knussen. From 1994 to 1996 he was Constant and Kit Lambert Fellow at the RCM, where he was later appointed a professor of composition. He is also active as a broadcaster and writer, contributing to such periodicals as *Tempo* and *The Musical Times*.

Although he has followed the progress of his British peers with close sympathy, Anderson's initial enthusiasms were for such continental radicals as Xenakis, Vivier and the 'spectral' composer Murail (with whom he also studied) and for the various folk musics of eastern Europe. His early compositions tended to be study pieces, each concentrating upon a single technique – melodic decoration, for instance, or overtone-derived harmony. These he has mostly withdrawn, but the concerns they focussed have continued to evolve and interact in his published output.

His earliest orchestral work, *Diptych* (1991–5), derives its form from the boldness with which its volatile, elaborately figured first movement, *Parades*, is balanced against the slowly accumulating overtone harmony of its second, *Pavillons en l'air*. By contrast, his ensemble piece *Tiramisù* (1994–5) evolves its collage-like form from a rapid cross-cutting of highly contrasted folk materials, culminating in bell sounds – another recurrent resonance in his work. Several of his scores have been generated by processes of melodic proliferation: whether assembled from fragments as in his setting (which owes nothing to Delius) of Whitman's *Sea Drift* (1992–3); or expanded by multiple heterophonic doublings as in his jubilant *Khorovod* (1994); or set jaggedly ricochetting between varied instrumental groupings as in his *Alhambra Fantasy* (1999–2000).

Anderson's largest orchestral piece, *The Stations of the Sun*, commissioned for the 1998 Henry Wood Promenade Concerts, synthesizes many of these techniques in an impressive formal sweep of almost 20 minutes. Yet his septet, *Poetry Nearing Silence* (1997), achieves equal distinction by compressing similar materials into a series of emblematic miniatures. Many of Anderson's pieces could be characterized as dance-like celebrations or ritualized laments. The recurrence of such topics suggest a composer preoccupied less with his own subjectivity, than with renewing the power of music as an evocation or expression, of community.

WORKS

Scherzo with Trains, 4 cl, 1989–93; Parades, orch 1991 [performable with Pavillons en l'air as Diptych]; Seadrift (W. Whitman), S, fl, cl, pf, orch, 1992–3; The Bearded Lady, ob, pf, 1994, arr. cl, pf, 1995; The Colour of Pomegranates, a fl, pf, 1994; Khorovod, 15 insts, 1994; Tiramisù, fl + pic + a fl, cl + b cl, bn, hn, perc, hp, vn, va, vc, db, 1994–5; Pavillons en l'air, orch, 1995 [performable with Parades as Diptych]; I'm nobody, who are you? BAYAN NORTHCOTT

Anderson, June (*b* Boston, 30 Dec 1952). American soprano. She studied at Yale University and made her début in 1978 as the Queen of Night at the New York City Opera, where she also sang Rosina, Gilda, Olympia (*Les contes d'Hoffmann*) and Lora (*Die Feen*). In 1982 she made her European début at the Rome Opera in *Semiramide*. She has sung at La Scala and in many other European cities.

In the USA Anderson has sung in Chicago and San Francisco, and first appeared at the Metropolitan Opera in 1989, as Gilda. She made her British début in 1984 with the WNO as Violetta, disclosing her dramatic talents, and first sang at Covent Garden in 1986 in a concert performance of *Semiramide*, returning as Lucia, Gilda and Elvira (*I puritani*, 1992), roles that are peculiarly well suited to her vocal gifts of plangent tone and technical flexibility, and her sincere and eloquent acting. She has sung Rossini's Desdemona, Anna (*Maometto II*), Zoraid and Armida; Bellini's Amina, Juliet, Elvira and Beatrice; Donizetti's Marie (*La fille du régiment*), Verdi's Lida (*La battaglia di Legnano*) and Gulnara (*Il corsaro*). Her recordings chronicle her skills in the French repertory: Bizet's Catherine (*La jolie fille de Perth*), Thomas's Ophélie, Rachel (Halévy's *La Juive*) and L'Ensoleillad (*Chérubin*).

ELIZABETH FORBES/ALAN BLYTH

Anderson, Laurie (*b* Chicago, 5 June 1947). American performance artist and composer. Although she played the violin from childhood, she received her formal training in the visual arts (Barnard College, BA 1969; Columbia University, MFA 1972). During the 1970s she became one of the most celebrated practitioners of performance art. Her work has incorporated graphics, lighting, sculpture, mime, slides, film, speech, music and many electronic devices, some of her own design. By 1976 her performances were featured prominently in museums and concert venues across Europe and North America.

The first phase of Anderson's career culminated in the seven-hour work, *United States, I-IV*, performed at the Brooklyn Academy of Music in 1983. Hailed as a landmark by postmodernist theorists, the work was regarded as thematizing the contradictions and tensions of late-capitalist society. Against a backdrop of stylish visuals, she played electronically enhanced violins, sang, mimed, controlled an elaborate bank of electronic devices and recited her own witty, yet disturbing poetry, that hovers between scathing social criticism and ironic self-parody. Much of her work comments on the alienation produced by contemporary culture, but at the same time self-consciously relies on the very technological mediation it appears to lament.

In 1981 Anderson's single *O Superman* reached number two on the British pop charts. Until then music had been

Laurie Anderson

only one of the media employed in her work. As a performance artist, she had been reluctant to release recorded fragments of live concerts. *O Superman*'s unlikely success, however, offered new audiences and new directions for artistic experimentation. In 1982 she recorded *Big Science*, an album made up of works originally designed for live performance. A second album, *Mister Heartbreak* (1984), announced her willingness to privilege sound over other components in her work; together with Peter Gabriel she composed new songs and revised earlier ones so that they could stand as independent musical entities. Although some critics regarded *Mister Heartbreak* as a violation of her performance-art principles, the album secured her crossover to a mainstream audience. A feature-length film, *Home of the Brave* (1986), presented her in concert performances to an even larger audience. In 1987 the unusual name-recognition she had acquired through these popular successes allowed her (with her male 'clone') to host 'Live from Off Center', a weekly showcase of avant-garde art on American public television.

Subsequent albums, if not as successful as *Mister Heartbreak*, continued to engage the attention of both popular-music and avant-garde audiences. She published several books of texts and visual imagery and continued to perform in concert. Although her work occasionally has highlighted the fact that she is a woman (e.g. *Langue d'amour* on *Mister Heartbreak*; her use of the vocoder to make her voice sound like that of a smug patriarch), much of it maintains an androgynous stance.

Anderson has achieved greater visibility than most composers of her generation, in part because of her originality: coming to music from the visual arts, she was free to manipulate sounds as she liked. Her unexpected crossover into the popular domain brought her a degree of fame usually unavailable to avant-garde artists, making

her one of the most influential women composers of her time.

WORKS

Performances: Automotive, 1972; Institutional Dream Series, 1972; O-RANGE, 1973; As:If, 1974; Duets on Ice, 1974; In the Nick of Time, 1974; Out of the Blue, 1974; Tales from the Vienna Woods, 1974; Songs and Stories for the Insomniac, 1975; For Instants 3 'Refried Beans', 1976; Stereo Stories, 1976; Audio Talk, 1977; On Dit, 1977; Some Songs, 1977; Stereo Decoy, 1977; That's Not the Way I Heard It, 1977; Down Here, 1978; Like a Stream, 1978; Suspended Sentences, 1978; Americans on the Move, 1979; Blue Horn File, 1979; Born, Never Asked, 1980; It's Cold Outside, 1981; United States, I–IV, 1983; Mister Heartbreak, 1984; Natural History, 1986; Talk Normal, 1987; Empty Places, 1989; Voices from the Beyond, 1991; Halcion Days: Stories for the Nerve Bible, 1992

SUSAN McCLARY

Anderson, Leroy (*b* Cambridge, MA, 29 June 1908; *d* Woodbury, CT, 18 May 1975). American composer, arranger and conductor. He studied piano and organ with his mother and Henry Gideon, and double bass with Gaston Dufresne. He also worked with Spalding (theory), Ballantine (counterpoint), Heilman (fugue), and Piston and Enescu (composition) at Harvard where, from 1930 to 1934, he pursued studies in German and Scandinavian languages. In the early 1930s he tutored at Radcliffe College (1930–32), directed the Harvard University Band (1931–5), and conducted and arranged music for dance bands. In 1936 he composed an arrangement of Harvard songs for the conductor of the Boston Pops, Arthur Fiedler, who subsequently commissioned two short pieces, *Jazz Pizzicato* (1938) and *Jazz Legato* (1939). While serving in the military (1942–6), Anderson continued writing music for Fiedler and, after World War II, he became a principal arranger for the Boston Pops in addition to providing them with a series of popular short original compositions, often with picturesque titles.

In the early 1950s his fame spread both when WCBS-New York selected *Syncopated Clock* (1945) as the theme song for 'The Late Show', and when in 1951 his own recording of *Blue Tango* sold over a million copies. The concurrent growth of Pops concerts around the nation consolidated his popularity, and a 1953 study named him the American composer most frequently performed by native orchestras. In that same year he composed the Concerto in C for piano and orchestra, his only extended orchestral work. In 1958 his one musical comedy, *Goldilocks*, opened in New York. A romantic farce set against the early days of the motion picture industry, it enjoyed only a short run, though some of the show's numbers had continued success when arranged for orchestra. In collaboration with Mitchell Parish, he also adapted some of his orchestral music as songs, including 'Sleigh Ride', which became a Christmas perennial, although Anderson intended it simply as a winter landscape. In 1988 he was elected posthumously to the Songwriters Hall of Fame.

Distinguished by careful workmanship and an ingratiating humour, Anderson's music derived largely from Gershwin and other popular song composers. He orchestrated vividly (see, for example, the use of whip, sleigh bells, and trumpet 'horse whinny' effect in *Sleigh Ride*, 1948), and on two occasions (*The Typewriter*, 1950, and *The Sandpaper Ballet*, 1954) he featured non-traditional instruments. Anderson raised the prominence of the popular orchestral miniature, and such music proved useful not only to pops concerts, but to radio, television and Muzak, making his music familiar to millions who would not necessarily recognize his name.

HOWARD POLLACK

Anderson [née Philpot], **Lucy** (*b* Bath, 12 Dec 1797; *d* London, 24 Dec 1878). English pianist. She was the daughter of John Philpot, a professor of music and music seller at Bath, and was taught music by her cousin. In about 1818 she went to London, where she soon became eminent in her profession and in 1822 became the first woman pianist to play at the concerts of the Philharmonic Society. In July 1820 she married George Frederick Anderson (*d* 14 Dec 1876), a violinist who was from 1848 to 1870 Master of the Queen's Musick. In 1830 she gave the first Philharmonic performance of Beethoven's 'Emperor' piano concerto, a work she was to play frequently. She was introduced at court by George Smart in 1830 and became the piano teacher of Princess, later Queen, Victoria and her children. She also taught at the RAM and retired in 1862 after appearing at the Philharmonic Society's Jubilee Concert at St James's Hall. (*DNB*, W.B. Squire)

W.H. HUSK/R

Anderson, Marian (*b* Philadelphia, 27 Feb 1897; *d* Portland, OR, 8 April 1993). American contralto. After graduating from South Philadelphia High School, she studied in her native city with Giuseppe Boghetti but was refused entry to the Philadelphia Music Academy on racial grounds. Having won first prize in a competition sponsored by the New York PO, she appeared as a soloist with the orchestra at Lewisohn Stadium on 27 August 1925. After further study with Frank La Forge, she made a number of concert appearances in the USA, and her European début took place at the Wigmore Hall, London, in 1930. She was subsequently lionized throughout Europe, winning from Toscanini the reported tribute: 'A voice like yours is heard only once in a hundred years'. By then a mature artist, Anderson gained high critical acclaim for her first appearance at Town Hall in New York (1935) and then undertook further tours, across the USA and in Europe. Because of a lack of stage experience – and therefore confidence – she refused offers to sing in opera, but such discs as Delilah's 'Softly awakes my heart' show what might have been, and became bestsellers. In 1939 she was denied the use of Constitution Hall in Washington, DC, for a concert; with the support of Eleanor Roosevelt and other prominent Americans, she gave a concert at the Lincoln Memorial (9 April 1939), which drew an audience of some 75,000 people. At the invitation of Rudolf Bing, she made a belated début in opera at the Metropolitan Opera in New York as Ulrica in *Un ballo in maschera* in 1955. Although her voice was no longer at its best and she was understandably affected by the emotion of the moment, as the first black singer on the company's roster she paved the way for others.

After leaving the Metropolitan in 1956, Anderson continued her concert career, making a farewell tour in 1965. Her voice was a rich, vibrant contralto of intrinsic beauty. She left recordings covering every aspect of her repertory. Her lieder, though hardly idiomatic, are deeply felt, while in spirituals she is compelling. Her autobiography, *My Lord, What a Morning*, was published in New York in 1956.

MAX DE SCHAUENSEE/ALAN BLYTH

Anderson, Ruth (*b* Kalispell, MT, 21 March 1928). American composer, flautist and orchestrator. At the University of Washington she studied the flute (BA 1949) and composition (MA 1951). She did postgraduate work at the Columbia-Princeton Electronic Music Center and at Princeton University, and privately studied composition with Boulanger and Milhaud and the flute with Wummer and Rampal. She worked as a flautist, playing with the Totenberg Instrumental Ensemble (1951–8) and as principal of the Boston Pops (1958), and was an orchestrator at NBC (1960–66) and Lincoln Center Theatre (1966). In 1968 she designed and became the director of the first electronic music studio within CUNY at Hunter College, where she taught composition and theory (1966–89). Among her many awards are two Fulbright scholarships to Paris (1958–60), residencies at MacDowell Colony (1957–73) and Yaddo (1969, 1982), and numerous grants.

The concept that sound as energy affects one's state of being is central to Anderson's work. The first of two sonic meditations, *Points* (1974), uses sine waves, while the second, *I come out of your sleep* (1979), sets elongated whispered vowel sounds canonically. *Tuneable Hopscotch* (1975) is an interactive installation; *Centering* (1979) is a performance piece for a dancer and four observers whose reactions to the dance are translated into sound by oscillators, via galvanic skin resistance sensors, to which the dancer then responds. Anderson intends these works to further wholeness of self and unity with others.

BARBARA A. PETERSEN/JUDITH ROSEN

Anderson, T(homas) J(efferson) (*b* Coatesville, PA, 17 Aug 1928). American composer. Born into a musical family, he began piano study with his mother at the age of five and formed his first touring jazz ensemble at the age of 13. He studied at West Virginia State College (BMus 1950), Pennsylvania State University (MMusEd, 1951), the Cincinnati Conservatory (summer 1954) and the University of Iowa (PhD 1958). His teachers included Edward Lewis, Ted Phillips, P. Ahmed Williams, George Ceiga, T. Scott Huston, Phillip Bezanson and Richard B. Hervig, among others. He also attended the Aspen Music School (summer 1964), where he studied with Milhaud. His teaching appointments include positions in the North Carolina public schools and at West Virginia State College (1955–6), Langston University (1958–63) and Tennessee State University, Nashville (1963–9). From 1969 to 1971 he served as the first black composer-in-residence of the Atlanta SO. He was appointed professor at Tufts University in 1972, a position he held until his retirement in 1990. His honours include fellowships from the MacDowell Colony and Fromm Foundation, two honorary doctorates, and commissions from the Berkshire Music Center, Yo Yo Ma and Bill T. Jones/Arnie Zane Dance Company, among others.

Anderson's music constitutes a poignant mixture of traditions, from tonal and avant-garde jazz, blues and spirituals to the music of Ives and Berg. His predilection for rhythmic complexity and his imaginative use of instrumental colour are particularly notable. His orchestration of the score for Scott Joplin's opera *Treemonisha* facilitated its première in Atlanta in 1972. His own one-act chamber opera *Walker* (1992) is a musical meditation on slavery explored through the life of 19th-century black abolitionist David Walker. *Squares* (1964), the Chamber Symphony (1968) and Variations on a Theme by M.B. Tolson (1969) have been recorded.

WORKS

Dramatic: The Shell Fairy (operetta, S. Beattie, after C.M. Pierce), 4 solo vv, chorus, dancers, chbr orch, 1976–7; Re-creation (L. Forrest), 3 speakers, dancer, tpt, a sax, drums, vn, vc, pf, 1978; Soldier Boy, Soldier (op, Forrest), 5 solo vv, chorus, jazz combo, orch, 1982; Thomas Jefferson's Orbiting Minstrels and Contraband: a 21st Century Celebration of 19th Century Form (multimedia), S, dancer, ww qnt, str qt, jazz sextet, synth, cptr, visuals, 1984; Walker (chbr op), 1992; orch of Joplin: Treemonisha (op), 1972

Orch: Pyknon Ov., 1958; Introduction and Allegro, 1959; New Dances, chbr orch, 1960; Classical Sym., 1961; 6 Pieces, cl, chbr orch, 1962; Squares, essay, orch, 1964; Sym. in 3 Movts, 1964; Chbr Sym., 1968; Intervals, 1970–71; Messages, a Creole Fantasy, 1979; Chbr Conc. (Remembrances), 1988; Conc., 2 vn, chbr orch, 1988; early works

Chbr and solo inst: Str Qt no.1, 1958; 5 Bagatelles, ob, vn, hpd, 1963; 5 Etudes and a Fancy, ww qnt, 1964; 5 Portraitures of 2 People, pf 4 hands, 1965; Connections, 2 vn, 2 va, vc, 1966; Transitions, fantasy, 10 insts, 1971; Watermelon, pf, 1971; Swing Set, cl, pf, 1972; 5 Easy Pieces, vn, pf, jew's harp, 1974; Minstrel Man, b trbn, perc, 1977; Street Song, pf, 1977; Variations on a Theme by Alban Berg, va, pf, 1977; Play me Something, pf, 1979; Vocalise, vn, hp, 1980; Call and Response pf, 1982; Inaugural Piece, 3 tpt, 3 t trbn, 1982; Intermezzi, cl, a sax, pf, 1983; other works

Vocal: Personals (cant., A. Bontemps); nar, chorus, brass septet, 1966; Variations on a Theme by M.B. Tolson (cant.), S, a sax, tpt, trbn, vn, vc, pf (1969); This House, male vv, 4 pitch pipes, 1971; Block Songs (P.C. Lomax), S, pitch pipe, jack-in-the-box, musical busy box, 1972; Beyond Silence (P. Hanson), T, cl, trbn, va, vc, pf, 1973; In Memoriam Malcolm X (R. Hayden), S, orch, 1974; Horizons '76 (M. Kessler), S, orch, 1975; Spirituals (Hayden), T, nar, children's vv, chorus, jazz qt, orch, 1979; Jonestown, children's chorus, pf, 1982; Thomas Jefferson's Minstrels (T.J. Anderson), Bar, male chorus, jazz band, 1982; Dear John, Dear Coltrane, SATB, 1989; other choral and solo vocal works

Band: Trio Concertante, cl, tpt, trbn, band, 1960; Rotations, 1967; In Memoriam Zach Walker, 1968; Fanfare, tpt, 4 small bands, 1976

Principal publishers: ACA, Bote & Bock, C. Fischer, Peters

GUTHRIE P. RAMSEY, JR

Andersson, Nils (*b* Hofterup, Malmöhus län, 29 July 1864; *d* Lund, 31 March 1921). Swedish collector of folk music. He took degrees in philosophy and law at the University of Lund, in which town he held a succession of legal and official appointments. His principal interest outside his professional work was folk music, and it was on his initiative that the Folkmusikkommissionen was formed in 1908. He made a notable collection of some 12,000 melodies (songs, dances, wedding marches and herdsman's calls) which were later edited and published by Olof Andersson as Svenska låtar (Stockholm, 1922–40/*R*).

KATHLEEN DALE/MALCOLM TURNER

Andersson, Otto (Emanuel) (*b* Vårdö, 27 April 1879; *d* Turku, 27 Dec 1969). Finnish musicologist and folklorist. After qualifying as an organist and choirmaster (1900), he studied (1901–5) at the Helsinki Music Institute (later the Sibelius Academy) and Helsinki University (MA 1915), taking the doctorate there in 1923 with a dissertation on the bowed harp. In 1906 he was a co-founder of the Brage Society for the preservation of Swedish-Finnish culture and from its inception he was president of its music section and conductor of its choir. He taught music in Helsinki and then became a lecturer in Scandinavian music history at the university (1925) and professor of musicology and folk literature (1926–

46) and rector (1929–36) at the Finland-Swedish University of Åbo (Turku). In 1926 he founded the latter's music history collection, which in 1950 became the basis of the Sibelius Museum. As a musicologist he made valuable contributions to the study of early music history in Finland; he also collected folk music and studied folk music instruments of Swedish-speaking regions in Finland.

ERKKI SALMENHAARA

Andersson, (Ernst Christian) Richard (*b* Stockholm, 22 Aug 1851; *d* Stockholm, 20 May 1918). Swedish pianist, teacher and composer. At the Swedish Royal Academy of Music (1867–74) he studied the piano first with Johan van Boom and then with Ludvig Norman, harmony with Otto Winge, the organ with Gustaf Mankell and composition with Berens. After further piano study with Hilda Thegerström (1874–6), he went to Berlin, where he became a pupil of Clara Schumann and Heinrich Barth and also studied composition at the Hochschule für Musik with R. Wüerst and Friedrich Kiel. During this period he frequently deputized as a teacher for Barth, both at the Hochschule and privately. He returned to Stockholm in 1884 and two years later founded a piano school, where at first he was the only teacher of the instrument, with Sjögren as teacher of harmony. The school gradually developed a more general curriculum, including courses in other instruments and in singing, and became the country's outstanding private music school. Noted Swedish musicians who studied at the school (Anderssons Musikskola) include Stenhammar, Astrid Berwald, Wiklund, Fryklöf and Gustaf Heintze. Andersson was appointed professor of piano at the Stockholm Conservatory in 1904, but retired at his own wish in 1906; he was a member of the Swedish Royal Academy of Music from 1890. His compositions, mainly early and for the piano, show the influence of Chopin, Liszt and other virtuoso composers, as well as evidence of Andersson's own pianistic skill. They are often free in form and harmonically colourful. The collection *Skuggor och dagrar* ('Shades and Lights') op.14 was awarded the *Svensk musiktidning* prize in 1885.

WORKS
(*selective list*)

all MSS in S-Skma

Pf: Impromptu, op.2, 1869; 7 skisser (Berlin, 1878); Sonata, op.11, 1878 (Stockholm, 1889); Schwedische Tänze (Berlin, 1881); Skuggor och dagrar [Shades and Lights], op.14 (Stockholm, 1886); 21 skisser, op.16 (Stockholm, 1889); 4 waltzes, op.17, 1901; works for 4 hands, incl. Bolero, op.7, Svenska nationaldanser (Stockholm, 1881)
Other works: Fantasiestück, vc, pf, op.13, 1881; songs; Pianospelets teknik, pf method (Stockholm, 1888–94)

AXEL HELMER

Andover. American firm of organ builders. It was founded in 1955 by Thomas W. Byers and CHARLES BRENTON FISK in North Andover, Massachusetts. It moved shortly afterwards to Methuen, Massachusetts, and in 1961 to Gloucester, Massachusetts, being renamed C.B. Fisk, Inc. A new Andover Organ Co. was formed in Methuen by two former employees, Leo Constantineau (*b* Lawrence, MA, 1 Nov 1924; *d* North Andover, MA, 1 Feb 1979) and Robert J. Reich (*b* Urbana, IL, 15 Dec 1929). Beginning modestly with rebuilding and restoration work, the firm soon began attracting contracts for new organs such as that for St John's Lutheran Church, Northfield, Minnesota (1965). This organ, like several subsequent instruments, was designed by Constantineau and voiced and finished by Reich. In this same period a small continuo positive was designed, several examples of which have been built. The firm later became a multiple partnership with Robert Reich as president, Donald Olson as vice-president, and Donald Reich as treasurer. In 1998 Robert Reich retired from the presidency and was succeeded by Olson. In addition to building new organs Andover sustains an extensive maintenance and restoration department under the direction of Robert Newton. Significant examples of the firm's work may be found in the Lawrenceville School, Lawrenceville, New Jersey (1968), the Mt Hermon School, Northfield, Massachusetts (1971), the Church of the Epiphany, Danville, Virginia (1978), Phillips Academy, Andover, Massachusetts (1981), Meredith College, Raleigh, North Carolina (1983), and St Thomas's, Rochester, New York (1987). In 2000 the firm restored and enlarged t he four-manual Hook and Hastings organ in St Joseph's Cathedral, Buffalo.

BARBARA OWEN

Andrade, Mário (Raul) de (Morais) (*b* São Paulo, 9 Oct 1893; *d* São Paulo, 25 Feb 1945). Brazilian writer and musicologist. He was one of the founders of Brazilian ethnomusicology, and very influential in the assertion of musical nationalism in his country in the 1920s and 1930s. He studied at the São Paulo Conservatory where he later taught. He took an active part in the Semana de Arte Moderna (February 1922) whose basic goal was the reform of Brazilian art from academicism into 'modernismo'. Soon afterwards he began his lifelong investigations into Brazilian folk and popular music which produced a series of outstanding essays. His first monograph, *Ensaio sôbre a música brasileira* (1928), considers the relationship that ought to exist between art music and popular music, and analyses the rhythmic, melodic, harmonic, textural, instrumental and formal peculiarities of Brazilian music. Andrade was one of the chief organizers of the Congresso da Língua Nacional Cantada (1937) and from 1935 to 1938 was in charge of the Department of Culture; he founded the Discoteca Pública Municipal de São Paulo which still holds a splendid recorded collection of Brazilian folk music.

NORMAN FRASER/GERARD BÉHAGUE

André. German family of composers and music publishers, of French extraction.

(1) **Johann** [Jean] **André** (*b* Offenbach, 28 March 1741; *d* Offenbach, 18 June 1799). Composer and publisher. His peasant grandfather, a Huguenot, fled persecution in Languedoc and settled in 1688 in Frankfurt, where he became a manufacturer of silks. When only ten years old Johann succeeded to the family firm, which was directed during his minority by his mother and an uncle. His early education in music, described by Gerber as 'notes, metre and some playing of chorales', came through a friend who took lessons in Frankfurt; from 1756, while he learnt business management in the family firm, he had lessons in thoroughbass for several months from a transient musician, apparently the only regular instruction he ever received. Around 1758 he went to Mannheim to further his business training and there he enthusiastically attended concerts, plays and operas, acquainting himself with the current repertory of serious and comic Italian opera as well as the modern instrumental style specific to Mannheim.

The decisive stimulus to André's artistic career occurred when he was a volunteer clerk in Frankfurt (1760–61), where, during the French occupation, a French troupe presented the *opéras comiques* of Philidor for the first time to a German public. It is noteworthy that André first approached this new, middle-class genre not as a musician but as a translator. The first of his translations, *Der Komödienfeind* (1765), was followed two years later by his *Komische Versuche*. The removal of Theobald Marchand's renowned theatrical troupe to Frankfurt in 1770 made André's efforts particularly timely. Marchand, apparently drawn by the literary finesse of these translations, seems to have proposed André's close collaboration with the troupe; in any case André translated more than a dozen French plays and operettas in 1771–2, all of which appeared in Marchand's repertory. In addition Marchand cultivated German Singspiel, as represented by Georg Benda, Hiller, Neefe and others. André made adept use of the many-sided theatrical experiences and stimuli of these years in the libretto and score of his first work, *Der Töpfer* (1773), dedicated to Marchand. Goethe wrote at length in appreciation of this work (letter of 23 November 1773 to Johanna Fahlmer):

> The piece exists for the sake of its music, bears witness to the good, gregarious soul of its creator, and fully meets our theatre's particular need that actors and audience be able to follow it. Now and then there are good conceits; yet its uniformity would not exist but for the music. This music is composed with understanding of the present capabilities of our theatres. The author has sought to combine correct declamation with light, flowing melody, and no further art is required to sing his ariettas than is demanded by the beloved compositions of Messrs Hiller and Wolf. So as not to leave the ear entirely empty, he has directed all his industry to the accompaniment, which he sought to render as full-voiced and harmonious as is possible without disadvantage to the sung parts. To this end he often used wind instruments, sometimes putting these in unison with the voice parts to make them strong and agreeable, as accomplished for instance by a single flute in the first duet. One cannot reproach him for copying or pilfering. And there is still more to be hoped from him.

Der Töpfer, first performed on 22 January 1773 in Hanau, was a success; and, as was characteristic of André's enterprise and practicality, he tried to turn this into a material success too. In that summer the score was published, 'at the author's expense'. The artistic and apparent financial success of *Der Töpfer* determined André's subsequent career and encouraged him to further undertakings both as a dilettante composer and as a music publisher. In 1774 he issued two collections of his songs; in the next year his setting of G.A. Bürger's *Lenore* brought him widespread acclaim. Beyond these he had the satisfaction of being commissioned by Goethe to set the Singspiel *Erwin und Elmire*; the work had its première in Frankfurt in 1775 and appeared the next year in vocal score. (Goethe's *Dichtung und Wahrheit*, iv/17, gives a vivid account of his relation to the Andrés in connection with his affair with Lili Schönemann.)

André withdrew from the family silk concern in 1774 (1773, according to Matthäus) to found his own 'Notenfabrique' and music publishing house. In 1776, perhaps through Marchand's intercession, he was appointed conductor at Theophil Döbbelin's theatre in Berlin, directing a troupe of 51 permanent, well-paid members, among them 16 orchestral musicians. There André disclosed his full talent as a composer in a period of extraordinary productivity, and at that time he also attempted to surmount his dilettantism by a serious study of Kirnberger's writings, particularly the *Grundsätze des Generalbasses als erste Linien zur Composition*. Of the 16 Singspiele of this period, most of them performed in Berlin, his settings of Goethe's *Claudine von Villa Bella*, C.F. Bretzner's *Die Entführung aus dem Serail* (shortly

afterwards to be set by Mozart in a revised version by the younger Stephanie) and German versions of Palissot de Montenoy's *Le barbier de Baghdad* and Beaumarchais' *Le barbier de Séville* deserve special mention, as does his incidental music to Shakespeare's *Macbeth* and *King Lear*. He also continued to write songs.

André's mother died in 1784, and his publishing firm was faring poorly under the administration of his uncle J.B. Pfaltz. As the removal of the firm from Offenbach to Berlin was made impossible by J.J. Hummel's exclusive privilege in that city, André, by then bearing the honorary title of Kapellmeister to Margrave Schwedt, accordingly chose to return to Offenbach, where he immediately took over the direction of his firm. Through good fortune and acumen he was able to establish relations with Pleyel, then (through Paul Wranitzky) with Joseph Haydn and later with Adalbert Gyrowetz. By virtue of its circumspect treatment of authors and many technical improvements in printing and production the firm flourished considerably, reaching its 1000th item in 1797. André apparently composed little after 1784, his Singspiel *Der Bräutigam in der Klemme* for the Frankfurt stage (1796) being a solitary late addition to his output. In 1798 he fell ill while on a business journey to Bamberg and he died the next year.

André was not a significant composer and as a dilettante and 'original genius' he falls into no particular school. He had no high ambitions, being content to use his talent for naive melody to meet the needs of his day. A sure theatrical instinct and a happy gift for folklike, vulgar humour allowed him to create entertainment in the best sense of the word, and in this he won the esteem of his contemporaries. His songs proved a more lasting part of his output: the ballad *Lenore* deeply impressed an entire generation and many of his social songs continued to be sung with pleasure in the 19th century; the *Rheinweinlied*, to a text by Matthias Claudius, became almost excessively popular.

WORKS

printed works published by André in Offenbach unless otherwise stated

STAGE

all Berlin premières at Döbbelin's Theater in der Behrenstrasse

for MS sources see Stauder (1936)

Der Töpfer (komische Oper, 1, André), Hanau, Fürstliches, 22 Jan 1773 (Offenbach, 1773/*R*1986 in GOB, ix)

(2) Johann Anton André (*b* Offenbach, 6 Oct 1775; *d* Offenbach, 6 April 1842). Composer and music publisher, son of (1) Johann André. He showed an early gift for music, received instruction in the piano, the violin and later in singing and began composing small pieces at the age of six. In 1787 he took violin lessons from his brother-in-law Ferdinand Fränzl, writing his first violin sonata at this time; two years later he went to Mannheim to pursue his studies with Ignaz Fränzl. After staying briefly in Offenbach, where he had to deputize for his father in the publishing firm, he studied composition in Mannheim with G.J. Vollweiler (1792–3). Thereupon he took a position in his father's firm, studying composition independently in his spare time. In 1796 he enrolled at Jena University as a student of fine arts but soon had to abandon his studies when his father became ill. After his father's death he undertook an extended business journey in autumn 1799 through Germany to Vienna, accompanied by his friend, the pianist P.C. Hoffmann. It was to this journey that André owed (in his own words) 'the acquaintance of the foremost musicians of Germany' and the later, if only temporary, international importance of his firm. In Munich he acquired the rights to Senefelder's and Gleissner's lithographic process from its inventors and engaged both of them for his Offenbach firm (in a contract of 28 September 1799). In Vienna he bought the so-called 'Mozart-Nachlass' from the composer's widow Constanze for 3150 gulden (by a contract of 8 November 1799) and immediately had Gleissner prepare a provisional manuscript catalogue, the so-called 'Gleissner-Verzeichnis' of 1800. The first print by the André firm to use Senefelder's lithographic method was a vocal score of André's own opera *Die Weiber von Weinsberg* (1800). The André brothers set up more or less short-lived lithographic plants in Paris (the 'Imprimerie lithographique' in Charenton from 1802) and in London (1801); a

cousin in Offenbach, François Johannot, attempted at the same time to apply the process to works of art (1804).

It was however Mozart's estate that gave André his life's task. He viewed this purely in its editorial aspect, producing from 1800 a veritable plenitude of, for the most part, outstandingly reliable 'editions following the composer's original manuscript'; but above all he viewed his task as one of sorting and ordering the manuscripts. André's original plan, as arranged with Constanze and her husband Nissen as early as 1799–1800, called for a chronological catalogue of works and manuscripts to 1784, to be completed by appending Mozart's own autograph catalogue of 1784–91; but insurmountable difficulties prevented its realization. Over half a dozen manuscript sketches for a catalogue, in widely varying stages (of which only the 1833 catalogue is generally known), attest to André's continuing concern with the project, which occupied him intensively into the late 1830s. The results of André's groundwork were later gratefully excerpted and adopted by Otto Jahn and Ludwig von Köchel. Indeed André, if anyone, deserves to be called 'the father of Mozart research'. He entered the dispute over the authenticity of Mozart's Requiem, initiated by Gottfried Weber in 1825, with two editions of the work (1827 and 1829) accompanied by detailed commentary; even those who feel uneasy with the particulars of André's argument agree that at least the preface to the earlier edition is a brilliant showpiece of scholarly research. His edition in two colours of the score to *Die Zauberflöte* (1829), made 'in precise agreement with the composer's manuscript, as sketched, orchestrated and completed by him', established entirely new criteria for documentary editions of music. This and other accomplishments quickly placed André far ahead of his time and even today have an unexpected immediacy.

As a composer André is difficult to evaluate, though he was perhaps among the most considerable of the many composers of his period who now stand in the shadow of Beethoven and Schubert. A self-appraisal, recorded by his pupil F.W. Rühl, runs as follows:

> As a creative artist I did not become what I might have. While I was young I wrote well, but without planning or direction; after I had begun to think for myself and had learnt something, I was too old to recast my knowledge as fundamentally as only a child can.

The early works are mostly distinguished by an all but harmless, flaccid Classicism, deriving much more from Haydn than from Mozart. Occasionally there are surprising outbursts of genius, among which those in the string quartets op.14 (1801) even hint at Mendelssohn. Nor are the works lacking in eccentricities, as instanced by the contrapuntal development of a choral cantus firmus in the trio of the minuet in the Symphony op.11 no.2. André also had a striking tendency towards over-refinement, most apparent in the string quartets opp.22 and 54, nicknamed 'Poissons d'avril', where each instrument plays in a different metre; yet the highly complex whole rests on a disproportionately simple harmonic basis and the piece fails to be convincing. His *Sprichwörter* op.32 had the distinction of being published (by Joseph Aibl in 1869) as a work of Haydn's (cf H XXV*c*:G2). Many of his didactic pieces, particularly those for piano duet (recently published in a complete edition), have pedagogical worth if no particular musical interest and are still valued by teachers.

It is a great loss to music literature that André was unable to complete his *Lehrbuch der Tonsetzkunst*, grandly conceived in six volumes. Its torso breaks off with the treatise on fugue (vol.ii/3, posthumously edited by Heinrich Henkel), following the study of harmony (vol.i); only sketches remain for the further volumes, which were to deal directly with composition. What remains reveals a stimulating theorist and gifted teacher. His pupils included Aloys Schmitt, Wilhelm Speyer and Henkel.

André bore the title of court Kapellmeister to the grand dukes of Hesse from 1803 (he gave the later Grand Duke Ludwig I the autograph of Mozart's Serenade K361/370*a* in gratitude) and court councillor to the princes of Isenburg from 1813. In the wars of liberation he was plenipotentiary commander of the board of home reserves; later he was elected to the second peerage chamber of the Grand Duchy of Hesse, and in 1827 he received honorary citizenship from the city of Berne.

Of André's 15 children several sons (listed below) were musicians or publishers; a daughter, Auguste (Elisabeth) André (1802–47), married Johann Baptist Streicher, son of the noted Viennese maker of pianos, in 1823.

WORKS

all printed works published by André, Offenbach

Edition: *J.A. André: Originalkompositionen für Klavier zu 4 Händen*, ed. M. Streicher (Vienna, 1971); suppl. with opp.72–3 (Vienna, n.d.)

VOCAL

Stage: Die Weiber von Weinsberg (op), vs (1800); Rinaldo und Alcina (op), ov. pubd as op.16 (1801)

Choral: Der Friede Tuiskons (cant.), ov. pubd as op.9 (1800); Missa solemnis, op.43 (1819); Vater unser, op.50, 2 choruses, orch (1827); Crucifixus über einen Basso Continuo von J.S. Bach, op.58 (*c*1830); Veni Creator Spiritus, op.59 (*c*1830); TeD, op.60, solo vv, chorus, orch (1829)

Partsongs etc.: Sprichwörter (Quartetto a canone), op.32, 4vv, pf (*c*1808); Des Sängers Lied zu den Sternen, op.47, vv, pf (*c*1825); Ruf der Freude, op.48, vv, pf (1826); Ein alt Lied von Gott, op.49, vv, pf (*c*1828); 6 Duette, op.51, S, A (*c*1828); Kleine Kantate, op.55, 3 S, pf (1829); Liederkranz, op.57, 4–5 male vv (*c*1830); Liederkranz, op.61, male vv (*c*1830); Deutsche Vaterlandslieder, op.67 (*c*1840); 6 Duette, op.69, S, A (*c*1840); 24 Maurergesänge, male vv

Solo songs with pf: 48 Lieder und Gesänge, opp.38–40 (1819), excerpts pubd as op.62 (n.d.); Der 138. und 28. Psalm, op.63 (1840); other lieder

ORCHESTRAL

Syms.: C, op.4 (1795); F, op.5 (1795); C, op.6 (1795); D, 'zur Friedensfeier', op.7 (1797); 2 'd'une éxécution facile', op.11 (1800); Grande sinfonie, op.13 (1801); Grosse Symphonie, E♭, op.25 (1804); Grande sinfonie, op.41 (1820)

Concs.: fl, G, op.3 (1795); ob, F, op.8 (1798); fl, op.10, 1796 (1800); hn, op.33 (*c*1808); vn, vc; 2 hn, collab. P. Dornaus

Ovs.: Ouverture militaire, op.24 (1804); Die Hussiten vor Naumburg, characteristic ov., op.36 (*c*1818); Concertante in Form einer Ouverture, op.37 (1819)

Numerous dances for orch and other works

CHAMBER AND SOLO INSTRUMENTAL

Trios, qts: 3 str qts, op.14, 1801 (1801), arr. op.15, fl, str trio (1801); Sonata, op.17, pf, vn, vc (1803); Str Qt 'Poissons d'avril' no.1, op.22, 1803 (1803); Trio, op.29, 3 fl (1805); Str Qt 'Poissons d'avril' no.2, op.54 (*c*1828)

Sonatas etc., 2 insts: Sonata, C, ?op.1, vn, pf (1789); Sonata, D, ?op.1, vn, pf (1789); 3 sonatas, op.2, vn, pf (1790); Sonata, op.21, vn, pf (1803); 12 petits pièces, op.26, 2 hn (1805); 2 grands duos, op.27, 2 vn, 1804 (1805); 12 duos d'une difficulté progressive, op.30 (1807); Instruktive Variationen, op.53, 2 fl (1829)

Pf: 12 kleine Stücke zur Übung im Präludieren, op.23 (1804); Instruktive Variationen über 5 Tönen, op.31 (1807); 6 sonates

progressives, op.34 (*c*1811); 6 pièces instructives, op.35 (*c*1814); 3 sonatinas, op.71 (*c*1840); variations
Pf 4 hands: Sonata, op.12 (1800); 12 divertissements, opp.18–20 (1803); 3 marches, op.28 (1805); Conversations musicales, op.42 (1819); 12 leichte Stücke, op.44 (*c*1820); 6 leichte Sonatinen, op.45 (*c*1820); 3 sonatas, op.46 (*c*1820); Leichte Sonate ('Constance'), op.56 (1829); 9 leichte Stücke, op.72 (*c*1863); Sonatine, op.73 (*c*1863)
Org: 25 Orgelstücke (Die 12 Dur- und 12 Molltonleitern und die chromatische Tonleiter für das Orgelpedal), op.64 (1840); 10 Orgelstücke, op.68 (*c*1840)

OTHER WORKS

Anleitung zum Violinspielen, op.30 (1805); Fuge, a 4, nebst deren Entwurf und den allgemeinen Regeln über die Fuge, op.52 (*c*1828)
Opp.65–6, 70 unknown

WRITINGS

Thematisches Verzeichnis sämtlicher Kompositionen von Wolfg. Amad. Mozart (Offenbach, 1805, 2/1828 as *W.A. Mozarts thematischer Catalog*) [edn of Mozart's autograph catalogue of 1784–91]
Introductory essays to 2 edns of *W.A. Mozart: Requiem* (Offenbach, 1827, 1829); as 'Anzeige zu W.A. Mozarts Missa pro defunctis ...', *Caecilia* [Mainz], vi (1827), 193 [the title *Beiträge zur Geschichte des Requiems* was devised by A. Fuchs for his personal copies]
Lehrbuch der Tonsetzkunst, i–ii (Offenbach, 1832–42) [planned in 6 vols.; ii ed. H. Henkel]; abridged H. Henkel (1874–8)
Thematisches Verzeichniss W.A. Mozartscher Manuskripte, chronologisch geordnet von 1764–1784 (MS, 1833)
Thematisches Verzeichnis derjenigen Originalhandschriften von W.A. Mozart ... welche Hofrath André in Offenbach a.M. besitzt, ed. H. Henkel (Offenbach, 1841)
Essay on the rudiments of music, inc. (n.d.)

(3) Carl August André (*b* Offenbach, 15 June 1806; *d* Frankfurt, 15 Feb 1887). Music dealer, son of (2) Johann Anton André. He directed the Frankfurt music shop founded by his father in 1828, and from 1839 also made pianos there, notably a series of 'Mozartflügel' from 1853. In 1855 he published a brochure *Der Klavierbau und seine Geschichte.*

(4) (Peter Friedrich) Julius André (*b* Offenbach, 4 June 1808; *d* Frankfurt, 17 April 1880). Pianist and organist, son of (2) Johann Anton André. From 1864 he was procurist in his brother's shop in Frankfurt. He wrote an organ method which was much used in its time, a school of pedal technique, a harmony textbook, and well-regarded vocal works and organ and piano pieces.

(5) Jean Baptiste (Andreas) André (*b* Offenbach, 7 March 1823; *d* Frankfurt, 9 Dec 1882). Pianist and composer, son of (2) Johann Anton André. Henkel regarded him as the most gifted of the sons. He made concert tours within and outside Germany and later settled in Berlin, where he taught Count Bolko von Hochberg, in particular overseeing the latter's operatic works. He was later court Kapellmeister to the Prince of Bernburg until the liquidation of the chapel on the prince's death. He composed numerous songs, choral works and salon pieces for piano, some of them published under the pseudonym 'de St Gilles', after the family's ancestral home in Languedoc.

The direction of the family's Offenbach concern passed in 1840 from (2) Johann Anton André to his son (Johann) August André (1817–87), who successfully staved off several financial crises by issuing cheap editions of the classics and attracting such composers as Franz Abt and Heinrich Marschner. Under his direction the Frankfurt and Offenbach branches merged; they later came under the joint direction of his sons Karl (1853–1914) and Adolf André (1855–1910) and, from 1910 to 1923, of their respective widows Elisabeth and Aurelie. Their successor Karl August Johann (Hans) André (1889–1951), Adolf's son, turned the firm's emphasis towards choral and teaching material, and rebuilt the house (without a music printing shop) after its almost complete destruction in 1944. The firm continued as Johann André Musikverlag, Offenbach, under the direction of Hans's grandson Hans-Jörg André, and though not of importance for its new publications remains noteworthy for its archive, with rich holdings of composers' autographs, correspondence and the firm's own prints.

WOLFGANG PLATH

André, Charles-Louis-Joseph (*b* Ath, 23 Feb 1765; *d* Mechelen, 8 April 1839). Flemish composer. He is said to have been sent to Paris for his musical education at the expense of the Archbishop of Mechelen. For some time he was attached to Antwerp Cathedral and in 1788 was appointed organist to the Cathedral of St Rombout, Mechelen. In August of that year he went back to Paris and remained there until March 1789, when he returned again to Mechelen. On 18 December 1790 he was ordained priest, his salary being 200 florins; later that year he was made a canon. During the revolutionary troubles of 1797 he was deported to the island of Oléron and did not return to Mechelen until 1801, when he became organist at St Rombout and at Notre Dame. He also directed an orchestra. His works include *Le siège et bombardement de Valenciennes* op.1 for piano and violin, three sonatas for piano with violin, pots-pourris, preludes, a piano sonata and church music.

ERIC BLOM/R

André, Franz (*b* Brussels, 10 June 1893; *d* Woluwé Saint-Lambert, Brabant, 20 Jan 1975). Belgian conductor. He studied the violin with César Thomson at the Brussels Conservatory until 1914, and composition and conducting with Weingartner at the Hochschule für Musik in Berlin. From 1920 he taught at the Brussels Conservatory, resigning his directorship of the conducting class in 1944; he conducted the orchestra there, 1940–45. In 1935 he founded the Belgian RSO, of which he was conductor until 1958. From that year he became concerned with the administration of the Queen Elisabeth of Belgium Competition. A tireless interpreter of contemporary works, André was awarded the Schoenberg Medal in 1952 for his services to 20th-century music, especially Schoenberg's. He also gave the first performances of works by Milhaud, Koechlin, Jolivet and Sauget, among others, and was the dedicatee of Karl Amadeus Hartmann's First Symphony. He made orchestral transcriptions of works by Rameau, Lully, Grétry, Leclair and Bach and wrote incidental music for radio plays.

□

Andre, Hieronymus. *See* FORMSCHNEIDER, HIERONYMUS.

André, Maurice (*b* Alès, 21 May 1933). French trumpeter. At the age of 14 he became a miner like his father, from whom he learnt to play the trumpet (his father, also named Maurice, was an amateur trumpeter who played with great endurance). He studied under Sabarich at the Paris Conservatoire from 1951, receiving a *premier prix* for the cornet and for the trumpet after his first and second years of study. He played with the Lamoureux Orchestra (1953–60), the Radio France PO (1953–62) and the Opéra-Comique (1962–7). He won first prizes in the international contests in Geneva in 1955 and – brilliantly – in Munich in 1963. This was the start of an unprecedented international career as a soloist. In particular, he achieved great success through the use of the four-valved piccolo B♭/A trumpet, made under his supervision by Selmer. In 1967 he succeeded Sabarich at the Paris Conservatoire, where he taught until 1978.

André combines the gifts of endurance, range and musicality with the charisma of the true soloist. His recordings comprise the entire trumpet repertory, and include many transcriptions of Baroque flute, oboe or violin works. Many composers, including Jolivet, Tomasi, Blacher, Chaynes, Krol, Langlais, Tisné and Zbinden, have written for him. His brother Raymond (*b* 22 Dec 1941) is also a trumpeter and has toured with him.

EDWARD H. TARR

Andrea degli Organi [Andrea de' Servi]. *See* ANDREAS DE FLORENTIA.

Andreae, Carolus [Endres, Enders, Karl] (*d* ?Irsee, nr Kaufbeuren, Swabia, 1627). German composer. He was a monk at the Benedictine abbey at Irsee and was its abbot from 1610 until his death. He helped, together with Johann Seytz and Gregor Stemmelius, to make the abbey a leading south German centre for the cultivation of liturgical music in the early 17th century, and a number of vocal works and transcriptions for organ by him survive in manuscript. Most are signed 'FCA' ('Frater Carolus Andreae') and must therefore date from before his appointment as abbot. A slightly later work, however, is the *Magnificat*, which he intended for the fine new organ which he had installed shortly after becoming abbot, probably in 1612. Some of his music, such as the eight-part *Te Deum*, is written in the Venetian polychoral style. (U. Kornmüller: *Die Pflege der Musik im Benedictiner-Orden*, Würzburg and Vienna, 1881)

FRIEDRICH BASER

Andreae, Conrad. *See* VETTER, CONRAD.

Andreae, Hieronymus. *See* FORMSCHNEIDER, HIERONYMUS.

Andreae, Volkmar (*b* Berne, 5 July 1879; *d* Zürich, 18 June 1962). Swiss conductor and composer. He spent his school years in Berne, studying the piano and composition with Karl Munzinger, and was then a pupil of Franz Wüllner in Cologne (1897–1900), where his first compositions were performed. There followed a one-year engagement as répétiteur at the Munich Hofoper, and in 1902 he settled in Zürich, where he was to dominate musical life for the next half-century. He was appointed director of the Zürich Gemischter Chor (1902), the Winterthur Stadtsängerverein (1902) and the Zürich Männerchor (1904), but his most important position was as conductor of the Tonhalle Orchestra (1906–49). In addition he directed the Zürich Conservatory (1914–41), and held classes at the university (where he received an honorary doctorate in 1914). He also served as its musical director (1915) and conducted the Studentengesangverein (1914–16). In 1920 he was elected president of the Schweizerischer Tonkünstlerverein, and was made first honorary president of the society on his retirement in 1925.

The extent of Andreae's international reputation is indicated by the offer to him of the directorship of the New York PO on Mahler's death, and by his activities as a guest conductor of leading European orchestras. In 1923 he made a tour of Italy with the Berlin PO, and subsequently was permanent guest conductor of the

Vienna PO, receiving the Nicolai Medal. The composers he particularly promoted in Zürich were Berlioz, Debussy, Ravel, Mahler, Strauss and Reger, and in later years he was an outstanding advocate of Bruckner's music; he also supported such contemporaries as Stravinsky, Hindemith, Honegger and Schoeck, and was closely associated with Busoni, especially during the latter's exile in Switzerland during World War I. As most of his compositions arose from his conducting associations, male choruses form a large part of his output. During his career he gradually reduced his creative work until he gave up composing altogether. Earlier works are rooted in the Romantic tradition, with Straussian orchestration, while the later music, still tonal, has a refined, transparent sound.

WORKS
(*selective list*)

STAGE AND VOCAL

Ratcliff (op, after H. Heine), op.25, Duisburg, 1914; Abenteuer des Casanova (4 1-act ops, F. Lion), op.34, Dresden 1924; La cité sur la montagne (incid music to Festspiel, G. de Reynold), op.41, Geneva, 1942

Vocal-orch: Das Göttliche (J.W. von Goethe), op.2, T, chorus, orch, perf. 1900; Charons Nachen (J.V. Widmann), op.3, solo vv, chorus, orch, perf. 1901; Sinfonische Fantasie (W. Schaedelin), op.7, T, T chorus, orch, org, perf. 1903; Vater unser, op.19, Mez/Bar, chorus, org; Magentalied, op.28, male vv, orch (1917)

Male choruses: Waldesfriede und Graf Isenburg (M. Wetter), op.6; 4 Männerchöre (M. Lienert), op.13; 3 Männerchöre (G. Keller), op.22; Suite (E. Zahn), op.38, perf. 1935; arrs.

Solo vocal: Der Spielmann (Wetter), 4 Lieder, op.5 (1903); 6 Gedichte (C.F. Meyer), op.10 (1906); 4 Gedichte (H. Hesse), op.23 (1913); Li-tai-pe (Chin., trans. Klabund), 8 Lieder, op.37, T, orch, perf. 1931

PETER ROSS/ERIK LEVI

Andreas, Magister **Phillipotus** (*fl* late 14th century). Theorist. He is named only in the manuscript *US-Cn* 54.1, copied at Pavia in 1391. This manuscript attributes to him two widely distributed theoretical works: *De contrapuncto quedam regule utiles* (ed. in *CoussemakerS*, iii, 116–18), a set of contrapuntal instructions written in 26 pseudo-hexameters and found in seven further sources (see Sachs, 215 and 87), of which only two include the musical examples printed in *CoussemakerS*; and the *Tractatus figurarum* (ed. Schreur), known from 12 further copies. Both treatises appear elsewhere with ascriptions or implied ascriptions to Philippus de Caserta. While the *Tractatus figurarum* is also ascribed to Egidius de Murino, the stemmatic arguments of Arlt effectively rule out his authorship. Despite the arguments of Arlt and Schreur, it seems hard to resist the suggestion of Strohm (following Pirrotta) that both treatises are in fact by Philippus de Caserta. Coussemaker's suggestion (*CoussemakerS*, iii, XXII) that he could be identified with the composer Andreas de Florentia has found no further support.

DAVID FALLOWS

Andreas Contredit. *See* ANDRIEU CONTREDIT D'ARRAS.

Andreas de Florentia [Magister Frater Andreas Horghanista de Florentia; Andrea degli Organi; Frate Andrea de' Servi, Fra Andrea di Giovanni] (*d c*1415). Italian composer and organist. A relatively large amount of information about Andreas's life is available, because of the important position he held in the Order of the Servi di Maria, which he entered in 1375. From 1380 until 1397, with interruptions, he was prior of the monastery of the SS Annunziata in Florence; in 1393 he was prior in Pistoia and from 1407 to 1410 he was the leader of the Tuscan Servites. Andreas was closely associated with Landini and worked with him on the construction of the organ at both the SS Annunziata and Florence Cathedral, in 1379 and in 1387. Moreover, the names 'Cosa' and 'Sandra', which occur in ballata texts that he himself probably set to music and in works by Landini (and Paolo da Firenze), point to these composers sharing a social environment. Andreas was the teacher of the Florentine composer Bonaiuto Corsini who is known for several ballatas. It is uncertain whether a Maestro Andrea who was commissioned in 1382 with the construction of a new organ in Rieti (to the north-east of Rome) is identical with the composer.

18 two-voice and 12 three-voice ballatas and possibly a French ballade by Andreas have survived. (*Girand'un bel falcon*, earlier attributed to Andreas, is by Paolo da Firenze; see *I-Fc* 2211 fol.101v/102). The main source for his work is the Squarcialupi Codex (*I-Fl* 87, containing 29 works). The manuscript includes a portrait of an organ player, presumed to be Andreas (see illustration). The texts, most of which were probably written by Andreas himself, are either love songs or moralizing and sometimes polemic poems.

With his exclusive cultivation of the ballata, Andreas belongs among the representatives of the last Florentine generation. And yet in most of the two-voice pieces that have text supplied for both voices and in which there is simultaneous syllabic articulation, Andreas adheres to the older tradition of the madrigal. On the other hand, in the three-voice ballatas all the techniques of textual underlay current at that time are to be found; in seven of these – perhaps under French influence – the *piedi* sections have a double cadence (as opposed to three in the two-voice

Miniature thought to portray Andreas de Florentia: detail of initial from the Squarcialupi Codex (I-Fl Med.Pal.87, 184v)

ballatas), and in four works the cadences of *ripresa* and *piedi* are identical (as also seen in some works by Landini). The contratenor appears both as a *secundus cantus* (cf Landini) and as a true contratenor. The short imitations, usually restricted to single words or phrases, are a striking feature of Andreas's work. They give the pieces a lively, restless character, enhanced by the short metrical schemes used, which stands in contrast to the balanced style of Landini. Typical of Andreas's often original and versatile manner of writing are *Dal traditor non si può*, a ballata-caccia, and also *Astio non morì mai*, with its pes-like tenor and with voice-exchange in the upper voices of the *ripresa*.

BALLATAS

Amor, già lungo tempo, 3vv (Senhal: 'Nencia')
Amor, i' mi lamento (M. Griffioni), 2vv (Senhal: 'Tadea')
Astio non morì mai, 3vv (incipit identical with an anon. ballata in *F-Pn* it.568)
Checch'altra donna, 2vv (Senhal: 'Checca')
Cosa crudel m'ancide, 2vv (Senhal: 'Cosa'; laude: 'El cor mi si divide', 'A te ritorna piangendo')
Dal traditor non si può, 3vv (ballata-caccia)
Deh, che farò, signore?, 3vv
Deh, quanto fa gran mal, 2vv
Dolce speranza, 2vv
Donna, bench'i' mi parta, 3vv
Donna, se per te moro, 2vv (Senhal: ?'Checca')
Donna, s'e raçi, 2vv (also in *F-Pn* it.568)
E più begli occhi, 3vv (text incipit from a canzone of C. da Pistoia; Senhal: 'Sandra')
Fili paion di fin or, 2vv (Senhal: 'Filippa')
Fugite Gianni Bacco, 2vv (text about a composer charged with plagiarism)
La divina giustizia, 2vv (Senhal: 'Giovanna')
Morrà la 'nvidia, 2vv
Non già per mie fallir, 2vv
Non isperi mercede, 2vv
Non più doglia ebbe Dido, 3vv
Perché languir mi fai, 2vv
Perché veder non posso, 3vv
Per fanciulleza tenera, 3vv
Per la vera onestà, 2vv
Pianto non partirà, 3vv
Presunzion da ignoranza, 3vv
Questa legiadra luce, 2vv
Sia quel ch'esser pò, 2vv (unicum in *GB-Lbl* 29987), not in W
Sotto candido vel, 3vv
Voi, non voi loro, 2vv

DOUBTFUL WORKS

KURT VON FISCHER/GIANLUCA D'AGOSTINO

Andreas Sylvanus [Walder] (*fl* Heidelberg, 1511). German composer. He was a colleague of Sebastian Virdung at Heidelberg, and Virdung's treatise *Musica getutscht* (1511) is presented as a dialogue between the author and Andreas. The sole source of his music is Glareanus' *Dodecachordon*, which includes the Kyrie and Osanna of his *Missa Malheur me bat*. He is not to be confused with Andreas De Silva.

□

Andrée, Elfrida (*b* Visby, 19 Feb 1841; *d* Göteborg, 11 Jan 1929). Swedish composer, conductor and organist. She was the first woman organist and telegraphist in Sweden, the first to compose chamber and orchestral music and the first to conduct a symphony orchestra. Initially taught music by her father, in 1855 Andrée went to Stockholm and in 1857 passed her examination as the first woman

organist in Sweden. In 1860 she studied composition with Ludvig Norman and in 1870 with Niels Gade in Copenhagen. She brought about the revision of a law enabling women to hold the office of organist, and in 1861 became an organist in Stockholm. In 1867 she moved to Göteborg, where she was organist at the cathedral until she died. She performed frequently and conducted performances of her works for choir and orchestra. In 1897 she took charge of the so-called Labour Concerts, for which she organized about 800 concerts. She became a member of the Swedish Royal Academy of Music in 1879.

Andrée's chamber and symphonic music is closely related to that of Norman and Gade. The influence of Mendelssohn and also the French Romantic organ school is evident in her first Organ Symphony. Her music was performed mostly in Göteborg. *Snöfrid* (1879), a ballad for soloists, mixed choir and orchestra, was performed several times at the turn of the century, and the Organ Symphony has always been highly esteemed by organists. During the 1980s new interest in her music arose, and her chamber music is widely performed in Scandinavia.

WORKS

EVA ÖHRSTRÖM

Andreini, Giovanni [Giovan] **Battista** [Giambattista] (*b* Florence, 9 Feb 1576; *d* Reggio nell'Emilia, 7 June 1654). Italian actor, dramatist and poet. He was the son of Isabella and Francesco Andreini, famous *commedia dell'arte* players, and was educated at the University of Bologna. In 1594, taking the stage name 'Lelio', he joined the Compagnia dei Gelosi, the comic troupe to which his parents belonged, and in 1601 he married the actress and singer Virginia Ramponi ('La Florinda'). By the time the Gelosi disbanded in 1604 he had already formed his own company, the Compagnia dei Fedeli, which served the Medici and Gonzaga families, with brief interruptions, until it disbanded, playing throughout northern and central Italy. In 1613 Maria de' Medici invited the Fedeli to Paris. Their visit, which lasted from September 1613 to July 1614, was so successful that they performed there again from January 1621 to March 1622, probably December 1622 to March 1623 and December 1623 to October 1625. In 1627 they visited Prague and in 1628 Vienna. Virginia died in about 1631, and soon after Andreini married Virginia Rotari ('Lidia'), an actress in his company for whom he had harboured an ill-concealed passion since about 1620. In 1643 the Fedeli returned to Paris, where they remained for four years; they gave Luigi Rossi's *Orfeo* in 1647. They disbanded in 1654, after Andreini's death.

Andreini was a prolific writer. In 1604 he became a member of the Accademia degli Spensierati of Florence. His defences of the dramatic arts, *La saggia egiziana* (Florence, 1604), *Prologo in dialogo fra Momo e la Verità* (Ferrara, 1612), *La Ferza* (Paris, 1625) and *Lo specchio* (Paris, 1625), reconcile early modern theatrical practices with Thomist theory and post-tridentine Christian morality. A number of his stage works straddle the borderline between spoken drama and opera. He wrote in the style of late Renaissance *dramma per musica* and some of his plays emulate other works in this style. *La Centaura* (Paris, 1622), which marries comedy and pastoral with tragedy, contains imitations of Rinuccini's *Euridice* and the younger Striggio's *Orfeo*, as well as substantial provision for musical performance, including a sung prologue, finale, eight choruses and scenes sung in *stile recitativo*. Andreini described his comedy *La Ferinda* (also Paris, 1622), which he dedicated to Cardinal Mazarin in 1647, as a 'commedietta musicale', and his *Ismenia* (Bologna, 1639) as an 'opera reale e pastorale'. His other plays – tragedies and comedies, as well as pastoral dramas – call for songs and dances, many of them including choruses, sung prologues, finales and other musical scenes.

Andreini wrote two five-act sacred plays, which are well on the way to being operas. Both are composed in verse with choruses and other music-making interspersed throughout the drama. *L'Adamo* (Milan, 1613; ed. E. Allodoli, Lanciano, 1913), which inspired Milton's *Paradise Lost*, features choruses of angels, infernal spirits and sprites, in addition to other characters who sing. Music for parts of *La Maddalena* (Mantua, 1617) was composed by Monteverdi, Effrem, Salamone Rossi and Ghivizzani for a performance at Mantua in 1617; the music was published by Andreini as *Musiche de alcuni eccellentissimi musici ... per La Maddalena* (Venice, 1617). Andreini based this 'sacra rappresentatione' on his poem of the same name (Venice, 1610); a revised three-act version, *La Maddalena lasciva e penitente*, appeared at Milan in 1652. In his works Andreini combined performing practices of the *commedia dell'arte* with contemporary 'literary' drama. He helped to pave the way for Italian opera in France and for the *comédie-ballets* of Molière and Lully.

COLIN TIMMS (with ANNE MACNEIL)

Andreini [née Canali], **Isabella** (*b* Padua, 1562; *d* Lyons, 10 June 1604). Italian actor, dramatist and poet, mother of G.B. Andreini. After her marriage in the late 1570s to Francesco Andreini, they joined the renowned Compagnia dei Gelosi, assuming the roles of *prima donna innamorata* and Lelio *innamorato*. They were favoured performers at the courts of Tuscany, Ferrara, Mantua and France. Isabella led the Gelosi from the 1580s until her death (when it disbanded), negotiating patronage and accepting payments on its behalf. In 1589 she performed alongside her rival Vittoria Piisimi at the wedding celebrations in Florence for Ferdinando de' Medici and Christine of Lorraine; Pavoni described the enthusiasm of the audience for Isabella's performance of the comedy *La pazzia d'Isabella*, during which she sang *canzonette alla francese*. Her talents as an author were also widely praised and she was accepted into the Accademia degli Intenti of Pavia in 1601. Of her nearly 500 lyric poems (two books of which were published in Milan in 1601 and 1605), over 30 were set to music by, among others, India, Merula, Cifra and G.F. Anerio. Her *Mirtilla pastorale* (Verona, 1588, reprinted many times; ed. M.L. Doglio, Lucca, 1995) is the first pastoral play known to have been written by a woman. It was heralded by Angelo Ingegneri (1598) as a model of pastoral composition based on Tasso's *Aminta* (*c*1572). Her *Myrtille, bergerie* was published in Paris and her *Lettere* in Venice in 1602, and a collection of fragments of other writings appeared posthumously in Turin in 1620.

ANNE MACNEIL

Andreini [née Ramponi], **Virginia** ['La Florinda'] (*b* Milan, 1 Jan 1583; *d* Bologna, 1629–30). Italian actor, singer and poet, first wife of G.B. Andreini. When they married in 1601, Virginia and her husband formed the Compagnia del Fedeli, in which she assumed the role of *prima donna innamorata*. Her stage name derived from her performance in Giovanni Battista's tragedy *La Florinda* (1603, Florence). In spring 1608 she replaced Caterina Martinelli as the protagonist of Monteverdi's *Arianna* and took part in his *Ballo delle ingrate* during the wedding celebrations for Prince Francesco Gonzaga and Margherita of Savoy; according to Antonio Costantini (1608), she learnt the part for *Arianna* in six days. She also sang the title role in G.C. Monteverdi's opera *Il rapimento di Proserpina* during the festivities for the birth of the Infanta Margherita Gonzaga in 1611. Contemporary accounts suggest that her performance in *Arianna* was exceptionally powerful, and her talents as a singer were recalled with praise by Bonini in his *Discorsi e regole sovra la musica*. Her career was marred by her rivalry with Orsola Cecchini ('La Flaminia' in the Compagnia degli Accesi) and by her husband's longstanding affair with Virginia Rotari ('Lidia'), whom he married after Virginia's death. She died some time during the plague in Bologna.

TIM CARTER with ANNE MACNEIL

Andreis, Josip (*b* Split, 19 March 1909; *d* Zagreb, 16 Jan 1982). Croatian musicologist. He studied Romance languages at the universities in Zagreb and Rome and graduated in 1931. Between 1931 and 1941 he was a schoolmaster in Šibenik, Hercegnovi, Zagreb and Split, where he also studied composition privately. In order to complete a formal university course in music, he then entered the Academy of Music in Zagreb, although he had already written several articles and two books. In 1945 he became professor of the history of music at the Academy of Music and head of its musicology department; he occupied these positions until his retirement in 1972. In 1950–51 he was the editor of the musical periodical *Muzičke novine*, and between 1958 and 1963 general editor of *Muzička enciklopedija*, the first publication of its kind in Yugoslavia; between 1965 and 1969 he edited the proceedings of the music section of the Croatian (formerly Yugoslav) Academy of Arts and Sciences, and in 1969 founded and edited the first two volumes of the musicological annual *Arti musices*. He was a member of the Yugoslav Academy of Arts and Sciences.

Andreis's first significant contribution to Yugoslav musicology was a comprehensive history of music, completed before he entered the Academy of Music. Between 1951 and 1954 he produced a much bigger work on the same subject. Both were of pioneering significance in Yugoslavia; the latter book has established itself as the standard history of music in Croatian. His interests were always divided between musical lexicography and general history of music on the one hand and, on the other, the history of music in Croatia, where his work centred on the early Baroque and the 19th century. An erudite scholar, well versed in the literature and art of Italy and France, he left an important mark on the development of musicology in Yugoslavia and especially in Croatia since World War II.

BOJAN BUJIC

Andreoli. Italian family of musicians.

(1) **Evangelista Andreoli (i)** (*b* Disvetro, Modena, 27 June 1810; *d* Mirandola, Modena, 16 June 1875). Pianist, organist and teacher. He taught at the music school in Mirandola where he spent his entire life. Crippled in both legs, he constructed a device which enabled him to play the organ pedal-board. He should not be confused with his son Evangelista (ii) (*b* Mirandola, 7 September 1845; *d* Modena, 15 May 1867), also a pianist and teacher.

(2) **Guglielmo Andreoli (i)** (*b* Mirandola, 22 April 1835; *d* Nice, 13 March 1860). Pianist and composer, son of (1) Evangelista Andreoli (i). A precocious music student, he studied first with his father and later with Antonio Angeleri at the Milan Conservatory (1847–53). From 1854 he was active as a concert pianist in Europe, principally in London, where he lived from 1856 to 1859. Subsequently he played in Italy, Paris and Nice. He was renowned for his taste, the delicacy of his touch and his virtuosity.

(3) **Carlo Andreoli** (*b* Mirandola, 8 Jan 1840; *d* Reggio nell'Emilia, 22 Jan 1908). Pianist, composer and conductor, son of (1) Evangelista Andreoli (i). The most celebrated member of the family, he studied with his father and with Angeleri at the Milan Conservatory (1852–8), where he received a piano diploma. In December 1858 he made his début as a concert artist in the Teatro di S Radegonda in Milan. He made successful tours of Italy and gave concerts in England, France, Germany and Austria with such artists as Piatti, Bazzini, Bottesini, Alard, Borghi Mamo, Joachim and Sivori. From 1871 he taught the piano at the Milan Conservatory. He founded the Società dei Concerti Sinfonici Popolari (1877), which he and his younger brother (4) Guglielmo Andreoli (ii) directed for ten years, giving 96 concerts altogether. He became insane in 1891 and four years later was committed to an asylum in Reggio nell'Emilia, where he died. A bust of him, with an epigraph by Boito, was placed in the Milan Conservatory in 1910.

As a pianist Andreoli had a precise technique and an exceptional singing tone. He was an outstanding representative of the Milanese piano school and he helped popularize German 18th- and 19th-century instrumental music in Italy, being among the first Italians to play Bach, Beethoven and the Romantics. His compositions show the influence of Chopin, Liszt, Mendelssohn and Schubert; his style is virtuoso and descriptive, rich in harmonic effects. Besides dances, military marches, nocturnes, songs without words, études and character pieces, he wrote a set of scenes – *Le stagioni* (1888). He also composed songs, cello sonatas, trios and other chamber works; he published a piano tutor (with Angeleri) and prepared editions of the keyboard music of Bach, Beethoven, Chopin and Clementi.

(4) **Guglielmo Andreoli (ii)** (*b* Mirandola, 9 Jan 1862; *d* Modena, 26 April 1932). Pianist, violinist, conductor and composer, son of (1) Evangelista Andreoli (i). He received his first musical instruction from his father, and from 1876 studied the organ with Polibio Fumagalli, the violin with G. Rampazzini and composition with Bazzini at the Milan Conservatory. He taught harmony, counterpoint and (from 1900) the piano at the conservatory, where his pupils included Victor De Sabata and Franco Vittadini. From 1878 to 1886 he took an active part in the Società dei Concerti Sinfonici Popolari and directed the concerts of the Società del Quartetto; he was a member of the Campanari Quartet for three years. His works include a *Fantasia sinfonica* and two overtures for orchestra, a requiem, a string quartet, short piano pieces, and songs. He also published *Manuale d'armonia* (with Edgardo Codazzi, Milan, 1898) and prepared editions of piano music of Beethoven, Chopin, Heller, Mendelssohn, Moscheles, Raff and Weber.

FRANCESCO BUSSI

Andreoni, Giovanni Battista (*b* Lucca; *d* Lucca, 23 April 1797). Italian mezzo-soprano castrato. In 1736 he was appointed first soprano to the Palatine Chapel in Lucca. He sang in two operas (including Hasse's *Demetrio*) at Rimini in 1737, at Venice in 1738–9 in operas by Pergolesi, Lampugnani, Hasse and Porpora, and in Reggio nell'Emilia in 1739. Lord Middlesex engaged him for his experimental opera season at London's New Theatre in the Haymarket (1739–40); he appeared in three operas. He returned the two following years, singing in Handel's final, unsuccessful opera season at Lincoln's Inn Fields

(1740–41), and in Lord Middlesex's King's Theatre company as second man to Monticelli, mostly in pasticcios (1741–42). Under Handel he created the parts of Tirinthus in *Imeneo* and Ulysses in *Deidamia* and sang in revivals of *L'Allegro*, *Acis and Galatea*, *Saul* and probably *Parnasso in festa*. His roles in the English works were translated into Italian. Burney called him 'a good singer of the second class'; his Handel parts indicate a capable technique and a voice and compass (*b* to *a''*) similar to Carestini's. He was immensely fat, and according to Horace Mann had no trill.

Andreoni sang at Florence in 1742–3 and 1747–8 (Lampugnani's *L'olimpiade* and *Tamerlano*) and many other Italian cities, including Lucca, Palermo, Livorno and Rome between 1744 and 1754. In Spain he was robbed by a servant, which so disgusted him that he went to Rome and was ordained priest. His last known appearances were at Modena in 1755 (Perez's *Zenobia*) and Mantua in 1757 (Giuseppe Carcani's *Olimpiade*). Some arias attributed to Andreoni are in the library of the Gesellschaft der Musikfreunde, Vienna.

WINTON DEAN

Andreozzi, Gaetano [Jomellini] (*b* Aversa, 22 May 1755; *d* Paris, 21/24 Dec 1826). Italian composer. He studied singing, harmony and counterpoint with Fenaroli and P.A. Gallo at the Conservatorio di S Maria di Loreto, Naples. He was called 'Jommellini' after his maternal uncle, Niccolò Jommelli, with whom he also studied. Following his début work, the oratorio *Giefte* (1779, Rome), he established himself as a regular contributor of comic operas for Florence and Venice, but he did not write an *opera seria* for Venice until 1788. After Carnival 1784 he travelled to St Petersburg, where his *Didone abbandonata* was performed (*MooserA*). During his visit he may also have written *Giasone e Medea* (Florimo), though he must soon have been back in Naples, for he wrote an opera for Carnival 1785. The following spring he was again in Florence, where he married his student, the soprano Anna de Santi (*b* Florence, *c*1772; *d* nr Dresden, 2 June 1802). She had made her début as prima donna at the Teatro S Benedetto in Venice during the carnival season of 1786 and thereafter pursued a successful career, occasionally as the principal in her husband's operas. As well as singing in many Italian operatic centres including Naples and Palermo, she appeared for a season in Madrid (May–December 1791).

In 1786 Andreozzi wrote his first version of *Catone in Utica*, which enjoyed a number of revivals. Equally successful was his *Agesilao* (1788, Venice), which established his reputation as a composer of *opera seria*; thereafter his serious operas outnumber his comic works by more than three to one. For the next seven years he wrote operas on new texts by all the most important librettists of the period and for all the major operatic centres. He was also invited to revise successful operas by others. For most of his career he worked in northern Italy, returning frequently to Naples to compose operas. Beginning in 1790, he was called upon to write an occasional carnival opera for Rome. He also probably accompanied his wife on her Madrid trip, during which his *Angelica e Medoro* and *Didone abbandonata* were given at the Caños del Peral, although there is no evidence to support Fétis's claim that Andreozzi wrote a new opera for the city, *Gustavo, re di Svezia*. His Lenten opera, *Saulle* (1794, Naples), enjoyed numerous revivals throughout the first decade of the 19th century.

During the Napoleonic wars Andreozzi experienced a sharp decline in demand for his services. He and his wife had separated by 1801; he returned to Naples, and she accepted a contract in Dresden, where she died in a carriage accident in 1802. From January 1802 to September 1803 Andreozzi produced five new operas. When political complications attending the French occupation of Naples cut short his service as impresario at the S Carlo in 1806, he began to teach singing. In 1825, ten years after his last opera was performed in Rome, he moved to Paris, where, with the patronage of his former pupil Maria Carolina, the Duchess of Berry and daughter of King Francesco I of Naples, he was able to earn enough to assist his family, which had remained in Naples.

Andreozzi's serious operas of the late 1780s show that the move towards more ensembles and choruses and fewer arias had already begun. Some of the ensembles are conceived as arias with interjections by other characters which serve either as transitions or as commentary during the soloist's caesuras. Most of his arias are in through-composed, ternary form, in one or two tempos. There are a few minuets and an occasional shortened rondò or *dal segno* aria. Two-tempo rondòs are reserved for the principals, and shorter binary and simple ternary arias are more prevalent in the second and third acts. Extensive obbligato recitative is still reserved for the principals and does not accompany action. Andreozzi's ensembles tend to move from *largo* to *presto* in successively faster tempos. He skilfully imbued them with a sense of dramatic motion, though not in the same way as an action-filled comic finale. In his ensembles and in his choruses, which can be extensive, antiphonal pieces with solo and ensemble components, he used imitative writing and counterpoint. His sinfonias are in a single movement with two themes, a short development and a partial recapitulation; an extended crescendo and stretto articulate each section.

By the late 1790s *ABA'* aria forms almost disappeared from Andreozzi's operas. The number of arias decreased, while the number of cavatinas, choruses and ensembles increased. *Introduzioni*, scene complexes and multi-sectional, action-ensemble finales are all used. Freely constructed ensembles often contain some action and may fluctuate in the numbers of personnel. The varying components in scene complexes are tonally unified and interconnected with obbligato recitative. Choruses interact with the principals in recitative and ensemble. As a result of the fashion for tragic endings and for operas in two acts, when *Angelica e Medoro* was revived in Florence in 1792 the third act was cut so that the unhappy conclusion of Act 2 prevailed. Andreozzi's comic operas have the usual *introduzioni* and multi-sectional action-ensemble finales, as well as an additional ensemble in the middle of each act. By the mid-1790s these internal ensembles also incorporate action and become more like the finale.

Andreozzi was a skilled and original composer. He often contrasted wind and string sonorities and used solo instruments in dialogue or to provide obbligato embellishment or a simple countermelody to the voice. The English horn, clarinet and bassoon, as well as horns and oboes, heighten the effect of obbligato recitatives. His lean accompaniments often take the form of motivic, rhythmic or syncopated beat-keeping, using arpeggiated, oscillating

or repeated note figures. Simple string accompaniment for the vocal phrases are in strong contrast with motivic tutti commentaries in orchestral passages and ritornellos. Andreozzi often establishes a dialogue between voice and orchestra, and occasional examples of motivic, textural or harmonic word-painting can be found. Andreozzi's prominent use of wind instruments, crescendo passages, chromaticism, modality and disguised recapitulations, as well as his tonally unified scene complexes, all point to Jommelli's influence.

WORKS

OPERAS

L'equivoco (dg, 3), Florence, Pergola, spr. 1781, *I-Fc*
Arbace (os, G. Sertor), Livorno, S Sebastiano, aut. 1781, *P-La*; in 2 acts, Florence, Palla a Corda, spr. 1785, *I-Fc*
I pazzi per disimpegno (dg, 2, P.A. Bagliacca), Venice, S Moisè, carn. 1782
Olimpiade (os, 3, P. Metastasio), Pisa, Prini, spr. 1782
Bajazet (os, 3, A. Piovene), Florence, Pergola, carn. 1783, *Fc*
Medonte, re d'Epiro (os, G. De Gamerra), Alessandria, Civico, Oct 1783
L'amore industrioso (int, 2, G. Casorri), Florence, Palla a Corda, aut. 1783
Quello che può accadere (dg, 2), Venice, S Samuele, carn. 1784
Didone abbandonata (os, 3, Metastasio), St Petersburg, Hermitage, 1784
Giasone e Medea (os, 2), ? St Petersburg, 1785 [according to Florimo]; Naples, S Carlo, 4 Nov 1793, *Nc*
Le tre fanatiche (ob, 2, G. Palomba), Naples, Fondo, carn. 1785
Catone in Utica (os, 3, Metastasio), Cremona, Società, carn. 1786; in 2 acts, Livorno, Armeni, aut. 1789
Virginia (os, after S. Stampiglia: *La caduta dei Decemviri*), Genoa, S Agostino, carn. 1787; as La caduta dei Decemviri, Florence, Palla a Corda, spr. 1788
Agesilao, re di Sparta (os, 3, F. Ballani), Venice, S Benedetto, carn. 1788, *F-Pn*; in 2 acts, Florence, Pergola, aut. 1788, *I-Fc**, *P-La*
Arminio (os, 3, F. Moretti), Venice, S Benedetto, 7 May 1788, *F-Pn*, *P-La*
Teodelinda (os, 3, G.D. Boggio), Turin, Regio, carn. 1789, *La*
Giovanna d'Arco, ossia La pulcella d'Orléans (os, 4, A.S. Sografi), Vicenza, Nuovo, 27 June 1789
Artaserse (os, Metastasio), Livorno, Armeni, aut. 1789
La morte di Giulio Cesare (os, 3, Sertor), Rome, Argentina, carn. 1790, *I-Gl*
Il finto cieco (ob, ?Trinchera), Naples, Nuovo, 1791
Angelica e Medoro (os, 2, Sertor, after Metastasio), Florence, Intrepidi, spr. 1792
Amleto (os, 2, G.M. Foppa, after J.-F. Ducis), Padua, Nuovo, 12 June 1792, *Pl*
Gli amanti in Tempe (pastorale, 2, De Gamerra), Florence, Palla a Corda, 4 Aug 1792, *Fc*
Sofronia ed Olindo (azione tragica, 2, C. Sernicola), Naples, S Carlo, 17 Feb 1793, *Bc*, *Fc*, *Nc*; as Amelia ed Ottiero, Trieste, Regio, 7 Nov 1797
Ines de Castro (os, 2, C. Giotti), Florence, Pergola, 8 Sept 1793
Le nozze inaspettate (ob, 2), Naples, Fiorentini, 1793
Saulle (L'ombra di Samuele, ossia La morte di Saulle) (os, 2, F. Salfi), Naples, Fondo, Lent 1794, *Fc*, *Nc*
La principessa filosofa, ossia Il contravveleno (ob, 2, Sografi, after A. Moreto: *Donna Diana*), Venice, 6 Oct 1794, *Bc*; rev. as Il disprezzo vinto dal disprezzo, Naples, Fondo, 2 Aug 1795
Arsinoe (os, 2, M. Rispoli), Naples, S Carlo, 13 Aug 1795, *Nc*
Il trionfo di Arsace (os, F. Ballani), Rome, Argentina, carn. 1796, *GB-Lbl* (Act 2)
La vergine del sole (os, C.L. Rossi, after J.F. Marmontel), Palermo, S Cecilia, aut. 1797, *?F-Pn*; in 2 acts (F. Casòli), Livorno, Avvalorati, aut. 1799, *I-Fc*
La morte di Cleopatra (os, 3, G. Rossi and Sografi), Palermo, S Cecilia, 1797
Argea (os, 3, G. Boggio), Turin, Nazionale, carn. 1799
Pamela nubile (comic-serious, 2), Parma, Corte, carn. 1800, *PAc*
Sesostri (os, 2, ?A. Zeno), Naples, S Carlo, 12 Jan 1802, *GB-Lbl*, *I-Nc*
Armida e Rinaldo (os, 2, after T. Tasso: *Gerusalemme liberata*), Naples, S Carlo, 2 Sept 1802, *Nc*
Il trionfo di Alessandro (os, 2, A. Passaro), Naples, S Carlo, 1803, *Nc*
Piramo e Tisbe (os, 2, G. Schmidt), Naples, S Carlo, 30 May 1803, *Nc*
Il trionfo di Claudia (os, 2), Florence, Pergola, 8 Sept 1803, *Fc*
Sedesclavo (os, M. Prunetti), Rome, Alibert, carn. 1805
Il trionfo di Tomiri (os, F. Cammarano), Naples, S Carlo, Lent, 1807
Tutti i torti son dei mariti (burletta, 1), Florence, Cocomero, 7 June 1814
Il trionfo di Alessandro Magno il Macedone (os, Passaro), Rome, Argentina, carn. 1815

Doubtful: Gustavo, re di Svezia (os), Madrid, 1791

MARITA P. McCLYMONDS

Andrés, Juan [Andres, Giovanni] (*b* Planes, Alicante, 15 Feb 1740; *d* Rome, 12 Jan 1817). Spanish literary historian and music critic. He was professed in the Society of Jesus on 24 December 1754 and studied at Tarragona, Manresa, Gerona and Valencia from 1754 until 1763, when he was ordained a priest. Four years later, while teaching rhetoric and poetry at the University of Gandía, he was exiled with the rest of the Spanish Jesuits. He went first to Corsica, then to Italy, where he taught philosophy at Ferrara until 1773. After Clement XIV suppressed the Jesuits in 1773 Andrés devoted himself to letters and bibliography, living three years with the Bianchi at Mantua, and then travelling throughout Italy and in 1794 to Vienna. During his travels he maintained a correspondence with his brother Carlos, which was published from 1786 to 1794. The work contains much valuable material on music, particularly the third volume, which deals with Venetian conservatories, singers, opera and Greek-rite chant in 1788, and the fourth. In his magnum opus, the seven-volume universal history of literature published at Parma (1782–99, frequently re-edited and translated), he argued that Spanish–Arabic precedents determined the forms of medieval Catalan and Provençal poetry as well

as music. He was also the first to claim Arabic influence in the cantigas of Alfonso X, a thesis later developed exhaustively by Julián Ribera.

ROBERT STEVENSON

Andrésen, Ivar (Frithiof) (*b* Christiania [now Oslo], 27 July 1896; *d* Stockholm, 24 Nov 1940). Norwegian bass. He studied in Stockholm, making his début there in 1919 as the King in *Aida*. In 1925 he sang in the première of Atterberg's *The White Horse*, then joined the Dresden Staatsoper. At Bayreuth (1927–36) he sang King Mark, Gurnemanz, the Landgrave, Hunding and Titurel. He also sang at Covent Garden (1928–31), the Metropolitan (1930–32) and the Berlin Staatsoper (1934–6). In addition to Wagner, his repertory included Sarastro and Osmin, which he sang at Glyndebourne in 1935, Banquo, Padre Guardiano and Abul Hassan in Cornelius's *Barbier von Bagdad*. Andrésen's voluminous, imposing voice is preserved in extracts from many of his roles reissued on CD.

HAROLD ROSENTHAL/R

Andreví y Castellar, Francisco (*b* Sanahuja, Lérida, 7 Nov 1786; *d* Barcelona, 23 Nov 1853). Spanish choirmaster and composer. He began his musical studies in the cathedral at Seo de Urgel, where he was a choirboy for nine years. Later he moved to Barcelona for advanced study with Juan Quintana (organ) and Francisco Queralt (composition). In 1808 he entered the competition for choirmaster of Tarragona Cathedral; although he was ranked first by the examining tribunal, the chapter of the cathedral did not grant him the position. On 1 June of the same year he won the post of choirmaster of Tafalla, but turned it down to take an identical position at Segorbe Cathedral, where he remained until 1814, when he was appointed choirmaster of S María del Mar in Barcelona. In 1819 he was named choirmaster of Valencia Cathedral and in 1830 advanced to the same post at Seville Cathedral. All of these appointments were obtained by competitions. In 1831 he won the highest possible post available to a contemporary Spanish musician, that of choirmaster of the royal chapel in Madrid. In 1836 he lost this appointment for political reasons and emigrated to France; in 1839 or 1840 he became *maître de chapelle* of Bordeaux Cathedral, where he remained until 1845. Later he seems to have lived for some time in Paris, and then returned to Barcelona, becoming choirmaster of the parish church of La Merced in 1850, a post he retained until his death.

Andreví's extraordinary merit was shown by his success in all of the competitions he entered for the position of choirmaster in various cathedrals, from the one at Tarragona at the age of 22, to those for the most coveted positions in Spain.

WORKS

Pubd (Paris, n.d.): mass; 15 Lat. motets, incl. 3 Stabat mater; other Lat., Fr. and Sp. compositions
MSS: 5 masses, office and mass of the dead, TeD, Vespers, Compline, Christmas matins, 5 motets, 2 hymns, 2 litanies, Salve, Seq, 9 Lamentations, all in *E-Mn*; 4 masses, 12 pss, Tantum ergo, exercises for competitions, all *Bc*; 2 masses, ps, 2 motets, all *SC*; mass, motet, *PAL*
Orats: La dulzura de la virtud, Barcelona, before 1819; El juicio universal, Valencia, 1822
Pedagogical: *Tratado teórico práctico de armonía y composición*, 1835, *E-Mn** (Barcelona, 1848; Fr. trans., 1848)

JOSÉ LÓPEZ-CALO

Andrew of Crete [Andrew Hierosolymites; Andrew of Jerusalem] (*b* Damascus, *c*660 CE; *d* Mytilene, *c*740). Byzantine hymnographer. He was first a monk at Jerusalem and later a deacon at Constantinople; in 711/12 he became Archbishop of Crete and from that time lived at Gortina.

His homilies (more than 50, of which half remain unpublished) and hymns were probably written when he was Archbishop of Crete. He was particularly famous as a writer of hymns, although the tradition that attributes to him the invention of the KANŌN has now been discredited, since his *kanōnes* (several dozen in number) show that the genre was already fully developed. His works in this genre are remarkable for the originality of their metric and musical form and for their length. The most famous is the Great Kanōn, a penitential hymn of 250 stanzas, which is still sung during Lent. Andrew's hymns have been listed by Tomadakēs (pp.206–9); some may be found in the Greek liturgical books (mēnaia, triōdion and pentēkostarion).

ENRICA FOLLIERI

Andrews, Ellen. The name under which JANET PATEY made her singing début.

Andrews, H(erbert) K(ennedy) (*b* Comber, Co. Down, 10 Aug 1904; *d* Oxford, 10 Oct 1965). Northern Irish music scholar, teacher, organist, composer and editor. He went to Bedford School, and studied at the RCM in London, Trinity College, Dublin, and New College, Oxford, gaining doctorates of music at both universities. In 1938, after four years as organist and choirmaster at Beverley Minster, he moved to a similar position at New College. Thereafter, he lived and worked in Oxford, where he was a university lecturer in music and a Fellow of New College, and later of Balliol. He also taught at the RCM.

Andrews published three books, various articles (including contributions to the fifth edition of *Grove's Dictionary of Music*), reviews, and several motets, services and songs. *The Oxford Harmony*, vol.ii, traces the development of chromatic harmony through standard repertory works and relates this to techniques of composition. The opening chapters of *An Introduction to the Technique of Palestrina* and *The Techniques of Byrd's Vocal Polyphony* can be accepted as standard – and very lucid – expositions of the complex problems of modality and the mensural and proportional time systems. The latter book is particularly valuable as a comparative study of the development of polyphonic language during the 16th century.

PETER CLULOW

Andrews, Joseph King (*b* London, *c*1820; *d* Hull, 5 Nov 1896). English organ builder. With James Alderson Forster he founded the firm FORSTER & ANDREWS.

Andrews, Dame **Julie** [Wells, Julia Elizabeth] (*b* Walton-on-Thames, 1 Oct 1935). English singer and actress. Her prodigious talents as singer and dancer were recognized early on by her mother (Barbara Morris Wells, a pianist), and stepfather (Ted Andrews, a Canadian vaudeville performer). After vocal lessons with Lilian Stiles-Allen and sporadic appearances in her parents' act, she made her solo début at the age of 12 in the *Starlight Roof* revue (1947), singing 'Je suis Titania' from Ambroise Thomas' *Mignon*. She repeated this feat at the Royal Command Performance of 1948.

Following engagements on BBC radio ('Educating Archie', 1950–52) and in Christmas pantomimes, she was asked to play the female lead in the Broadway production of Sandy Wilson's West End musical *The Boy Friend* (1954). This led to her portrayal on Broadway of Eliza Doolittle in *My Fair Lady* (1956), a role she repeated in London in 1958 and which confirmed her pre-eminence as a singing actress on both sides of the Atlantic. Her performance in *Camelot* (1960) was also highly praised, as were her television appearances in Maxwell Anderson's *High Tor* (1957, with Bing Crosby), Rodgers and Hammerstein's *Cinderella* (1957), and *Julie and Carol at Carnegie Hall* (1962, with Carol Burnett), in which her boisterous duets with Burnett went some way towards deflating her image as a prim, perfect Englishwoman and allowed her to show off her comedic timing. However, the screen musicals *Mary Poppins* (1964; Academy Award for Best Actress) and *The Sound of Music* (1965), both of which featured her as an angelic governess, made her an international icon of purity and goodness, and, less fortunately, a victim of typecasting and critical backlash.

Her next screen musical, the 1920s homage *Thoroughly Modern Millie* (1967), was at least a financial success; *Star!* (1968), a biographical film about Gertrude Lawrence, and *Darling Lili* (1970), a World War I spy farce, were relative failures. The last of these was the first of many collaborations with the director Blake Edwards, whom she married in 1969 after divorcing her first husband, set designer Tony Walton. After this she concentrated on dramatic roles, television work, concerts and recordings. Her last screen musical was *Victor/Victoria* (1980); an acclaimed return to the New York stage (off-Broadway) in the Sondheim revue *Putting it Together* (1993) paved the way for a staged version of *Victor/Victoria* (1995). Rising above its second-rate material, Andrews subsequently made headlines when she refused a Tony nomination for her work, protesting the show's absence from other award categories.

In her prime, Andrews was the best-known example of the operetta-rooted Broadway soprano; her voice is basically light, with head voice often used throughout her range, although she can use chest voice for dramatic effect, and in general her lower register has a pleasing edge. An excellent sense of pitch, clear diction and conversational phrasing make her still one of the most distinctive of Broadway and Hollywood singers.

HOWARD GOLDSTEIN

Andrews Sisters. American vocal trio. It was formed in 1932 by the sisters LaVerne (*b* Minneapolis, 6 July 1915; *d* Brentwood, CA, 8 May 1967), Maxene (Maxine) (*b* Minneapolis, 3 Jan 1918; *d* Hyannis, MA, 21 Oct 1995) and Patti (Patricia) (*b* Minneapolis, 16 Feb 1920) Andrews. They began performing in vaudeville houses in the Midwest with the Larry Rich Orchestra in 1932, and first achieved national prominence with a version of *Bei mir bist du schön* in 1937. They made frequent radio appearances in the late 1930s and 40s, including regular performances with the Glenn Miller Orchestra; they acted in 16 films (1940–48), often cast as themselves; they made nationwide tours; and they produced a steady stream of popular song recordings, some with Bing Crosby and Guy Lombardo. Among the most popular of their recordings

were *Beer Barrel Polka* (1939), *In Apple Blossom Time* (1940), *Boogie Woogie Bugle Boy* (1941), *Don't sit under the apple tree* (1942) and *Rum and Coca-Cola* (1944).

The Andrews Sisters began by emulating their idols the Boswell Sisters of New Orleans and first achieved success with settings in close harmony that had a dixieland flavour; Patti sang lead soprano, Maxene second soprano and LaVerne alto. They went on to embrace all the current strains of popular song – the ballad of the swing era, boogie woogie, South American dance songs and novelty songs. Their singing presented a generally sweet and optimistic mood and exhibited a strong sense of ensemble and swing; improvisation played only a small role and was usually confined to Patti's solos.

The retirement of the Andrews Sisters in the mid-1950s, caused by the changing temper of popular music and Patti's attempt at a solo career, was short-lived, and from the late 1950s until LaVerne's death in 1967 they performed in night clubs. Bette Midler's unabashed imitation of *Boogie Woogie Bugle Boy* in 1973 sparked a renewal of interest in their recordings, and Patti and Maxene, with a substitute for LaVerne, starred in the nostalgic Broadway musical *Over There* (1974).

MICHAEL J. BUDDS

Andreyanova, Yelena Ivanovna (*b* St Petersburg, 13 July 1819; *d* Paris 26 Oct 1857). Russian dancer. *See* BALLET, §2(ii).

Andreyev, Vasily Vasil'yevich (*b* Bezhetsk, 3/15 Jan 1861; *d* Petrograd, 26 Dec 1918). Russian balalaika player. He was largely responsible for improving the design of the balalaika, domra and gusli, and at the end of 1887 founded in St Petersburg an orchestra of Russian folk instruments. With the orchestra he made successful tours of Russia, Germany, France, England, Canada and the USA. While he did much to awaken the interest of his contemporaries in Russian folk instruments, Andreyev's combination of Russian folk instruments and the Western symphony orchestra was by no means universally acclaimed: Rinsky-Korsakov abandoned the idea of balalaikas in the score of *Kitezh* after the first rehearsal, Balakirev and Stasov despised the 'pseudo-Russian' combination, but Glazunov decided to write for it his Russian Phantasy (1906). Under Andreyev's direction ensembles of folk instruments were established in schools and in the army, and this tradition later made folk orchestras a vital part of official Soviet music. He made many arrangements of folksongs for his orchestra, and composed about 40 pieces, mostly waltzes, for the balalaika or balalaika ensemble. He wrote essays on Russian folk music and folk instruments, and a textbook on the balalaika.

JENNIFER SPENCER/MARINA FROLOVA-WALKER

Andrez, Benoit (*b* Liège, 1718/19; *d* Liège, 12 Jan 1804). Flemish music engraver and publisher. His publications, only rarely dated, bear the address 'At Liège, behind St Thomas'. Some editions were engraved by Mlle Jeanne Andrez, his daughter, who continued the business until after 1809. He dealt primarily with instrumental music of the 'Belgian' composers of the period, publishing works by H. Renotte, J.-J. Robson, J.-N. Hamal, H.F. Delange, G.G. Kennis, F.-J. de Trazegnies, J.J. Renier, J.-H. Coppenneur and others. He also published music by P.C. von Camerloher and F. Schwindl, as well as Boccherini's op.4 and Beethoven's op.46. For vocal music he produced the periodical *Echo ou Journal de musique françoise, italienne* (1758–73; from 1767 titled *Journal vocal composé d'airs, duos, trios*, or *Journal de musique vocale*). Besides these, Andrez published a comedy 'interspersed with songs', *La chercheuse d'esprit* by Du Boulay, and a choral work by d'Herlois, *Hymne au printemps*. He also ventured into music theory with his publication of *Ludus melothedicus* and Morel de Lescer's *Science de la musique vocale*. With the Liège musician Jean Joiris he obtained in 1752 a licence for the publication of a *Méthode pour dresser les nouvelles contredances françoises et angloises* and he was responsible for producing six volumes of the *Recueil de contredances angloises*.

HENRI VANHULST

Andricu, Mihail G(heorghe) (*b* Bucharest, 22 Dec 1894/5 Jan 1895; *d* Bucharest, 4 Feb 1974). Romanian composer, pianist and critic. At the Bucharest Conservatory (1906–13) he studied theory with Kiriac-Georgescu, harmony and composition with Castaldi, the violin with Robert Klenck and chamber music with Dinicu; he returned there to teach chamber music (1926–48) and composition (1948–59). Andricu also spent some time studying in Paris with d'Indy and Fauré, and when he returned to Bucharest he promoted concerts of new Romanian and French chamber music. He wrote for numerous publications on subjects ranging from music aesthetics to jazz and folk music; he was made a member of the Société Française de Musicologie in 1937, and a corresponding member of the Romanian Academy in 1948. A composer of rare vitality and spontaneity, he quickly established an individual style within the Romanian tradition. The distinctive features of his music are melodies taken from folkdances or *colinde*, simple diatonic harmony sometimes coloured by modality and a preference for the woodwind in orchestral writing of great transparency. Sometimes he used folk instruments to render gypsy band sounds. He worked in all genres, but his temperament was not essentially dramatic, and he was at his best in music of serenity and moderation, although expressive contrasts are not excluded.

JOHN LADE

Andriessen. Dutch family of musicians.

(1) Willem Andriessen (*b* Haarlem, 25 Oct 1887; *d* Amsterdam, 29 March 1964). Pianist and composer. He studied at the Amsterdam Conservatory with Jean-Baptiste Charles de Pauw (piano), Julius Röntgen (ensemble playing) and Daniël de Lange and Bernard Zweers (music theory and composition). In 1908, two years after passing his final examination, he received the Outstanding Achievement Prize for piano; to mark the occasion he wrote his Piano Concerto in D♭, which he characterized as 'in brilliant piano style, influenced by the virtuoso writing of Grieg and Liszt'. Though an international career was within his grasp, his modest nature led him to appear mostly in the Netherlands, where he was in great demand especially for his performances of Bach, Mozart, Beethoven and Schumann. However, he was also an advocate of the music of his time, including Debussy, Ravel, Bartók and Pijper. He gave the Dutch première of Falla's *Noches en los jardines de España* and of a number of works by Dutch composers such as Wouter Hutschenruyter, Jan van Gilse, Gerard von Brucken Fock and Leo Michielsen.

Andriessen's playing was distinguished by its naturalness, by an avoidance of virtuosity and by a particular insight into the style and architecture of a composition. He was also a respected teacher, first at the Royal Conservatory in The Hague (1910–18), and then from 1924 at the Muziekschool in Rotterdam. He was subsequently appointed head of piano at the Amsterdam Conservatory, where from 1937 until 1953 he was also director. During the war he was one of the signatories of the petition against the establishment of the Kultuurkamer, the organization set up by the Nazis with the aim of controlling cultural life. On 13 July 1942 Andriessen was imprisoned together with his brother Hendrik, first in Haren and later in S Michielsgestel. To boost morale in the camps, he gave concerts, explaining the compositions verbally beforehand. After he was released in 1943, this form of presentation became his trademark, particularly during the youth concerts and at the concerts he gave at secondary schools throughout the country for the Stichting het Schoolconcert. In addition, for many years he

made radio broadcasts, explaining well-known masterpieces.

Under all the pressure of his performing and teaching, as well as the many committees and advisory bodies he sat on, Andriessen developed less as a composer. His small output shows, however, an awareness of the latest musical trends, as well as idiomatic instrumental writing. He received numerous Dutch and Belgian awards for his achievements.

(2) Hendrik (Franciscus) Andriessen (*b* Haarlem, 17 Sept 1892; *d* Haarlem, 12 April 1981). Composer, organist and teacher, brother of (1)Willem Andriessen. He studied the organ with Louis Robert and Jean-Baptiste Charles de Pau and composition with Bernard Zweers at the Amsterdam Conservatory, and in 1913 he succeeded to his father's appointment as organist in Haarlem. In 1927 Andriessen gave up his job as a journalist on the local Haarlem newspaper to teach composition and analysis at the Amsterdam Conservatory, concurrently teaching the organ, improvisation and Gregorian chant at the Roman Catholic School for Church Music, Utrecht. He was made organist of Utrecht Cathedral in 1934 and, three years later, director of the conservatory in that city. In 1949 he was appointed director of the Royal Conservatory in The Hague, and in 1952 he became professor of music history at Nijmegen University, a post he held until his retirement in 1963.

Andriessen could not remember a time he was not composing – he was ten when he wrote an Andante religioso for organ – and he first received attention as a composer through a number of organ works and the *Missa in honorem SS cordis* (1918). The outstanding feature of this piece was its novel treatment of the text: abandoning the conventional Romantic approach, Andriessen provided a meditative consideration of intimate, mystical simplicity. This style initiated a renewal of Dutch Catholic church music, and the large number of liturgical works that he subsequently composed are marked by the same manner of treating the text and by a devout atmosphere of glorification. In settings of the Mass he preferred cyclic forms, with all sections constructed from a single melodic idea.

During the 1930s Andriessen's orchestral works also began to attract notice. His Symphony no.1 (1930), given its première by Eduard van Beinum and the Haarlemsche Orkest-Vereeniging, has a form deviating widely from the conventional: a slow introduction precedes five short sections which merge into one another and are arranged symmetrically according to tempo and character. All of the thematic material develops from the introduction, and the orchestration is notable for surprising changes in colour and nuance. One of Andriessen's most successful orchestral pieces appeared in 1935: the Variations and Fugue on a Theme by Johann Kuhnau. It is a particularly well-balanced composition, warm in sound and poetic in atmosphere. The contemplative variation technique changes in nature with each new section; the first variation explores only the first notes of the theme, while the second develops just four notes in a scherzo-like manner. In the third variation, the theme's inversion is the basis, and the fourth surrounds the theme with full, broad chords. After a fifth variant illuminating the harmonic possibilities of the idea, the work concludes in a lively double fugue that shows Andriessen's contrapuntal mastery.

In the same year, 1935, he wrote three Rimbaud songs, the *Trois pastorales*, which underline Andriessen's links with French culture and are among the finest Dutch songs of modern times. Two important liturgical works of the period are the *Magnificat* for chorus and organ, a work of apt exaltation and gladness, and the spacious six-part *Missa diatonica*, composed wholly in the Aeolian mode.

The Second Symphony was written in 1937 and was first performed a year later by Van Beinum and the Concertgebouw Orchestra. Its first movement, Fantasia, freely uses elements of sonata form, the second is a polytonal pavane based on an earlier piano work, and the last movement is a rondo. As a whole, the work shares those qualities of poetic expressiveness, inventive melodic treatment, transparent texture and organ-influenced changes of orchestration which were typical of the First. In 1940 Andriessen produced one of his major organ works, the Sinfonia, a piece that is characteristic of his music for the instrument in its frequent passages of polytonal harmony, vigorous contrapuntal working and modal melody. Aside from the solo pieces, he later wrote an Organ Concerto (1950) in two parts: a passacaglia and a toccata built on the Phrygian tetrachord of the passacaglia theme. Andriessen himself was one of the foremost organists of his generation, particularly renowned for skills in improvisation.

During the war years he composed little, refusing to become a member of the Kultuurkamer and assisting with the 'Bruinboek' against Hitler's terror. As a result, he was relieved of almost all his public positions and his compositions were no longer allowed to be performed. From 13 July to 18 December 1942 he was imprisoned with his brother (1) Willem, first in Haaren and later in St Michielsgestel. The few works from that period, such as the *Missa 'Christus Rex'*, give powerful expression to his faith in the victory of right.

After 1945 Andriessen became more prolific in his production of sacred choral music, chamber pieces and orchestral works, the Symphony no.3 appearing in 1946. It shares with its predecessors the divergence from the classical pattern: an overture leads into a sonata-form first movement, in which all of the melodic ideas arise from a signal-like motif on the trumpet; this is followed by a sarabande and, finally, a large-scale double fugue. The orchestral Ricercare (1949) has been described by the composer as 'a summons of various themes which are

apparently conflicting, but which form a symphonic whole precisely because of their contrapuntal dialogue'. Quite different in character is the *Symphonic Etude* (1952), four linked developments of an expressive, meditative melody which approaches a 12-note row, yet without serial technique being applied in the work. The Fourth Symphony (1954) may be seen as a development from the *Etude* in its employment of a 12-note theme in a cyclic manner, never completely abandoning tonality, and in its distinct treatment of the material in each of the four movements. The first is a dramatic, impassioned Allegro, while the second is one of Andriessen's typical movements of contemplative lyricism, suggestive of the organist quietly improvising; there is great contrast between this and the capricious, rhythmically tense scherzo which follows.

The opera *Philomela*, completed in 1948, is based on an episode from Ovid's *Metamorphoses*, and is notable for the profound symphonic working of its leitmotifs. The prelude has the character of a symphonic exposition, orchestral interludes constitute developments of the ideas and the ballet forms a scherzo. The finale, where the musical developments reach their climax, is also the culmination of the drama: the gods, in compassion for the people who destroy all in their unfettered passion, change them into birds, and so the conflicts are resolved in the triumph of eternal song. Broad, flowing melody, individual modal harmony and colourful orchestration make this one of Andriessen's most striking works. It was first performed at the 1950 Holland Festival; almost two decades passed before Andriessen composed the one-act opera *De spiegel van Venetië*, concerning an incident in the life of Sweelinck.

In 1955 Andriessen suffered a heart attack, after which his health deteriorated dramatically. Subsequently, the death of his wife in 1975 affected him such that he was able to compose but little. A number of important works nevertheless appeared during this period, such as the symphonic fantasy *Mascherata* (1962), concertante works for violin, oboe and cello, three string quartets, the Second Piano Sonata (1966) and the Suite for organ (1968). In his last masses (*Missa populi*, 1959; *Missa 'Cogitationes cordis'*, 1960; *Missa ter dankzegging*, 1972), Andriessen draws congregational singing into composition. The last of these is also notable for its use of Dutch psalms in favour of liturgical texts. Andriessen was of enormous significance to Dutch musical life. His organ works and masses pointed Roman Catholic church music in a new direction, and in his songs and instrumental works he superbly combined a neo-classical feeling for structure and counterpoint with the introverted character and colour palette of French music. His biography of César Franck is authoritative. As a teacher, he left his mark on many younger composers, such as Mul, de Klerk, Strategier and his sons (3) Jurriaan and (4) Louis, although the last in particular has followed an entirely different path.

WORKS

(*selective list*)

OPERAS

Philomela (op, 3, J. Engleman, after Ovid: *Metamorphoses*), 1948, Amsterdam, Stadsschouwburg, 16 June 1950

De spiegel van Venetië [The Venetian Mirror] (chbr op, 1, H. Nolthenius), KRO, 5 Oct 1967

MASSES

Missa in honorem SS cordis, 2vv, org, 1918; Missa in festo assumptionis, 3vv, org, 1925; Missa simplex, 3vv, 1928; Missa 'Splendor veritatis', chorus, 1928; Missa pro defunctis, 3vv, org, 1931; Missa 'Sponsa Christi', 3vv, org, 1932; Missa diatonica, 6vv, 1935; Missa 'Christus Rex', chorus, male chorus, org, 1938–42; Missa 'Lauda Sion', 6vv, org, 1944; Missa 'Sanctus Gregorius Magnus', 4vv, org, 1944; Missa 'Sanctus Ludovicus', 3vv, org, 1945–7; Missa solemnis, 8vv, org, 1946; Missa 'Te Deum laudamus', 6vv, org, 1952; Festum immaculati cordis Beatae Mariae Virginis, chorus, 4 hn, 3 tpt, 3 trbn, tuba, 1954; Missa 'Fiat voluntas tua', 2vv, org, 1958; Missa populi, 1v, congregation, org, 1959; Missa 'Cogitationes cordis', 4vv, congregation, org, 1960; Missa 'In honorem St Willibrordi', 3vv, org, 1963; Missa ter dankzegging [Mass of Thanksgiving], chorus, congregation, org, 1972

OTHER SACRED CHORAL

Veni Creator Spiritus, chorus, org, 1912; Salve regina, 3vv, 1920; Tantum ergo, chorus, 1919; De die aeternitatis, 1921; Christus stervende [Christ Dying], male chorus, 1921; Tenuisti, chorus, 1922; Qui habitat, chorus, 1933; Magnificat, chorus, org, 1937; De veertien stonden [The 14 Hours] (passion-play), male chorus, str, 1943, unpubd; Te Deum laudamus, chorus, org, 1943, orchd 1946; Laudes vespertinae, chorus, org, 1944; Septem Cantica Sacra, chorus, org, 1944

Ps xlvii, chorus, 1945; Pater noster, chorus, org, 1949; Ps cl, chorus, 1958, arr. chorus, org; Veni Creator, chorus, orch, 1960, Ps ix, T, chorus, orch, 1961; Ps c, chorus, org, 1963; Lux iocunda, T, chorus, orch, 1968; Te Deum laudamus II, chorus, orch, 1968

SECULAR CHORAL

Sonnet de Pierre de Ronsard, chorus, 1917; Met kloeken arme [With a Sturdy Arm], male chorus, 1918; L'histoire de l'enfant de Dieu, S, T, chorus, orch, 1918–19; Als 't licht wordt [When Daylight Comes], chorus, 1920; September Blaas [September Blows], male chorus, 1920; De stilte [Silence], chorus, 1922; Driekoningenlied [Song of the 3 Kings], chorus, 1922; Morgenzang [Morning Song], chorus, 1922; Vrede [Peace], chorus, 1922; 2 madrigali, chorus, str, 1940; 3 liederen, chorus, 1951; Omaggio a Marenzio, chorus, 1965; Cantate, B, chorus, 3 tpt, 3 trbn, tuba, org, 1966–7; Carmen saeculare, S, T, chorus, orch, 1968

SOLO VOCAL

for 1v, pf unless otherwise stated

Chanson, 1913; Erwacht, 1913; Gebet an den Sonntag, 1913; Abendgang zur Geliebte, 1914; Das alte Lied, 1915; Les larmes, 1915; L'aube spirituelle, S/T, orch, 1916; Crucem tuam, S, str, 1916, orchd 1920–30; Quand ton sourire me surprit, 1916; Harmonie du soir, 1917; L'invitation au voyage, Mez, orch, 1918; Magna res est amor, S/T, org/orch, 1919; Loomheid is op uw hart [Heaviness is in your Heart], 1919; O sacrum convivium, 1v, org, 1919; Fiat Domine, 1v, org/str, 1920; Chaque heure, ou je songe, 1920; L'attente mystique, S, orch, 1920

Tractus 'Qui habitat', S, T, org, 1920; Cantique spirituel, S/T, org/str, 1921; Sequentia 'Audi tellus', T, org, 1921, unpubd; Sequentia Trinitas, T, org, 1921; Le chemin de la croix, T, org, 1922; La sainte face, 1v, org, 1922; A ces reines, 1923; Miroir de peine, S, org/str, 1923; Maria zart von edler Art, Mez, org/str, 1929; 3 pastorales (A. Rimbaud), 1935, orchd M. Flothuis, 1971; Hymnus 'Frequentemus hodie', Bar, orch, 1939; Cantilena della madre, 1943; 3 sonnets spirituels, S/T, org, 1944; Dankbare Jubilacie, 1945; Luci serene, 1966, unpubd; La Vierge à midi, Mez, fl, ob, hn, str, 1966; 3 romantische Liederen, Mez, fl, ob, pf, 1969

ORCHESTRAL

Sym. no.1, 1930; Variations and Fugue on a Theme by Kuhnau, str, 1935; Ballade van de merel [Ballad of the Blackbird], spkr, orch, 1936; Sym. no.2, 1937; Capriccio, 1941; Variations on a theme by Couperin, fl, hp, str, 1944; Sym. no.3, 1946; Ballet suite, 1947; Ricercare, 1949; Org Conc., 1950; Wilhelmus Rhapsody, 1950–51; Sym. Etude, 1952; De zee en het land [The Sea and the Land], spkr, orch, 1953; Libertas venit, rhapsody, 1954; Sym. no.4, 1954; Mascherata, 1962; Sym. Concertante, 1962; Canzona, vc, orch, 1965; Vn Conc., 1969; Chromatic Variations, fl, ob, va, vc, str, 1970; Concertino, ob, str, 1970; Concertino, vc, chbr orch, 1970; Canzona, 1971; Chantecler, ov., 1972

CHAMBER AND SOLO INSTRUMENTAL

Sonata no.1, vn, pf, 1915; Pf Trio, no.1, 1915; Sonata, vc, pf, 1926; Sonata no.2, vn, pf, 1931; Pf Sonata, 1934; 3 inventions, vn, vc, 1937; Pavane, pf, 1937; Pf Trio no.2, 1939; Passepied, pf, 1942; Pastorale, fl, vn, pf, 1942; Rigaudon, carillon, 1943; Intermezzo, fl, hp, 1950; Suite, vn, pf, 1950; Aubade, 2 tpt, hn, trbn, 1951;

(3) Jurriaan Andriessen (*b* Haarlem, 15 Nov 1925; *d* The Hague, 23 Aug 1996). Composer, son of (2) Hendrik Andriessen. He was taught composition at the Utrecht Conservatory by his father and he later studied instrumentation and conducting with Willem van Otterloo and the piano with André Jurres and Gerard Hengeveld. After his final examinations in 1947, he spent several months in Paris with the particular aim of studying film music. There he also took lessons with Messiaen. On returning to the Netherlands, he was commissioned to write the incidental music for the open-air play *Het wonderlijke uur* ('The Miraculous Hour'), performed in celebration of the 50th anniverary of Queen Wilhelmina's accession; this was his first score for the stage. From 1949 to 1951 he was in the USA on a Rockefeller Foundation Fellowship, and it was there that he wrote the Tanglewood Overture for Koussevitzky and, to a commission from the Dutch government, the *Berkshire Symphonies* (1949), a work to which Balanchine and Robbins created the ballet *Jones Beach*, which was given in New York and in many European cities. Andriessen made several visits to Italy and Germany during the period 1951–3, and at this time he composed two ballet scores: *Das Goldfischglas* (1952) for the Deutsche Oper am Rhein and *De canapé* (1953) for the Netherlands Opera.

In 1954 he was appointed resident composer to the Haagse Comedie; one of the first scores resulting from this appointment was that for *Mourning becomes Electra*, from which Andriessen made a widely performed orchestral suite. Much successful incidental music followed, and further derived concert pieces, including *Les bransles érotiques* from the score for *Rosencrantz and Guildenstern are Dead*. In his music for *The Tempest* (1953) he used electronics for the first time. Andriessen also composed a quantity of music for radio, television and film in addition to his copious output of orchestral and chamber works and pieces for amateurs. He was highly regarded as a composer of occasional music, his commissions include music for the wedding of Princess Beatrix (*Entrata Festiva*, 1966), the silver jubilee of Queen Juliana (*Een Prince van Orangien*, 1973) and the coronation of Queen Beatrix (*Entrata della regina*, 1980). Andriessen has also conducted his own compositions and worked as a television director.

His music exhibits sound professional skill in a style that draws on diverse recently developed techniques without being bound to any specific system. The same attitude is to be found in the work of a number of Dutch composers in the period following World War II, responding to a great hunger for art and relaxation. Influences include American film and theatre music, Copland's ballet scores, Stravinskian neo-classicism, and folk music, both from the regions of the Netherlands and from distant cultures such as Peru. In the second part of the *Berkshire Symphonies*, Andriessen makes use of the 12-note row from the second part of Berg's *Lyric Suite*, though the series is used melodically and not elaborated dodecaphonically. Such an eclectic mix was outstandingly well suited to music as dramatic accompaniment, but his concert works sometimes lack a powerful, personal stamp.

(4) Louis Andriessen (*b* Utrecht, 6 June 1939). Composer, son of (2) Hendrik Andriessen. After a few youthful works influenced by neo-classicism and serialism in the manner of Boulez he moved steadily away from the postwar European avant garde and towards American minimalism, jazz and Stravinsky. Out of these elements he has developed a musical language marked by extremes of ritual and masquerade, of monumentality and intimacy, of formal rigour and intuitive empiricism. The epitome of the Hague School, he is regarded as the most influential Dutch composer of his generation.

1. LIFE. Andriessen was born the youngest son of a musical family. His father and his elder brother (3) Jurriaan, who passed on to him his musical experiences of Stravinskian neo-classicism and jazz, were his earliest mentors. Between 1957 and 1962 he studied composition at the Royal Conservatory in The Hague with Van Baaren. After receiving the composition prize there, he continued his studies with Berio in Berlin and Milan (1962–5).

Back in the Netherlands he played an active role in the increasing politicization of the arts put into practice during the Holland Festival in 1969 with the collective work *Reconstructie*, a music-theatre morality based on the character of Che Guevara; the composers involved were Schat, van Vlijmen, Reinbert de Leeuw and Misha Mengelberg, all former students of Van Baaren. Later the same year Andriessen was involved in the Notenkraker-sactie, the disruption of a concert by the Concertgebouw Orchestra, whose artistic policy the protesters regarded as reactionary. This controversial act has since come to be seen as a turning-point in postwar Dutch musical life. For Andriessen it led to a permanent abandonment of the medium of the symphony orchestra. Convinced that musical renewal cannot be separated from the renewal of performance practice, he set up in 1972 De Volharding ('Perseverance') to perform his composition of the same name, and similarly in 1977, Hoketus, the result of a project at the Royal Conservatory; both ensembles have gone on to stimulate extensive new repertories.

Andriessen began to teach composition and instrumentation at the Royal Conservatory in 1973, and in the mid-1980s started to be in great demand as a guest lecturer, particularly in the USA, for example at Yale (1987), New York State University, Buffalo (1989) and Princeton (1996). His music has also been widely performed in the USA, with commissions from the San Francisco SO (*De snelheid*, 1983) and the California EAR Unit (*Zilver*, 1994). Awards and honours include the Matthijs Vermeulen Prize twice, for *De staat* in 1977 and for *Dances* and *Hout* among other works in 1992, the Kees van Baaren Prize in 1983 for *De tijd* and the 3M Prize in 1993. With Elmer Schönberger, Andriessen published in 1983 a monograph on Stravinsky, *Het apollinisch uurwerk: over Stravinsky*.

2. WORKS. It may be tempting to regard the première of *De staat* in 1976 as marking the birth of the 'real' Andriessen. A typically European response to the more ethereal American minimalism of the time, it made his name internationally. It is the first work in a line of monumental, for the most part 'didactic' compositions which mark moments of synthesis and re-orientation in his output; it also unveiled Andriessen's characteristic sonorities of brass, keyboards and bass guitars. However, his output from before *De staat* should not be viewed merely as a preliminary stage, since in it a number of distinctive (albeit short-lived) styles and techniques are discernible, becoming marked increasingly by personal features. At the extremes stand the graphic composition *Registers* (1963) and the exercise in youthful sentiment *Souvenirs d'enfance* (1966). In *Ittrospezione III (Concept I)* serial methods derived from Boulez are uneasily combined with a Cageian conceptualism, though pre-echoes of *De staat* are occasionally apparent in the work's instrumentation and form. *Contra tempus* of 1968 reveals Andriessen explicitly turning away from the avant garde's rejection of the past. The montage form, the mixture of static, 'chorale' continuos of sound, traced by the composer to such variable sources as Stockhausen's *Momente*, Stravinsky and pre-tonality, and the big-band-like instrumentation, all point in another direction. Most of all it is Stravinsky whom Andriessen considered – 'with his hand on my shoulder' – the model; the last chord of the work is the opening one of the *Symphony of Psalms*.

Other works of the time, notably *Anachronie I* and *II* (1966, 1969), display a 'style of stylelessness' at odds with serial progress. With its quotations from high (Franck, Milhaud, Roussel) and low culture, the first *Anachronie* bears a dedication to Ives, hailed by the Dutch Charles Ives Society as the founder of 'inclusive', anachronistic composition. The second, with its pastiches of, among other things, Italian Baroque music, is dedicated to Satie, the inventor of *musique d'ameublement*. As well as paying tribute to the anarchistic spirit of the 1960s in Amsterdam, these works are characteristic of an anti-purist versatility which enabled Andriessen, while preserving his own distinctive musical style and personality, to combine the composition of agit-prop (*Thanh Hoa*, 1972; *Dat gebeurt in Vietnam*, 1972), play-like operas for

Louis Andriessen

singing actors (*Mattheus passie*, 1976; *Orpheus*, 1977; *George Sand*, 1980) and film music (e.g. *The Family*, 1973; *Golven*, 1981) with ambitious projects for the concert platform.

With *De volharding* (1972), Andriessen moved a step closer to *De staat*. Composed in response to American minimalism in general and to Riley's *In C* in particular, the musico-political convictions which have determined Andriessen's development are reflected in the title, with its reference to the ideals of the early 20th-century labour movement. At its most straightforward this ideology manifests itself in *Volkslied* (1971), a metamorphosis of the melody of the *Wilhelmus*, the Dutch national anthem, into that of the *Internationale*, and in *Workers Union* 'for any loud-sounding group of instruments' (1975). On a more abstract level these works laid the foundation for the most striking compositional principle of *De staat*: homophony in the form of chords and unison melodies, not as a sign of impersonal collectivism but, on the contrary, as a structural expression of equality and collaboration. *De staat* is, then, an essentially optimistic work, even Dionysian in mood, though the text, taken from Plato's *Republic*, warns of the subversive nature of particular scales and, more generally, of the dangers inherent in any fundamental change in the nature of music. These words are completely embedded in the instrumental structure, and together they fulfil the Brechtian function of a negative model. Other aspects of Andriessen's mature style are also fully revealed here: strict, for the most part process-related, techniques of repetition, canon and hocket; chain forms based on contrast; a non-functional, dissonant tonality; and the choice of limited pitch material as the basis of melody and harmony. This material can take a variety of forms: tetrachords in *De staat*, the combination of two major 2nds in *Mausoleum* (1979), two incomplete 7th chords in *De tijd* (1980–81) and a four-note chord which combines the functions of tonic and dominant in *De materie*.

Although in almost all respects its antithesis, the basic texture of *De tijd* ('Time') is nevertheless derived from the 28 bars of chorale-like music in *De staat*, as well as from the hymn, culminating in the ecstatic 'ya lyubil Bakunina' ('I loved Bakunin'), from the second half of *Mausoleum*. *De tijd* begins with an explosion of sound out of which, in an organic process of increasing complexity, all the following chords, rhythms and melodies emerge. Like so many of Andriessen's works, the music takes its strength to a large extent from a strictly conceptual underlying principle, in this case the logically incompatible notions of 'eternity that always stands still' and 'time that never stands still', as expressed by St Augustine and quoted in the preface to the work. This dichotomy is translated into the combination of a strictly 'measured', instrumental time, based on the numbers two and three, and a sung 'constant' time in equal note values. The increasing stacking of layers as the piece unfolds and the use of diminution technique makes *De tijd* a musical equivalent of the astronomical clock in Beauvais Cathedral, with its simultaneous marking of different scales or levels of time. The fast, loud, virtuoso music of *De staat* and the slow, gentle, introverted *De tijd* are both technically and expressively the poles between which Andriessen proceeded in the 1980s. *De snelheid* (1982–3, rev. 1984), an extrovert essay on tempo and rhythm, and *De stijl* (part 3 of *De materie*, 1985) tend toward the first. The second is exemplified by the static *Hadewijch* (part 2 of *De*

materie, 1988) in which soft, long-drawn-out melodies are broken up by chords striking at defined intervals in a clock-like manner, and by *Dubbelspoor* (1986), a dance composition for four keyboard instruments which further develops the 'shadow melodies' from *De tijd*, i.e. the 'negative' melodies created by the individual notes of a chord as they are released one by one.

While attempting to go to the essence of things, writing works 'about' general subjects of a musical or philosophical nature, both in the large (*De tijd*, *De snelheid* etc.) and the small (e.g. *Melodie* for recorder and piano, 1974), Andriessen has remained a pragmatist, reacting to the music and performance practice that surrounds him, whether it be jazz (e.g. *On Jimmy Yancey*, 1973; *Facing Death*, 1991), modern dance (*Dances*, 1991; *Odysseus' Women*, 1995) or even a Mozart anniversary (*M is for Man, Music, Mozart*, 1991). The monumentality and the sometimes unapproachable aggressiveness of his largest and most influential works contrast with the accessibility, intimate charm or mild irony of his smaller-scale compositions, such as his numerous occasional pieces. *Symphonieën der Nederlanden* for wind orchestra (1974) is a small-scale, lighthearted counterpart to *De staat*, *Melodie* a melancholic homage to what Andriessen in referring to Thelonius Monk has called the 'good wrong note', and *Symfonie voor losse snaren* ('Symphony for Open Strings') of 1978 – in which largely re-tuned open strings are employed in the manner of a hocket – the triumph of limitation.

The four-part music-theatre work *De Materie* ('Matter'), given its première in Amsterdam in 1989 with Robert Wilson as director, may be regarded as a synthesis of Andriessen's intellectual and stylistic preoccupations, while integrating the speculative constructivism of the polemicist with the instinctive spontaneity of the theatre composer. As diverse as the historical figures who people the work – among them the 13th-century mystic Hadewijch, the early 17th-century physicist Gorlaeus, Piet Mondriaan and Marie Curie – is the arsenal of references to (and formal and structural models drawn from) music history, from the quotation of the medieval melody *L'homme armé* and a Bach prelude, to the use of toccata, passacaglia and boogie-woogie, which, in more-or-less abstract guise, are subsumed into the general architecture. Compared with the character of scenic oratorio which *De materie* displays, the later *Rosa, a Horse Drama* (1994) is far more conventionally operatic, this despite the anti-realist, cinematic libretto by Peter Greenaway and the fiercely objective, anti-psychological nature of the work.

With the *Trilogie van de laatste dag* (1996–7), Andriessen appeared to be embarking on new paths. The character of the music shows him still positioned emphatically outside the world of the classical and contemporary symphonic repertory; Stravinsky is a continuing presence in, for example, the hieratic final chords of *Tao*, the second part; specific models still fulfil a structuring function, such as Saint-Saëns's *Danse macabre* in the third part, *Dancing on the bones*; and the compositional unfolding remains anchored in limiting technical starting-points, e.g. the canon in part 1, *De laatste dag*, or the series of 13 chords in part 2, *Tao*, which are the representation of the similarly numbered companions of death and life, of which the Chinese text speaks. However, the music is far less consistent in its use of processes, and much more capricious in form. Moreover, remarkably, Andriessen, the declared, even dogmatic anti-Romantic (cf. *Nietzsche redet*, 1989), pursues in the *Trilogie* a kind of dialectical thematicism and development, in the manner of early Romanticism.

WORKS

DRAMATIC

Reconstructie [Reconstruction] (music theatre, 2 pts, H. Claus and H. Mulisch), Amsterdam, Careé, 29 June 1969, collab. R. de Leeuw, M. Mengelberg, P. Schatt, J. van Vlijmen
The Family (film score, dir. L. de Boer), 1973
Mattheus passie (music theatre, 2 pts, L. Ferron), Amsterdam, Shaffy, 3 Nov 1976
Orpheus (music theatre, 3, L. de Boer), Amsterdam, Shaffy, 19 Oct 1977
George Sand (music theatre, 3, M. Meijer), 1980, Amsterdam, festival of fools, 29 May 1980
Golven [Waves] (film score, dir. A. Apon), 1981
Doctor Nero (music theatre, 2, L. de Boer), Amsterdam, Appel, 13 April 1984
De materie [Matter] (music theatre, 4 pts, Andriessen and R. Wilson, after N. Witsen, D. Gorlaeus, Hadewijch, M.J.H. Schoenmaekers, W. Kloos, Marie Curie and others), 1984–8: I De materie, pt 1, II Hadewijch, III De stijl, IV De materie, pt 4; Amsterdam, Muziektheater, 1 June 1989, collab. Wilson
Dubbelspoor [Double Track] (dance score), 1986, Amsterdam, Mickery, 21 Oct 1986
M is for Man, Music, Mozart (video score, dir. P. Greenaway), 1991
De trap (dance score, J. Grant: *The Winged Pharaoh*, choreog. B. van Dillen), 1991, Amsterdam, Frascati, 24 April 1991; see also VOCAL [Dances, 1991–2]
Rosa, a Horse Drama (op, Greenaway), 1994, Amsterdam, Muziektheater, 2 Nov 1994
Odyssey (dance score, choreog. B. Blankert), 1995, Rotterdam, Departure Hall, 3 May 1995; see also VOCAL [Odysseus' Women, 1995]
Writing to Vermeer (op, Greenaway), 1997–9, Amsterdam, Muziektheater, 1 Dec 1999

ORCHESTRAL AND LARGE ENSEMBLE

JOS WOUTERS/RONALD VERMEULEN (1–3), ELMER SCHÖNBERGER (4)

Andrieu, F. (*fl* late 14th century). French composer. The only composition attributable to him with certainty is the four-part bitextual ballade *Armes, amours/O flour des flours* set to the text by Eustache Deschamps lamenting Machaut's death in 1377. Two three-part ballades (*De Narcissus* and *Phiton, Phiton, beste tres venimeuse*) by Magister Franciscus from the same manuscript (*F-CH* 564) suggest that the two composers may be the same person. *Phiton, Phiton* borrows its first three bars from a similarly-titled piece by Machaut. (All three works are ed. in CMM liii/1, 1970, and in PMFC, xviii–xix, 1981–2.)

GILBERT REANEY

Andrieu Contredit d'Arras (*d* Arras, 1248). French trouvère. French royal accounts for 1239 mention Andreas Contredit, knight and minstrel, who had vowed to join the crusade led that year by Thibaut IV, Count of Champagne and Brie, King of Navarre. 'Contredit' is probably a sobriquet. It is possible that Andrieu was in the service of King Louis IX as a minstrel; *Au mois d'avril* is addressed to 'the king'. He was a member of the Arras *puy* and addressed *Ja pour nul mal* to this group. The register that indicates his date of death mentions the death of his wife in 1225, suggesting that he may have been born in about 1200 or earlier. He participated in a jeu-parti with Guillaume li Vinier (R.1520), and addressed *Bone, bele et avenans* to 'Marote', probably the poet Maroie de Diergnau of Lille. He referred affectionately to his native city Arras in *L'autrier quant je chevauchoie*.

Andrieu named himself in 14 of his 20 works, which include a pastourelle, a lai and a jeu-parti in addition to *chansons courtoises*. He lacked technical imagination. Except for the lai, all strophes are isometric, most are decasyllabic, four are heptasyllabic and three octosyllabic.

19 works begin with the customary *abab* rhyme pattern, and all but four continue *baab* (two continuing *bab* and two *ccbb*).

The melodies – all in bar form – show greater variety of construction. However, in some the repetition of the initial *pes* is strict, in others the second element is varied, and in three new material is introduced. In most the concluding section is non-repetitive, but motivic references and varied repetition of phrases are both found. In *Au mois d'avril*, the last two phrases (eighth and ninth) are variations of the fifth and sixth. Three melodies have a range of an 11th, combining plagal and authentic ranges, and the Noailles Chansonnier's version of *Quant voi partir* has the exceptional ambitus of a 13th (the last two phrases here may be written a 5th higher than was originally intended). In all but five melodies there is a strong sense of tonal centre. The rhythmic constructions range from the rather florid *Pré ne vert bois* to the simple *L'autrier quant je chevauchoie*. No readings are given in mensural notation, but the ligature disposition in phrases of *Au tens que je voi*, *Iriez, pensis chanterai* and *Mout m'est bel* suggests regular rhythmic patterning.

THEODORE KARP

Andronicus, Lucius Livius. *See* LIVIUS ANDRONICUS, LUCIUS.

Andropediacus, Lycosthenes Psellionoros [Spangenberg,Wolfhart] (*b* Mansfeld, probably before 1570; *d* Buchenbach, nr Freiburg, before Oct 1636). German theologian and writer. The first two names of his pseudonym are equivalents of Wolfhart Spangenberg, his original name, and Andropediacus derives from the name of his birthplace. He was the son of Cyriac and grandson of Johann Spangenberg. His father having been obliged to leave his position as court preacher at Mansfeld in 1574 because he supported Matthias Flaccius's substantialist view of Original Sin, he spent his earliest years at, among other places, Strasbourg, from 1578, and Schlitz, near Fulda, from 1581 and came under his father's influence in theological and artistic matters. He matriculated at Tübingen University on 5 April 1586 and took the bachelor's degree in 1588 and master's degree in 1591. He too was an adherent of Flaccianism, which hindered his career as a theologian. In 1595 he followed his father to Strasbourg, where he gained citizenship and earned his living as a proofreader. In 1601 he joined the local guild of Meistersinger (of which his father was already a member), and his plays and translations were a valuable contribution to the guild's theatrical performances, the texts of 20 Meistergesänge by him, mostly on biblical subjects, have survived, but he composed no melodies. In an ode celebrating the rebuilding of the organ of Strasbourg Cathedral in 1609 he recommended nature, and especially birdsong, as a source of sounds that could well be reproduced on the organ, and he also recounted some of the history of the cathedral organ. He became parish priest at Buchenbach in 1611 and remained there until his death, which must have occurred by October 1636, since after this date his successor was making the entries in the parish registers. Shortly after he moved to Buchenbach he revised his father's history of Meistergesänge, *Von der edlen und hochberümbten Kunst der Musica* (1598); he added new biographical data and incorporated the findings of more recent historical research. His comedy *Singschul* is a reworking in the form of a verse dialogue of material from the same work of his father's. Allegorical figures tell the farmer Simplicius about the life and work of the Meistersinger from biblical times onwards, and, in accordance with the Christian and moral tendencies of the traditions of the Meistersinger, secular songs and dance-songs are repudiated as a misuse of music.

LINI HÜBSCH-PFLEGER

Andrysowicz, Łazarz (*b* Stryków; *d* Kraków, 1577). Polish printer. He took over the printing house of HIERONIM WIETOR on the latter's death.

Andsnes, Leif Ove (*b* Karmøy, 7 April 1970). Norwegian pianist. He studied with Jiří Hlinka at the Bergen Conservatory, won the Hindemith Prize in 1987 and made his Oslo début in the same year. In 1989 he played

in New York and Washington DC, and the following year appeared with the Cleveland Orchestra under Neeme Järvi and also won the Grieg Prize. Andsnes made his Proms début in 1991 and quickly established himself as one of the leading pianists of his generation. His recordings include outstanding interpretations of Grieg and other Scandinavian composers, Chopin (the three piano sonatas), Schumann and Rachmaninoff, and superbly authoritative discs of Janáček and Nielsen. His partnerships with the violinist Christian Tetzlaff and the viola player Lars Anders Tompter are also widely acclaimed.

BRYCE MORRISON

Aneau, Barthélemy (*b* Bourges, *c*1510; *d* Lyons, June 1561). French writer. After studying at the University of Bourges he was appointed professor of rhetoric at the Collège de la Trinité in Lyons before 1538, becoming principal in 1540. He was murdered as a suspected Protestant during a riot in Lyons. Among other writings, especially on poetics, he wrote several plays with important musical content. The *Chant natal* (1538), made up of contrafacta of well-known chansons, ends with a 'Noël mystic' on the chant *Le dueil yssu* 'harmonized' by the 'nightingale Villiers'. The allegorical satire *Lyon marchant* (1542) includes a scene in which Arion (representing François I) sings *Doulce mémoire* (a poem written by the king which enjoyed great success in a musical setting by his singer-composer, Pierre Sandrin). Another Christmas play, *Genethliac* (1558), includes 17 new songs for three or four voices, which survive incomplete (*F-Pc* Rés.85). The first 15 may be by Etienne Du Tertre; the book closes with a Sibylline eclogue by Goudimel and a *Présentation de l'enfant au Temple* by Didier Lupi Second. In the *Quintil sur le premier livre de la Defense et illustration de la langue françoise* (Lyons, 1551), a critique of Du Bellay's manifesto, Aneau rejected the Pléiade's assertion that classical poets had turned their own poems to music and sung them themselves.

FRANK DOBBINS

Anelli, Angelo (*b* Desenzano, 1 Nov 1761; *d* Pavia, 9 April 1820). Italian librettist. He was trained as a classical scholar, and between 1808 and 1816 he was Professor of Forensic Oratory in Milan; later he was Professor of Judicial Procedure in Pavia. He wrote more than 40 librettos, some of which became the most famous of the day. They include *La Griselda*, set by Piccinni and Paer, and *Ser Marcantonio*, which was set by Pavesi and later used by Ruffini as the basis for the libretto of Donizetti's *Don Pasquale*. The Pappataci rituals in *L'italiana in Algeri* (set by L. Mosca and Rossini) may reflect Anelli's interest in freemasonry. The same opera also reveals his propensity to use real-life situations in his librettos: in 1805 a Milanese girl, Antonietta Frapollo, was kidnapped and taken to the court of Mustapha-ibn-Ibrahim in Algiers. A number of his librettos were published under the pseudonyms of Lauro Fifferi, Marco Landi, P. Latanzio, Nicolo Liprandi, Tomasso Menucci, Giovanni Scannamusa and Gasparo Scopabirba.

RICHARD OSBORNE

Anémocorde [aéro-clavicorde] (Fr.). *See* SOSTENENTE PIANO, §2.

Anerio, Felice (*b* Rome, *c*1560; *d* Rome, 26/7 Sept 1614). Italian composer, elder brother of GIOVANNI FRANCESCO ANERIO.

1. LIFE. Anerio spent his entire life in Rome. From 23 December 1568 until December 1574 he was a choirboy at S Maria Maggiore, where from 1571 the music was directed by G.M. Nanino. Anerio described himself as a student of Nanino in the prefaces to several of his publications. He was a soprano in the Cappella Giulia for a monthly salary of 4 scudi from 1 May 1575. From 1 January 1577 he appears in the salary lists as an alto, first receiving 2 scudi a month and then, from August 1578 until he left on 1 April 1579, 3 scudi. From there he went to S Luigi dei Francesi, where he was a contralto under the *maestro di cappella* Francesco Soriano, from 24 December 1579 to 16 May 1580. For the next four years there is no record of his movements, but the parish records of S Giordano show that he was living together with his brothers in his father's house. This was the period of his first known music: he wrote madrigals, choruses and solo songs for a *Passio di Nostro Signore in verso heroico*, an Italian Passion play by Curzio Faiani, which was performed in the church of the Servite fathers at Viterbo on 22 March 1582. In 1584–5 he was *maestro di cappella* of the Collegio Inglese, and according to the dedication of the madrigal collection *Le gioie* (1589), which he edited, he then held a similar position in the Vertuosa Compagnia dei Musici di Roma, a society of Rome's leading musicians, founded in 1584. Like many Roman composers of the time, he was a member of the clergy. He first received the tonsure on 29 August 1584, and on 10 April 1607 he became deacon and shortly afterwards priest. The first records of close contact with Filippo Neri's Congregazione dell'Oratorio date from 1593, while Anerio was in the service of Cardinal Pietro Aldobrandini. On 3 April 1594, in accordance with the wishes of Pope Clement VIII and Cardinal Aldobrandini, he succeeded Palestrina as composer to the papal choir – testimony to his excellent reputation. During his time as papal composer he formed a close relationship with Duke Giovanni Angelo Altemps, who maintained his own chapel and appointed him his musical director. In 1597, in order to celebrate with greater liturgical pomp and ceremony Mass and Vespers on the feast of Filippo Neri (who, though not beatified until 1615 was already honoured as a saint two years after his death), new four-choir works 'such as have never before been sung in this church, and perhaps not even in the whole of Rome' were performed at the oratory under Anerio's direction. The following year he directed three-choir works on the feast day and for the performance in 1599 a specially built stage was required to accommodate the choir, organ, harpsichord and other instruments. Compositions surviving in manuscript (*I-Rv* Z122-30) provide evidence of Anerio's involvement in musical performances at the oratory. In a papal brief of 6 March

1611 Anerio and Soriano were commissioned by Cardinal del Monte to reform the Roman Gradual, and the work was completed early in 1612; the reformed responsories are very similar to the versions in the *Editio medicea*.

2. Works. Most of Anerio's earlier works are secular, though some of the madrigals have spiritual texts. The four-part canzonettas (1586) are similar in melody and rhythm to villanella-like three-part canzonettas; their binary form, with repetition of both parts, is considerably disguised by frequent imitation and by regular interchange of the two upper voices during the repetitions.

Anerio turned to sacred composition mainly after his appointment as papal composer in 1594. Although conservative in outlook, he did not slavishly follow Palestrina's style – except perhaps in the mass '*Or le tue forze adopra*' – but enriched it with a number of personal, expressive elements. The motets of the *Sacri hymni et cantica* (1596–1602), many of which are for double choir, are still in the spirit of classical vocal polyphony. The basses of both choirs are generally flowing and linear and often participate in the imitation, and the two choirs frequently share thematic material through the close alternation of loosely homophonic textures. A few works include attempts at *passaggi* in the bass (e.g. *Regina caeli*) and also the more modern element of rapid homophonic declamation (as in *Veni, Sancte Spiritus*and *Tibi laus, tibi gloria*). The four-part Holy Week responsories (1606) are characterized by deeply felt religious sincerity and restrained personal expression, which are much enhanced by occasional chromaticism and the frequent infiltration of the ecclesiastical modes by extra-modal notes.

Anerio's fondness for traditional forms is also revealed in his *alternatim*psalms (in *I-Rn*). These include frequent word repetition, usually to stress significant parts of the text but occasionally also to heighten devotional elements (as in the sixth verse of the psalm *Credidi*); they are also distinguished by subtle contrasts of texture. Several features bring them close to the genre of the *Magnificat*: runs in the bass part, the delaying and highlighting of individual entries that loosen predominantly homophonic passages, imitation that is occasionally extended to all four parts, and extensive polyphonic cadential sections. Anerio took a great interest in the reforming efforts of Filippo Neri, writing several *laudi* for the Oratory as well as some dialogue-madrigals (*I-Rv* Z122–30) in a theatrical style similar to those in G.F. Anerio's *Teatro armonico spirituale* (1619). In his later years, during his service with Duke Altemps, he wrote works for small forces possibly prompted by the example of Viadana, but the outwardly modern trappings do not conceal the fact that he remained rooted in the Palestrina tradition. For instance, the numerous solos and duets with organ in the *Collectio parva* of the Altemps collection (the originals of which are lost) have conservative melodies, which in spite of frequent *passaggi*would not be out of place in old-fashioned polyphonic motets, while the organ bass mostly imitates the voice parts. Eight double-choir sacred madrigals (which survive only in early 17th-century partbooks in *I-Rv* Z122–30) represent a more interesting contribution to his musical form because of the choral forces used. The same partbooks also contain a further 21 madrigals by Anerio, mostly in four parts and sacred.

KLAUS FISCHER

Anerio, Giovanni Francesco (*b* Rome, *c*1567; *d* Graz, bur. 12 June 1630). Italian composer and organist, younger brother of Felice Anerio.

1. Life. He spent much of his life in Rome. From letters of Ancina it appears that from at least 1583 he was closely connected with Filippo Neri's Congregazione dell' Oratorio. He decided at an early age to become a priest and received the tonsure on 12 December 1583; he

became ostiary on 22 November 1584 and lector on 20 December 1586. He was ordained deacon on 17 July 1616 and became a priest seven days later. Anerio celebrated his first Mass at Il Gesù on 7 August 1616, with all the musicians of Rome, divided into eight choirs, providing the music for the liturgical ceremony. His connections with the Gesù date from the early 1590s, when documents indicate that he was associated with the Congregazione dell'Oratorio. In 1595, when Anerio was in the service of Cardinal Antonio Maria Gallo, he and other members of his family were witnesses to the process of the beatification of Neri. In 1598 Anerio was granted permission to take part in singing the Office at the Chiesa Nuova. He was frequently involved with the Congregazione over the following years, becoming a member in November 1602, although for unknown reasons he never formally entered and therefore was not subject to the probationary review of new members of the community after the first year. His duties consisted of active participation in the Oratory's music, for which he provided many settings of the texts used.

The first reference to Anerio's musical activities is in 1595, when he was organist for the Lenten performances of the Arciconfraternita del SS Crocifisso at S Marcello. In 1599 he was in the service of Duke Massimiliano Caffarelli in Rome. He may have been *maestro di cappella* at S Giovanni in Laterano, in succession to Francesco Soriano, from 1600 or 1601 until 1603; from at least January 1608 he was *maestro di cappella* at Santo Spirito in Sassia. How long he held this post cannot be determined, since records for 1606 and 1607 are missing, but as his predecessor, Vincenzo de Grandis (i), left on 29 November 1605 he may have taken it up shortly after that date. In November 1608 he was elected *maestro di cappella* of Verona Cathedral at a yearly salary of 180 gold scudi; he arrived at Verona on 3 July 1609. On 23 December 1610 he was elected *maestro di musica* of the Accademia Filarmonica of Verona, and at this date the records of the Accademia still describe him as *maestro di cappella* of the cathedral ('hora mastro di Cappella del Duomo'). His duties at the Accademia, for which he was paid an annual salary of 30 ducats, were to set madrigals and all kinds of poetry that were to the taste of its governing body. He was also to direct musical performances every Wednesday and on such other days as were convenient to the committee. He was still in Verona, then, until at least the end of 1610, when he went to Rome for a short period to attend to the publication of some of his works. He returned to Verona but finally left on 14 March 1611 and settled again in Rome. In 1611–12 he was music prefect at the Collegio Romano and from 1613 to 1620 *maestro di cappella* of S Maria dei Monti. The dedicatory preface to his *Lieti Scherzi*, dated 29 September 1621, suggests that he was by this time living permanently in Rome. On 9 June 1624 he played the organ at the ceremonial robing of the novices at the convent of S Teonisto at Treviso. Shortly afterwards he became choirmaster to King Sigismund III of Poland at Warsaw – one of a long series of Italians to hold this position at the Polish court. He was succeeded in 1628 by his pupil Marco Scacchi, and he died two years later while on his way back to Rome.

2. Works. Giovanni Francesco Anerio was a far more progressive composer than his brother. The balance in his output between a modified use of the Palestrina idiom and the techniques of the early 17th century, makes him one of the most significant progressive Roman composers of the period. Some of the pieces in his second book of motets, published in 1611, already make use of *stile concertato* and solo voice with basso continuo. A noticeable break with the stylistic principles of late 16th-century Roman vocal polyphony can be discerned in the thematic construction of the clearly articulated imitative themes, which are usually short and concise, generally rejecting extended overlapping imitative sections in favour of clear musical demarcations. Plasticity and economy of musical form as well as appropriate interpretation of the liturgical text mark most of the works in this collection. The motet *Panis angelicus*, is characteristic in its grouping of high and low voices in oppositional pairs forming a kind of rudimentary polychorality. Texture is also used to text-expressive ends, for example the duet-like opening section of *Duo seraphim*.

The forward-looking tendencies are even more evident in the third book of motets (1613), particularly in the solo motets with their elaborate *passaggi*. The fifth book of *Sacrae cantiones*, published in 1618, again shows an advance on the structural principles of the music in the previous collections: the *passaggi* are more prolonged in the solo motets and in those for few voices, and it becomes increasingly frequent for more extensive melodic sections to consist of sequences tending to a cadential effect at the close (for instance, the 'Alleluia' coloraturas in the *proportio tripla* section of *Spiritus sanctus replevit*, and the 'Amen' coloraturas in *Jesu decus angelorum*). Anerio often intensifies his rhythmic contrasts by inserting sections of ternary meter. The *Selva armonica* (1617), an unusual compilation containing works of various kinds in Latin and Italian for one to four voices, is particularly representative. The solo spiritual madrigals, which are among the most interesting Roman monodies, have forms that are largely independent of the structure and rhyme patterns of the verses. The strophic, aria-like pieces include canzonettas that have in common with 16th-century canzonettas only their lively rhythms and the division into two parts, each repeated. Several of them have very expressive melodies, often tending to an almost folksong-like simplicity (as in *Sommo re delle stelle*). The motets are more conservative in style. The nature of their melodies and the treatment of the figured bass have much in common with similar works by Viadana. Formal unity is achieved by a skilful handling of repetition. This can be seen at its best in the motet *Veni, sponsa Christi*, which falls into numerous sections and is in the expanding form $AA^1BB^1CC^1CC^1C^2$. The breaking up into small self-contained sections, some of which are settings only of a single word, is characteristic of all the pieces in this collection. This tendency is already evident in the *Antiphonae* and *Sacri concentus* (both 1613), but the motets in these collections are less formally unified than the solo motets of the *Selva armonica*. The latter include numerous *passaggi*, which are never used merely for the sake of virtuosity but are organized through sequential sections into convincing melodic structures. *Ghirlanda di sacre rose* (1619) includes fewer melodic sequences, but they always enhance the musical expression, most persuasively in the three dialogue motets. The *Diporti musicali* (1617), which contains only madrigals, is similar in style to the *Selva armonica* and occasionally includes some even more striking monodic writing (e.g. in *Cruda Lilla*,

che fai). The secular collection *La bella Clori* (1619) is a notable contribution to the secular music of the early 17th century in its variety of musical expression and richness of form. The six arias and two canzoni on sacred texts found in manuscript (*I-Rv* Z122–130 also illustrate Anerio's progressive style in their expressive interpretation of the text, the insertion of solo sections and the varied and full figuring of the organ bass.

Anerio's liturgical music is generally more conservative and was less influential. This is specially true of his masses, which in general follow the principles of the Palestrina style, with prominent use of imitation, including canon, and of parody technique (as in the *Missa 'Surge illuminare'*); he made a four-part arrangement of Palestrina's *Missa Papae Marcelli* (RISM 1619[2]). Cantus-firmus technique is prominent only in the *Missa pro defunctis* (1614). The structure of the three *missae breves* is freer, and they include a few passages in which the text is set in an almost parlando manner. Parlando technique, and word-painting too, are specially characteristic of the four-part mass *La battaglia* (in *D-MÜs* dated 1608). The ideals of classical vocal polyphony still dominate Anerio's polychoral masses (e.g. *Missa Constantia* in *I-Bc*); each choir includes a succession of imitative sections, and the echoing between the choirs of whole sections of music is tantamount to the imitative treatment of individual vocal parts in non-polychoral works. In contrast to the comparatively uniform style of his masses, Anerio's psalms display a fairly wide range of styles. Most of the four-part psalms in the 1614 collection have basically homophonic textures but with a few imitative verses; several end with deviations from the specified psalm-tone cadences. The three-part works in the same volume bear witness to the stylistic changes occurring in early 17th-century Italy. The two upper parts (two sopranos or soprano and alto) often move in parallel 3rds or 6ths and have short subjects, often treated sequentially, and piquant rhythms – all of them features that were gradually transforming the Palestrina style – and there are occasional passages that would not be out of place in madrigals and canzonettas of the time; as in the antiphons of 1613, embellishments and chromaticism are introduced with restraint.

His most significant pioneering achievement however, is the *Teatro armonico spirituale* of 1619, intended for the spiritual exercises in the oratories of S Girolamo della Carità and the Chiesa Nuova in Rome. Two works in it, the five-part *Dialogo del figliuol prodigo* and the six-part dialogue *La conversione di S Paolo* are notable not only for the intense and spiritual expression in their music, but also because they represent the earliest surviving examples of obbligato instrumental writing in Rome. The treatment of the instruments, particularly in the latter dialogue with its extensive instrumental introductions and sinfonias and instrumental parts that are closely connected with the imitative vocal writing, has its counterpart in psalms of Paolo Tarditi and the sacred works of Paolo Quagliati, published a short time later.

WORKS

printed works published in Rome unless otherwise stated

SACRED VOCAL

Dialogo pastorale al presepio di nostro signore, 3vv, lute/cembalo (1600); ed. A. Morelli (Rome, 1983)

Motecta, 1–3vv, bc (org) (1609)

Motectorum, liber secundus, 1–6vv, bc (org) (1611)

Litaniae deiparae virginis, una cum quatuor illis antiphonis, quae pro varietate temporum post completorium cani solent, 7, 8vv (1611, 3/1626 as Litaniae deiparae virginis, maiores de ea antiphone temporales, & motecta, una cum aliis sacris cantionibus varie modulatis)

Motectorum, una cum litaniis Beatae Virginis, liber tertius, 1–6vv, bc (org) (1613)

Antiphonae, seu sacrae cantiones, quae in totius anni vesperarum ac completorii solemnitatibus decantari solent ... prima, secunda, tertia pars, 2–4vv, bc (org) (1613)

Sacri concentus, liber primus, 4–6vv, bc (org) (1613[4])

Responsoria Nativitatis Domini, una cum invitatorio, et psalmo Venite exultemus, ac Te Deum laudamus, 3, 4, 8vv, bc (org) (1614, 2/1629 as Responsorii della natività di nostro Signore Giesu Christo ... con una messa, & motettini del Sig. Abundio Antonelli)

Psalmi vesperarum, qui in totius anni solemnitatibus decantari solent, nec non duo cantica Beatae Virginis, 3, 4vv, bc (1614)

Missarum, missa quoque pro defunctis una cum sequentia, et responsorium Libera me domine, liber primus, 4–6vv, bc (org) (1614, partial repr., 1630, as Missa pro defunctis, cum sequentia, responsorum Libera me domine); mass, 4vv, and responsory ed. A.G. Petti (London, 1966); masses ed. in Williams

Sacri concentus, liber quartus, 1–6vv, bc (org) (1617)

Selva armonica, dove si contengono motetti ... arie, 1–4vv, bc (org) (1617)

Sacrarum cantionum, liber quintus, 1–5vv, bc (org) (1618)

KLAUS FISCHER

Anet [Annet, Annette, Anette, Hanet], **Jean-Baptiste** (*b* Paris, 20 June 1650; *d* Paris, 26/28 April 1710). French violinist, father of Jean-Jacques-Baptiste Anet (*see* BAPTISTE). He was the son of Claude Anet, an instrumentalist. In his youth he studied under Lully. By 1673, when he entered into the first of his three marriages, he was in the service of Louis XIV's brother, the Duke of Orléans. His first wife, Jeanne Vincent, was the mother of Baptiste. Anet remained in the service of the Duke of Orléans (and later that of the duke's son) but also served in the 24 Violons du Roi from 1699 until his death. On his deathbed, he sold his position in the 24 Violons to his colleague Joseph Francoeur for the latter's son Louis. He enjoyed a successful career, but nothing is known of his violin playing, and no music has been found to suggest that he was a composer. He is presumed to have been the first teacher of Jean-Jacques-Baptiste Anet.

NEAL ZASLAW

Anet, Jean-Jacques-Baptiste. *See* BAPTISTE.

Anfossi, Pasquale (*b* Taggia, 25 April 1727; *d* Rome ? Feb 1797). Italian composer. According to the *Dizionario biografico degli italiani*, he entered the Loreto Conservatory, Naples, in 1744 and there specialized in the violin. Having left the conservatory about 1752, he played in the orchestra of one of the small Neapolitan theatres. After about ten years in that profession (Ginguené), he decided to become a composer and took composition lessons from Sacchini and Piccinni. His first opera, *La serva spiritosa*, was produced at the Teatro Capranica, Rome, in Carnival 1763, but he only gradually established himself as a leading opera composer. According to Burney, he wrote some music for Sacchini's operas at the composer's request, while Ginguené and Grossi state that Piccinni obtained opera commissions for him between 1771 and 1773 at the Teatro delle Dame, Rome, and that he achieved success only with the third of these, *L'incognita perseguitata* (1773). There is no doubt of the success of *L'incognita*, which gained for Anfossi a degree of celebrity he had not previously enjoyed.

During the 1770s Rome and Venice were the main centres of Anfossi's activities. For part of this period he was *maestro di coro* at the Venetian girls' conservatory called the Derelitti or Ospedaletto, for which he wrote music between 1773 and 1777. It has not been possible, however, to determine from the surviving conservatory records (now in *I-Vas*) the exact dates of his appointment or resignation. Commissions for Turin – *Armida* (1770) and *Gengis-Kan* (Carnival 1777) – as well as a resetting of the Turinese libretto *Motezuma* for Reggio nell'Emilia in 1776 offered Anfossi the opportunity to compose spectacle operas on exotic subjects which that theatre favoured. A nod towards the Franco-Italian synthesis taking place in nearby Mannheim and Stuttgart, these operas infuse italianate dramaturgy with military and machine spectacle, pantomime and ballet. His *Armida*, together with Jommelli's *Armida abbandonata* for Naples in the same year, spawned a dozen subsequent versions, among them Haydn's *Armida* of 1783. The tragedy *Motezuma* represents an early departure from longstanding operatic conventions. Anfossi also participated in the lavish spectacle operas that the revisionist Stuttgart librettist Verazi presented for the opening of La Scala during the 1778–9 season.

It is said that he went to Paris in 1780, but if so, he composed no new operas there. The statement in the *Dizionario biografico degli italiani* that he moved directly from Paris to London is dubious. His first opera for London, *Il trionfo della costanza*, was produced at the King's Theatre on 19 December 1782, and there is no evidence that he was in London much before then; the new operas that he had performed in Venice and Rome between 1780 and 1782 prove that he must have been working in Italy during this period. Off and on during the years 1782–6 he served as music director for the King's Theatre, where five new operas as well as several of his earlier works were produced. He also supervised the production of operas by other composers, including a version (first staged at the King's in May 1785) of Gluck's *Orfeo* with additional music by Handel and J.C. Bach. His last London opera, *L'inglese in Italia*, was unsuccessful, being performed only twice (20 and 27 May 1786); an extract from the *General Advertiser* for 22 May reads, 'The music evidently labours under a tedious monotony'.

By the following autumn Anfossi was back in Venice. At the start of 1787 he was in Rome for the production of his *Le pazzie de' gelosi*, a work which, according to Gerber, caused a fresh wave of enthusiasm for his music among the Romans. In 1790, however, his production of new operas, uninterrupted since the 1770s, came to an abrupt stop and he spent his last years in the service of the church. In August 1791 he was promised the post of *maestro di cappella* at S Giovanni in Laterano, Rome, on G.B. Casali's resignation or death; he was appointed in July 1792 and held this position for the rest of his life.

The total number of Anfossi's operas, both heroic and comic, has not been established, but is certainly over 60 and possibly 70 or more. He also composed a considerable amount of church music, including about 20 sacred oratorios in Latin (composed for female voices and orchestra and first performed in Venice) or Italian (composed for mixed voices and orchestra and first performed in Rome). Anfossi's early style is close to Piccinni's, a reflection of their close professional relationship. His harmonies are diatonic and bland and his textures within any single number discreetly varied, though perhaps a little heavy at times because of constant note repetitions in the bass. His melodies, although not all equally inspired, contain moments of elegance and warmth. Like Piccinni, Anfossi successfully modified his style to suit changing tastes that condemned less flexible composers to oblivion. Anfossi employed the da capo form in arias of his early heroic operas and oratorios, though not in those of his comic operas, where binary forms prevail; by the mid-1770s, however, he abandoned

the form altogether in favour of through-composed structures. Several stylistic changes are noticeable in his later works: textures are lighter, and there is more effective use, both in accompaniments and melody, of pauses and rests; there are fewer embellishments and ornamental notes in the melodic parts; the orchestration is more colourful, partly because of a more imaginative use of wind instruments. Gerber noted the originality of his finales, although part of the credit is due to the high quality of the librettos by Bertati and others. Anfossi was particularly successful at depicting sentimental characters and situations: Giannetta in *L'incognita perseguitata* is one of his loveliest creations. In *Cleopatra* (1779) Anfossi responded to Verazi's challenge with some of his most beautiful, expressive and dramatic music, including an *ombra* scena, a finale-like ensemble encompassing three scenes in Act 2 and a finale in which the star-crossed lovers die. The storm and trio at the beginning of *Zemira* (1782), the finales and the many ensembles (some with action) even in traditional librettos like *Nitteti* (1771), *Creso* (1787) and *Artaserse* (1788), betray Verazi's continuing influence. However, Anfossi's operas betray evidence of haste in composition, and his operatic music has sometimes been criticized for not sufficiently enhancing characterization or creating dramatic impact. His *buffo* characters lack both Paisiello's witty terseness and Cimarosa's extravagant prolixity, while his inferiority to Mozart as a music dramatist can be seen from a comparison of Anfossi's *La finta giardiniera* (1774) with Mozart's setting of the same libretto a year later.

MICHAEL F. ROBINSON, MARY HUNTER (WITH MARITA PETZOLDT MCCLYMONDS)

Angehangte Traktur (Ger.). *See* SUSPENDED ACTION.

Angel. American record company. It was created by EMI in 1953 to distribute its English Columbia label in the United States. Under the astute leadership of Dario Sario in New York, and with the full support of the powerful producer Walter Legge, the firm quickly established a reputation for excellent recorded sound and high standards of album packaging. The label augmented its catalogue with material from Pathé Marconi and Electrola, and in 1957 it acquired the HMV catalogue for North America, consolidating its vital position within EMI's international network. Later that year Angel moved its operations to Los Angeles, affiliating with Capitol Records, in which EMI had gained a controlling interest two years earlier. Angel expanded during the 1960s under the direction of Brown Meggs, acquiring Capitol's classical catalogue, distributing numerous Russian recordings under the Melodiya/Angel banner and (in 1966) introducing Seraphim, a low-priced reissue label. Angel

also established its own contracts with artists, including André Watts, Christopher Parkening and Nadja Salerno-Sonnenberg. In 1992 the company relocated to New York, where it pursued various crossover projects.

DAVID MERMELSTEIN

Angeleri, Giuseppe Maria (*fl* 1678–91). Italian composer. He is known mainly for seven masses for small groups of voices and continuo, which he published in two volumes, three in the first, op.1 (Milan, 1678), and four in the second, op.2 (Milan, 1691). The first volume also contains a *Magnificat* and a *Tantum ergo* for solo voice. The second survives incomplete.

Angeli, Francesco Maria ['Il Rivotorto'] (*b* Rivotorto, nr Assisi, 1632; *d* Assisi, 23 Dec 1697). Italian composer. He bore as a sobriquet the name of his birthplace. He first studied at the monastery there and later at Perugia, Assisi and, in 1655–6, Bologna. As a member of the Franciscan order he held a series of appointments as *maestro di cappella*, beginning at S Francesco, Bologna, in 1656. He then worked at Spoleto and Palermo and finally, until his death, at S Francesco, Assisi. Music at this basilica notably flourished under his direction, and he enjoyed a high reputation as a contrapuntist; he wrote a short treatise on counterpoint, *Sommario del contrapunto* (MS, 1691, *I-Bc*). While at Assisi he was also superintendent of the Sacro Convento and wrote its history, which was published posthumously. All his compositions are sacred, and most are for two or more choirs. They are competently written, but they are sometimes marred by a too easy acceptance of superficial effects and massive sounds.

WORKS

Messa del secondo tono (Ky, Gl, Cr), 8vv, org, *I-Bc*
Missa 'Angelorum chori', 4 choirs, insts, org, 1677, *Ac*
Messa, 4vv, org, chorus, 1680, *Ac* (authenticity doubtful)
Many psalms, hymns, tracts etc., 8vv, org, *Ac* (some holograph)

GIUSEPPE VECCHI

Angelica. *See* ANGÉLIQUE.

Angelieri, Giorgio (*b* ?Venice; *fl* Vicenza and Venice, 1562–1604). Italian printer and music publisher. He was possibly related to the Parisian publishers Abel and Arnoul Angelier. He printed books in Venice sporadically from 1562 until 1570, when he apparently acquired the printing shop of CLAUDIO MERULO and began to publish in earnest. His 1571 edition of madrigals by Aurelio Roccia employs the same typefaces and ornamental initials that Merulo had used, and the madrigals were 'per Claudio Merulo da Correggio con ogni diligenza corretti'. Angelieri's seven other surviving music editions are mostly madrigals and use the printer's mark acquired from Merulo: Arcadelt (1572), Rore (1573), Lassus (two books, 1573), Palestrina (1574). He also printed Alard Du Gaucquier's *Magnificat octo tonorum* (1574), and Costanzo Porta's *Litaniae* (1575). Three of the music books name Merulo as 'correttore', but Merulo seems not to have had any continuing connection with the firm.

After the Porta book of 1575 Angelieri sold his music type to Giuseppe Guglielmo and moved to Vicenza, publishing there (and occasionally in Venice) from 1576 until his definitive return to Venice in 1580. He continued to print a large variety of books with various partners until 1604. He was succeeded by Agostino Angelieri, presumably his son, in 1605.

Angelika. *See* ANGÉLIQUE.

Angelini, Giovanni Andrea. *See* BONTEMPI, GIOVANNI ANDREA.

Angelini, Orazio (*b* Gubbio; *fl* 1583–92). Italian composer. From the dedication of his first book of five-voice madrigals it is clear that he had previously been employed by Ottavio Accoromboni, Bishop of Fossombrone. The contents, mostly cast in the fashionable canzonetta style, make much use of stock madrigalisms including 'eye-music' and changes of mensuration for representational purposes. The remaining two books are dedicated to another patron, Cardinal Scipione Gonzaga, who is known to have had strong musical and literary interests. The dedication of the *Secondo libro* speaks in particular of his knowledge of music.

1 piece intabulated lute in 1601[18]

IAIN FENLON

Angélique (Fr.: 'angel lute'; Ger. *Angelika*; It. *angelica*). A two-headed lute with ten single strings on the lower head and six or seven on the upper (see illustration). Its characteristic diatonic tuning greatly restricts its compass, but the tone of the open strings is full and clear. An instrument of the lute family, tuned in this way, was depicted by Praetorius (*Theatrum instrumentorum*, pl.xxxvi), who said it was played like a harp. The 23 strings shown, however, run between a sloping bridge and a single pegbox angled to one side. The name 'angel lute' or 'angélique' is found in the late 17th century and the 18th. The instrument can usually be distinguished by the ten pegs of the lower pegbox. James Talbot (*GB-Och* Music 1187, *c*1695) gave the tuning for the 16-course angel lute, spreading diatonically on 'white' notes from *D* to *e′*. He also said that the instrument had nine frets and was 'more proper for slow and grave lessons than for

Damon with an angélique: engraving by Nicolas Bonnart

quick and brisk by reason of the continuance of sound when touched which may breed discord'.

Christiaan Huygens heard a consort of five angéliques in Paris in 1661. The performers were Jérôme Vignon, who claimed to be the angélique's inventor, his daughters and other pupils; they played instruments made by Guillaume Jacquesson, a well-known lute and theorbo player. The angélique was also cultivated in Strasbourg, where Valentin Strobel (ii) published some ensemble music for it in 1668 (now lost). An influential player and teacher was Jean Béthune, who was active in Paris in 1664 and moved to Strasbourg about 1681; Béthune's work is represented in two manuscripts in tablature. The angélique is one of four instruments (the others being lute, bass viol and guitar) for which alternative song accompaniments were provided by Kremberg. A third angélique manuscript is in the former Mecklenburg ducal library at Schwerin. The collection also includes four early 18th-century angéliques made in Hamburg (one of which is certainly the work of Tielke), suggesting that the instrument remained popular in German aristocratic circles into the 18th century; this idea is supported by the arrangements of music by Count J.A. Losy in a manuscript from the monastery of Rajhrad (Raigern), near Brno, Moravia.

Angeloni, Carlo (*b* Lucca, 16 July 1834; *d* Lucca, 13 Jan 1901). Italian composer, teacher and bandmaster. He studied with Michele Puccini, father of Giacomo, and spent his life in Lucca except for a period in Florence (1855–62). Of his activities, the most important was his teaching at the Istituto Musicale Pacini. As the institute's director, and especially as teacher of singing, the organ, harmony and counterpoint (1864–95), he educated several generations of young musicians, among them Alfredo Catalani and Giacomo Puccini, who remained devoted to him. His works include eight operas, five of which were performed between 1854 and 1871 and the last after his death, in 1902, though all were given only in Lucca or other small towns; the manuscripts of his *Asraele degli Abenceraggi* and *Dramma in montagna* are preserved in Rome (*I-Rsc*). Angeloni also produced a large number of sacred works distinguished by their originality, dignity of style and sound contrapuntal technique. These include a mass for the jubilee of Leo XIII (*I-Rvat*), as well as a 'Miserere' and *Stabat mater* (*I-Fc*). Nevertheless, his entire output, which also includes songs, piano pieces, orchestral and band music, remains unpublished, despite posthumous attempts to make him better known.

EMILIA ZANETTI

Angelus Silesius(, Johann) [Scheffler, Johannes] (*b* Breslau [now Wrocław], Dec 1624; *d* Breslau, 9 July 1677). German poet. He received an excellent education and his first exposure to the budding vernacular literature at the Elisabeth Gymnasium, Breslau. He attended the universities of Strasbourg, Leiden and Padua, at the last of which he received the degrees of MD and PhD in 1648. He returned to Breslau and served as personal physician to the Duke of Oels in 1649–52. A clash with the Protestant censor led to his conversion to Catholicism on 12 June 1653, on which occasion he assumed the name of (Johann) Angelus Silesius. He defended his conversion in writing and soon became an outspoken and prolific agent and leading poet of the Counter-Reformation. He was ordained priest in 1661 and spent his later years – when his creative powers were in decline – mostly in religious activities and polemics.

Angelus Silesius's two principal poetic works are *Die Geistreiche Sinn- und Schlussreime* (Breslau, 1657, 2/1674, 3/1675 as *Der cherubinische Wandersmann*) and *Heilige Seelenlust* (Breslau, 1657, enlarged 2/1668). The former, a collection of 1679 poems mostly in rhymed Alexandrine couplets, is a product of his mystical disposition. Using the strict form of the epigram, a form given to antithesis and dialectic, he expressed the mystic's abnegation of will and his vision of the longed-for union with God. By employing such poetic devices as paradox, hyperbole, irrational circumlocution and contradictory statements he fulfilled the 'rationalistic' form of the epigram while conveying the ineffability of a basically irrational experience. In their daring expressiveness and mastery of form the epigrams represent a high point of German Baroque literature. 20th-century composers who have set texts from *Der cherubinische Wandersmann* include Arnold Mendelssohn (1900), Willy Burkhard (1927), Conrad Beck, in the form of an oratorio (1933–5), Hugo Distler (1934) and Fritz Lubrich (*c*1950).

Heilige Seelenlust belongs to a tradition of religious pastoral in which Jesus is portrayed as the shepherd and the soul as his longing bride. Here Angelus Silesius often used the technique of the contrafactum, giving a secular poem or song religious content while retaining the original metre, rhyme and melody. He adopted a simple lyrical style and various common strophe forms in order to provide the Counter-Reformation with songs that could compete in popularity with the Protestant hymns. He furnished all the songs with melodies, for the most part composed by Georg Joseph.

These songs have lived on in the hymnals of both confessions but never with the original melodies. The Pietists in particular embraced his poems; 30 were included in the widely used *Geistreiches Gesangbuch* (1704), edited by J.A. Freylinghausen.

TRAUTE MAASS MARSHALL/LOTHAR HOFFMANN-ERBRECHT

Angerer, Edmund (Johann Nepomuk) (*b* St Johann in Tyrol, 24 May 1740; *d* Fiecht, Tyrol, 7 Aug 1794). Austrian composer. He was the son of the organist Stefan Angerer (1711–after 1777), who gave him his early musical instruction. As a boy he attended the Gymnasium of Hall in Tyrol; he was a chorister at the Königliches Damenstift there, which had an excellent Kapelle, 1754–7, and in 1759 studied composition with Vigilio Blasio Faitello. In 1758 Angerer entered the Benedictine abbey of Fiecht, then famous for its music. He was ordained priest in 1764, and was a choirmaster of the abbey and a music teacher at the abbey school until he fell ill in 1793. He had close links with the Cistercian abbey of Stams, which he visited several times, sometimes performing his own compositions there.

Many of Angerer's compositions were lost in fires at the Fiecht abbey, and few of those surviving in collections elsewhere are dated. In 1996 he was identified as the composer of the famous *Kindersinfonie* ('Toy Symphony'), previously attributed variously to Joseph Haydn, Michael Haydn and Leopold Mozart. His works are melodious and attractive in style, and make use of tone-painting and material reminiscent of folksong, with such features as alphorn glissandos and unusual instruments such as the conch trumpet, goat horn and glockenspiel. Many of his settings of Mass Propers are set in a cantata manner, with free texts in German.

HILDEGARD HERRMANN-SCHNEIDER

Angerer, Paul (*b* Vienna, 16 May 1927). Austrian conductor, viola player and composer. From 1941 to 1946 he studied theory, the piano, violin and organ at the Vienna Music Academy. After playing the viola in the Vienna SO and winning a medal at the Geneva Music Competition in 1948, he was engaged by the Zürich Tonhalle Orchestra, and then by the Orchestre de la Suisse Romande (1949–52). From 1953 to 1956 he was principal viola player in the Vienna SO. He also won first prize for an organ composition in the competition in Haarlem in 1954.

Angerer's subsequent career as a conductor has extended from the post of director and chief conductor of the Vienna Chamber Orchestra (1956–63), and numerous tours as guest conductor, to an engagement as composer and conductor of the Vienna Burgtheater (1960–64). In this capacity he wrote and performed music for various

plays. He was principal conductor of the opera house of Bonn (1964–6), musical director of the theatre in Ulm (1966–8) and musical director of the Salzburg Landestheater (1968–72). In these posts he also sometimes directed productions. From 1970 to 1971 he was artistic director of the Fest in Hellbrunn, a local offshoot of the Salzburg Festival, and in 1972 he became director of the South-West German Chamber Orchestra in Pforzheim, a post he held until 1982. From 1982 to 1992 he taught at the Vienna Hochschule für Musik.

Angerer has composed many instrumental works in a personal style which shows the influence of Hindemith; he has also written a mass, the *Missa Seitenstettis* (1987–8). His gifts as conductor and composer may be heard in his recordings; he has edited Baroque and pre-Classical music, as well as works by Joseph Lanner.

RUDOLF KLEIN/R

Angermüller, Rudolph (*b* Gadderbaum, Bielefeld, 2 Sept 1940). Austrian musicologist of German origin. He studied musicology in Mainz (1961–5), Münster (1965–7) and Salzburg (1967–70) with Schmitz, Massenkeil, Federhofer and Croll, as well as the piano, double bass and music theory at the Salzburg Conservatory. He received the doctorate at Salzburg University with a dissertation on Salieri in 1970 and was assistant lecturer at the musicology institute of Salzburg University under Gerhard Croll (1968–72). While continuing to teach at Salzburg University, in 1972 he became academic librarian of the Internationale Stiftung Mozarteum in Salzburg, a post in which he worked with Otto Schneider on the preparation of the Mozart bibliography. He has been editor-in-chief of the Mozart Neue Ausgabe sämtlicher Werke (1973–81), director of musicology (1981–9) and secretary-general (1989–) of the Internationale Stiftung Mozarteum, curator of many exhibitions and a prolific Mozart scholar. His Salieri studies have brought him international recognition and he has edited the opera *Tarare*. His work on the Mozart collected edition and his editions of *Bastien und Bastienne* (1974) and *La finta semplice* have won him a reputation as a Mozart scholar. The library of the Internationale Stiftung Mozarteum contains a catalogue of all his publications.

RUDOLF KLEIN

Angers. City in France. It is situated at the western end of the Loire valley. The cathedral of St Maurice was constructed between 1125 and 1148. Musical activity centred around it until the French Revolution. Of particular note was the Psallette, a choir school founded in 1369. Four children aged seven and older were given vocal and instrumental instruction by a *maître de chapelle* and prepared for participation in the service. By the mid-16th century the Pueri Chori (children of the Psallette) had increased to ten. The Psallette still functions. The chanson composer Clément Janequin was a *maître* (appointed 1534). The earliest written reference to an organ at St Maurice also dates from 1369. Major renovations during the 16th century transformed it into one of the country's finest. Jean Daniel (1540) and Jean Huré (1899) were among the titular players.

The city's first theatre was built in 1738, but was infrequently used. Another, which was opened in 1763, housed only itinerant troupes. Today's Grand Théâtre, inaugurated in 1871, averages 20 operatic performances annually. Numerous vocal and instrumental ensembles began to flourish towards the end of the 18th century: a woodwind society (founded 1773); an orchestra of 60 players (1798) directed by Pierre Voillemont (1750–1814), a former *maître*; the Concert d'Etude (1817); two

Sociétés Philharmoniques (1804 and 1843); and a Société Ste-Cécile (1860). With musical education linked for so long to the cathedral a public music academy was only first proposed in 1726. Other such projects came to nothing until Voillemont established the short-lived Institut de Musique (1798). Further attempts failed until the creation in 1857 of the current conservatory.

The Association Artistique, a municipally funded symphony orchestra, gave its inaugural concert in 1877. Renamed the Société des Concerts Populaires (1898), it prospered until the 1960s. Max d'Ollone, Rhené-Baton (1879–1940), Louis Fourestier (1892–1976) and Jean Fournet were among the conductors. The Orchestre Philharmonique des Pays de la Loire followed in 1971. 114 players were divided into two groups, one based in Angers with Yves Prin (*b* 1933), the other in Nantes under Jean-Claude Casadesus. Pierre Dervaux, principal music director, conducted a number of Grands Concerts Symphoniques with both ensembles joined together. He was succeeded by Marc Soustrot (*b* 1949) in 1978 and Hubert Soudant (*b* 1946) in 1993. The orchestra has performed in the Centre de Congrès d'Angers since 1982, and is also the resident orchestra of the Grand Théâtre.

JEFFREY M. ENGEL

Angiolini, (Domenico Maria) Gasparo [Gaspare, Gaspero] [Gasparini, Domenico Maria Angiolo] (*b* Florence, 9 Feb 1731; *d* Milan, 6 Feb 1803). Italian choreographer, dancer and composer. Along with his rival Jean-Georges Noverre, Angiolini was one of the principal exponents of the new *danza parlante*, or *ballet en action*. He began his dance career in Lucca (1747) and also in Venice (1747–8, 1750–51), Turin and Spoleto (1751), Lucca again, this time also working as a choreographer, and Rome (1752–3) before moving to Vienna. There, in 1754 he married his partner, Maria Teresa Fogliazzi (1733–92), notwithstanding the rivalry of Casanova. During Carnival 1756–7 Angiolini produced ballets for the operas given at the Teatro Regio, Turin, also performing as *primo ballerino*, partnered by his wife. He returned to Vienna as *premier danseur* at the French theatre, and when the choreographer Franz Hilverding van Wewen departed for Russia in November 1758, the director Giacomo Durazzo named Angiolini as his successor. Gluck succeeded Joseph Starzer as composer of ballet music.

Angiolini later claimed to have had misgivings over this appointment, and indeed early reports on his dancing and his ballets hardly hint at the power of his later creations. In his 1762 programme essay for *Citera assediata* he implied that the chore of producing repertory ballets had inhibited his artistic development; with the hiring of assistant choreographers and the arrival in Vienna in 1761 of Ranieri de' Calzabigi, Angiolini gave up some of his duties and embarked on a series of major dance-dramas informed by the ideal of ancient pantomime. Calzabigi wrote or collaborated on at least the French-language programme essays for *Don Juan* and *Sémiramis* (he claimed authorship of both in his 1784 *Lettera ... al sig. conte Alfieri*), providing literary polish and theoretical rigour. Angiolini himself insisted on concision, clarity and respect for classical precedents. In the interest of audience comprehension the main ballets in this series (all with music by Gluck) – *Don Juan, ou le festin de pierre*, *Citera assediata*, *Alexandre et Roxane*, *Sémiramis* and *Ifigenia in Aulide* (lost) — were based on well-known plays, operas or myths. By Angiolini's own account the *lieto fine* of his *Ifigenia* ballet was in response to audience displeasure with the grim dénouement of *Sémiramis*. (Angiolini later staged a five-act version of his *Sémiramis* ballet, to his own music.) During this same period Angiolini contributed ballets to *opéras comiques*, and to *opere serie*, including reform operas by Traetta and Gluck in which dance formed an integral part of the action. He called particular attention to the classical sources of his ballets for Gluck's *Orfeo ed Euridice*. Still, Angiolini was proudest of his independent ballets, which he saw as requiring far greater force of imagination.

The death of Emperor Francis in 1765 closed all theatres in Vienna, and prevented performances in Innsbruck of Angiolini's last ballet to music by Gluck, *Achille in Sciro*, based on Metastasio's libretto. Shortly thereafter Angiolini succeeded Hilverding at St Petersburg, making his début (September 1766) with another ballet derived from Metastasio, *Le départ d'Enée, ou Didon abandonnée*, to his own music. (A prior trip to Russia to assist with the festivities for the 1762 coronation of Catherine II, reported by Tozzi and others, cannot have taken place, as the choreographer was present in Vienna during the entire period in question, staging and performing in several ballets, including those for *Orfeo ed Euridice*.) During this first stay in Russia Angiolini presented several new heroic, pastoral and allegorical ballets, restaged others from Vienna, and composed dances for Italian operas by Galuppi and Traetta. He worked next (1772–3) in Venice and Padua, and then in Milan, despite the failure (due to the empress's opposition) of his bid to manage that city's Teatro Regio Ducale. While in Milan Angiolini published several highly informative statements ('avvisi') on his ballets and his art, and a pamphlet entitled *Lettere di Gasparo Angiolini a Monsieur Noverre sopra i balli pantomimi*. This was principally an impassioned defence of his teacher Hilverding as the inventor of the *ballet en action*, and of his own ideals, against the claims of priority of the choreographer Noverre, who had succeeded Angiolini in Vienna. (Their polemic over the next few years involved several figures in the Milanese enlightenment.) In his *Lettere* (which had been prompted also by a critical pamphlet on ballet by Ange Goudar) Angiolini clarified his attitudes on matters such as the contradictory languages of gestures and words, and the proper conduct of a tragic action. He also chided Noverre for neglecting technique, for relying on long explanatory programmes, and for his insufficient knowledge of music; Angiolini was by this time accustomed to writing his own music for his ballets.

The rivals traded posts in 1774, Noverre being hired at the Teatro Regio Ducale in Milan, and Angiolini returning to the Habsburg capital. Though highly productive during this stay, and seconded in a number of works by the talented Starzer, Angiolini fared poorly against the strong Noverre faction. In 1776 Angiolini was called again to St Petersburg, where he composed ballets for three operas by Paisiello, possibly also a *Pygmalion*, and restaged an *Arianna* ballet originally composed for Padua. For most of the time between Carnival 1780 and autumn 1782

Angiolini was at La Scala, and at the height of his fame. Even while respecting Milanese traditions (with regard to the genres thought appropriate for a *primo*, *secondo* or *terzo ballo*), Angiolini captivated both audience and critics with novel and interestingly treated subjects, magnificent scenery and programme essays that advanced his public's understanding of both the possibilities and limitations of pantomime. By now Angiolini was composing the music to all his ballets; though critics generally praised his scores (including more than one biographer of Gluck, to whom *L'orfano della China* was long attributed), the few that survive reveal considerable technical deficiencies.

During a final sojourn in St Petersburg (1782–6) Angiolini became involved in the newly founded ballet school, and also in disputes with the impresario Yelagin. For Carnival and spring 1789 he was again staging dances for La Scala, and thereafter worked in Turin (Carnival 1790) and Venice (Carnival 1791), where for one of the operas he functioned also as 'Direttor di tutto lo spettacolo'. *Deucalione e Pirra*, an allegorical ballet celebrating the Lombard-French alliance (1797, La Scala) seems to have been his final choreographic effort; the other patriotic ballets claimed for him by the Fascist writer Sóriga are not documented in other sources. Angiolini's republican sympathies were real, however, and cost him two years' imprisonment and exile; he was released in 1801 following the Peace of Lunéville.

It is not only Angiolini's revival of ancient pantomime drama that marks him as a major figure in 18th-century ballet, but also his sophisticated thinking on the relationship between dance, words and music. Several of his independent ballets were derived from operas, including *La caccia di Enrico IV* (1773, after Sedaine and Collé), *Il disertore* (1773, after the 1769 *opéra comique* by Sedaine and Monsigny), *Il sagrificio di Dircea* (1773, after Metastasio's *Demofoonte*), *Solimano II* (1781, after Favart and Marmontel) and *Il diavolo a quattro* (1782, after Sedaine). In the programmes for several of these works Angiolini discusses with rare perspicacity the changes made necessary by different means of expression. Angiolini's importance lies also in his early, successful integration of Italian 'grotesque' technique, French *danse noble* and classical subject matter, and (later on) in his vindication and renewal of the Italian tradition in the face of a flood of French dancers and choreographers. Angiolini left no single treatise summarizing his approach to ballet, as did Noverre, and his reputation has consequently suffered in comparison. But unlike his French rival he had the good fortune to collaborate over a long period with Gluck, whose scores provide some notion of the vigour and originality of Angiolini's choreography. Though no actual choreographic notation of an Angiolini ballet survives, there are (in addition to printed scenarios) early annotated scores or parts for *Don Juan*, and (presumably) the choreographer's own detailed description of the action of *La partenza d'Enea*, in the printed first violin part of that ballet.

Angiolini's nephew Pietro Angiolini (*b* ?Florence, *c*1760; *d* after 1836), also a dancer and choreographer, worked in opera houses throughout Italy as well as in London and Lisbon. He should not be confused with a son of Gasparo, also named Pietro, who was born in 1764.

BRUCE ALAN BROWN

Angklung. Tuned bamboo sliding rattle of Java, Madura, Bali, South Sumatra, Central and South Sulawesi, south-western Kalimantan, Malaysia, Singapore and Thailand. It is especially popular in West Java. Its two or three bamboo tubes, tuned to as many octaves, are closed with a node at the bottom. A tongue-shaped segment is cut out of one side of each tube, the size of the segment determining the pitch (see illustration). The tubes sit in small troughs cut in the base of the square bamboo frame; attached to narrow vertical tubes tied with rattan, they slide to and fro when shaken. They are normally played in groups of three or more, each instrument being shaken sideways by one person, traditionally in an interlocking,

Angklung (bamboo rattles) and selompret (oboe), both tuned in pélog, Ponorogo, East Java

hocket-like manner, sometimes together with an oboe (the TAROMPET in West Java, the *selompret* in Central and East Java), drums and gongs to accompany dances. The *angklung* sometimes employ complete or incomplete pentatonic tunings of the *sléndro* (*saléndro*) or *pélog* type, but sets have more recently been tuned diatonically and also suspended from a frame, enabling the whole set to be played by one performer.

In Banyuwangi, East Java, the *angklung* is a xylophone consisting of 12 to 14 bamboo tubes in a frame; the tubes are cut on the slant at the top and closed by a node at the bottom. It forms part of the *gamelan angklung* (*see* GAMELAN, §I, 5(iii)).

The *angklung bungko*, an ensemble of the Bungko area near Cirebon, West Java, consists of four large *angklung*, a large iron gong, a *kempul* (smaller gong), a *kenong* and *ketuk* (small gongs), three *kebluk*(small gongs with deep rims) and two *kendang* (double-headed cylindrical drums). The ensemble accompanies local dances.

Music played on sets of diatonically tuned *angklung* is included in tourist shows in Thailand (where it is called *angkalung*) and also Malaysia, where it was formerly featured in *kuda kepang* horse trance dance but is now a popular school instrument.

The *sléndro*-based four-tone *gamelan angklung* of Bali no longer regularly contains *angklung*, despite its name. It comprises small gongs, metallophones, cymbals, drums and flute (*see* INDONESIA, §II, 1(iii)(b)).

MARGARET J. KARTOMI

Anglaise [anglois, angloise] (Fr.: 'English'). 18th-century term used on the Continent to refer to various types of English dance, primarily the ever-popular country dances, but occasionally also the hornpipe. Country dances were a recreational activity in the French court of Louis XIV as early as the 1680s, but they were soon altered to conform to French taste by the use of characteristic French steps such as the *pas de bourrée* and the *contretemps de gavotte*; the resulting hybrid was called CONTREDANSE. In 1699 Ballard published a *Suite de danses ... qui se joüent ordinairement aux bals chez le Roy* which contained 17 'contredanses anglaises'.

Pieces entitled 'anglaise' are generally in a style reminiscent of the music accompanying country dances: they may be in duple or triple metre or in 6/8, and they have an obvious accent on the first beat of the bar; the melodies are lively, often covering a wide range and with some disjunct motion. Examples of the stylized anglaise may be found in J.S. Bach's French Suite no.3, J.C.F. Fischer's *Musicalischer Parnassus* (where they are called 'balet anglois' or 'air angloise'), and Telemann's Ouverture in F♯ minor for strings and basso continuo (Musikalische Werke, x, Kassel, 1955). All of these pieces are in duple metre with no upbeat and in a bipartite form consisting of two strains, each of which is repeated.

German theorists who described the anglaise include Mattheson, who applied the term to English ballads and hornpipes as well as country dances (*Der vollkommene Capellmeister*, 1739), D.G. Türk (*Clavierschule*, 1789) and H.C. Koch (*Lexikon*, 1802). The anglaise was popular until the late 18th century; an example may be found in the third movement of the string quartet by E.-B.-J. Barrière, op.3 no.2, 1778.

MEREDITH ELLIS LITTLE

Anglebert, Jean-Baptiste-Henry d'. French musician, son of JEAN HENRY D'ANGLEBERT.

Anglebert, Jean Henry d'. *See* D'ANGLEBERT, JEAN HENRY.

Angleria, Camillo (*b* Cremona, 1630). Italian theorist. He was a Franciscan tertiary and studied composition with Claudio Merulo. According to Lucchini, he was *maestro di cappella* at the Florentine court in 1622, but this cannot

have been so, as Marco da Gagliano held the post at that time. In his treatise *La Regola del contraponto, e della musical compositione* (Milan, 1622) he was primarily concerned with strict counterpoint, basing his theory on mathematically established intervals from the speculative theory of harmony. In this way he appears as one of the closer adherents of Zarlino, together with Girolamo Diruta, Cerone, Artusi and Zacconi, but he defended the *seconda pratica* as the outcome of the *prima pratica*. He discussed – with continual references to Merulo – intervals, keys, imitation and composition in two and more parts, including double counterpoint. As practical illustrations the treatise presents two of Angleria's own ricercares, and some canons and a ricercare by his friend G.P. Cima.

JOSEF-HORST LEDERER

Anglès, Higini [Anglés, Higinio] (*b* Maspujols, nr Tarragona, 1 Jan 1888; *d* Rome, 8 Dec 1969). Catalan priest and musicologist. From 1900 to 1912 he studied theology at the Seminario de Tarragona and was ordained in 1912. In 1913 he settled in Barcelona, where he studied harmony with José Cogul, harmony, counterpoint, fugue and organ with Vicente de Gibert, composition and folksong with José Barberá, and musicology with Felipe Pedrell. In 1917 he was appointed director of the music section of the Biblioteca de Catalunya in Barcelona. From 1923 to 1924 he studied with Willibald Gurlitt in Freiburg and with Friedrich Ludwig in Göttingen. In 1927 he was appointed professor at the Barcelona Conservatory, and in 1933 at the university. As a result of the Spanish Civil War he lived in Munich (1936–39). In 1941 he became a member of the Institut d'Estudis Catalans in Barcelona and in 1943 the first director of the Instituto Español de Musicología. At the same time he was elected a member of the Real Academia de Bellas Artes de S Fernando in Madrid. In 1947 he moved to Rome to become president of the Pontificio Istituto di Musica Sacra. He was created Protonotario Apostolico by Pope Pius XII in 1958. Among the other honours he received were the Gran Cruz de Isabel la Católica in 1958 and the Grosse Verdienstkreuz des Verdienstordens der Bundesrepublik Deutschland in 1960. He was a vice-president of the IMS from 1933 to 1958.

In his youth Anglès collected more than 3000 folksongs in Catalonia; but his career was devoted to the study and publication of music transmitted in writing. At the age of 33 he founded the Publicaciones del Departamento de Música de la Biblioteca de Catalunya, and followed this in 1941 by inaugurating the Monumentos de la Música Española, published from 1943 onwards by the Instituto Español de Musicología (the first volume was issued by the Instituto Diego de Velázquez). He not only directed both these series but himself contributed many of the volumes. The Catalan series is notable for his publication, in facsimile and transcription, of the 13th-century Las Huelgas Manuscript and for his edition, also in facsimile and transcription, of the cantigas of Alfonso el Sabio. In both cases detailed commentary was supplied. This was characteristic of all Anglès's publications: his commentaries were not confined to the music he was editing but ranged widely over the period as a whole. His meticulous care for detail and his encyclopedic knowledge of medieval music made him an ideal editor: it was choice, not a lack of experience, that made him confine his attention to the music of his own country. His interests extended also to the instrumental music of the 17th and 18th centuries. An important development of MME was the decision to include the complete works of Morales (beginning in 1952), Guerrero and Victoria. The editing of Morales and Victoria was undertaken by Anglès himself. Another of his activities was the publication of the *Anuario musical*, which first appeared in 1946.

Anglès enjoyed an international reputation as a scholar. His capacity for work was prodigious, and his readiness to contribute to Festschriften almost legendary. He was a familiar figure at international congresses, where his colleagues appreciated not only his scholarship but his natural simplicity and sense of humour. As director of the Pontificio Istituto in Rome he believed strongly in the traditional Latin rite of the church and was firmly opposed to any change.

EDITIONS

Publicaciones del departamento de música de la Biblioteca de Catalunya (Barcelona):
i. *Els madrigals i la missa de difunts d'en Brudieu* (with F. Pedrell, 1921)
ii. *Catàleg dels manuscrits musicals de la Collecció Pedrell* (1921)
iii, vii. *J. Pujol: Opera omnia* (1927–32)
iv, viii, xiii, xvii. *Musici organici Iohannis Cabanilles: Opera omnia* (1927–56)
vi. *El còdex musical de Las Huelgas* (1931/*R*)
ix. *A. Soler: Sis quintets per a instruments d'arc i orgue o clave obligat* (with R. Gerhard, 1933)
x. *La música a Catalunya fins al segle XIII*(1935/*R*)
xv, xviii, xix. *La música de las Cantigas de Santa María del Rey Alfonso el Sabio* (1943–64)
xvi. *M. Flecha: Las ensaladas* (1955)
Monumentos de la música española: i, v, x. *La música en la corte de los Reyes Católicos* (1941–51)
ii. *La música en la corte de Carlos V* (1944, 2/1965/*R*)
iv. *Recopilación de sonetos y villancicos a quatro y a cinco de Juan Vásquez* (1946)
xi, xiii, xv, xvii, xx, xxi, xxiv, xxxiii. *C. de Morales: Opera omnia* (1952–69)
xxv, xxvi, xxx, xxxi. *Thomae Ludovici Victoria Abulensis: Opera omnia* (1965–9; orig. edn ed. F. Pedrell (Leipzig, 1902–13/*R*)
xxvii–xxix. *A. de Cabezón: Obras de música para tecla, arpa y vihuela* (1966)
Las canciones del Rey Teobaldo (Pamplona, 1973) [pubd posth.]

JACK WESTRUP/R

Anglés, Rafael (*b* Rafalés, Aragon, 1730; *d* Valencia, 9 Feb 1816). Spanish organist and composer. While serving as *maestro de capilla* at the collegiate church of Alcañiz, near Zaragoza, he competed in 1761 for the position of organist at Valencia Cathedral in succession to Vicente Rodríguez. He was narrowly defeated by Manuel Narro, though his playing was judged superior 'en el estilo moderno', but Narro remained only briefly and Anglés received the appointment on 1 February 1762, retaining it until his death. Chapter records show that he also serviced and tuned the cathedral organ, served as professor (*catedrático*) of plainsong, and was active in adjudicating competitions for other musical posts in the cathedral; the choice of José Pons as *maestro de capilla* in 1793 seems to have been his.

Works credited by earlier authorities to Anglés (supposedly in *E-Bbc* and *ORI*) apparently do not exist; the latter contains one eight-part villancico, *Brillantes luceros*. On the other hand, Valladolid Cathedral possesses a manuscript of his *pasos* and sonatas for organ or piano (see *AnM*, iii, 1948). Joaquín Nin published four pieces from a manuscript in the possession of José Iturbi in *Classiques espagnols du piano*, ii (Paris, 1928). On the evidence of these his music was dominated by Haydn's style; even the Fugatto is homophonic and pianistic in character, more scherzo than fugue. The intense Aria in D minor, however, with an embellished, spun-out melody over a steadily moving bass, suggests a late manifestation of the Baroque style. José Climent published an edition of two sonatas (Madrid, 1970) and his *Salmodia para organo* has been edited by Dionisio Preciado (Madrid, 1981).

ALMONTE HOWELL

Anglesi, Domenico (*b* ?Milan, between *c*1610 and 1615; *d* Florence, 11 May 1674). Italian composer and instrumentalist. He joined the court musicians of the Grand Duke of Tuscany at Florence on 16 March 1639. For several years he was also in the household (as *aiutante da camera*) of Cardinal Giovan Carlo de' Medici; and in 1647 he was associated with Prince Mattias de' Medici, governor of Siena. He failed twice (on a technicality) to gain the post of organist of Florence Cathedral in 1645 and 1649; in documents associated with the latter round of applications he is styled 'Milanese'. He is mentioned by Atto Melani in two letters to Prince Mattias: in one of 7 September 1653 he is named as one of the musicians who had slandered Melani on his recent arrival at the court at Innsbruck; in the other, dated 27 September 1654, Melani drew attention to his contrary opinion of Act 1 of Cavalli's *Ipermestra*. According to another letter to Prince Mattias, from Lorenzo Guicciardini on 3 September 1641, he wrote the music for a *cocchiata* recently given at Florence. The music is lost, as is that of three later dramatic works by him: *Alidoro il costante* (text by Antonio Malatesta, in *I-Fn* Magl.VII.359, pp.584ff), a dramatic cantata commissioned by Cardinal Giovan Carlo for performance on 10 August 1650; the comic opera *La serva nobile* (G.A. Moniglia; Florence, Teatro della Pergola, 1660, staged by the Accademia degli Immobili, whose patron was Cardinal Giovan Carlo); and *Il mondo festeggiante* (Florence, Palazzo Pitti, 1 July 1661), an equestrian ballet performed as part of the festivities celebrating the wedding of the future Grand Duke Cosimo III and Marguerite Louise d'Orléans.

He had some reputation as an organist, but apart from three isolated pieces attributed to him – a keyboard toccata (in *F-Pn* Vm[7] 1811) and two solo songs, *Occhi*

belli (in *A-Wn* 17762) and *Lasciatemi dormire* (in *US-Eu* MS 1) – no music by Anglesi survives except his *Arie* (Florence, 1635), for solo voice and continuo; this appears to be a matter for regret, since the book is one of the finest Italian song collections of its time. It consists mainly of 22 strophic arias; the other four items are two sectional songs midway between strophic arias and strophic variations, an extravagantly embellished sonnet setting similar in form and in the then rare key of E minor, and a long recitative with aria-like intrusions. Most of the songs are named after people prominent in Florentine society or arts. For example, the opening 'Aria detta La Salviata' no doubt refers to the volume's dedicatee, Duke Salviati; 'La Saracinella' probably denotes Ferdinando Saracinelli. 'La Niccolina' and 'Il Nero' (the recitative) possibly indicate connections with the dedicatee and compiler (or at least with members of their families) of an interesting Florentine song manuscript of the period (*I-Bc* Q49): certainly the style of many of the arias is reminiscent of those of Settimia Caccini, her husband Alessandro Ghivizzani and other composers represented in that manuscript and in a related one also of Florentine provenance (*CZ-Pnm* Lobkowitz MS II La 2). Anglesi's arias are notable for their spaciousness, long-breathed melodies and clearcut tonalities, which include such unusual keys as E major, for *Sott'aspetto ridente*, and F minor, for *E bella colei* ('La Saracinella'; in Racek, 249–50, rather inaccurately). The latter is an admirable example of Anglesi's more pathetic vein, and the fine *La mia ninfa amore* ('La Salviata'; in *FortuneISS*, appx iv, 23ff) typifies his more forthright manner, though here too there are darker moments that anticipate so-called Neapolitan progressions in music of the next 100 years or so. Several songs include effective juxtapositions of duple and triple time and a close integration of vocal line and bass that gives them a strong momentum. *La mia ninfa* illustrates this last quality and also another important feature of Anglesi's songs – the expansive treatment of the last few lines of a verse as a refrain in a manner similar to that previously found in songs by G.P. Berti and only one or two other composers. Anglesi deserves to rank alongside Berti as one of the most progressive and rewarding Italian songwriters of the period.

Anglican and Episcopalian church music. The word 'Anglican' refers primarily to the Church of England, a moderately protestant state church established in 1549, and secondarily to a number of daughter churches founded in former British colonies and other countries around the world. The word 'Episcopal' or 'Episcopalian' was adopted by churches, such as those in Scotland and the USA, that espoused theological and liturgical principles similar to those of the Church of England but owed no allegiance to it as the English state church.

1. Anglicanism and Episcopalianism. 2. The Pre-Reformation Church. 3. The English Reformation. 4. English cathedral music, 1549–1645. 5. English cathedral music, 1660–1830. 6. English parochial music, 1549–1830. 7. Organ music in the service, 1549–1830. 8. The Church of England after 1830. 9. Wales, Ireland, Isle of Man, Scotland. 10. North America and Australasia. 11. Missions and the Anglican Communion.

1. ANGLICANISM AND EPISCOPALIANISM. The term 'Anglican' also implies recognition of the unique validity, for sacramental purposes, of the apostolic succession, through a hierarchy of bishops, priests and deacons: this belief, along with the use of a prescribed liturgy, distinguishes Anglicans and Episcopalians from most other protestant sects. In the Church of England proper, however, the conduct of public worship is governed by law, with the national legislature (sovereign and parliament) as the ultimate authority; since 1965, decisions regarding liturgy and worship have been effectively delegated to a General Synod. Almost all Anglican and Episcopalian churches now maintain membership of the Anglican Communion, a consultative body without supervisory powers, which holds a periodic conference at Lambeth (London) and recognizes the Archbishop of Canterbury as its titular head. In this article the word 'Anglican' will be used, where appropriate, to embrace Episcopalian as well as strictly Anglican traditions.

Anglican church music, originating in a blend of Catholic survival with Calvinist innovation, soon developed a number of distinctive forms, styles and practices. Many of these are still in use, although during the second half of the 20th century they have been diluted both by social and economic change and by the sharing and mixing of musical traditions among denominations and among cultures. The 450 years since the English Reformation have yielded an important and varied body of original music for choir, for organ and for congregation. This article covers such music when it was intended for use in worship; it does not embrace devotional sacred music intended for home or concert use.

2. THE PRE-REFORMATION CHURCH. The early Tudor period (1485–1530) saw a great flowering of religious polyphony in England, in which the cathedrals and monasteries were joined by a host of lesser institutions such as collegiate churches, colleges, private chapels and endowed chantries. There was a new development of choir schools, where boys were trained to take full part in the chant-based polyphony that could now be heard in an unprecedented number of buildings, including some of the wealthier parish churches. The intricate church calendar allowed for a proliferation of special feasts, including local patronal festivals, often with processions; feasts of the Virgin Mary were especially prominent. The musical idiom was highly ornate, but conservative, by no means adopting the 'pervasive imitation' that prevailed in continental church music.

Henry VIII's break with Rome (1534) was a purely political move, establishing national church government but leaving the practice of worship essentially undisturbed. During the rest of his reign Henry gave only sporadic support to the growing reform movement. William Tyndale and Miles Coverdale's 'Great Bible' was printed and ordered to be placed in all churches (1539), and 'lessons' (bible readings in church) had to be in English from 1543. An English Litany was printed, with music, in 1544; it was a simple monophonic adaptation of plainchant. Otherwise the Latin liturgy continued with little change. Nevertheless, under the influence of Thomas Cranmer, archbishop of Canterbury from 1533, there was a notable simplification, both of the church calendar and of music, which showed a tendency to modify the luxuriance of earlier decades. The most significant change was the rapid decline of monastic music, as Henry systematically suppressed the abbeys and monasteries throughout the land (1536–40); eight of them, however, were refounded as secular cathedrals. The suppression of chantries, which had supplied the musical staff of many smaller churches, followed, but was completed only in 1548.

3. The English Reformation. The accession in 1547 of Edward VI, who was a minor, brought the reforming party to power through successive lord protectors Edward Seymour, Duke of Somerset, and John Dudley, Duke of Northumberland. Under the guidance of Cranmer, a rapid succession of royal injunctions abolished the use of images, special ceremonies, Offices of the Virgin and masses for the dead. Experiments were conducted in the use of the vernacular. Finally, the Act of Uniformity (1549) imposed a uniform service book in English, the Book of Common Prayer, for use throughout the country. Two Offices, Matins and Evensong, replaced the eight of monastic tradition, while the Mass was revised as a Communion service (*see* Service). Many of the texts of pre-Reformation polyphony – graduals, alleluias, tracts, sequences, antiphons, responsories – disappeared almost without trace, but much remained in translated form. The calendar still retained feasts of the Virgin and major saints, but they were marked only by specially appointed psalms, collects (prayers), epistles and gospels. A new ordinance, unique to the Church of England, required that the entire Psalter be sung or said at Matins and Evensong in the course of each month, and it was divided into 60 portions for the purpose.

Despite its historic importance, the 1549 Prayer Book proved to be transitional. In 1552 a more radical revision replaced it, with several features of Calvinist origin. Matins and Evensong became Morning Prayer (including the Litany) and Evening Prayer, and certain psalms were introduced as alternatives to the daily canticles. In Communion (the words 'commonly called the Mass' being now dropped) the Kyrie gave way to the Ten Commandments with responses, the Gloria in excelsis was placed near the end, and the Benedictus qui venit and Agnus Dei were omitted. Various rubrics directing 'clerks' to sing were also removed.

Little more than a year later, Edward VI died and was succeeded by Mary I (reigned 1553–8), who brought back the Latin rite and submitted to Rome. But Elizabeth I, who followed her, cautiously returned to the reformed religion, forging a masterly compromise that came to be known as the Elizabethan Settlement. It was during her relatively stable reign that the Church of England became well enough entrenched in the hearts of many (but never all) English people to withstand and ultimately overcome the turmoil of the following century. For political reasons, the queen desired to accommodate as many as possible of her subjects within the national church. So the Church became, and still remains, an institution that could tolerate and embrace an unusually wide range of opinions and practices. The character of its music has varied from extreme Puritan to ultramontane Catholic.

The 1559 Act of Uniformity restored the Book of Common Prayer in a form that differed only in minor details (chiefly concerning vestments) from that of 1552. It gave little or no guidance in the matter of music, and a sharp distinction soon arose between the practice of choral foundations, where much of the surviving liturgy was sung by trained choirs, and that of parish churches, where the same liturgy was spoken and the music consisted largely of extra-liturgical metrical psalms sung by the congregation.

Although the number of endowed choral foundations had been vastly reduced, Elizabeth was anxious to maintain those that had survived. Choral foundations still existed in 22 cathedrals – Bristol, Canterbury, Carlisle, Chester, Chichester, Durham, Ely, Exeter, Gloucester, Hereford, Lichfield, Lincoln, London (St Paul's; *see* London, §I, 2(i)), Norwich, Oxford, Peterborough, Rochester, Salisbury, Wells, Winchester, Worcester and York; two 'royal peculiars' – Westminster Abbey (*see* London, §I, 1(ii)) and St George's, Windsor; some half-dozen Oxford and Cambridge colleges and those of Eton and Winchester; and one collegiate parish church, Southwell, to which Ripon was added in 1604, Wimborne in about 1630 and Manchester in 1635.

But many of these bodies were unable to maintain efficient choirs. The combined effect of the dissolution of monasteries and the assertion of royal supremacy had been to exalt the Chapel Royal (*see* London, §III, 1(i–ii)) over all other choral foundations, and it was there, during the next 200 years, that the most important developments took place in the production and performance of liturgical music and anthems, with Westminster and St Paul's taking second and third place. The Chapel Royal was not a single building, but a foundation headed by a dean, with some 32 'gentlemen' (male singers), 12 boy choristers under a master, and at least two organists – much larger forces than any cathedral could boast. They followed the sovereign from one place to another, singing in the royal chapels at Whitehall, Greenwich, Richmond, Hampton Court and Windsor.

For convenience, the choral music sung at all these endowed foundations is generally known as 'cathedral music', and this usage will be followed here.

4. English cathedral music, 1549–1645. All parts of the new liturgy, including the daily psalms, could be spoken where no musicians were to be found. They could also be intoned or chanted in much the same way as the Latin rite, the priest being answered by one or more clerks in unison; and this was undoubtedly the practice in the early years at many churches. John Marbeck's *Booke of Common Praier Noted* (1550) gives a good idea of how this was achieved by simple adaptation of the Sarum chant. Where there was a choir, it sang the responses and psalms in unison on ordinary days, and in simple homophony on feast days, continuing the improvised

practice of the older FABURDEN. This was the context of the four- and five-part sets of responses by Thomas Tallis (*c*1505–85), and of his 'festal' psalms: all of them are straightforward settings of Gregorian tones in the tenor. Later they would become the model for freely composed responses and psalm chants respectively.

In larger choral foundations where polyphony had been the rule, the liturgy presented both a stimulus and a challenge. The two complete choirs (DECANI AND CANTORIS), generally in five vocal parts each, facing each other across the central aisle, remained a feature of cathedrals and college chapels, and more especially of the Chapel Royal, where Queen Elizabeth encouraged musical elaboration and high ceremony. Certain texts called for polyphonic treatment, at least on festal occasions: the daily canticles (*Venite*, *Te Deum* or *Benedicite*, and *Benedictus* or *Jubilate* at Morning Prayer; *Magnificat* or *Cantate Domino* and *Nunc dimittis* or *Deus misereatur* at Evening Prayer; *see* CANTICLE, §4) and what remained of the Mass Proper in the Communion service (the Responses to the Commandments – often called Kyrie – Sanctus, Creed and Gloria in excelsis). Organs were available to accompany and to play voluntaries. At the same time, however, the new theology frowned on the use of music unless it was justified by text, and required simple and clear articulation of the English words, which was often incompatible with the older polyphonic texture; while in many parts of the country, including some cathedrals, church authorities of more Puritan leanings were pressing for more radical changes.

Fortunately, Elizabeth's Injunctions of 1559 contained a well-crafted passage that not only showed the way out of the dilemma, but virtually set the course of music in the Church for most of its subsequent history:

> And that there be a modest distinct song, so used in all parts of the common prayers in the church, that the same may be as plainly understood, as if it were read without singing, and yet nevertheless, for the comforting of such that delight in music, it may be permitted that in the beginning, or in the end of common prayers, either at morning or evening, there may be sung an hymn, or such like song, to the praise of Almighty God, in the best sort of melody and music that may be conveniently devised, having respect that the sentence of the hymn may be understood and perceived.

The 'modest distinct song' was maintained in the psalms and responses, and, to a great extent, in canticle settings as well, which tended to be syllabic and largely homorhythmic. There was the 'short service', of which those by Tallis, Byrd and Orlando Gibbons are the classic examples. (Byrd's elaborate Great Service was probably not used outside the Chapel Royal.) But before or after the service greater freedom was allowed, and it quickly became conventional to perform a more elaborate piece at the end of Morning and Evening Prayer. This 'hymn, or such like song' permitted a wide range of texts that could include metrical paraphrases or original poems as well as biblical and liturgical passages. Short, memorable texts could be chosen, and their words could be repeated in a series of points of imitation towards a climax, in the manner of Franco-Flemish polyphony, which was seldom possible in a canticle setting. And in this context the Injunctions encouraged 'the best sort of melody and music', although the text must still be intelligible.

So the ANTHEM found its place in worship, as a simplified descendant of the votive antiphon. The way was open for it to become the vehicle for some of the most creative and characteristic music of the English choir service. When, in 1662, additional prayers were added to the end of Morning and Evening Prayer, the customary place of the anthem after the third collect (which before then had ended the service) was now recognized in the famous 'anthem rubric': 'In quires and places where they sing, here followeth the anthem'.

It is true that there was continuous opposition to elaborate music from the Puritan wing. In some provincial cathedrals, such as York, Norwich and Winchester, the authorities succeeded for a time in imposing much stricter standards: at Winchester in 1571, for instance, Bishop Horne banned both melismas and text repetitions. But the queen and her two Stuart successors had the ultimate power to impose their will in matters of worship, until indeed the monarchy itself was overthrown by the Puritan party. Particularly at the Chapel Royal, which alone had the resources to perform difficult and elaborate choir music, composers were free to put forth their best efforts. With growing confidence they worked out an idiom that preserved continuity with the polyphonic glories of the Latin past, but which catered for, and occasionally dramatized, the more varied vowel sounds, word-endings, stresses and intonation patterns of English prose. These trends can already be observed in the surviving sources from the Edwardian period, more particularly in the music of John Sheppard and Tallis. They were further developed in the next generation by William Mundy, Richard Farrant and Byrd. These three composers began to develop the 'verse anthem', a new genre in which sections for a solo voice (verses) with organ accompaniment alternated with shorter choral sections.

The later Elizabethan and Jacobean period (*c*1588–1625) is often called a Golden Age in English cultural history; certainly, it is a high point in the history of Anglican choral music. The defeat of the Spanish Armada and the ending of a long period of monetary inflation boosted national self-confidence. The Church, after decades of uncertainty, seemed secure and stable, and music's place in it was warmly extolled in the great apologia for Anglicanism, Richard Hooker's *Laws of Ecclesiastical Polity* (v, 1597, §39). After a long decline in the standards of cathedral choirs, there was a much greater willingness to devote resources to music, especially after 1600. Somewhat surprisingly, however, there are almost no contemporary sources of the nearly 2000 Anglican choral compositions dating from the period, and we are dependent on post-1630 manuscript cathedral partbooks, plus two printed sets: John Barnard's *The First Book of Selected Church Musick* (1641/*R*), a wide-ranging collection, and *Musica Deo sacra* (1668), consisting entirely of the work of Thomas Tomkins.

The towering figure of the period, William Byrd (1543–1623), contributed the magnificent and highly innovative Great Service, other service music, responses and festal psalms, but probably 'no more than a handful of anthems for liturgical use' (Le Huray, 1967, p.238). His earlier, simpler work was probably written for Lincoln Cathedral; he became a Gentleman of the Chapel Royal in 1570. However, he was far more prolific as a composer of Latin church music, and of devotional consort songs and partsongs with English texts, many of them published. His true anthems, both 'full' and 'verse', are striking for their dramatic qualities and word-painting. The most important of Byrd's younger contemporaries were Thomas Morley, Edmund Hooper and Nathaniel Giles, all of

whom strongly developed the verse anthem. Morley's setting of the Burial Service is the earliest of its kind.

In the next generation the greatest names are Tomkins, Thomas Weelkes and Gibbons. Tomkins spent much of his long life at Worcester Cathedral, Weelkes at Chichester (which had only a 'half' choir and certainly could not have performed his more ambitious works), while Gibbons's career was at the Chapel Royal and Westminster Abbey. All were prolific: Weelkes wrote as many as nine services, one fully on the scale of Byrd's Great Service. Gibbons (1583–1625) 'best epitomizes the special flavour of Jacobean church music' (Caldwell, 1991, p.369). His Short Service in F, which has never been absent from the repertory, and his famous verse anthems, such as *This is the record of John*, are less dramatic in their word-painting than some of their predecessors, but are notable for their calm restraint and dignity, induced perhaps by the improved conditions of the Church, and for their impeccable verbal declamation, reflecting the high literary culture of the age of Shakespeare and of the King James Bible (1611). No music of any period more cogently expresses the Anglican ideal.

The best summary of performing practice for the period is given by Le Huray (1967, chap.4). Most sets of partbooks consisted of eight to ten volumes, divided into decani and cantoris: each had medius (or mean: a low-lying treble part), altus (countertenor, a high tenor part), sometimes a second altus, tenor and bassus. In addition there was often an organ book giving an outline in short score. Some pieces have an additional triplex (high treble), but it was comparatively rare. This reflects the customary division of the human voice into five ranges: treble and mean for children's and women's voices; countertenor, tenor and bass for men's. Among men, the tenor was the most common voice, roughly corresponding in range and tessitura to the modern baritone, while the countertenor was a high tenor. There is no mention in surviving descriptions or treatises of the falsetto or 'head voice' practised by modern countertenors. Most choirs had about twice as many men as boys: the largest, that of the Chapel Royal, had 32 men (of which 16 were employed for ordinary weekday services, but all 32 on Sundays and feast days) and 12 boys.

Authentic ten- or even eight-part writing is comparatively rare, but the available parts were used in various combinations. 'Verse' anthems and services distinguished between sections of one voice to a part and those for the full choir; antiphonal singing between the two sides was also frequently used. There is evidence that choirs sang unaccompanied at some cathedrals. Elsewhere, organs doubled the voice parts and may have added ornaments and preludes. Vocal ornamentation was practised in solo passages. From the 1570s onwards some cathedrals and the Chapel Royal had cornetts and sackbuts, and possibly other instruments, to augment the voices on special occasions.

James I (reigned 1603–25) had disappointed the Puritans' hopes for further reforms. Instead, there grew up in his time a 'high-church' party, preferring Arminian to Calvinist theology and re-emphasizing the Church's Catholic and Apostolic roots. James's successor, Charles I, moved decisively in that direction, and under William Laud (bishop of London from 1627, archbishop of Canterbury from 1633) energetic efforts were made to enforce every detail of the prescribed liturgy, to revive ritual practices and to encourage elaborate music. The move drew little popular support, but Laud's visitations of provincial cathedrals spurred the chapters to repair organs, replenish deficient choirs and restore music to those portions of the service where it had fallen into disuse. Such insistence on high-church practices, regardless of the wishes of local authorities and congregations, was one of the factors leading to the downfall of Laud and, eventually, of the king himself.

The choir music of this period is the first to show some slight influence of the *stile nuovo*, in a more theatrical declamation of texts and in the Gabrieli-like opposition between blocks of chordal harmony. The traditional contrapuntal style was also maintained, but generally without the strength or individuality of the Jacobean period: the exception was Tomkins, who was still active and whose music retained its old quality. The leading composers of the younger generation, William Lawes, George Jeffries and William Child, contributed a substantial amount of music, but it rarely rises above competence. The service settings in particular, generally of the 'short' variety, are colourless and perfunctory in effect. Lawes introduced a formal innovation – the verse anthem in which the refrain was a metrical psalm tune sung by the full choir; but his specimens had no successors.

5. English cathedral music, 1660–1830. After the parliamentary victory in the Civil War, the Long Parliament abolished the Book of Common Prayer in 1644 and introduced a Presbyterian form of worship. Parliamentary troops were allowed to go on a rampage, destroying statues, stained glass and organs wherever they could. Choral services ceased at dates varying between 1642 and 1647. Anglicans now had the same standing as Catholics: a persecuted sect, worshipping only in secret. Both Latin and English sacred music for the purpose has survived from this period.

The Restoration of Charles II in 1660 immediately brought back Church and Prayer Book. The Chapel Royal was quickly re-established, but many cathedrals took some time to restore their organs and choirs. There was naturally a shortage of trained singers, particularly boys, and the king's agents scoured the country to take the most promising singers for the Chapel Royal. There was a need to recover familiarity with the old choral traditions and texts: two manuals (Lowe, Clifford) were printed for the purpose.

Once again, the Puritans had hoped for further reforms friendly to their position (which had been promised them by Charles in the Declaration of Breda, 1660) but were disappointed. On the contrary, the royalist parliament was vindictive and reactionary and ushered in a period of persecution of Dissenters. A new Act of Uniformity (1662) ratified a further revision of the Prayer Book, which now for the first time incorporated the prose Psalter (in the Great Bible translation of 1534). Because of their unwillingness to subscribe to the Act, more than 2000 Presbyterian vicars and rectors forfeited their parish livings. But the changes had little practical effect on the music of choral foundations. Until the Act of Uniformity Amendment Act (1872), Morning Prayer in all churches still had to be followed by the Litany (on certain days) and the first part of Communion ('ante-Communion'), the latter now often known as 'second service'.

The return to tradition was clearly more than just a matter of taking up the story where it had been interrupted

in the 1640s. The very validity of monarchy was vested in the past, and there was a conscious denial of recent history and a reaching back to earlier times, expressed (for example) in the choice of the 1534 translation of the psalms, the self-conscious maintenance of Gothic traditions in Anglican church building and typesetting, and the revival of 'golden age' and earlier music in preference to that of Charles I's reign. The language of the Prayer Book itself was not updated. It was already acquiring the halo of antiquity.

Older composers such as Child (1606/7–97) took the lead in evolving a style that both upheld and simplified the tradition. Their music was typically for four voices or less (although many cathedrals were able to revive double choirs). It was melodious rather than contrapuntal, with conservative harmony and part-writing and an emphasis on the solo voice. Such music slowly developed in the provincial cathedrals over the next 170 years, changing its style almost imperceptibly with the development of Classical tonality, but well behind the fashions of secular muisc. The short service, in particular, settled into a durable stereotype, now often reduced to the *Te Deum*, *Jubilate*, *Magnificat* and *Nunc dimittis*. Choral Communion ended with the Creed, after which a sermon was preached in the nave, preceded and followed in many cathedrals by metrical psalms sung congregationally and accompanied on the organ. When Communion was celebrated (an increasingly infrequent observance), there was a persistent tradition of singing a metrical Communion Hymn while the people took the bread and wine.

In contrast, Charles II's personal tastes, formed during his long exile at the court of Louis XIV, were French, modern and worldly. At the Chapel Royal he gradually replaced the cornetts and sackbuts, first with viols and then with instruments of the violin family, in imitation of Louis' 'quarante violons': there were 20 musicians involved from 1673 until the end of the reign (1685). The king soon made clear his dislike of severe counterpoint and his preference for jaunty, triple-time movements and dotted rhythms to which he could tap his foot, and he sent Pelham Humfrey to France to learn the new styles, which Humfrey and other composers obligingly imitated in their music for the Chapel. In a typical 'symphony anthem', the strings were generally used for symphonies of the French overture type and ritornellos between the vocal sections, while verses for solo or for male trio had a more prominent place than the full choir. Triple time was favoured. Many bland specimens of this formula have survived, often ending with extended alleluias. For coronations, victory celebrations and festivals, there were special anthems and settings of the *Te Deum* and *Jubilate* with trumpets.

But the extraordinarily gifted group of composers assembled in London at this time were not content merely to cater to vacuous royal preferences. They created what today is recognized as the distinctive 'Restoration' idiom, of which the pioneer was Matthew Locke (*c*1621–77). The extraordinary dissonance, angularity and unpredictability of his personal style would hardly have commended itself to the king. As a Catholic, Locke was appointed organist to Queen Catherine, but he composed several anthems for the Chapel Royal, and they were undoubtedly influential in the brilliant stylistic developments that followed in the hands of Humfrey, John Blow, Henry Purcell, and their lesser contemporaries. The influence of the French *grand motet* and the Italian psalm and solo cantata can be detected in their music, but the style is nevertheless distinctively English. These composers revelled in harmonic colour and in the powers of the solo voice, especially the bass and the countertenor; and they delighted in declamatory passages, where individual words could be seized on for dramatic representation, which was sometimes carried to extremes.

The verse anthem was the principal vehicle for these developments. It had become a form divided (like a cantata) into sections, often with contrasting metres and tempos but rarely departing from the tonic key, unless into the parallel mode. A subcategory was the 'solo anthem', where a single voice monopolized the whole work except for a perfunctory closing section, often an alleluia, for the choir. Even anthems designated 'full' generally had a verse section in the middle, but the traditional, seamless, full anthem was never entirely forgotten, however dull and antiquated it might sound to king and courtiers.

These musical forms and practices were maintained without drastic change throughout the Georgian era (1714–1830). The Chapel Royal had lost its violins after Charles II's death, and its last royal enthusiast was Queen Anne (reigned 1702–14); but it remained, in conjunction with Westminster Abbey and St Paul's, the chief magnet for church musicians and the source of most new cathedral music of national importance. Many of the leading composers of the period – William Croft, Maurice Greene, William Boyce, Thomas Attwood, to name only a few – were organists of one or more of the three London foundations. The provincial cathedrals and other endowed choirs, though occasionally fostering distinguished music, were generally in decline. They were starved of funds and moral support by governing bodies often composed of well-connected place-holders with no real interest in music or even in religion. Some of the smaller foundations were barely able to maintain daily choral services. By the early 19th century there was a tendency, deplored by some writers, to chant the canticles and to replace anthems with simple hymn tunes or adaptations of popular melodies. Excerpts from Handel's oratorios and from Haydn's and Mozart's masses (adapted to English texts) were also frequently used as anthem substitutes after 1800.

Nevertheless, in a period when native secular music was more and more neglected or spurned by the governing classes, the choral foundations offered a haven of security for English musicians and allowed composers to flourish with relatively little competition from foreigners. Additional public support was offered in the form of occasional musical festivals in cathedrals, generally accompanied by a sermon in praise of cathedral music. Composers began to publish their own services and anthems in full score, engraved folio, by subscription – a venture pioneered by Croft in his *Musica sacra* (1724) and followed by more than 30 composers in the next hundred years. These were joined by anthologies of earlier music, such as those edited by Boyce, Samuel Arnold and John Page. Cathedral chapters would often subscribe to one or a few copies of these expensive volumes and use them as a basis for hand-copied parts. Singing from score, though advocated by Croft and others, did not become generally practicable until the advent of cheap octavo scores in the mid-19th century.

The intensity of expression found in the great Restoration anthems was gradually dissipated, together with the chromaticism, dissonance and melodic rhythmic exuberance that had been its vehicles. A smoother, more predictable product came into being, well expressing the rationalism and moderation that characterized Anglican belief in this period. The influences of *opera seria*, Handelian oratorio and the Viennese classics were successively absorbed, but they never wholly ousted the typically English and Anglican character of cathedral music, with its conscious restraint and sobriety, its permanent association with the now archaic language of the English Bible and Prayer Book and its distinctive rhetorical style. Pale echoes of the triple-time dotted rhythms of the Restoration period persisted into the 19th century, and the declamatory idiom of Purcell never descended to mere recitative. Even the old 'English ending' (the cross-relation produced by a descending flat 7th at a cadence) can be found here and there as late as 1800. Within this conservative idiom, composers such as Green, John Alcock, Jonathan Battishill and John Christmas Beckwith were capable of rising on occasion to considerable heights of musical expression, especially in the pathetic vein.

There was still a preference for verse and solo anthems, not so much for the dramatic opportunities they offered as for their usefulness when a full choir could not be mustered, which was all too often the case. Ornaments, cadenzas and organ interludes were freely added in the performance of solo sections. The short service was joined, in the early 19th century, by the short (one-section) full anthem, easy to sing and understand, often based on one of the collects or on a metrical text; at its best it could be quite devotional in effect.

During this period ANGLICAN CHANT evolved into the form known today. Beginning at the Chapel Royal under Charles II, a large number of chants were composed, at first in imitation of the harmonized Gregorian psalm tones, then in a more up-to-date tonal idiom. The double chant, encompassing two verses of a psalm, became a balanced classical structure of 20 chords with a half-cadence in the middle. At the same time the recited syllables, instead of being sung evenly with an occasional long note as formerly, had to be crowded into the time of a semibreve while the organist played the reciting note in slow strict time. This barbarous practice persisted despite frequent criticism of 'gabbling'. The notation expressing it, still used for chants today, was first adopted in print by Alcock (1752). In most cathedrals psalms were chanted antiphonally with organ accompaniment. The responses were more often unaccompanied, even unharmonized in some places, and in the various cathedrals gradually evolved into quite distinct versions, some of which were recorded by Jebb (1847). A few original sets of responses and litanies were brought into use.

6. ENGLISH PAROCHIAL MUSIC, 1549–1830. The suppression of chantries (1548) left the vast majority of parishes destitute of funds to support organs, organists, or paid singers, unless they were willing to tax themselves for the purpose. A handful of country parishes, such as Ludlow and Newark, were able to benefit from special endowments and so to maintain some choral polyphony. A few London parishes retained small choirs and organs into the first years of Elizabeth's reign, but by about 1571 the choirs had gone and most of the organs had fallen into disrepair or disuse. There remained only the PARISH CLERK, who was still officially required to lead the singing and responses, but who was less and less well equipped to do so.

For this reason, more than for any ideological cause, the singing in parish churches soon became strictly congregational. The people could not chant or sing the liturgy, but they could sing simple strophic songs monophonically to known tunes, and they evidently relished the opportunity to do so, a possibility that had not existed before the Reformation. The quoted Injunction of 1559 that had authorized anthems before and after service was also used to justify metrical psalms or hymns, and in the course of time the custom of singing before and after sermons also became widespread.

Congregational singing had been established for decades among the Bohemian Brethren, Lutherans and Calvinists. It had been practised by the Protestant exiles from the Continent at Austin Friars, London, in Edward VI's time and may have been tried out in English churches. Metrical psalm paraphrases suitable for the purpose were already in use for private devotion and at court, and several sets were published with the idea that they might replace 'rhymes of vanity' for private singing. Those of Thomas Sternhold were of this type; their plain language and consistent use of common or ballad metre assured their popularity when, after Sternhold's death in 1549, his 37 psalms were published in complete form in an edition by John Hopkins, a country clergyman, who added a further 7 versions in similar style. They were used by the Protestant exiles in Frankfurt, Geneva and elsewhere during the reign of Mary I and became the nucleus of *The Whole Booke of Psalmes* (London, 1562). This collection, later known as the Old Version, was the basis of English parochial music for more than 200 years. In addition to versions of all 150 psalms it contained metrical paraphrases of other biblical and liturgical texts and nine original hymns. (For further description and discussion of the book, *see* PSALMS, METRICAL, §III).

Puritan leaders, following Calvinist doctrine, approved of this development because the Bible enjoined the singing of psalms by 'young men and maidens, old men and children'. But they insisted that the object was not beauty of sound; it was merely an opportunity for each individual to praise God with the heart and the understanding. Metrical paraphrases were accepted as a means for the people to sing, but they were to be as close to the Hebrew as possible, regardless of poetic quality. Choirs and organs to improve the musical effect were mere vanity, for God would be better pleased by a 'hoarse or base sound', if sincere, than by the finest of trained voices singing for money. Circumstances happened to favour this outcome in English parish churches, but its success was due less to the popularity of Puritan doctrine than to the pleasures of communal singing.

There may have been some early use of existing ballad tunes for the metrical psalms, but if so, no such tunes have been traced in the printed psalm books, which contain a large number of anonymous, rather characterless eight-line tunes in addition to some French and German imports for psalms of unusual metre. There were early attempts to teach people to sing from notes, found in the prefaces to the psalm books, some of which (from 1569) used sol-fa letters printed alongside the notes; in

some parishes schoolchildren were taught to sing the tunes and lead the congregation.

Later in Elizabeth's reign, a number of striking four-line tunes emerged, largely superseding the earlier ones in popularity. They became the staple of English-language psalmody. Many of them have been in continuous use since that time. Several editors printed four-part harmonizations for domestic use and began the distinctively English practice of assigning geographical names to tunes. Among the most enduring of these tunes have been 'Old 100th', taken from the French Genevan Psalter of 1551; 'Cambridge' (1579); 'Canterbury'/'Low Dutch' (1585); 'Windsor' (1591); 'Winchester' (1592); 'St David's' (1621); and a group from the Scottish psalm book of 1615 – 'Dundee', 'Martyrs' and 'York'. The dates are those of first printings in harmonized arrangements, but it is likely that most of them were already in common use as monophonic tunes.

It was comparatively rare at this date for professional composers to publish new tunes under their own names, but there were three notable collaborations: Tallis provided nine four-part tunes, including the famous 'Canon', for Archbishop Parker's *Whole Psalter* (1567); Gibbons wrote 15 tunes for tenor and bass to go with George Wither's *Hymnes and Songs of the Church* (1620); and Henry Lawes furnished 24 two-part tunes for George Sandys' *A Paraphrase upon the Psalmes of David* (1638). None of these tunes became popular until the 18th century.

Congregational psalm singing was largely ignored by the educated classes, including the clergy, and, being entirely unregulated, tended to drag and to accumulate melodic changes and improvised harmonizations. It gradually evolved into an extremely slow heterophony that came to be known as the OLD WAY OF SINGING. At the same time the repertory of commonly known tunes dwindled to little more than a dozen. Neither Commonwealth nor Restoration brought much change. There was nothing in the current practice that Puritans found objectionable, but they did introduce one innovation in 1645: LINING OUT by the minister or elder, where each line was read out before singing for the benefit of those who could not read or had no book. The custom survived the Restoration, becoming the responsibility of parish clerks, who tended to turn the reading into a kind of chanting.

Movements to reform parochial psalmody gradually gained strength in the later 17th century, one of the principal movers being John Playford (i) (*see* PLAYFORD family, (1)). The motive was perhaps a mixture of piety and the desire for concrete symbols of a growing affluence and sophistication. The high-church party, which was once more gaining ground in the Church, believed in the value of art as an offering to God in worship and consequently gave new and much-needed attention to musical quality and effect. Religious societies were formed in many parishes, consisting mainly of young men who attended regular meetings under the vicar, to pray, to listen to moral precepts and, in many cases, to learn how to sing the psalms from musical notation. From this point on, two distinct traditions of parochial psalmody emerged, one in urban, the other in rural churches (*see* PSALMODY (ii)).

The wealthier town parishes, including many in London, Westminster and the larger ports and market towns, were able to install organs (usually donated or paid for by subscription) and to find and pay an organist to play them. Frequently, also, they maintained a charity school (the first being that of St Margaret, Westminster, opened in 1688), which provided uniformed, disciplined children to lead the psalm singing from the organ gallery. Thus, with the help of the young men of the religious society, an accompanied mixed choir could be heard in the more affluent churches in about 1700, and a certain amount of music to cater for this combination has survived. Two- and three-part settings of psalm tunes were published, and Henry Playford (*see* PLAYFORD family, (2)) in *The Divine Companion* (1701) introduced a new concept, the parochial anthem, a simple three-part piece in one section; he commissioned anthems, hymns and psalm tunes from Jeremiah Clarke, Croft, and other prominent musicians of the day.

Although the primary intent had been for the choir to lead the congregation in the singing of metrical psalms, the practical result was often that people fell silent and listened to the children singing with the organ. The religious societies had disappeared by about 1740, and treble-based tune settings in one or two vocal parts for children became the norm; charity hymns and anthems were written for use at the annual charity sermon to raise funds for the school. Once a year all the London charity children combined in an impressive ceremony, held at St Paul's from 1801 onwards.

Nahum Tate and Nicholas Brady brought out *A New Version of the Psalms of David* (London, 1696) to cater for the new appreciation of elegance in psalmody, as opposed to literalness. It did not overtake the Old Version in popularity for another hundred years, but a musical Supplement (6/1708) contained more new tunes of artistic quality, including such permanent favourites as 'St Anne' (by Croft) and 'Hanover' (possibly by Croft). This set the stage for a long succession of tunes, to which leading cathedral composers did not disdain to set their names. Generally the tune was in the treble, with or without a second treble, and with a figured bass that could also be sung. Treble-based psalmody was strongly cultivated in the London charitable institutions founded under Anglican auspices in later Georgian times (*see* LONDON, §I, 5). In a few town parishes, for instance at St Nicholas, Newcastle upon Tyne, when John Brown was rector and Charles Avison was organist, the ideal of hearty congregational singing was realized.

In many rural parishes, the societies of young men survived and rapidly turned into voluntary choirs, where they were occasionally joined by female singers or children, although the tenor remained the tune-bearing voice. Again, the original purpose of leading the congregation was gradually lost as the singers in their enthusiasm sought out anthems and elaborate tunes with solos and duets, ornaments and melismas, tempo changes and (eventually) 'fuging' sections that effectively excluded the congregation. They demanded and generally acquired a place in the church where they could sing as a body, either a special pew or a gallery. The first models for their music were found in the publications of the Playfords, but a new breed of country singing teacher grew up rapidly in the early 18th century, often journeying in a large region, teaching parish choirs and selling his own books as he went. A particularly strong area for these activities was the north Midlands, including Lancashire and the West

Riding of Yorkshire, where some parish choirs even began to chant the psalms, responses and litany along cathedral lines and to sing settings of the canticles as well as anthems.

Parochial anthems and canticle settings by relatively untrained, self-appointed country singing masters began to appear in print soon after 1710 and are found up to early Victorian times. The fuging tune, developed by Michael Beesly in Oxfordshire in the late 1730s, enjoyed a heyday of a few decades until trained composers such as Samuel Arnold began to take over the tradition by writing 'correct' specimens. There was also a large output of plain tunes from rural sources, some of which, such as 'Wareham' (by William Knapp, parish clerk of Poole), have survived in common use until today. In general, through the introduction of non-functional harmonies, accidental clashes, parallelisms, and other naiveties that condemned it in the eyes of the town dweller, this music departed to a greater or lesser extent from the canons of art music. It often disregarded verbal stresses, showed little understanding of tonality or the treatment of dissonance, and preserved archaic features such as open 5ths and 4ths and unsharpened leading notes, while at the same time retaining enough of its original models to preserve a general resemblance to the style of Restoration cathedral music. Considered on its own terms, however, the music is fresh, hearty and inventive, and it has been successfully revived in modern times under the general designation of (West) GALLERY MUSIC.

The music continued to be tenor-led until late in the 18th century, and was often accompanied by a small band of wind and string instruments, growing from the single bassoon or 'bass viol' (cello) that had been more usual before mid-century. After 1800 increasing give-and-take with dissenting choirs and bands led to the influence of a different style of tune, treble-led and deriving from more recent art and theatre music, fostered by Methodism (*see* METHODIST CHURCH MUSIC). Country bands were fiercely independent and resistant to change, but dissatisfaction with their music grew with the Evangelical movement and the industrialization or suburbanization of many villages. Eventually, most country choirs and bands were displaced by barrel organs (a new way of dealing with the difficulty of attracting organists to country churches), or later by harmoniums or small pipe organs which could often be played by the vicar's wife or daughter. The last area of survival was the West Country; in 1895 there were still 18 out of 219 parish churches in Cornwall housing instrumental bands, and Galpin described one at Winterbourne Abbas, Dorset, that lasted untll 1896.

The Evangelical movement, which began in the mid-18th century but wielded only minor influence on worship until the 19th, can be defined as that portion of Methodism that remained within the Church. Evangelicals wished to revive the religious spirit in services which they saw as lifeless and perfunctory, and to bring about the 'conversion' of individual souls to Christ. The musical results of their efforts included the gradual introduction of hymns, often with highly emotional content, to replace metrical psalms (a change that was stoutly challenged by orthodox Anglicans but was declared legal by the consistory court of York in 1820) and to revive hearty congregational participation in the singing. In some places this included congregational chanting of the canticles, psalms and responses, an entirely new development that would lead to great change in the Victorian period.

7. ORGAN MUSIC IN THE SERVICE, 1549–1830. The organ has always been called upon to fill in gaps in the liturgy, during processions, the collection of alms, the taking of Communion by the congregation, and special ceremonies such as baptism; and also, of course, before and after the service, and between Litany and ante-Communion. In the Church of England there was an additional custom of playing a voluntary in the middle of Morning or Evening Prayer, either after the second lesson or before the first, which lasted well into the 19th century: Samuel Wesley, for instance, published a set of 'middle voluntaries'. It was quite possibly a vestige of the medieval respond – this is suggested by the generic name 'verse' that was often used for organ pieces – although in general the practice of using the organ to substitute for voices did not survive the Reformation. Short preludes and even interludes were sometimes used with anthems.

Such music was normally improvised. But composers from Tallis to Tomkins left a surprisingly large amount of organ music based on Sarum chant, whose purpose is as difficult to determine as that of Latin church music. It may have been used at the Chapel Royal, especially under Elizabeth I, or in Catholic noblemen's chapels, but it hardly seems likely to have been acceptable in the cathedral service, and the general consensus is that most of it was written for virginals. More probable candidates for church use are pieces called VOLUNTARY and other free contrapuntal works: short 'verses' and 'points' as preludes or interludes, and perhaps the longer fantasias, such as those of Gibbons, for solos before, during and after service. Solo organ music based on metrical psalm tunes is rarely found before 1700: the complete list comprises two examples in the Mulliner Book (*c*1550) and a single voluntary, by either Blow or Purcell, based on the tune 'Old 100th'.

From the Restoration onwards changes in organ design stimulated the development of a new type of voluntary that exploited contrasts between manuals and, especially, solos on bassoon, trumpet or cornett stops. After 1700 a sufficient number of parish churches had organs to make the publication of organ music worthwhile. Several sets of 'givings-out' and interludes to be used with psalm tunes appeared, beginning with a set by Blow in 1703; in 1710 Walsh reprinted some Italian organ sonatas as 'voluntaries'; and a long series of organists, beginning with Thomas Roseingrave, of St George's, Hanover Square in London, in 1728, published original sets of voluntaries, typically in two or three movements. Among the most significant were John Stanley and Samuel Wesley.

8. THE CHURCH OF ENGLAND AFTER 1830. The Oxford Movement, also called 'Tractarianism' after the series of *Tracts for the Times* that expressed its views, began in the 1830s as an effort to return to a perceived age of faith. It sought to undo much of the Reformation (and many in the movement, led by John Henry Newman, eventually joined the Roman Catholic Church) and asserted the Church's independence from state control. Although the Tractarians were concerned primarily with matters of theology and church government, they stimulated a ritualistic revival that came to be known as 'Anglo-Catholic', 'Puseyite' (after another prime mover, Edward Pusey) or simply 'high church': the latter term was

somewhat misleading, as many high churchmen did not subscribe to the new ritualism. The Cambridge Camden Society, later the Ecclesiological Society, was a protagonist for many of these issues. A Society for Promoting Church Music was also formed and published its own journal, *The Parish Choir* (1846–51).

Those who remained in the Church of England generally obeyed the law by following the Book of Common Prayer, but they scrutinized the calendar and rubrics, reinterpreting them to justify the revival of observances, vestments, customs and gestures that had long since fallen into disuse. In matters on which the Prayer Book provided no guidance, including music, the changes they introduced were radical and, to many, shocking. They wished to eliminate almost all recent music, which they regarded as secular and meretricious, and to revive the austerity of plainchant (often in Marbeck's adaptation), the Gregorian psalm tones, and both medieval and post-Tridentine Catholic hymns in translation (the Latin language was rarely admitted to public worship, even in the most Anglo-Catholic churches, before 1900). They hoped that congregations would learn to sing all this music unaccompanied, but here they had limited success beyond hymn singing and simple responses, and eventually they had to accept organs and rehearsed choirs. They also began the process of reviving polyphonic choral music of the Renaissance period, both English and continental. Certain pre-Reformation elements were reintroduced with questionable legality, such as introits, Office hymns and the Agnus Dei.

These changes had some effect on cathedral services, but they could be fully carried out only in certain parish churches, often newly built for the purpose and usually situated in towns where a sympathetic congregation could be drawn from many surrounding parishes. One of the first such churches was Margaret Chapel, London, later rebuilt as All Saints, Margaret Street. There was also a revival of monastic orders within the Anglican Church, where the possibilities of Catholic worship could be explored with little opposition: by the end of the 20th century 25 religious communities remained (20 female, 5 male), of which some have continued to sing the Prayer Book liturgy to plainchant. The College of St Mark, Chelsea, a training school for teachers, was opened in 1841; it was there that Thomas Helmore developed the model for Anglo-Catholic choral service (see Rainbow, 1970).

In the end, the Oxford Movement was overtaken by a more general overhaul of the Church that was rooted in the transformation of public life following the industrial revolution. The parliamentary reforms of 1832 produced a demand for accountability in all public institutions. The long decay of the Church was halted, old sinecures and financial abuses swept away, parishes reorganized and a vast programme of building new churches undertaken. In return the government required that clergy and musicians be appointed on a basis of merit rather than influence, and high standards of performance were demanded. (Only four new cathedrals have been built since that time – Truro, Liverpool, Guildford and Coventry – but 18 parish churches have been converted into cathedrals, mostly between 1905 and 1927).

In cathedrals, daily choral services were gradually restored to full strength, attendance of choir members enforced, and standards of performance improved, notably after 1870, when John Stainer set a good example at St Paul's. Frederick Ouseley founded a new college at St Michael's, Tenbury (1856), to train cathedral singers and set up a model of the choral service. In the end, the amount of singing exceeded anything known since the Reformation, for even the opening and closing prayers were often intoned or chanted. Organists improvised changing harmonies during chanting and even in monotoned prayers and the General Confession. The 'fully choral service' became the model for parish churches, beginning at Leeds in 1841, and by the 1870s many affluent churches boasted a staff and a music list comparable to those of a cathedral. Parish choirs began to wear surplices, to occupy the chancel, to process in and out with the clergy and to rehearse the chanted psalms so as to unify their timing. Soon every church had an organ (now generally in the north or south chancel instead of the west gallery), or at least a harmonium, and maintained some sort of choir. In 1872, Trinity College, London, was founded for the purpose of training church musicians.

Thus the 300-year-old barrier between cathedral and parochial practice had been decisively breached. One result was a greatly increased demand for anthems and services, which were supplied by J.A. Novello and other publishers in various series of octavo editions of both old and new music. Composers responded by writing anthems and services that could be used in parish churches as well as cathedrals. Antiphonal writing for double choir was less often used; solos were shorter and more modest, to cater for amateur singers; alto parts were designed to accommodate women or children; extremes of vocal range were avoided; anthems and settings of moderate length were preferred; the musical style often owed more to the oratorios and concert music of the day than to the ancient cathedral tradition.

In the mid-Victorian period, however, there was a consistently worked-out theory and practice of cathedral music proper (Gatens, 1986). The greatest composer of the age, Samuel Sebastian Wesley (1810–76), continued for a while to write in the grand manner and on a spacious scale, but he too began in later life to compromise with the new demands. It may well have been in the later Victorian period that the characteristic modern sound of English choirs was developed, depending as it does on the fluty, ethereal tone of boys' voices, the impersonal falsetto of countertenors and the general avoidance of vibrato. Zechariah Buck, organist of Norwich Cathedral from 1817 to 1877, continued to train his boys in the older operatic manner, with 'shakes' as one of the principal goals of his instructions; but this was considered a matter for comment and explanation by his biographer (Kitton, 1899). Training manuals for choirmasters published after 1880 emphasized an Arnoldian ideal of discipline, and the merging of the individual voice in a unified choral texture.

The practice of chanting psalms changed, while the form of the chants (which had begun to be called 'Anglican' to distinguish them from Gregorian ones) remained the same. The Victorian concept, best represented in *The Cathedral Psalter* (1875) which, despite its name, was designated chiefly for parochial use, was to divide the chanting into a reciting portion to be sung freely, taking up as much time as the syllables required, and the concluding portion of each half-verse, sung in strict time. A further revolution occurred in the early 20th century, when the entire verse came to be sung in the

natural rhythm of recited speech, entirely disregarding the musical rhythm of the chant as notated.

There was a great burgeoning of new hymn texts and tunes in the Victorian period, since the York decision of 1820 had established the legality of hymns in worship. While Anglo-Catholics found old hymns that strengthened the Catholic underpinnings of the Church, the Evangelicals used hymns to express the individual worshipper's feelings of guilt, penitence and hope, while the Broad Church (liberal) party promoted hymns of brotherhood and unity, now more and more bound up with social reform, nationalism and imperialism. A new type of hymn tune, pioneered by John Bacchus Dykes and disseminated in the overwhelmingly successful *Hymns Ancient and Modern* (musical edition 1861), borrowed melodic and harmonic clichés from contemporary concert music. These tunes have proved more durable than almost any other Victorian music. Ingeniously varied organ accompaniments, and later on 'descants' sung by the choir trebles, often treated the congregational melody as but one element in an elaborate composition. In a similar way, organists felt free to improvise romantically during the chanting of psalms and the intoning of prayers and creeds. The music of worship, in many parish churches as well as cathedrals, was becoming more like a concert with an audience.

An aesthetic reaction against Victorian tastes is already evident in Robert Bridges' *Yattendon Hymnal* (London, 1899), and in the *English Hymnal* (London, 1906), both of which sought fresh inspiration in the revival of early psalm tunes and the use of rural folksong. Vaughan Williams, who was deeply involved in this process, also produced some of the best of all English hymn tunes. The revival of early cathedral music and plainchant and the ever higher performance standards of many cathedral and college choirs proceeded with little abatement. A distinguished series of composers continued to be inspired by the traditional choir service; in particular, a creative surge in the setting of the familiar daily canticles was sustained over a period of nearly 100 years in the services of C.V. Stanford, Charles Wood and Herbert Howells.

But these developments appealed chiefly to the educated minority, and it had become clear, especially after the War of 1914–18, that change of a different sort would be needed if Anglican church music was to retain any hold over the larger population. The Church of England was sharing in the general decline of faith in a secular and material age, and was moreover losing ground to Nonconformists and Roman Catholics, being all too readily identified with the gentry and an out-of-date paternalism. The call for liturgical renewal grew more and more insistent. A series of commissions was set up by the two archbishops in 1917; the one on church music produced a report, *Music in Worship* (1922), which stated unequivocally that 'the ideal in all parish churches is congregational singing'. The hymn festival movement began to flourish at about this time as a kind of antidote to the regional choir festival that had originated in late Victorian times.

A moderate attempt to revise the Prayer Book (1928) was rejected by Parliament, but many of its changes were put into practice anyway. By the end of World War II a number of parishes had begun to treat Communion as the main Sunday service. While still adhering, in the main, to the 1662 liturgy, 'parish Communion' was given a new directness and centrality, its meaning subtly transformed by such things as gesture, voice tone and body language, so that the congregation felt they were drawn into full participation. 'Family services' were also introduced, to appeal to all ages. A new charismatic movement spread to the fringes of the Church of England in the early 1960s.

Music played an important part in these developments. A landmark was Geoffrey Beaumont's *20th-Century Folk Mass* (London, 1956), whose obvious relationship to popular music brought indignation from traditionalists but nevertheless began an unstoppable trend. Congregations were encouraged to participate, not only by singing but by swaying and clapping (whence the nickname 'Happy-Clappy'). The Evangelical wing of the Church has especially welcomed the popularization of music. At the same time, the ecumenical stance of liberal churchmen has encouraged hymns and other music from Nonconformist, Roman Catholic and non-Christian sources, and of music from non-European cultures. The Anglo-Catholics have defended tradition, as have the great majority of professional church musicians.

In 1965, the Prayer Book (Alternative and Other Services) Measure received the royal assent, which meant that, for the first time, the Church's own Assembly was free to embark on liturgical reform without recourse to Parliament. Several 'series', representing different degrees of change, were tried out and debated at many levels. The result was the Alternative Service Book (1980), which offers a wide choice of language and liturgy to each individual church – including the option to continue the use of the 1662 Prayer Book, still vigorously defended by some. In letting each parish decide on its own style of worship, the Church has come closer to the Congregational tradition (*see* CONGREGATIONAL CHURCH, MUSIC OF THE). A large amount of new music has been composed and published to cater for the various services. Broadcasting has further weakened the boundaries between denominations.

Meanwhile, the daily services of cathedrals and choral foundations have largely stood outside the more drastic liturgical changes, although the buildings are often made available for a variety of religious observances. The 1662 liturgy is mostly retained, and its Morning and Evening Prayer (now again more often called Matins and Evensong) remain in daily use, if only because the vast majority of the greatest music was written for them. But cathedrals are in difficulties. The preservation of buildings and the payment of staff have become an impossibly heavy burden, making it more difficult to justify further expenditure on a style of worship and a musical idiom that many Anglicans do not find 'relevant' to their concerns. The newer cathedrals, upgraded from parish churches, have few endowments, and many of them have never been able to establish daily choral services.

The Church Music Society, founded in 1906, and the Royal School of Church Music (RSCM), founded in 1927, both have as their principal object the maintenance and enhancement of the choral tradition, although each has also paid some attention to congregational music. The Friends of Cathedral Music was founded in 1956. The introduction of female singers in a few cathedral choirs has prompted a strong reaction, and a Campaign for the Defence of the Traditional Cathedral Choir was formed in 1996, supported by many who have little or no connection with the Church of England. Meanwhile,

broadcasting has brought the cathedral choirs and their music to a new audience of millions, most notably in the Festival of Lessons and Carols on Christmas Eve – a service invented for Truro Cathedral in 1880 but now chiefly associated with the chapel of King's College, Cambridge.

Once again, therefore, as in Elizabethan times, cathedral and parochial music have diverged along different paths. It appears that the great tradition of choral service will survive, in some cathedrals and colleges at least. If it does, it will be less for religious reasons than because it embodies a splendid musical past rich in association, excites national and local pride and attracts tourists and television viewers.

9. Wales, Ireland, Isle of Man, Scotland. The Anglican Church was also established in Wales (until 1920) and Ireland (until 1870). In both countries, though representing a minority of the population (essentially, the anglicized gentry), it inherited the medieval cathedrals, where it conducted exclusively English-language services. But these cathedrals tended to be on a smaller scale than English ones as regards both buildings and endowments, and there was a continual struggle to keep up the musical standards.

Of the four Welsh cathedrals, only St David's was able to maintain a reasonably continuous tradition of choral services. After the Bible and Prayer Book had been published in Welsh (1588), Archdeacon Edmwnd Prys published a book of metrical psalms (*Llyfr y psalmau*, London, 1621), with 12 tunes that included two new ones destined for long histories, 'St Mary' and 'Song 67' (as it was called when Gibbons supplied it with a bass two years later). Another set of metrical psalm tunes was the work of Ifan Williams (1755). But the great Welsh hymns of later date emerged from the revivals of the 18th century, which led the majority of the Welsh people into Calvinistic Methodism (*see* Methodist church music), and the Church's decline accelerated from that time onwards. There have been some signs of reawakening in what is now 'the Church in Wales'.

The Church of Ireland was closely linked with that of England, although formal union between them existed only from 1801 to 1870. Its 34 cathedrals do not reflect any modern reality. Grindle (1989) traces some kind of choral tradition in 13 of them, but the only ones that were able to compete seriously with English foundations were Christ Church and St Patrick's, both at Dublin. Indeed, when these two were willing and able to pool their resources by offering dual positions to lay clerks and organists, they were in a position to induce well-established English cathedral musicians to settle in Dublin. A high standard of performance resulted, but little original music of more than local importance. A notable Dublin-born organist at both cathedrals was Robert Prescott Stewart (1825–94). Choral services were also held, in some periods, at Trinity College, Dublin, and after 1814 in the chapel royal at Dublin Castle.

Perhaps to distance itself from the surrounding Catholic majority, the Church of Ireland has tended towards low-church ideals in worship and music. Urban parish churches had metrical psalms sung by charity children with organ well into the Victorian period, with the congregation virtually silent, as G.W. Torrance complained (1861): he was a Dublin parish organist and the editor of the first official hymnal of the Church of Ireland (1864). Since disestablishment (1871) the Church has succeeded in maintaining its small but unique place in Irish musical life.

In the Isle of Man, which has an independent jurisdiction and diocese (Sodor and Man), the Reformation took nearly two centuries to establish itself. Metrical psalm singing in English was practised in a few town churches in the early 1700s; in the Manx-speaking rural areas, singing dates only from 1768, when on Bishop Hildesley's initiative a Manx version of Tate and Brady's psalms was added to the translated Prayer Book.

The Scottish story is quite different. The Reformation, which in Scotland dates from 1560, was more radical than in England, and the destruction of abbeys and cathedrals more complete. The majority of Scots (excluding the predominantly Catholic Highlands) desired a Presbyterian form of church government, which was established in 1592, but it was constantly challenged by an Episcopalian party, which had the support of the Stuart kings. Charles I tried unsuccessfully to impose a Scottish form of the Prayer Book in 1637, and Charles II continued to appoint bishops and archbishops, who attempted to impose Episcopalian forms. It was not until 1691 that a final Presbyterian settlement was adopted, and it was retained when Scotland was united with England in 1707.

An Act of Toleration (1712) allowed Scottish Episcopalians to worship in peace if they adopted the English liturgy (with its prayers for Queen Anne or, later, King George), and this produced a schism. Some clergy accepted the offer and openly officiated in what were termed 'qualified chapels'. Others held out, especially in Aberdeenshire, and quietly preserved a Scottish liturgy, more especially a Communion Office which differed in some respects from that of the Church of England. They were under constant suspicion of Jacobite sympathies and became a persecuted sect, especially after 1746. The penal laws were repealed in 1792, but disputes over the differing liturgical forms continued for more than a century. A Scottish Book of Common Prayer was finally adopted in 1929.

Despite these troubles, chanting, service music and anthems were performed in several Episcopal chapels during the 18th century (Wilson, 1996). In the Victorian period the Scottish Episcopal Church experienced a revival, with a strong Anglo-Catholic component. Colleges were founded at Cumrae and Glenalmond. The first new cathedral was built (St Ninian's, Perth, consecrated 1850), where, under the guidance of Frederick Helmore, daily choral services on Anglo-Catholic lines were established. Several others followed, and parochial music, too, developed much as in English churches.

10. North America and Australasia. The Anglican Church was established in Virginia (1624), Maryland (1702), South Carolina (1706), North Carolina (1715) and Georgia (1733). The efforts of the Society for the Propagation of the Gospel in Foreign Parts (SPG), founded in 1701, made headway in the northern colonies as well. In the later 18th century principal cities such as Charleston, Philadelphia, New York, Boston and Halifax had prosperous churches with music along the lines of English town churches (organ and charity children); often they were the only churches where 'professional' music was cultivated, under the direction of immigrant organists from England or Germany (e.g. William Tuckey). Rural

congregations, if they sang, presumably sang metrical psalms in the 'Old Way'.

The Church of England declined to appoint an American bishop, and all Anglican churches abroad were under the remote jurisdiction of the Bishop of London. The Revolution placed the Church in crisis; many loyalists, including most of the clergy, left for England or Canada, and Anglican worship came to a temporary halt in most places. The first American bishop, Samuel Seabury, was forced to seek consecration by bishops of the Episcopal Church of Scotland; Bishop William White, also from Scotland, was influential in guiding the music of the American Church. A modified Prayer Book was adopted at the first General Convention in 1785. The Protestant Episcopal Church of the USA was officially constituted in 1789 (the word 'Protestant' was dropped only in 1967).

Musically, the most significant departure from Anglican tradition was the adoption of a selection of metrical psalms and hymns as an official rather than an optional part of the liturgy. This policy has continued, producing a series of authorized hymnals every 20–30 years. A Joint Commission on Church Music was appointed in 1919 and resulted in several musical publications. The *Hymnal* of 1940 was the first to have an official music edition. A much expanded section of chants and service music appeared in the 1982 edition. At every stage in its development, the music of the Episcopal Church has been deeply entwined with that of the Church of England: *Hymns Ancient and Modern* has been a particularly strong influence.

Chants are found in American sources from as early as 1783 (see Wilson, 1996, chap.8), and were certainly used for the canticles and doxologies in some town churches. Anthems date at least from the 1760s, when Francis Hopkinson composed some for the use of Christ Church and St Peter, Philadelphia. But anything approaching a full cathedral service sung by an endowed choir of boys and men was unknown before the effects of the Oxford Movement began to be felt in the 1840s. In most town churches in the early 1800s the music was sung by a quartet of professional singers in the organ gallery.

The choral revival was led by Trinity Church, New York, under the English immigrant Edward Hodges (see Ogasapian, 1994) and his successor Henry Stephen Cutler. By 1900 there were several 'boy choirs' (all-male choirs) in each of the larger cities across the country (see Ellinwood, 1953), and they were a distinctive characteristic of Episcopal churches. At the end of the 20th century perhaps 15 endowed churches and cathedrals around the country were able to maintain daily choral services, the most famous being Washington Cathedral, and the cathedral of St John the Divine, New York. Among the more distinguished American composers of anthems and other cathedral music are Horatio Parker and Leo Sowerby.

Liturgical renewal in the 1960s followed a similar course to that in England. A revised Prayer Book, in 1979, established the centrality of Communion and recognized the 'ministry of lay persons', encouraging a breakdown of barriers between rehearsed choirs and congregations. The emphasis in the 1982 *Hymnal* was firmly on congregational singing. It made moderate advances toward multiculturalism and popular music. Among its 700 hymns were eight tunes based on negro spirituals, two on Ghanaian work songs, two on Chinese hymns, two on Amerindian songs, one Hispanic American hymn, and one tune by a Mexican composer (Boyer, 1990, pp.37–8). The Association of Anglican Musicians, founded in 1967, has been a significant force in raising musical standards in the Church and encouraging composers to provide music for it.

In Canada, the Church of England was established by law in Nova Scotia (1758), New Brunswick (1786) and Upper Canada (1791). For many decades only a few town churches possessed the means for anything beyond unaccompanied congregational psalmody. It was not until after 1900 that a substantial choral tradition grew up. Two English-born Canadian composers, Healey Willan and Alfred Whitehead, were the first to draw international attention to the existence of a Canadian School of Anglican church music.

A similar pattern of events, at a somewhat later date, occurred in Australia (see Forsyth, 1997), and also in New Zealand, where Christchurch Cathedral was an early centre for Anglican choral music (choir school founded 1879). In all these white-dominated countries there were Anglican missions to the indigenous populations, in which hymn singing played its due part.

11. Missions and the Anglican Communion. The high-church Society for the Propagation of the Gospel, by far the oldest Anglican mission organization, was primarily concerned with ministering to white settlers in colonies and other outposts, although it did from time to time attempt to convert Amerindians and West Indian slaves. The Church Missionary Society (CMS), on the other hand, was founded in 1799 under Evangelical auspices for the express purpose of bringing Anglican Christianity to the subject peoples of the growing British Empire, often in competition with nonconformist societies. Its first successful mission was in Sierra Leone, where the population of freed and returned slaves was less firmly tied to tribal religions than that of other African countries. Similarly, the American Episcopal Church missions concentrated first on Liberia. For the next 150 years the greatest missionary efforts took place in Africa.

For most of the 19th century Anglican missionaries, with a few exceptions, saw it as their duty to rescue Africans from the evils of their own religions and persuade them to adopt Anglican Christianity, just as it came. They may have been among the most ethnocentric of the denominations active in Africa. They expended vast efforts in translating hymns, as well as the Bible and Prayer Book, into African languages. The music of hymns clearly attracted some Africans. But a literal translation of an English hymn, designed to be sung to its usual tune, often violated the natural stresses and tones of the new language and made virtual nonsense of the text. Moreover the quite complex nature of the High Victorian hymn tune was more difficult to master than the simple gospel hymn of the Moody-Sankey type used by other missionaries, such as the Methodists. Anglican missionaries disapproved of drumming or dancing in worship, although these had been an inseparable part of both music and religion for many Africans.

Despite all these barriers, progress was made; no doubt many Africans saw material as well as spiritual advantage in yielding to the pressure to convert and to learn Anglican music. The CMS hoped that Africans would eventually take over the missions, and the first African bishop was consecrated as early as 1864. But the period of intensified

imperialism in Africa (1880–1920), although it greatly increased the success of missions, did so at the expense of indigenous cultures. Even African church leaders, having learnt English hymn tunes in their youth, often wished to exclude native music and customs from Christian worship. In reaction, a number of independent African churches were formed (outside any existing denomination), using music and dance in their own traditional styles to accompany worship.

The popularity of these sects may have awoken the missionaries to their predicament. After World War I, some serious efforts to synthesize African music with Western Christianity were begun. T.K.E. Phillips, a Nigerian, was trained both in mission school and at Trinity College of Music, London, and became organist and choirmaster of Lagos Cathedral; but he retained his Yoruba roots. His *Litani* (1926) alternates an unaccompanied soloist with four-part choir and organ, but the tunes are African and the speech tones and rhythms of the Yoruba language are retained. His student, Fela Sowande, continued what he had begun. A.M. Jones, a white missionary at St Mark's College in Northern Rhodesia (now Zambia), reversed the earlier procedure by setting new Christian words to secular African songs, eventually assembling them in a *Lala Hymnbook* (1931). This proved to be a useful model.

Gradually the Anglican Church was changing from an 'establishment' into a mission church (see Sachs, 1993) and was looking more favourably on African cultural expression. By 1960 the indigenization of African church music had come a long way. The independence of Britain's African colonies, beginning with Ghana in 1957, by no means slowed the pace of conversion to Christianity – at the end of the 20th century there were at least 30 million African Anglicans – but it naturally predisposed Anglican leaders, both colonial and indigenous, towards the africanization of church music. Ecclesiastical provinces often crossed both national and tribal boundaries. Efforts were made to forge a syncretic, pan-African style out of the differing music of various regions, tribes and languages. Drums and other instruments were now admitted, and a call-and-response type of hymn became a normal part of worship, but the music belonged to no single tribal tradition and still retained many Western features as well. Later the growth of nationalism in many African states led, paradoxically, to a new wave of Western musical influence, but in the form of commercial popular music.

In a few cathedrals, however, as in England, popular trends have been resisted, and fully choral Anglican services are sung by all-male choirs, with only the occasional African hymn. Examples are the cathedrals of Lagos and Cape Town. The choir directors and organists are trained at one of the London colleges or at the RSCM, or at one of the many African music schools modelled on them.

Anglican Christianity is also firmly established in many Asian countries, though on a smaller scale – perhaps four million members in all. In India it is a natural product of centuries of British rule. But both conversion and indigenization were slower and more difficult than in Africa. The existing religions were ancient and well developed, and both North and South India possessed strong and mature traditions of high art music which had little in common with Western music. A modern Anglican service in Hindi may well contain various musical elements, each remaining largely intact: North and South Indian melodies, Indian and Western instruments, Hindu and Moslem chant, and English hymns with their original tunes in four-part harmony. Some Christian musicians have attempted a fusion of rāgas with Gregorian chant. Some aboriginal groups in the east-central plateau, such as the Munda people, have reverted to the use of their own melodies, with drumming and dancing, but (as in Africa) with some perceptible traces of Western influence that distinguish it from the music of non-Christian Munda (Babiracki, 1985, p.97). In Sri Lanka, Sinhala folk music and dance, prose chants, and drums were introduced into the Anglican Church of Ceylon in the mid-1950s.

In China, Japan and Korea, acceptance of Western art music has been far more complete, so that in general Anglican church music has been adopted with little change (other than translation of the texts) in whatever degree the resources of a particular community may allow.

The earliest attempt to bring together the bishops of Anglican and Episcopal churches around the world was held in 1867, at Lambeth Palace (the London residence of the Archbishop of Canterbury). It was to be the first in a series of approximately decennial conferences that have continued until the present time. Although music as such is rarely a principal subject of discussion, the Lambeth Conference has shaped and overseen the gradual evolution of the Anglican Communion in the modern world, and provided a focus for increasing controversy on such subjects as the ordination of women and proposals for reunion with other denominations. The services at the conference itself have generally been quite traditional and, for many of the assembled bishops, have acted as a reminder of the liturgical and musical model which had been a starting-point for their own churches' evolving practices.

The Anglican Communion embraces some 20 independent church organizations around the world, all tracing their ultimate roots to the Church of England. One modern commentator considers that 'Anglicanism [in the late 20th century] exhibited dynamism in Africa and Asia which seemed lacking in its British and American counterparts' (Sachs, 1993, p.336).

NICHOLAS TEMPERLEY

Anglican chant. Harmonized formulae used for the singing of psalms and canticles in the liturgy of the Church of England. A single chant (ex.1) comprises two sections,

Ex.1 Tallis

paralleling the bipartite psalm or canticle verse to which it is sung; the initial chord in each half is the 'reciting' chord to which a substantial part of the verse section is freely sung. The first half of the chant is concluded by a progression of between three and five chords, the second half by a progression of between five and nine chords. These are invariably measured out in semibreve, minim and crotchet values, the first comprising three bars, the second, four. Double chants repeat the single chant formula once, and quadruple chants repeat it three times, being sung to two and four psalm or canticle verses respectively (triple chants are occasionally used). There are many ways of 'pointing' or fitting the words to these chants, and various systems of symbols are used to indicate how this may be done; in the following examples the barring is equivalent to the barring of the chant:

Oxford Psalter:
Glory / be. to the / Father: and to the Son, / and. to the / Ho-ly / Ghost;
As it was in the beginning,* is now, and / ever. shall / be:
world without / end, A / - / men.

Revised Psalter:
Glory be to the Father, and / to the / Son: and / to the Holy / Ghost;
As it was in the beginning, is now and / ever / shall be:
world without / end. / A- / men.

The pointed psalters that are most commonly used are *The Parish Psalter*, *The Oxford Psalter* and *The New Cathedral Psalter*. Congregational chanting was attempted in many churches from the unpointed texts of the Book of Common Prayer, but pointed psalters are essential if a satisfactory standard is to be achieved.

Anglican chant can be traced back to Latin psalm tones and is related to the continental FALSOBORDONE. The earliest sources of harmonized chant are Thomas Morley's *A Plaine and Easie Introduction* (1597), manuscript 34 from the first 'Caroline' set of partbooks at Peterhouse (*c*1635) and three early Restoration books: Edward Lowe's *A Short Direction for the Performance of Cathedrall Service* (1661, 2/1664), James Clifford's *Divine Services and Anthems* (1664) and John Playford's *Introduction to the Skill of Musick* (1654, many reprints to 1730). To these must be added various sets of festal psalms (*psalmi festivales*) by some 20 composers dating from about 1550 to about 1640, many published in John Barnard's *The First Book of Selected Church Musick* (1641).

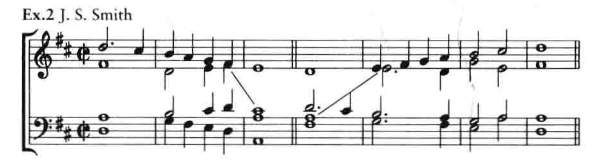
In his *Booke of Common Praier Noted* (1550) Marbeck did no more than provide examples of the way in which the psalms and canticles could be sung to the long-established Latin psalm tones: he used the 8th tone, mostly without the intonation and with two variant endings, for seven psalms and canticles; the 5th tone occurs twice, while the 1st, 4th, 7th tones and *tonus peregrinus* are each used only once. The fact that Marbeck did not set out more fully and systematically the system of eight tones indicates that choirs were conversant with it and had no difficulties in adapting it to English use.

Morley went one stage further in supplying simple harmonizations to the eight tones, though he gave no examples of how these might be fitted to words. The first evidence that choirs were actually singing the plainsongs in harmonized versions is to be found in the Caroline Peterhouse books, in which two voice parts from a set of chants that were probably for three or four voices are scribbled out on a single page; no words are supplied but the rhythms fit the opening verse of the *Venite*.

The three Restoration sources – Lowe, Clifford and Playford – provide a comprehensive guide to the use of the tones, as might be expected after a break in the tradition of some 15 years. All eight tones are printed, together with the Benedicite chant (described as 'from the Sarum Breviary'). What is more, harmonizations of four chants are provided: 'Adrian Batten's tune' (1st tone), 'Christ Church tune' (a different harmonization of the 1st tone), Dr Child's harmonization of the 8th, known as the 'Imperial tune', and a chant called 'Canterbury tune', which after the Restoration was commonly attributed to Byrd and attached to his third set of Preces.

In pre-Restoration times the psalms would normally have been sung at Matins and Evensong to Gregorian tones, either simply harmonized in the manner of Batten's tune, or monodically; but special settings of the psalms would have been sung on festal occasions. Many sets of pre-Restoration festal psalms are extant. The earliest are by Tallis for the Evensongs of 24, 25 and 26 December: those for Christmas Day (only the bass part of the others survives) are fairly simple harmonizations of the 1st and 7th tones, not far removed from the Batten tune in style but with the underlay of each verse carefully set out in measured notes. No doubt the simpler festal psalms of this kind provided the model for the later Anglican chant.

Wilson (1996) provides a detailed account of Anglican chant and chanting after the Restoration. Extant manuscript collections of chants compiled between 1660 and 1750 illustrate the formation of a repertory consisting of adaptations from festal psalms, psalm tone harmonizations and, increasingly, new chants. A post-Restoration repertory associated with the Chapel Royal, Westminster Abbey and St George's, Windsor, copied into a manuscript owned by the Precentor of Windsor, Dr John Butler (*GB-Lbl* 17784, 1670) consists of three psalm tone harmonizations and 18 chants attributed to Blow, Humfrey, Edward Purcell, Henry Purcell (i), Thomas Purcell and Turner.



This 'royal chapels' repertory' circulated to provincial cathedral choirs where local additions were made. Henry Aldrich's collection of 'Proper Tunes' for Christ Church,

Oxford (*GB-Och* 48, late 17th century), is typical; of 28 chants 12 come from the royal chapels repertory and five from Lowe's collection; the remaining 11 are by Oxford composers, including Richard Goodson, Francis Withye and Aldrich himself. John Alcock, organist of Lichfield Cathedral, published the first printed collection (1752), but one of the most significant was that edited by (but not ascribed to) Granville Sharp: *Fifty Double and Single Chants being the Most Favourite, as performed at St Paul's, Westminster and Most of the Cathedrals in England* (*c*1770). Instructions on chanting became more numerous in the 18th century, and there was recognition of the relationship between the nature and mood of the psalm and the chant to which it was sung; John Jones (1785) classified the psalms as 'Rejoicing, Penitential or Historical'. John Marsh (1804) and John Beckwith (1808) were the first to provide a specific chant for each of the 150 psalms. The first system of 'pointing' was published by Robert Janes, organist of Ely Cathedral: *The Psalter or Psalms of David* (1837) was

> Carefully marked and Pointed to enable the Voices of a Choir to keep exactly together by singing the same Syllables to the same Note; and the accents as far as possible made to agree with the accents in the Chant …

These publications marked the beginning of a flood of 19th-century chant books, serving the rapidly expanding number of parish choirs with cathedral aspirations. Rimbault, deploring the tendency to increasingly 'pretentious' chants (such as ex.2) edited a retrospective collection

Ex.2 J. S. Smith

of chants (1844); among the earliest composers are Tallis, Byrd, Richard Farrant, Morley, John Farrant and Child, some of whose chants prove to be highly simplified adaptations from festal settings, and who are complemented by Restoration and 18th-century composers. *The Cathedral Psalter* with chants (1874) compiled by John Stainer and others, was widely used until the 1950s, and can still be found more often in its revised format. Cathedral and other church musicians continued to compose chants in the 20th century, some of unbelievable chromatic decadence; others adopted a simpler modal style or re-introduced the Latin psalm tones. The select cult of polished Anglican chanting continues, and includes several recordings of the entire psalter, most recently by St Paul's Cathedral. Since 1960 the use of Anglican chant has diminished greatly in parish churches, some preferring responsorial psalms, Père Gelineau's method of psalmody, or modern songs based loosely on psalm texts, while others have abandoned sung psalms entirely.

Angola (Port. Républica de Angola). Country in south-central Africa. It has an area of 1·25 million km² and a population of 12·78 million (2000 estimate). Angola was a Portuguese colony during the first half of the 20th century, declared an overseas province in 1972 and achieved independence in 1975. Conflicts between liberation movements financed by foreign powers immediately plunged the country into a 20-year civil war that led to the destruction of most rural community-based cultures and excessive urban migration, particularly to Luanda, the capital city. The impact of this turmoil on Angola's musical cultures is only gradually being assessed (see Kubik, 'Muxima Ngola', 1991).

1. Historical sources. 2. Main musical style areas: (i) Music of Khoisan-language speakers (ii) Music of Bantu-language speakers of the central and south-western zone (iii) Music of Bantu-language speakers of the north-western zone (iv) Music of Bantu-language speakers of the eastern zone. 3. Modern developments.

1. HISTORICAL SOURCES. Several Iron Age sites have been uncovered in north-west Angola. Further south, the site of Féti in the central highlands of Viye (Bié) was discovered in 1944 by an amateur archaeologist, Júlio de Moura, who recovered a flange-welded iron bell with stem grip and two other iron bells that each seem to have a clapper (Ervedosa, 1980, p.lix). The site dates to 720 CE, demonstrating the presence of iron bells in central Angola at the beginning of the 8th century and showing how far south the technology used for making flange-welded iron bells, often associated with chieftainships, had penetrated. Significantly, bells had disappeared from most parts of Angola by the 20th century.

Owing to the late 15th-century establishment of a permanent political and cultural link between Portugal and the Kingdom of Kongo, north-west Angola is unique in south-central Africa in that a considerable number of early written and pictorial sources exist. Early sources refer to the Kingdom of Kongo that extended far into the present-day Democratic Republic of the Congo at the height of its power. Ruy de Pina (1792) reported that *trombetas de marfim* (ivory trumpets) were among the instruments played at a reception for a Portuguese delegation given by the King of Kongo in 1491. Duarte Lopes travelled to Luanda in 1578 and described military music among the Bakoongo and Imbundu peoples (Schüller, 1972). G. Francesco da Roma, an Italian

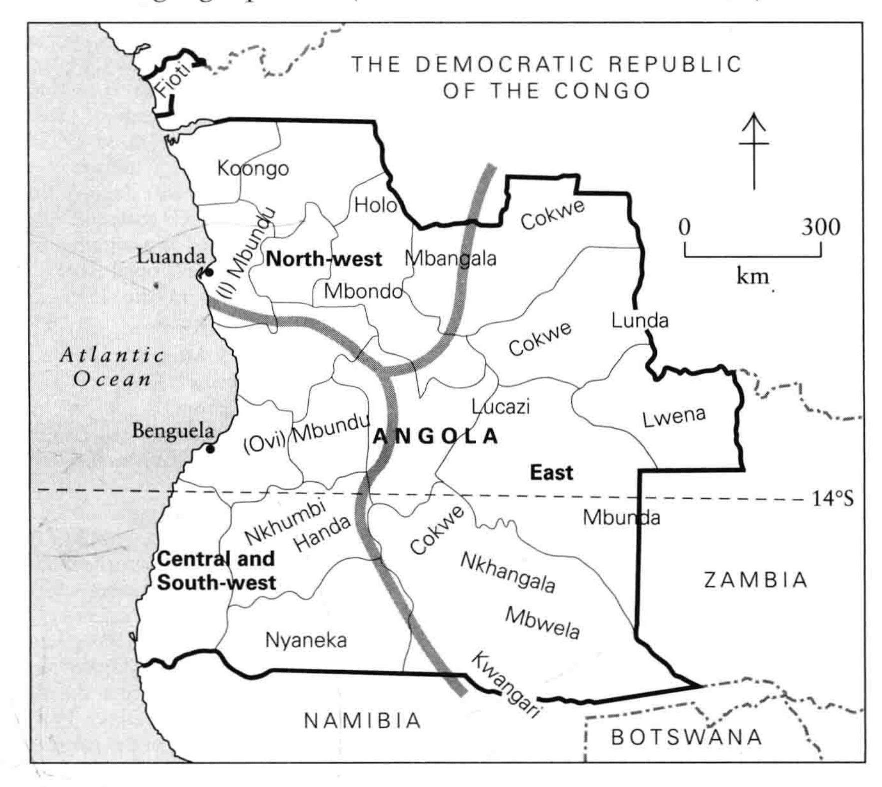
missionary, was the first to describe xylophones in north-west Angola in 1648, giving an account of musical acculturation at that time. European wind instruments were introduced soon after relations had been established between King Nzinga Nkuwu and Portugal in 1490. These instruments spread far into the interior of Angola. The Kingdom of Kongo was an area of early Christian evangelization and the establishment of missions. Church bells were also introduced, giving rise to the production of small bells with clappers made with local metallurgical techniques.

Two Capuchin missionaries, Giovanni Antonio Cavazzi and Girolamo Merolla, gave the most detailed descriptions of music, organology and the role of instruments in society during the late 17th century. Cavazzi travelled to what is now north-west Angola in 1654, living in the Kingdom of Kongo and adjoining areas for 13 years. Musical scenes are depicted in many of the illustrations in his *Istorica descrizione de'tre' regni Congo, Matamba et Angola* (1687), such as warriors playing single- and double-bells (reproduced in Hirschberg, 1969, p.15).

Merolla travelled to Luanda from Naples in 1682. Some historians consider Merolla's documentation (1692) of musical instruments in the north-west Bantu-language zone as secondary and largely based on Cavazzi, but it is probably independent. Similarities with Cavazzi's account are easily explained since the two were contemporaries and had contact with the same cultures. One famous illustration (fig.1) shows several musical instruments: a gourd-resonated marimba (xylophone), a *nsambi* (pluriarc), a *kasuto* and *kilondo* (two types of scrapers), a *longa* (double-bell), a goblet-shaped single-headed *ngamba* (drum) and an *epungu* (end-blown horn).

1. *Instruments documented by Girolamo Merolla in the Kongo/(Ki-)Mbundu region of Angola between 1683 and 1688; woodcut from his 'Breve e succinta relatione del viaggio nel regno di Congo nell'Africa meridionale' (1692)*

The xylophone tradition noted by these authors has disappeared from the area. It survives, however, further north, in southern Cameroon, where it spread from Congo and Gabon at the height of the Kingdom of Kongo's power. Their organology, mode of performance, social context and the fact that usually four are combined to form an ensemble contribute to the hypothesis that the present-day southern Cameroonian xylophone tradition is the closest parallel to that described by Merolla.



Some of the most intriguing indirect testimonies of Angolan musical instruments in the late 18th century and the early 19th come from Brazil, where Angolan slaves continued to produce the musical instruments of their home cultures. At that time, Brazil was more accessible than Angola to European travellers. Rio de Janeiro, in particular, became a meeting point for European painters and authors keen to capture picturesque scenes. Thus, in the paintings of Jean-Baptiste Debret, Johann Moritz Rugendas, Lt Chamberlain, Thomas Ewbank and others (see Kubik, 1979), there is invaluable information on musical instruments made by African slaves.

One particular Brazilian source is useful in the indirect assessment of musical practices in 18th-century Angola. On his journey through northern Brazil in 1783–92, Alexandre Rodrigues Ferreira observed slaves playing a 16-note board lamellophone and a seven-string pluriarc. His accurate drawings reveal details such as the tuning of the lamellophone with lumps of black wax (Kubik, 1979). Analysis of these drawings has enabled an identification of the area from where those slaves must have come, south-west Angola. Probably they were of the Nkhumbi, Handa, Cipungu or related peoples who were deported to Brazil via Benguela. A comparison of Ferreira's drawings with field research materials from south-west Angola collected in 1965 demonstrates that instrumental designs of these types have remained stable for over 200 years (Kubik, 1979; 1986).

Sources on music in Angola became abundant in the 19th century when colonial penetration of inner Angola intensified (Magyar, 1859; Pogge, 1880; Pinto, 1881; Capello and Ivens, 1881; Dias de Carvalho, 1890–93). In the 20th century these sources were amplified by numerous ethnographic accounts (Schachtzabel, 1923; Hambly, 1934), as well as the collections of musical instruments in museums, notably the Museu do Dundo, Angola, and the Museu de Etnologia, Lisbon.

2. Main musical style areas. As elsewhere in Africa, music and language are intimately linked in Angola. Major musical style areas of the country, therefore, correspond with principal linguistic divisions. The majority of Angola's population speaks Bantu languages of one of three zones: north-west, central and south-west, and east (fig.2). There are also scattered communities speaking non-Bantu languages of the Khoisan family, south of latitude 14°S.

(i) Music of Khoisan-language speakers. In 1975, before the forced dislocation of peoples caused by civil war, Khoisan groups, ethnically classified as !Kung', were found in several locations across southern Angola. Another small group in Namibe province speaking a

2. Map showing the population zones of Angola's Bantu-language speakers: north-west, central and south-west, and east

Khoisan language is known as the Kwisi (Kwise). Non-Bantu-language-speaking groups of south-west Angola also include the Kwepe and Kazama and the speakers of Kwadi.

Several thousands of years ago, Khoisan hunter-gatherers developed harmonic counterpoint, stimulated by two converging factors: hunters' experiences with long, stretched strings and the ability of the hunting bow to be turned into a musical instrument by dividing the string with a tuning noose and employing the mouth as a variable resonator (fig.3). This convergence led to the technique of selective reinforcement of lower partials over two fundamentals, and thereafter to an understanding of the natural harmonic series.

!Kung' music demonstrates five salient traits. First, the use of vocal polyphony in the Africanist definition of the term (*see* AFRICA, §3(v)) and yodel. Pitch-lines sung to syllables and few words, if any, are combined by singers in an interlocking style. Second, pitch-lines are generated by tones derived from the exploration of the natural harmonic series up to the 4th partial over two fundamentals of a stretched string; !Kung' intervallic memory is conditioned by the experience of the mouth bow. Third, !Kung' musical instruments include three adaptations of a hunting bow as a musical bow: two mouth-resonated and one with an external gourd-resonator. Women use a *bavugu* (stamping tube) made from three gourds of the *strychnos spinoza* plant glued on top of each other with black wax. The *bavugu* is stamped on the player's left thigh and hit with the right hand on the uppermost orifice. All other instruments, such as the *kawayawaya* (friction bow), various lamellophones and occasional drums, are borrowed from Bantu-language speakers. Fourth, rhythm is characterized by the use of interlocking motifs in song and clapped polyrhythmic patterns in cycles of 12 or 24 elementary pulses. Fifth, movement in dance includes vigorous shaking of the torso, sometimes inducing trance-like states. Miming of animals and mock duels between men are prominent features of !Kung' expressive culture.

(ii) Music of Bantu-language speakers of the central and south-western zone. The Ovimbundu are the largest ethnic group in Angola, with close to 4 million Umbundu speakers. *Ocisungo* (song) among the Ovimbundu is a generic term that was exported to Brazil with the slave

3. Hunting bow used as a musical instrument; the string is divided with a tuning noose and the mouth is employed as a variable resonator.

trade (Kubik, *Extensionen*, 1991, p.70). The first recordings of Ovimbundu singing were made by Alfred Schachtzabel in 1913 on wax cylinders, and they reveal the presence of a characteristic heptatonic multipart singing style. Musical instruments include drums similar to those of their eastern and southern neighbours. Various musical bows are used: mouth-resonated bows such as *ekolowa* (a friction bow) and *ocimbulumbumba* (a braced, gourd-resonated musical bow). The onomatopoeic name *mbu-lu-mbu-mba* characterizes timbre and accent patterns played on the bow.

Ethnographic coverage of the Ovimbundu is detailed (Schachtzabel, 1923; Hambly, 1934), but no comprehensive ethnomusicological coverage is available. Indirect conclusions are, however, possible. An important difference between the culture of the Ovimbundu and almost all surrounding peoples is the absence of boys' circumcision and, therefore, also associated music-dance activities. A unique class stratification has, however, generated specific forms of praise-songs.

In contrast to Angola's central highland population, which was much affected by trade along the Ovimbundu routes from the 18th century to the 19th, the cultures of the south-west remain conservative, although the Portuguese presence was long established; the town of Caconda-a-Velha, for example, was founded in 1680, and south-west Angola subsequently became a preferred slave-recruiting area. This is why many cultural traits of this area survive in the Brazilian melting pot (Kubik, 1979; *Extensionen*, 1991). The cultural profile of these peoples has fuelled speculation about remote East African migrations, dating perhaps to the 1st millennium CE. Ethnomusicological data corroborate rather than contradict such speculation.

The most popular recreational dance for men and women, *onkili*, reveals a style of movement emphasizing high jumping and high stepping by the male dancers. *(O)Nkili* is an original dance emerging from the Nkhumbi-Handa cluster of peoples in which young people form two rows. While the women clap, one dances out from her row, executes several slow turns and finally intercepts with her hands the high jump of a male partner who has detached himself from his group and run towards her, making it seem as if the woman lifts the man's body up above her head and shoulders. This pattern is repeated with alternating partners.

A variety of dances accompanied by drums and hand-clapping is shared by the peoples of Wila (Huíla) province; the most important are *ovinjomba*, *ombulunganga*, *kaunjangera*, *machikuma*, *ombanda* and the ubiquitous *onkili*. Drums are highly decorated with brass nails, coins, crosses, amulets of metal, beads etc.; the brown-tainted bodies of drums sometimes have high reliefs representing the breasts of a woman. Two drum sizes are distinguished, each with a specific function: *kenjengo* (also *cikenjengo*, *cipinjingo* etc.), which provides a basic pattern, and *ng'oma*, the master drum. Tuning paste is used for both drums, which are played with the hands and held between the knees while standing.

A range of musical instruments is used by the Ovankhumbi, Ovahanda, Ovacilenge, Ovacipungu and others for solo performances, including two transformations of an *onkhonji* (hunting bow) into a mouth-resonated musical bow that exploit the harmonic series up to the 6th partial over two fundamentals (Kubik, 1975–6; 1987, pp.103–4). In addition, there is the *embulumbumba* (gourd-resonated bow). One performer, José Emmanuel Virasanda, recorded at Mukondo, near Dinde, in 1965, is now a celebrity among ethnomusicologists for his bow-songs presented by Tiago de Oliveira Pinto in a cross-cultural experiment to Brazilian musicians in the Recôncavo Baiano. Pinto's experiment tested the extent to which common ground between these traditions still existed on a cognitive level (1994). The Brazilian *berimbau* was developed from a blend of Angolan gourd-resonated bows in the 19th century, and many patterns have continued.

(iii) Music of Bantu-language speakers of the north-western zone. The principal language of this zone is Kikoongo (Kongo), while Kimbundu (Mbundu) is the most important language spoken in the city of Luanda and the outskirts as far as Malanji province. The expanse of the north-west zone includes all of north-west Angola, the enclave of Cabinda and adjacent areas of south-west Democratic Republic of the Congo and southern Congo.

In Cabinda, the Bafioti are known for three-part singing in chord clusters within a heptatonic non-modal system and for the 'sanza-type loango' (Pechuël-Loesche, 1907; Söderberg, 1956; Laurenty, 1962). Traditions in Kikoongo-speaking communities of the north-west still echo some of those in the old Kingdom of Kongo, as suggested by Margot Dias's 1960 location of a horn ensemble. The activities of a *nganga* (medical practitioner) often include musical performance, as do the rites in the *dilongo* boys' circumcision school (Kubik, *Extensionen*, 1991, p.66).

A variety of drums is used by the Koongo, Holo (Holu), Imbundu and related peoples in religious and popular dances. In Malanji province, particularly in the area of the former Kingdom of Matamba, xylophone music is a prominent feature of music-dance activities. The *marimba de arco* (Portugese designation) is played as a solo instrument among the Jinga (Njinga), and also among the Cokwe (Chokwe) in the neighbouring east zone. Among the Mbondo the prominent type is *madimba*, a large, gourd-resonated xylophone with 20 keys tuned to a heptatonic scale. It is played by three musicians who sit next to each other, one striking bass notes, another playing a basic middle-pattern, while the lead player uses most of the upper range for variations. Each player uses two rubber-headed beaters to strike the keys in the centre.

Madimba xylophone playing was originally presentation music for powerful chiefs. At Kixingambambi village in the Kunda district, Chief Kalunga-Kandala supported one of the most famous *madimba* groups in Malanji province, that of Armando Balanga (fig.4). The name *madimba* in the Mbondo language is formed from the word-stem *-rimba/-limba*, formative in the designations of xylophones and lamellophones, primarily in south-east Africa. Since there are no documented connections between these gourd-resonated xylophones and those of the old Kingdom of Kongo, it could be that its inspiration came from contacts opened up by the *pombeiros* (African-Portuguese explorers) with the lower Zambezi valley in the 18th century (Rocha Matos, '(Ma)Dimba', 1982).

Of similar historical significance is the presence of the *hungu* or *ungu* (gourd-resonated musical bows) in Luanda and surrounding areas. The stave is made from a plant called *mutamba*, the string of wire. It is divided into two sections near the lower end; the very short bottom section is not used for playing. The division on the long bow of

4. Armando Balanga madimba group in Malanji province, Angola

Miguel Francisco dos Santo Kituxi (*b* 1941), which had a stave of 1·7 metres, was 8:1 (Kubik, 1987, pp.179–85). To obtain a second fundamental, the musician stops the longer part of the string just above the tuning noose with the thumb of the left hand wrapped around the neck of a glass bottle. The tuning noose dividing the string is connected to the gourd resonator. During performance the player holds the instrument vertically, creating tonal fluctuations by moving the gourd's orifice slightly against the bare abdomen. The name *hungu* suggests historical connections with *lukungu* (musical bows) in south-west Democratic Republic of the Congo.

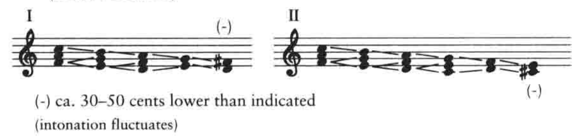
The *kakoxa* (two-string bowed lute) that can still be heard across the Kwanza-Sul and Malanji provinces (Rocha Matos, 'Para um programa', 1982; Redinha, 1984; Kubik, 'Muxima Ngola', 1991, p.263) sheds light on another aspect of Angola's music history. Characteristically, the *kakoxa* has horizontal pegs and is normally a solo instrument played by elderly men, but it may be accompanied by a percussive pattern struck on a plastic plate or similar object by a second performer. The *kakoxa* was most likely developed by Kimbundu-speaking musicians in the 18th century based on Iberian models.

Iberian string instruments of the 17th–19th centuries were brought to Angolan coastal cities by Portuguese, Brazilian and other sailors. Among them was the *cavaquinho*, a four-string plucked chordophone (Dias, 1967) that spread worldwide, leading to the development of the RAMKIE in south-west Africa. The *violão* (Port.: 'guitar') among the Mbondo and Holo is a four-string, homemade chordophone quite different from 20th-century factory-made guitars. It is characterized by the following traits: (1) vertical position of tuning pegs; (2) four strings (sometimes three); (3) rectangular soundboard made of raffia and fitted into the trough-like resonator (Kubik, 'Muxima Ngola', 1991, pp.265–8); (4) raised first fret on the fretboard; (5) monoxylous resonator and fretboard; (6) metal ring buzzers on some examples; and (7) decorative engravings on most instruments. Traits 4–7 are local developments, whereas traits 1–2 are held in common with the *cavaquinho* and trait 3 in common with the *kakoxa*.

North-west Angola is a site of rapid transculturation, in which local Kikoongo, Kimbundu and Portuguese concepts of music have interacted since the 16th century. An example is the development of small board-shaped lamellophones with calabash-resonators still popular among men in the Kunda and Kela districts. They are known as *sartela*, from the Portuguese *psaltério*. In this case the name was imported, not the instrument. Apparently, in the past when the psaltery was still used in European music, native speakers who had learnt some Portuguese explained lamellophones to their colonial masters by comparing, even equating, them with an instrument in the colonists' culture.

(iv) Music of Bantu-language speakers of the eastern zone. This zone covers all of east Angola and adjacent areas in north-west Zambia and southern Democratic Republic of the Congo. Ethnomusicologically it is one of the most studied areas of Central Africa (see Kubik, 1969; 1981; 1993; 1994; Gansemans and Schmidt-Wrenger, 1986; Bastin, 1992).

The cultures of eastern Angola remain relatively homogeneous, owing to their ethnogenesis of only 400



years. Many musical activities are linked to secret societies, institutions for youth education and to installation ceremonies and other ritual contexts of chieftainships. Cokwe, Lwena and Lucazi (Luchazi) chiefs keep a *mukupela* (or *mukupele*) double-headed hourglass drum among their regalia. Its penetrating sound is due to an ingenious device: a small piece of calabash neck closed with a mirliton made from a spider's nest is inserted into a hole on the side of the drum, resulting in strong sympathetic vibrations.

In south-east Angola, among the Vambwela and Vankhangala, dead chiefs are commemorated with secret instruments called *vandumbu* whose sound is said to represent the voices of the ancestral chiefs (Kubik, 1981). The sounds produced are the esoteric knowledge of the initiated. The large *vandumbu*, up to 4 metres in length, are megaphones, wooden tubes with a round embouchure, cut from tall trees and hollowed out. Their mouth is often shaped like that of a crocodile or other river animal. The body of each tube is completely wrapped with plant fibre. Throughout the year, these instruments are kept under water by the members of the secret society in a shallow place of the river marshlands. During the ceremony, members bring them up to the village in the darkness and produce fearful sounds. Three *vandumbu* usually form part of the procession. In front of them walk the players of three smaller aerophones, about 1·5 metres in length called *nyavikali*. Harmonics up to the 8th, even 10th partial are blown on some of them. They have a separate mouthpiece similar in size and bore to some 16th-century European trombones.

Among the Mbwela and Nkhangala of south-east Angola three secret associations by males and three by females were documented in 1965. Each has an individual song repertory, performance style and instrumentation. Membership is hierarchical and strictly segregated by gender. One has to pass earlier age-grades to become a member of later associations.

The eastern cultural area is also exemplary for the development of a system of harmonic part-singing used in ritual and other contexts. The Cokwe, Luvale, Lucazi and Mbwela-Nkhangala vocal style proceeds from a non-modal heptatonic scale in which intervals are adjusted at key points to satisfy both the principle of triadic euphony and equiheptatonic temperament. Songs follow either of the harmonic schemes shown in ex.1.

Ex.1 Harmonic schemes in Cokwe/Ngangela multipart singing: (relative notation)

(-) ca. 30–50 cents lower than indicated (intonation fluctuates)

≷ directions that individual voices may take

Much of Cokwe, Lwena and Ngangela music is structured along time-line patterns. One is a characteristic nine-stroke, 16-pulse pattern called *kachacha* in Lwena-Luvale, originating in the Lunda-Luba-Cokwe cluster of cultures, and spreading with the slave trade to Brazil, where it contributed to the development of samba (Kubik, 1979). Another is the ubiquitous seven-stroke, 12-pulse standard pattern, also prominent in West Africa. Any of these patterns can be struck either on the body of a drum or on the box-resonator of a *likembe* lamellophone by a second player holding a stick.

5. Kachacha dance performance with six tuned drums and a jinjimba (two-note xylophone), Njamba village, Alto Zambese district

6. Masked performance in eastern Angola to the accompaniment of a cinkuvu (slit-drum), Sangombe village, Kwandu-Kuvangu province

Percussion instrumental resources dominate eastern cultures. Membranophones include the long, goblet-shaped, single-headed drums, called *vipwali* in Mbwela-Nkhangala culture and *jingoma* among the Lwena-Luvale. The latter often group six of these drums together as a chime and play them together with a two-note, gourd-resonated *jinjimba* (xylophone) (fig.5). Another popular instrument throughout eastern Angola is the *cinkuvu* (slit-drum), used to accompany masked performance (fig.6).

3. Modern developments. Urban music in Angola was remarkably different from that of neighbouring African countries at the turn of the 20th century. To avert

undesirable political influences, rural populations were deprived of basic educational facilities and made almost inaccessible to international media until the 1970s. As late as 1965 no transistor radios existed in rural areas, in stark contrast to neighbouring countries.

Likembe lamellophone music swept through north-east Angola from the Democratic Republic of the Congo as early as the 1920s. Hugh Tracey recorded Cokwe- and Luvale-speaking Angolan *likembe* musicians in the 1950s in the Copperbelt. It was the vast labour migrations to mining centres in central and southern Africa that first exposed young Angolan men to foreign experiences.

A particular phenomenon in Angola's socio-cultural stratification was the rise of Luso-African or Portuguese-Kimbundu culture in Luanda, among the inhabitants of the so-called *musekes*, the townships in which most of the Kimbundu-speaking population lived. The rise of this early 20th-century culture created artistic expressions such as the dance forms of *kaduka*, *semba* and *rebita*. *Kaduka* in Kimbundu comes from 'Duque de Bragança', a historical Portuguese personality for whom a town north-west of Malanji was named by the colonial regime. In Luanda, the dance was referred to as *Akwaduke* ('of the people of the Duque de Bragança'), and it became known in upper-class dancing salons during the mid-19th century. At the same time another dance became popular: *semba*, associated with a belly bounce, as in the *umbigada* of Brazil. *Kaduka* and *semba* are associated with the *rebita* dance clubs in Luanda, of which four remained in 1982. In colonial times *kaduka* and *semba* were referred to as *danças recreativas assimiladas*, entertainment for those with *assimilados* status, that is with the rights of Portuguese citizenship.

A new factor emerged in the 1950s with the increasing popularity of the group Ngola Ritmos led by Liceu Vieira Dias. Ngola Ritmos introduced rumba, MERENGUE and samba to Luanda's urban musical culture, using guitar and local percussion instruments such as *dikanza* (scraper), rattles and drums. The music became popular in the *bairros* (townships) of Luanda since it was sung in Kimbundu and because it sympathized with liberation movements. In 1981 Dias was officially celebrated as *o precursor da música moderna angolana*.

Another early 20th-century development was the rise of military-style music after World War I called *kalukuta* in south-east Angola and performed with *ndamba* (scrapers) and hoe-blades. One song recorded in 1965 was *O mbomba* ('The Bomb'), in which listeners are incited to throw imaginary bombs on almost any city in the country (Kubik, 'Muxima Ngola', 1991, pp.234–36).

By the mid-1960s song texts from rural areas contained political messages celebrating Patrice Lumumba of the former Belgian Congo and Kenneth Kaunda of Zambia as heroes. In north-east Angola, in the areas of Luau and Kazombo, guitar music from Katanga and Zambia had swept across the border, but those few who took to the guitar almost exclusively used homemade instruments.

Only after Angola achieved independence in 1975 did the public have opportunities, at least in larger cities, to actually see groups from neighbouring countries. Dance bands from the former Zaïre began to affect Luanda, particularly with the return of exiled guitarist and singer Massano. His ensemble's instrumentation followed Zaïrean models, but his repertory was eclectic, including songs sung in Kimbundu. Other groups, playing in a Kimbundu-language popular style, have emigrated to neighbouring countries, particularly Namibia, to flee war and economic hardships.

GERHARD KUBIK

Anguilar, Antonia Maria. *See* GIRELLI, ANTONIA MARIA.

Angulo (Rodríguez), Héctor (Manuel) (*b* Santa Clara, 13 Oct 1932). Cuban composer. He went to Havana at the age of 16 to study music with Zenaida Romeu, Pró and Orbón. He began composing in the mid-1940s with his first works performed in the 1950s. In 1959 he attended a summer course at Tanglewood, USA, and later that year received a music scholarship to the Manhattan School of Music in New York, where he stayed for three years. In the USA he met the singer Pete Seeger and taught him the music of the *Guajira Guantanamera* by Joseíto Fernández, with words by the poet José Martí, and so he played a key role in the diffusion of this song. On his return to Cuba to joined the musical avant garde, begun there in the 1960's. His trio and *Sonata para 11 instrumentos*, written and first performed in 1965 and 1967 respectively, were important in defining the Cuban avant garde with their serial treatment and incorporation of aleatory techniques. His work reveals a search for the essence of Cuba, and shows the aesthetic influence of Caturla and Roldán. In the chamber opera *Ibeyi Añá* (1968) and *Cantos yoruba de Cuba* (1970), for solo guitar, he uses folk-songs of African origin as creative reference points. In *Toque (Homenaje a Amadeo Roldán)* (1980), he combines the structure of the traditional concerto with a national sonority produced by the percussion (marímbula, güiro, bongo and claves), all treated with a polyrhythmic and polymetric richness. He has written incidental music for the theatre since 1959, in particular for the Guiñol Nacional de Cuba, and also many vocal works.

VICTORIA ELI RODRÍGUEZ

Angus, John (*fl* 1543–95). Scottish composer. Generally described as 'conventuall brether of the Abbay of Dunfermling', he is mentioned in a charter of 1543 dealing with the transaction of land at Carberry. In 1562, shortly after the Reformation, he was appointed to the vicarage of Crieff, but probably remained at Dunfermline, teaching at the song school there. In general, after the Reformation in Scotland monks were not dislodged from an abbey, but suppression or secularization of the order took place after the death of the brethren. Up to the 1580s Angus received various pensions and benefices, and in 1595 he was presented to the parsonage of Crieff; by the following year he had died.

Angus contributed some 12 canticles to Thomas Wood's (i) anthology (*c*1566, *EIRE-Dtc, GB-Eu, Lbl, US-Wgu*; some ed. in K. Elliot: *Fourteen Psalm-Settings of the Early Reformed Church in Scotland*, London 1960, and in MB, xv, 1957, 3/1975). All are settings in psalm tune style, ranging from those in a severe chordal idiom, such as *Our Father, which in Heaven art*, to those in a more gently decorative style, such as *Now suffer me, O Lord* (well illustrating Wood's affectionate description of the composer as 'gude Angus or 'meike Angus') or *All my belief and confidence*. Here the composer's aim seems to have been to produce a polyphonic texture within the rather strict limits of a harmonic psalm tune setting. The result is admirable – animated but not fussy – and it is to be regretted that nothing has survived of Angus's work on a more ambitious scale. Edward Millar, the editor of the 1635 Psalter, stated that Angus was one of several Scottish composers who had written a 'set' of psalm tune harmonizations, on which he had drawn for this publication.

KENNETH ELLIOTT

Anhalt, István (*b* Budapest, 12 April 1919). Canadian composer, conductor and pianist of Hungarian birth. He studied with Kodály at the Budapest Academy (1937–41). As a young man he spent a period with other Jewish youths in a forced-labour contingent of the Hungarian Army; his later war experiences – escape, then concealment by friends during the winter of 1944–5 – are described in the memoirs of the novelist Theresa de Kerpely (Teresa Kay). After a season as assistant conductor at the Budapest Opera (1945–6), he went to Paris for further studies in piano (Soulima Stravinsky), conducting (Fourestier) and composition (Boulanger), remaining there for three years. He moved to Canada in 1949 (taking Canadian nationality in 1955), and for three years held a Lady Davis Fellowship and an appointment as assistant professor at McGill University. There he founded the electronic music studio and served for six years as chair of the department of theoretical music. He held grants for electronic music research from the Canada Council (1960–61) and the Columbia-Princeton Electronic Music

Center (1961), and in 1969 was Slee Visiting Professor in Composition at the State University of New York at Buffalo. In 1971 he left McGill to become head of the department of music at Queen's University in Kingston, Ontario, a post he held until 1981. He retired from Queen's in 1984. In 1982 and 1991 he received honorary degrees from McGill and Queen's respectively. His compositional output can be divided into four primary categories: dodecaphonic, electronic, dramatic and orchestral works.

The music Anhalt wrote in the 1950s is often characterized by bold abstraction and sustained intensity. Based on classic dodecaphonic procedures, his scores achieve large musical designs, avoid metrical redundancies and unfold in free, expressive lines, heavily characterized by cluster-like dissonances and unison doublings. A formal shape present in two works, the Piano Trio (1953) and the Piano Fantasia (1954), consists of an initial swift and violent plunge into a tense thematic complex, followed by a long and gradual relaxation. The swift bold opening attack is again found in the Symphony (1958) and in some sections of *Foci* (1969). Counterbalancing the prevailing abstraction in earlier works and presaging later developments in Anhalt's output is the three-movement suite *Comments* (1954), introduced by Maureen Forrester. The texts are clippings from the *Montreal Star*: the final section sets a weather report, elevating it into a simple but expressive 'found poem'. The major work of this period, the Symphony, was dedicated 'to the 200th anniversary of Canadian Jewry' but is not programmatic. Written for a large orchestra, its single movement consists of 13 sections arranged in a deliberate pattern of changing (and irregularly cumulative) density. The Symphony is powerful and original in the way it relates density fluctuations to time and in its frequent reliance on a wave-like continuity, resembling the sea or human respiration.

Anhalt's work in electronic music resulted in four exclusively synthetic studies (1959–62) and a number of subsequent works in which a prepared tape is played simultaneously with live media. Of the former group, special interest lies in the third (sub-titled 'Birds and Bells', 1960) by reason of its slow exploration of minute partials in a synthesized bell-like sonority. The length, seriousness and technical assurance of these studies gave a strong boost to the development of Canadian electronic music in the formative period of the early 1960s. Though commissioned for the celebrations of the centenary of Canadian confederation (1967), the *Symphony of Modules*, for large orchestra and tape, has remained unperformed. Long and complex, it employs graphic notation in some sections. An offshoot of this centenary project was a smaller one – *Cento* ('Cantata urbana'), for 12 speaking voices accompanied by further vocal sounds on tape. The 100-word text was selected by the composer from the Canadian poet Eldon Grier's *An Ecstasy*. The title refers neither to the text nor to the centenary occasion, but to the medieval concept of a mixture or patchwork composition. *Cento* introduced into Anhalt's work a new preoccupation with the musical properties of individual spoken and sung voices.

Foci (1969) fused this preoccupation with vocal sonorities with a trend towards mixed-media composition foreseen in the *Symphony of Modules*, fulfilling some of the theatrical potentialities glimpsed much earlier in *Comments*. Its forces include a live instrumental ensemble with soprano, a tape made up of utterances in nine different languages by many different voices, an accompaniment of slide projections in some sections, a lighting plan, and a scenario of exits and entrances for the performers. The work has a strongly ritualistic quality and, like the *Symphony of Modules*, a mobile-like free assemblage of compositional components. The theatrical and verbal images range wide, particularly those related to psychology and religion, and the combination of unfamiliar languages and intense feelings is one which may be specifically related to the multicultural Montreal environment.

Anhalt's next major work is *La Tourangelle* (1975), a long dramatic treatment of the career and writings of Marie de l'Incarnation, the 17th-century Ursuline from Tours who was one of the great pioneer figures of early Canada. The text by the composer is a compilation of contemporary documents including Mother Marie's letters. The central character is portrayed by three female singers, a compositional decision which lends psychological depth to the story and intensity to the musical texture. The subject, a young adult's transatlantic voyage and embarkation on a new life in the 'New World', had autobiographical resonances, which also appeared in Anhalt's next major work. *Winthrop* (1986) is a full-scale treatment of the career of John Winthrop, the first governor of Massachusetts. Again the libretto is a compilation of letters, legal proceedings, shipping lists, and other documents.

In the late 1970s and early 80s Anhalt's work took two new directions. Firstly, his interest in extended vocal techniques (exhibited in *Cento*, *Foci* and the two operas) led to a period of research in the works of other composers (especially Berio, Ligeti, Lutosławski, P.M. Davies and R.M. Schafer), resulting in his influential study *Alternative Voices* (Toronto, 1983). Secondly, he began reading Jewish writers and exploring his own family roots. The initial product of this activity was a remarkable 'duodrama', *Thisness* (1986), composed for the Canadian mezzo-soprano Phyllis Mailing. Its poetic text touches on the anguish of Anhalt's own wartime experiences, previously unreflected in his output. There followed a full-length dramatic script, *Oppenheimer*, originally intended as another opera. Unpublished and unperformed as of 1999, this work takes as its central figure the nuclear scientist E. Robert Oppenheimer, interweaving his career crises with images and themes from Jewish moral philosophy.

In the late 1980s Anhalt produced, in rapid succession and on commission from various Canadian orchestras, a trilogy of major orchestral works. *Simulacrum* (1987) is a memory-piece sprinkled with brief quotations, including fragments from Sephardic folk music, Bach, Verdi, Richard Strauss and Anhalt himself. *SparkskrapS* (1987–8) incorporates Kabbalistic notions – what Anhalt called, 'divine sparks (splinters of the divine essence) shattered and intermingled with the ... "scraps" ..., the good with the evil, etc. yet the two inextricably belonging together'. The work's spurting continuity contrasts sharply to the flowing dream-world of *Simulacrum*. The third part of the trilogy, *Sonance/Resonance (Welche Töne?)* (1989) commissioned specifically to precede a performance of Beethoven's Choral Symphony, led Anhalt to review the Beethoven score. The work is a remarkable musical

commentary on Beethoven's symphony, paraphrasing particular passages of its famous finale.

Anhalt's major work of the mid-1990s, *Traces (Tikkun)*, may be regarded as the third item in a music-theatre trilogy, the first two members of which are *La Tourangelle* and *Winthrop*. *Traces* is more overtly autobiographical than either of its companion works however. The single vocal performer, a baritone, enacts monologues and dialogues of various characters imagining these as 'traces' occurring in the mind of a single character. The Kabbalah's definition of the Hebrew word 'tikkun', 'the restoration of the Universe to its original design', appears as an epigraph in the score. The work's emphasis on One-ness recalls Schoenberg's *Moses und Aron*. Anhalt's next dramatic work, *Millennial Mall*, is strikingly different in character: it takes a North American shopping mall as the scene for a satire on turn-of-the-millennium mass culture.

WORKS

Dramatic: Arc en ciel (ballet), 2 pf, 1951, Montreal, 1952; Foci (I. Anhalt), S, 10 insts, tape, 1969, Buffalo, 1969; La Tourangelle (Anhalt), 3 S, 2 spkrs, 15 insts, tape, 1975, Toronto, 1975; Winthrop (Anhalt), S, Mez, 2 T, Bar, B, chorus, children's chorus, 30 insts, 1986; Kitchener, ON, 1986; Thisness (duo-drama, Anhalt), Mez, pf, 1986, Vancouver, 1986; Traces/Tikkun (Anhalt), Bar, orch, 1994, Toronto, 1996; Millennial Mall (Lady Diotima's Walk) ('voice-drama for the imagination', Anhalt), S, 6 solo vv, chorus, orch, 1998–9

Orch: Interludium, str, pf, timp, 1950; Sym., 1958; Sym. of Modules, orch, tape, 1967; Simulacrum, 1987; SparkskrapS, 1987–8; Sonance/Resonance (Welche Töne?), 1989

Vocal: 6 Songs from Na Conxy Pan (S. Weöres), Bar, pf, 1941–7; Ps xix: a Benediction (A.M. Klein), Bar, pf, 1951; 3 Songs of Love (W. de la Mare, anon., trad.), SSA, 1951; Journey of the Magi (T.S. Eliot), Bar, pf, 1952; 3 Songs of Death (W. Davenant, R. Herrick), SATB, 1954; The Bell-Man (Herrick), SATB, bells, org, 1954; Comments (newspapers), A, pf trio, 1954; Chanson d'aurore (A. Verdet), S, fl, pf, 1955; Cento (E. Grier), 12 spkrs, tape, 1967; A Little Wedding Music (G.M. Hopkins), S, org, 1984; A Wedding Carol (Anhalt), S, org, 1985

Chbr and solo inst: Funeral Music, 10 insts, 1951; Pf Sonata, 1951; Pf Trio, 1953; Sonata, vn, pf, 1954; Fantasia, pf, 1954; Doors ... Shadows (Glenn Gould In Memory), str qt, 1992; Galambabmalag, the Hallowe'en Witch, 25 easy solos and duets, rec, 1995

Tape: Elec Composition no.1 'Sine nomine I', 1959; Elec Composition no.2 'Sine nomine II', 1959; Elec Composition no.3 'Birds and Bells', 1960; Elec Composition no.4, 1961

JOHN BECKWITH

Anhemitonic. A term meaning 'without semitones', used mainly in conjunction with 'pentatonic' to distinguish music in which the MODE or SCALE consists of combinations of major 2nds and minor 3rds.

Anido, María Luisa (*b* Moron, nr Buenos Aires, 26 Jan 1907; *d* Tarragona, 4 June 1996). Argentine guitarist. She was encouraged to learn the guitar by her father, the publisher of a magazine devoted to the instrument. She studied with Domingo Prat and Miguel Llobet Soles, with whom she later made recordings and played in public concerts. She made her international début in 1918 and had a highly successful performing career for many years. The core of her repertory was Romantic, rooted in the works of Francisco Tárrega and his successors, including Llobet. For many years she was professor of the guitar at the conservatory in Buenos Aires, where she taught many of Argentina's best-known guitarists, and later taught in Cuba at the invitation of the government.

JOHN W. DUARTE

Aniels, Arnaut d'. *See* DANIEL, ARNAUT.

Anima (It.). *See* SOUNDPOST.

Animal music. Many animals communicate using sound. The sounds involved are often short and simple calls, like the croaking of frogs or roaring of lions. But they may be much longer and more elaborate, and are then usually referred to as 'song' by analogy with those produced by humans: examples are the trilling of crickets, the marvellously evocative songs of whales and birdsong with its great diversity. Many composers have been inspired by such sounds, notably those of birds (*see* BIRDSONG).

Whether or not the sounds produced by animals should be classed as music is a more complex issue. It may nevertheless be useful to consider such questions as why animals sing; whether animal songs can in any sense be regarded as examples of music; and whether they might shed light on the origins of the music of the animal species *Homo sapiens*. Analogies that have been drawn between structural factors in human music and, especially, birdsong (for example in transposition, inversion, rhythmic variation and the use of motifs) invite further enquiry (see Scholes, 1938; Mâche, 1983).

The use of sound as a means of communication for animals has several advantages. As with human language, much detailed information can be packed into a short sequence of sound signals, and these travel rapidly through air or water in all directions, by day or night, little affected by obstacles. Other modes of communication are usually less efficient. Smells diffuse slowly and largely downwind; they cannot be rapidly changed. Visual signals move at the speed of light and have the advantage that they can be quickly altered, but they are disrupted by obstacles in their path and usually depend on light, so are of little use in a dense environment or at night. Given these considerations, it is not surprising that sound is the channel of communication most often employed for complex animal signals, particularly where these involve advertising, where it is important that the signal covers the widest possible area. A particularly common use of sound by animals is in advertising for mates: the greater the area reached by the signal, the more likely it is to be received by a member of the opposite sex.

Simple animal sounds, such as call notes, convey a variety of messages. Examples are the calls used by members of a flock to maintain contact, or the alarm signals produced by certain animals when they spot a predator, which lead others to 'freeze' or seek cover. Some such calls are 'referential', like words in a language. Thus a vervet monkey (*Cercopithecus aethiops*) has different calls for eagle, snake and leopard, and other vervets hearing these calls behave appropriately (Seyfarth, Cheney and Marler, 1980). To the snake call they look down and approach with caution, to the eagle one they rush from the trees and into the thickets, while to the leopard alarm they run up into trees. The three calls might as well be words representing these three different kinds of animal.

Such instances, however, are rare. Much animal communication is affective rather than referential, representing emotional states rather than particular objects in the outside world, and in this respect it is more akin to music than to language. Further, the elaborate songs of some birds, in which each individual may have several hundred or even thousand different phrases, do not convey many different messages. It seems that this variety has evolved for its own sake to convey the same message in many different and perhaps more persuasive ways rather than because there are different messages to transmit.

Why do animals sing? Two main reasons have been proposed and there is good evidence for both of them (Catchpole and Slater, 1995). A clue is provided by the fact that song in birds, at least in temperate regions, is usually produced only by males and is restricted to the breeding season. At this time males, for example many songbirds, fight for territories. They often have duels in song across boundaries and, if the birds involved have repertories of different phrases, each tends to match the song of the other as they sing. A male redwinged blackbird (*Agelaius pheoniceus*) that cannot sing suffers more intrusions on to his territory (Smith, 1979). If a male great tit (*Parus major*) is removed from his territory, it will be less rapidly invaded if recordings of the song of his species are played from loudspeakers within it (Krebs, 1977). Such evidence points to song having a role in rival repulsion.

Repelling rivals with song may explain why some birds have a small number of distinct song phrases, for this enables them to match different intruders. Many such birds sing the same song several times in succession before moving on to the next and, unless countersinging with a rival, they will often cycle through their whole repertory before returning to the first song (e.g. the chaffinch, *Fringilla coelebs*: Slater, 1983).

Repeating a song several times may ensure that its particular message gets across, and that could be important where males match each other's songs precisely. On the other hand, the need to repel rivals does not account for the extreme elaboration of song found in some other species. Here the most likely explanation lies in the second proposed reason why animals sing: that it attracts females. Males of many birds stop singing once they are mated (e.g. the sedge warbler, *Acrocephalus schoenobaenus*: Catchpole, 1973), and song increases enormously if a male loses his partner (e.g. the great tit: Krebs and others, 1981). In several species song has been found both to attract females (Eriksson and Wallin, 1986) and to stimulate them to build nests and lay eggs (Kroodsma, 1976). One might suppose that a simple song labelling the male as belonging to his species, so that only the right females are attracted, would be sufficient. This may be so in some cases, where a simple little song fulfils that function; but in others females are known to be most attracted by males with large repertories of different songs (Catchpole, 1980; Eens, Pinxten and Verheyen, 'Male Song', 1991). If, for whatever reason, females prefer males with larger song repertories, the prize will go to the male with the most elaborate song. This process of runaway inflation, known as sexual selection and originally described by Charles Darwin (1871), is thought to be a prime reason why animals have large repertories of different sounds. The message of each sound is the same: 'I am a male sedge warbler in breeding condition'; but the male that can say it in the most varied way is more attractive to females and thus most likely to be successful in leaving his genes to the next generation. In such birds, unlike those with small repertories, it is much less common for the same song to be repeated several times consecutively, for the main message is variety itself (Slater, 1981).

The sedge warbler is a good example of a bird with a large song repertory (Catchpole, 1976). Each male's song is composed of relatively few elements but these are combined to make a complex whole. At the start, two elements alternate; then numerous others are introduced in quick succession in the middle of the song. Two of these are then selected to alternate in the closing section. These two then introduce the next song, which starts after a brief pause. This way of combining a small repertory of elements leads to an almost infinite number of possible songs, but just how varied they are depends on the number of elements that a male has: the effectiveness of a male in attracting and stimulating females depends on his element repertory. Males with a large repertory both attract females earlier in the season and stimulate them to mate more effectively (Catchpole and others, 1984).

Unlike the sedge warbler, nightingales have fixed repertories of song types, each of which is near identical every time it is produced (Todt and Hultsch, 1996). But the repertory itself is very large, usually consisting of over 200 different phrases. A bird tends to cycle through its repertory, though it misses out many of the phrases each time it goes through the sequence; thus the same phrase rather seldom occurs twice close together, but will often

recur after some 70 or 80 others. What the nightingale seems to be doing, as is the sedge warbler but in a different way, is maximizing the variety of its output. That is exactly what sexual selection would lead us to expect.

The song of the humpback whale (*Megaptera novaeangliae*) is not unlike that of the nightingale in its patterning, with a series of themes through which each animal cycles, although each theme tends to be repeated several times (Payne and McVay, 1971). Remarkably, all the animals in a population share these themes, yet the songs change during the singing season, some dropping out of the population's repertory and new ones being introduced (Payne and Payne, 1985). Cultural change is a notable feature of learnt vocalizations in songbirds (and of course in humans) as well as in whales. However, the whale example is unusual in that changes take place within a single season, each animal modifying its song in synchrony with the rest of the population. (In birds, it is usually only young males in their first year that copy from others.) Changes may take place at this stage: a note may be miscopied, or two songs may be blended, so that new songs are created. However, once learnt, the structure of the songs tends to be fixed, and this is true even for those birds that learn new songs each year throughout their lives. What is striking – and this contrasts markedly with human music – is that there is little evidence for innovation or improvisation. While birdsong may sound to the casual listener to be endlessly varied, that impression is created from a fixed, albeit sometimes very large, repertory of sounds.

One dramatic aspect of song learning in many birds is mimicry, the copying by one species of another. A good example is the European starling (*Sturnus vulgaris*) in which each male, in addition to the distinctive whistles and rattles that make up its species-specific song, will incorporate the songs of several other species (Eens, Pinxten and Verheyen, 'Organisation of Song', 1991). However, the most remarkable case must be that of the marsh warbler (*Acrocephalus palustris*), a small European bird which migrates to East Africa in the autumn. Adults cease to sing before their chicks hatch, but the young birds learn the sounds of many other species from Europe and Africa during their first winter and incorporate them into a song which, while of distinctively marsh warbler patterning, is largely or entirely based on mimicry (Dowsett-Lemaire, 1979). On average, a male marsh warbler mimics some 77 other species. It is not known why birds mimic, but it seems to be a way of building up a varied repertory. It appears to be easier for birds to copy the sounds that they hear than to generate variety by improvisation.

Might our understanding of these complex animal sounds shed light on the origins of human music? Any similarity is more likely to be by analogy than because of any shared musical ancestry with other singing animals. The closest living relatives of humans, the great apes, communicate more by gesture and facial expression than by sound. They have loud vocal displays, such as the 'pant hoot' of chimpanzees (*Pan troglodytes*), but these are far from elaborate, stereotyped or musical. Further, there is little evidence that any monkey or non-human ape learns the sounds that it produces from other individuals. Humans do so; and whales and songbirds, the most notable singers among animals, also copy their sounds from other individuals. Indeed, learning seems essential to the building-up of large song repertories. For some reason, therefore, elaborate singing behaviour has arisen separately in different parts of the animal kingdom; in the case of humans this was in the relatively recent past, since the time of the common ancestry with chimpanzees about two million years ago.

Straight comparison may not be justified, but analogy with birds or whales may help to suggest why singing and other musical activities may have arisen in humans. With any complex or varied display, sexual selection is a prime suspect and the fact that in many cultures singing (and in our own, composition) is predominantly an activity of young males confirms that suspicion. However, why singing behaviour should have been favoured in early man in particular rather than in other species remains a matter of speculation. The singing of humans also has features, such as the simultaneous chanting of the same tune by groups of individuals, which have not been described among animals.

Do animals produce 'music'? This partly depends on how 'music' is defined (*see* MUSIC). Many animal sounds are rhythmic, such as the trill of a stridulating grasshopper; others are pure and tonal, such as the whistles common in birdsongs. Energy efficiency alone might predict these features: a regular rhythm is shown by a mechanism operating at its resonant frequency, and this is where the energy cost is least. Concentrating all the energy in a narrow frequency band to produce fairly pure sounds is also economical, as such sounds carry further. But there are other good reasons why rhythmical and tonal sounds may have arisen in the animal kingdom. For the great majority of animal signals, and especially those concerned with mate attraction and rival repulsion, the signal must incorporate species identity. In some areas of the world, notably tropical rainforest, there may be hundreds of bird species in a small area; to stand out against both this cacophony of sound and other environmental noises, and to be distinctive, may impose features such as tone and rhythm as each species homes in on a unique broadcasting bandwidth. The complex patterns of songs, and species differences in the rules that underlie them, may also have their origins in the need for distinctiveness.

While animal signals need to be distinctive and clear, there are further features that those carrying similar messages tend to have in common. For example, many small bird species have a thin, high-pitched 'seeep' alarm call which they produce when they spot a hawk. This is not because different species are communicating with each other but simply because characteristics of this particular sound make it very hard to locate (Marler, 1955). It functions well in indicating to others of the caller's own species that there is a hawk about, but it does not encode the species of the caller (nor does it need to) and it minimizes danger to the caller by being very hard for the hawk to locate. For all these reasons the alarm calls of different species have evolved in the same form.

At a more general level, it has been pointed out that similar sounds in different animals may very often convey similar messages (Morton, 1977). For example, deep and gruff sounds tend to be aggressive and hostile while pure and high ones are more affiliative and friendly. Probably there are two factors involved. First, only large animals can make deep sounds, so the deeper the sound the more intimidating it will be to smaller individuals, who would be well advised to retreat rather than risk a fight. Secondly,

to be easily understood by other individuals, signals should be as distinctive as possible (the so-called 'principle of antithesis': Darwin, 1872). Probably, friendly signals that are pure and high have come to contrast maximally with hostile ones simply to preclude confusion. Given these arguments, it may be more than just by analogy that deep, loud and ponderous sounds tend to be aggressive and threatening in both animal communication and human music. The parallels in emotional expression between animal sounds and music may indeed go further: it has been argued that there are similarities between the rules underlying sequences of calls in Arabian babblers (*Turdoides squamiceps*) when they are excited and when they are calm and those both in equivalent speech situations and in musical counterpoint (Cohen, 1983).

Does animal musicality go any further than this? It is not difficult to find examples in animal song of complex features that can also be attributed to human music. Some birds sing in near-perfect scales (e.g. the musician wren, *Cyphorhinus aradus*); some pairs show antiphonal duets (Levin, 1996); and some groups sing in chorus (Brown and others, 1988). Humpback whales with large song repertories often start or end different phrases with the same subsection, a feature that has been likened to rhyming (Guinee and Payne, 1988); indeed it has been suggested, somewhat speculatively, that the common features of successive themes may help the whales to memorize the long sequence of sounds that they sing, as rhyming is known to do in humans. Caution is required here, as it is easy to jump to conclusions from chance similarities. Considering only the songbirds (*Oscine passerines*), there exist close to 4000 species; all are thought to learn their songs. The variety in the form and patterning of these songs is impressive and there can be few possibilities that remain unexplored given this huge array of species. So it would not be surprising if almost any characteristic found in human music were discovered in one or more of them. Such similarities are likely to be coincidental, attributable to convergence rather than to musical features arising in a common ancestor. Nevertheless, while animals may not share music in the strict sense with human beings, there is no doubt that some of them have complex and beautiful vocal displays. Understanding why these have evolved may help to shed light on why human beings, uniquely among the primates, have taken a similar pathway.

It has been suggested from time to time that the songs of some birds, which seem to us especially beautiful, may be more so than is strictly necessary for their biological function (Thorpe, 1961; Boswall, 1983): could this indicate some primitive aesthetic sense, and that the bird takes pleasure in song for its own sake? Candidate songs here would be that of the song thrush (*Turdus philomelos*) in Europe, the superb lyrebird (*Menura novaehollandiae*) in Australia and the mockingbird (*Mimus polyglottos*) in North America; all these have large, varied and beautiful repertories. It is difficult to test such ideas. Sexual selection is an open-ended process, which will lead to larger and larger song repertories until other constraints, such as storage space in the brain, set limits. Where it is responsible, it is unlikely that song could be demonstrated to be more elaborate than sexual selection demanded. On the other hand, there is nothing incompatible between this and either aesthetics or the enjoyment of song; indeed, sexual selection is likely to have been the basis for their evolution in humans. But that is where the problem of testing comes in. We know that humans feel enjoyment in hearing or performing music; we can ask them about it and discuss their feelings with them. When it comes to animals, however, we have no access to their inner feelings, so that the question can only be a matter of speculation.

P.J.B. SLATER

Animals, the. English rock group. Formed in 1960 as the Alan Price Combo, a jazz trio based in Newcastle upon Tyne, they became the Animals two years later when Price (*b* 19 April 1942; organ), Chas (Bryan James) Chandler (*b* 18 Dec 1938; bass guitar) and John Steel (*b* 4 Feb 1941; drums) were joined by Hilton Valentine (*b* 21 May 1943; guitar) and Eric Burdon (*b* 11 May 1941; vocals). Their style was founded in Burdon's 'wild' persona and raw voice, which showed the particular influence of John Lee Hooker and Ray Charles, and on Price's gospel-influenced organ style. Their version of *House of the Rising Sun* (Col., 1964) became a number one hit in the UK and the US despite being over four minutes long. Typical of their style, it featured Burdon's agonized delivery and Price's economical solos. Their next few singles were comparative failures but their producer Mickie Most achieved further success by importing Brill Building material, such as *We gotta get out of this place* (1965) and *It's my life*, and the more uncompromising *Don't let me be misunderstood* (1965) and *Inside Looking Out* (1966). Price left in late 1965, followed by the rest of the group a year later; Burdon's apparent megalomania is often cited as a cause. Burdon continued to perform in the Animals and then Eric Burdon and the Animals with some success. Price pursued a successful career as a middle-of-the-road pop artist and a composer for the stage while Chandler became a powerful entrepreneur, discovering and managing Hendrix in the late 1960s and Slade during the 70s. Burdon continued a chequered career as a singer for fusion and heavy rock bands. The original members of the Animals reformed in 1977 and 1983, to no critical acclaim. Although the band's quirky blend of pop and rhythm and blues failed to have lasting significance, their 1960s singles remain classics.

ALLAN F. MOORE

Animando. *See* ANIMATO.

Animato (It.: 'lively', 'enlivened'; past participle of *animare*, 'to enliven'). A mark of tempo and expression which has never achieved particular prominence in any specific form but which appears in all kinds of shapes and forms in 18th- and 19th-century music. Brossard (1703) translated both *animato* and *anima* as meaning approximately the same as *allegro*; but his contemporary François Couperin used the French form *animé* (as well as its superlative *tres animé*) in his works for an apparently similar purpose. For musical purposes it is likely that the adjective *animoso* ('bold', 'spirited') and its adverbial form *animose* are to be understood in the same way. All are used in 18th-century scores either independently or as qualifications, particularly to *allegro*. *Animando* ('becoming more lively', 'getting faster'; the gerund of *animare*) belongs more to the 19th century. Verdi used it repeatedly, in the *Dies irae* of his Requiem, for instance, where he has *sempre animando, poco a poco animando* etc., for the many increases of speed and excitement. Leonora's Act 1 cavatina in *Il trovatore* has *animando un poco* leading to *poco più animato*. In this context, and many others, *animato* may simply mean 'faster'. *Animato, animando* and *con anima* are common in Tchaikovsky's mature music: particularly good examples are in the second movement of his Fifth Symphony.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Animé (Fr.). *See* ANIMATO.

Animuccia, Giovanni (*b* Florence, *c*1520; *d* Rome, *c*20 March 1571). Italian composer.

1. LIFE. His birth and early training at Florence are attested to by the contemporary writer Michele Poccianti. Einstein inferred from his first published compositions, the two volumes of madrigals (Venice, 1547–51), that Animuccia's early works were influenced by Francesco Corteccia, court composer to Duke Cosimo I de' Medici. Two *capitoli* by A.F. Grazzini (il Lasca) give evidence of his association with Florentine literary circles; one of these is addressed to 'M. Giovanni Animuccia' and the other mentions him. Although his later career and work were centred entirely at Rome, Animuccia was not a Roman composer in the same sense as Palestrina, but brought a Florentine background to his later musical activity. This helps to explain his association with the Congregazione dell' Oratorio of Filippo Neri, who was a fellow Florentine, and his composition of *laude* for the oratory's use.

By 1550 Animuccia was at Rome, in the service of Cardinal Guido Ascanio Sforza (1518–64). He was also associated with the exiled Florentine Altoviti family (his first book of motets was dedicated to Archbishop Antonio Altoviti and the dedication refers to the debate of 1551 between Nicola Vicentino and Vicente Lusitano on the nature of the genera, which both Animuccia and the archbishop clearly attended). Other members of the Altoviti circle at this time included Orlande de Lassus and Filippo Neri. In January 1555 Animuccia succeeded Palestrina as *magister cantorum* at the Cappella Giulia and he remained there until his death, at which time Palestrina returned to the post.

Animuccia's friendship with Neri began as early as June 1551 when the former became a member of the Compagnia della pietà della nazione fiorentina, which met at the church of S Giovanni dei Fiorentini. He attended Neri's religious gatherings as a singer from 1556 on. In 1558 Neri obtained the use of a loft on the side of the church of S Girolamo della Carità to serve as an 'oratorio'

(prayer-room) and from about this time the singing of devotional *laude spirituali* was added to the regular diet of sermons and prayers. Neri and Animuccia encouraged many of Rome's musicians to attend, though in these early years the music was neither formally organized nor paid for. Animuccia was associated particularly with the *oratorio vespertino*, for which he published two books of *laude* (in 1563 and 1570). The first contained simple, largely homophonic four-voice Italian pieces 'for the consolation and needs of many spiritual and devout persons, religious and secular alike'. By 1570 things had changed and Animuccia issued a pioneering volume with texts in both Italian and Latin, and including Gospel dialogues and other pieces for up to eight voices in shifting choral groups (though not fully fledged *cori spezzati*). In his dedication he wrote:

> The oratory having increased, by the grace of God, with the coming together of prelates and of most important gentlemen, it seemed to me fitting in this second book to increase the harmony and the combination of parts, varying the music in diverse ways, now setting it to Latin words and now to the vernacular, sometimes with a greater number of voices and sometimes with fewer, with verses now of one kind and now of another, concerning myself as little as possible with imitations and complexities, in order not to obscure the understanding of the words.

His emphasis on using variety of texture to woo influential people through music into churches in effect set out a programme for Italian sacred music for the following century.

2. WORKS. Animuccia's early motets (the *Primo libro* of 1552 and an incomplete manuscript from the same period in *I-Rn*) show a firm grounding in Franco-Flemish techniques and a good ear for sonority; many give a prominent part to plainsong paraphrase. His next surviving sacred music dates from the late 1560s: composition seems not to have been part of Animuccia's duties during his first ten years at S Pietro, where the repertory was traditional and retrospective. However, the completion of the Council of Trent in 1563, and the subsequent deliberations in Rome in 1565 on an appropriate style for sacred music, opened the way for a late burst of creativity. Records published by Ducrot include a payment in December 1566 'for the composition of five masses [written] according to the requirements of the Council [of Trent]' and another of 20 September 1567 of 50 ducats for their composition 'and to help him to have them published, since they will serve our chapel'. These were the masses of his *Liber primus missarum* (1567) in which, according to Animuccia's dedication, 'the music may disturb the hearing of the text as little as possible, but nevertheless in such a way that it may not be entirely devoid of artifice'. Indicative of Counter-Reformation influence too is the avoidance of secular models and the use of plainsong melodies as the basis for paraphrase throughout. This type of mass had been cultivated in the early 16th century by Josquin Des Prez (in his *Missa 'Ave maris stella'* and *Missa 'Pange lingua'*) but had lain fallow during the period from about 1520 to about 1560. Animuccia's skill in combining elaborate paraphrase with contrapuntal devices is notable, as is the highly elaborate written-out ornamentation of the duo sections. Animuccia shows a greater reluctance to abandon contrapuntal devices in these masses than some other composers writing in the immediate aftermath of the Council (e.g. Vincenzo Ruffo's masses of 1570).

On 23 December 1568 Animuccia was paid 25 ducats 'for the trouble and expense that he has had in composing and copying and having copied the following hymns, motets, and masses which, again for our purposes, he has composed within the present year; they are needed for the chapel and are according to the requirements of the Council of Trent and of the new Office' (i.e. the revised breviary issued in that same year). The list includes 14 hymns, two masses 'della madonna' and four motets, including three that are specified as being suitable for singing on major festivals when the pope entered the basilica. A posthumous payment of 9 September 1575 to his successor Palestrina was made for 'due conserti di mottetti dell'Animuccia et due conserte del Pelestrina' for the chapel's use. Unfortunately, none of these works survives, but a set of 20 Magnificats published in 1568 shows Animuccia seeking after contrast of textures, both by continual variation of the number of voices – even within verses – and by extensive use of quasi-homophonic and declamatory writing.

Animuccia's early madrigals are highly contrapuntal. Einstein singled him out as being the first Florentine composer to write extended cyclic madrigals in several sections, setting texts by Petrarch and Sannazaro. In 1565 he published a forward-looking book of *Madrigali a tre voce ... con alcuni motetti, et madrigali spirituali*, the first Roman publication to use the words 'madrigali spirituali'. The book was dedicated to two young brothers (del Nero) who were frequent attenders at Filippo Neri's oratory and was to serve for their recreation during the summer months. Secular and spiritual madrigals alike show a lightness of touch and delight in syncopated rhythms in line with the words. The madrigals set some poems by G.B. Strozzi and a text from Giraldi Cintio's drama *Selene*. The Latin motets have the freshness of three-voice canzonets and show a fondness for pitting two high voices against a lower one, foreshadowing the accompanied small-scale motets of the end of the century.

Animuccia was Palestrina's most important Roman contemporary in the period 1550–71. On succeeding to the Cappella Giulia the latter proceeded to rewrite the liturgical repertory once again; Animuccia's contribution was eclipsed and has since been largely ignored. Nonetheless, Animuccia's greater interest in vocal colour and variety of texture foreshadowed much of what was to happen in Roman church music up to 30 years after his death.

LEWIS LOCKWOOD/NOEL O'REGAN

Animuccia, Paolo (*b* ?Florence, *c*1500; *d* Padua, 8–20 Oct 1569). Italian composer. Poccianti claimed that he was the brother of Giovanni Animuccia; although no other source confirms this relationship, there is no reason to doubt his authority. Paolo Animuccia must have spent his early years at Florence, but the first documented evidence of his musical activity is at Rome in 1550, when he is listed as *maestro di cappella* at S Giovanni in Laterano, in succession to Rubino. He remained in this post until 1552, when he was succeeded by Bernardo Lupacchino. Although it is often asserted that Animuccia's tenure there coincided with the presence of the young Lassus, Boetticher's research indicates that the only secure date of Lassus's activity there is 21 May 1553, when he was given a surplice. As it was habitual to issue surplices to the cathedral singers a few weeks after their entry, it is likely that Lassus began his service in March or April 1553, after the period of Animuccia's formal tenure. That there was, however, some connection between them is strongly suggested by the inclusion of madrigals by Animuccia in two publications of madrigals by Lassus (RISM 1557[22] and 1563[11]).

After his period at S Giovanni in Laterano, Animuccia's only known post was that of *maestro di cappella* at the court of Guidobaldo II della Rovere, Duke of Urbino (reigned 1538 to 1574). This association may well have gone back to the late 1550s or earlier, since a motet by Animuccia dedicated to Guidobaldo had already appeared in Costanzo Porta's *Liber primus motectorum* (1559). In *Giornate dette le Soriane dell'imperiale di Pesaro* (*I-PESo* 191), which narrates fictional events that are supposed to have taken place in the first ten days of August 1569, L. Agostini mentioned a performance of a madrigal by Animuccia, whom he referred to as *maestro di cappella* to the Duke of Urbino. Other references to him as *maestro di cappella* are found in Pietro Gaetano's *De origine et dignitate musices* (*I-Vmc* VI, 189), dedicated to Guidobaldo II. In January 1566 Animuccia wrote to Simone Fortuna, secretary to the Duke of Urbino in Rome, proposing himself for the task of reforming the Papal Chapel's music to conform to the recommendations arising from the Council of Trent: 'For I consider it most certain that his holiness will want to reform the chapel's musical compositions and chant so that the words can be understood and be accompanied by the devout music necessary for the ecclesiastical functions' (letter and Eng. trans. in Sherr). His proposal apparently came to nothing; but the letter is one of the most clearly articulated responses by a composer to the Trent resolutions that survives.

Animuccia was a moderately productive composer of motets and madrigals, although he was clearly less successful and less gifted than his brother Giovanni. His ten published madrigals include some on religious texts (one madrigal, *S'allhor che piu sperai*, 1555[27], was reprinted in a book of laude with a religious contrafact text, 1600[5]). Of interest is *Piangeano i padri* (RISM 1570[15]), his contribution, along with ten other composers including Palestrina, Zarlino, Andrea Gabrieli and Wert, to an 11-stanza canzone commemorating a Venetian victory.

LEWIS LOCKWOOD/R

Anitua, Fanny (*b* Durango, 22 Jan 1887; *d* Mexico City, 4 April 1968). Mexican contralto. She studied in Mexico City, then in Rome, where she made her début in 1909 as Gluck's Orpheus. The following year she sang Erda in *Siegfried* at La Scala, and in 1911 appeared at the Teatro Colón. In 1913 she toured the USA with the Western Metropolitan Company. Returning to La Scala in 1915, she created Etra in Pizzetti's *Fedra*, and sang La Cieca (*Gioconda*) and Konchakovna (*Prince Igor*). During 1916, the centenary year of *Il barbiere di Siviglia*, she sang Rosina (in the original key) at Pesaro, Rome and Parma. From 1924 to 1926 she sang Orpheus and Azucena (*Il trovatore*) under Toscanini at La Scala. Her rich, flexible voice was ideal for Cenerentola and other coloratura contralto roles. She made her final appearance in 1937 at Buenos Aires as Mistress Quickly (*Falstaff*), then taught in Mexico City.

ELIZABETH FORBES

Anjos, Dionísio dos (*b* *c*1638; *d* Lisbon, 19 Jan 1709). Portuguese composer and harpist. On 6 January 1656 he professed as a Hieronymite monk at Belém Monastery, Lisbon, and he remained there until his death. His works, formerly in the monastery archive but now lost, included responsories for all important feasts, vesper psalms, masses, *Magnificat* settings, motets and vilhancicos.

ROBERT STEVENSON

Anjos de Gouvêa, Simão dos (*fl* 1611). Portuguese composer. He studied with Manuel Mendes at the Évora Cathedral choir school. Around 1600, having already joined the order of S João Evangelista, he succeeded Pedro Thalesio as *mestre de capela* at the Hospital de Todos-os-Santos in Lisbon. In March 1611 he moved to Coimbra hoping to be elected to the chair of music at the university there, but after he had waited nine months, Thalesio was chosen. Sometime later until 22 December 1622, he held a royal appointment to head the music at S João Baptista, Tomar. Only three works have been identified as his: a four-voice motet, *Pueri hebraeorum vestimenta* (in *P-EVp*, ed. in PM, xxxvii, 1982), a five-voice hymn, *O lingua mens sensus vigor*, and a four-voice alleluia (both in *AR*).

ROBERT STEVENSON

An Laixu (*b* Xi'an, 1895; *d* Xi'an, 1977). Chinese priest and instrumentalist. Master of the ceremonial instrumental ensemble music known as *Xi'an guyue*, 'drum music' (or 'ancient music') of Xi'an. Given to the Chenghuang miao temple in Xi'an in 1911 in the wake of the chaos surrounding the fall of the Qing dynasty, he soon mastered the complex instrumental ensemble music of the temple, performing rituals there through the troubled following decades. In 1946 he established a research association for the music; although practice of such music was severely limited after the Communist Revolution in 1949, he continued to transmit the music, in part through his collaboration with the local scholar Li Shigen on the large repertory of scores in traditional *gongche* notation. Early scores were lost in the Japanese bombing of the temple in 1942, and it suffered further in the Cultural Revolution (1966–76). Although the Chenghuang miao ensemble was formally discontinued in 1977 with the death of An, many other groups, both in the city and in the nearby villages to the south, were reviving by the mid-1980s.

Leader of an important performance in Beijing in 1961, he was a master of the several types of drum used in the long ritual suites (see illustration), and a fine exponent of the double frame of pitched gongs (*shuang yunluo*). He is much venerated, both for his musical mastery and for his generosity in sharing it with other groups.

Anna, Francesco d'. *See* ANA, FRANCESCO D'.

Anna Amalia [Amalie, Amélie] **(i)**, Princess of Prussia (*b* Berlin, 9 Nov 1723; *d* Berlin, 30 March 1787). German patron, amateur musician and composer. The youngest sister of Frederick the Great, she seems to have sought and received his advice on musical matters. A music exercise book, dated 1735, which she shared with her sister Luise Ulrike, indicates an early commitment to musical studies, but it is not certain precisely when Amalia's formal musical training began. By 1740 she and Ulrike were receiving regular instruction from the cathedral organist, Gottfried Hayne (1684–1758), and this continued until 1742. Amalia apparently reached a high level of accomplishment as a player of stringed keyboard instruments and in about 1755 began to devote herself enthusiastically to playing the organ. Although contemporary reports, including her own letters, suggest that she also played the lute, the violin and the flute, they indicate that she was far less proficient on those instruments.

Amalia began studying composition in earnest in her mid-30s. In 1758 she engaged J.P. Kirnberger, a pupil of J.S. Bach, as her teacher, and under his tutelage she acquired considerable knowledge and mastery of counterpoint. In 1754 she had commissioned the poet K.W. Ramler to write a libretto for a Passion oratorio, and she allegedly set this entire libretto, entitled *Der Tod Jesu*, to music (the more renowned setting by the royal Kapellmeister C.H. Graun was composed and performed in 1755). Kirnberger later included two numbers from Amalia's setting (the only ones still extant) as models for professional composers in his *Die Kunst des reinen Satzes in der Musik*. Amalia's other surviving compositions were mostly composed in the 1770s and early 1780s; they display some skill, but little originality. Most are housed

in the Staatsbibliothek zu Berlin, Preussischer Kulturbesitz (in the collections of both the former Königliche Bibliothek and the Amalien-Bibliothek); a few have appeared in 20th-century editions.

In 1755 Amalia became abbess of the secularized convent of Quedlinburg, a position which afforded her a comfortable income and made almost no demands on her time. She continued to make her home in Berlin, where she held musical soirées attended by the artists and intelligentsia of Berlin and Europe (including Baron Gottfried van Swieten). She expressed her musical views freely, emphatically and often harshly to all who came within her orbit. Although she found enjoyment in listening to German Singspiele of the 1770s, she responded, like Frederick the Great, to most new styles that developed during her lifetime with increasing disapproval. In a letter to Kirnberger about *Iphigénie en Tauride* she expressed a particularly unfavourable opinion of Gluck, whom she considered greatly inferior to Graun and Hasse; on the other hand, she bestowed respect and support to C.P.E. Bach, and in 1768, as he prepared to leave Berlin for Hamburg, she named him her honorary Kapellmeister.

Amalia's greatest significance to music lies in her music library, a collection of incalculable value. It is particularly rich in 18th-century music – that of J.S. Bach above all. The collection was begun with Hayne's assistance while she was still under his tutelage, and after Kirnberger became her teacher he advised her in the selection of compositions for the library and supervised the preparation of many of the manuscripts that were housed in it. Almost half of the items were acquired from Kirnberger's estate after his death in 1783; this collection included, in turn, many items that Kirnberger had inherited from the estate of Amalia's chamber musician Christoph Schaffrath (1709–1763).

Amalia willed her library to the Joachimsthalschen Gymnasium in Berlin. In 1914 the music was transferred on permanent loan to the Königliche Bibliothek in Berlin, remaining intact and under its own name there. At the present time the catalogue of the Amalienbibliothek and the volume of letters and handwriting studies by E.R. Wutta, née Blechschmidt, constitute the most complete account of the history and contents of the library.

DARRELL BERG

Anna Amalia [Amalie] **(ii)**, Duchess of Saxe-Weimar (*b* Wolfenbüttel, 24 Oct 1739; *d* Weimar, 10 April 1807). German amateur musician and patron. She was the daughter of Duke Karl I of Brunswick and a niece of Frederick the Great. As a child she was given a good musical education. At the age of 16 she married the 18-year-old Duke Ernst August Konstantin of Saxe-Weimar; after his death two years later until the accession of her eldest son Duke Karl August on 3 September 1775 she conducted the regency. Despite her heavy official responsibilities she cultivated intellectual interests, especially music. She continued to take lessons in composition and keyboard playing from the leading musician in Weimar at that time, Ernst Wilhelm Wolf (later the court Kapellmeister), and gathered round her a group of scholars, poets and musicians, professional and amateur, which was a lively centre of discussion and music-making. In this 'court of the muses', as Wilhelm Bode called it, whose members included Wieland, Herder and eventually Goethe, Anna Amalia herself played a significant part in bringing together the poetry of 'Weimar Classicism' and the music of the time. J.A. Hiller's most successful Singspiel, *Die Jagd* (the score of which is dedicated to the duchess), received its first performance in Weimar in 1770, and Weimar was also the scene of the notable première on 28 May 1773 of the 'first German opera', Wieland's *Alceste* in the setting by Anton Schweitzer. Further public performances were prevented by the destruction of the theatre by fire in 1774, but Anna Amalia continued the tradition of the Singspiel in later years with performances in the amateur court theatre of her own compositions to texts by Goethe.

Free of the responsibilities of the regency, she devoted herself completely to her artistic interests. Between 1788 and 1790 she undertook a tour of Italy and was impressed by its visual arts as much as by its music. In an essay on music of 1799 (lost, but referred to by Bode) she particularly praised Italian singing. Her Singspiel *Erwin und Elmire*, without being eclectic in effect, reveals an intimate familiarity with the German Singspiel of Hiller and the contemporary Italian opera remarkable for an amateur, and shows thorough technical competence and spontaneous inventiveness. The majority of pieces, apart from occasional folklike songs, belong stylistically to the *Empfindsamkeit*, in the manner of Hiller and Schweitzer, combining features of song and of arioso. But Anna Amalia's significance lies mainly in the decisive influence exerted by her artistic convictions on German intellectual life at the period of its flowering in Weimar.

ANNA AMALIE ABERT

Ann Arbor. American town in Michigan. It is the site of the UNIVERSITY OF MICHIGAN SCHOOL OF MUSIC.

Anna Maria (*b* Venice, 1695/6; *d* Venice, 10 Aug 1782). Italian violinist. She was the most celebrated musician ever produced by the Venetian Ospedale della Pietà. The lack of a surname reflects her status as a foundling, and in spite of her fame, she remained all her life a ward of the Pietà. Around 1706 she was admitted to the all-female *coro* there, where one of her teachers was Vivaldi. On 19 July 1712 a violin was purchased for her, and on 26 August of that year she was one of a small group of *figlie di coro* engaged to play at the convent of S Francesco della Vigna. A new violin was bought for her on 26 April 1720 and on 14 February 1721 she was made one of the 14 *figlie privilegiate* allowed to act as tutor to a boarder, a service that she provided for over 60 years. In 1721, when she had begun to play solo parts in concertos, the Saxon jurist J.C. Nemeitz heard her and enthused over her playing, claiming that she had few peers among male violinists and praising her 'dextrous yet delicate hand'. Quantz, who visited Venice in 1726, lauded her (without mentioning her by name) in his autobiography, and Baron Karl Ludwig von Pöllnitz, writing from Venice on 15 May 1730, described her unequivocally as the foremost violinist in Italy.

On 30 August 1737 Anna Maria was promoted to the rank of *maestra* (with special responsibility for teaching the violin) and elected to the post of *maestra di coro*, which entrusted to her the direction, both musical and disciplinary, of the *coro*. As a result, she no longer appeared as a solo violinist. Throughout her career she was held in great respect by the governors of the Pietà, who generously allowed her to enjoy periods of convalescence on the mainland whenever her health required it.

As a violin teacher she was very successful, numbering among her pupils Bernardina, Santina and Anna Maria the younger. In a letter to G.B. Martini dated 12 March 1733, G.A. Riccieri opined that the eight violinists he heard perform at the Pietà put to shame their professional male counterparts, a testimony to Anna Maria's example and leadership. She also mastered the viola d'amore, cello, mandolin, harpsichord, lute and theorbo. These instruments are all mentioned in the ten quatrains devoted to her in an anonymous satire of *c*1736 on the Pietà's *figlie di coro*. The poem also pays tribute to her warm personality and her beauty.

Anna Maria's heyday as a solo violinist coincided with a period (1723–9) when Vivaldi was supplying the Pietà with two concertos a month. Two of his concertos for viola d'amore (RV 393 and RV 397) may have been composed especially for her: in the autograph score the letters 'AM' of amore are written in capitals. A record of her capabilities is provided by a manuscript partbook, inscribed to her on its front cover, that contains the principal violin part for 31 concertos, all apparently copied into the volume during the 1720s (*I-Vc*). At least 24 of the concertos (many of which are anonymous) are confirmed as Vivaldi's; Tartini, Brusa and Mauro d'Alay are responsible for other concertos. It is evident from the ambitious and varied writing of the solo parts that Anna Maria yielded little in technique to her teacher. However, had the Pietà not wished to win donations and bequests through the excellence of the music in its chapel, and had Venice not been a prime destination on the tourist circuit, her talent would never have been recognized, fostered and rewarded.

MICHAEL TALBOT

Annet [Annette], **Jean-Baptiste.** *See* ANET, JEAN-BAPTISTE.

Annibaldi, Claudio (*b* Rome, 8 Feb 1938). Italian musicologist. While a philosophy student at the University of Rome, he studied the piano privately and the organ and composition at the Conservatorio Statale di Musica S Cecilia, Rome (diploma 1962). He later took a postgraduate course in composition under Petrassi at the Accademia di S Cecilia (diploma 1966). He has been professor of music history at the conservatory of L'Aquila (1969–79) and at the Rome Conservatory (from 1979), where, from 1990, he gave courses in musicology. He has been a member of the editorial boards of the journals *Musica antica* (1984–5), *Rivista italiana di musicologia* (1989–91) and *Il saggiatore musicale* (1994–6), and he was on the teaching committee of the Società Italiana di Musicologia (1986–8). His areas of research are musical analysis, 17th- and 20th-century Italian music and musical patronage in Rome from the 16th century to the 19th. He has also undertaken archive research on Baroque instrumental sources in Rome, identifying the first autograph that can be attributed with certainty to Frescobaldi.

TERESA M. GIALDRONI

Annibale Padovano. *See* PADOVANO, ANNIBALE.

Annibali, Domenico [Dominichino] (*b* Macerata, *c*1705; *d* ?Rome, 1779 or later). Italian alto castrato. After appearances in Venice (1727 and 1729), he was engaged in 1729 for the Saxon court at Dresden at a salary of 792 thaler. He sang there in Hasse's *Cleofide* (1731) and *Cajo Fabricio* (1734), but was given frequent leave to take outside engagements: at Rome in 1730, 1732 and 1739, at Vienna in 1731, when his performance in Caldara's *Demetrio* won the approval of Metastasio, and from October 1736 to June 1737 as a member of Handel's company in London. He made his London stage début at Covent Garden in a revival of *Poro* on 8 December, when he introduced two arias by Ristori and one by Vinci (one of only two occasions on which Handel is known to have allowed this practice in his own operas). Annibali was in the first performances of Handel's *Arminio*, *Giustino* and *Berenice*, revivals of *Partenope* and *Esther* (in Italian), the pasticcio *Didone*, and probably the rewritten *Il trionfo del tempo*.

While Annibali was in London the Saxon envoy offered him an increased salary of 1500 thaler (raised to 2000 at the end of 1739), and he returned to Dresden. He is listed among the court and theatre musicians there until 1756, and left in 1764 with a pension of 1200 thaler and the title of *Kammermusikus*. He was living in his native town in 1776, and three years later moved to Rome. In Dresden Annibali was particularly associated with the operas of Hasse, appearing in *Tito Vespasiano*, *Demetrio*, *Lucio Papirio*, *Arminio*, *Semiramide*, *Demofoonte*, *Attilio Regolo* and *Adriano in Siria* between 1738 and 1752.

According to Burney 'his abilities during his stay in England seem to have made no deep impression', but Mrs Pendarves wrote that he had 'the best part of Senesino's voice and Caristini's, with a prodigious fine taste and good action'. This is confirmed by the compass of the parts Handel wrote for him, Justin, Arminius and Demetrius (*Berenice*), which is *a* to *g''* (Hasse took him down to *g*). Other accounts emphasized his brilliant and flexible coloratura, though some found his acting wooden. Anton Raphael Mengs made two portraits of Annibali (see illustration; the other is dated 1752).

WINTON DEAN

Annibal Mediolanensis. *See* ROSSI, ANNIBALE DEI.

Annunciação, Gabriel da (*b* nr Coimbra, *c*1526; *d* Landim, nr Vila Nova de Famalição, 14 June 1603). Portuguese ecclesiastic. About 1550 he became an Augustinian canon at the priory of S Cruz, Coimbra. Pinto credited him during the 1550s with the compilation of an important anthology (*P-Cug* M.M.48) of 127 folios of organ transcriptions of motets and chansons by Josquin, Mouton, Verdelot, Richafort, Gombert, Crecquillon, Morales and others, together with all ten ricercares in Buus's *Recercari libro primo* (Venice, 1547) and a tiento by Francisco de Soto (from RISM 1557[2]). In later life he held several high offices – counsellor, choirmaster, procurator and vicar – in the monastery at Landim, which was dependent on S Cruz, Coimbra. However, Rees proved the fallacy of attributing to him the incomplete *Tento de meyo registo, outavo tom natural a 3* ('Tiento for divided keyboard, tone VIII untransposed a 3') on f.66 and exposed Kastner's error in claiming that it 'may well be the earliest surviving organ work in a Peninsular manu-

Domenico Annibali: portrait by Anton Raphael Mengs, pastel on paper, 1745 (Gemäldegalerie Neue Meister, Dresden)

script specified for *medio registro*'. According to Barbosa Machado (see *DBP*), a Portuguese Franciscan of the same name (*b* c1681; *d* after 1747) wrote the treatise *Arte de canto – chão resumida para uso dos religiosos franciscanos* (Lisbon, 1735).

ROBERT STEVENSON

Anonymous theoretical writings. This article focusses on anonymous music theory texts within the following categories: works written during the Western Middle Ages and early Renaissance (to about 1600), currently assumed to be anonymous and not closely associated with a known person, which have been edited and published in modern times.

1. INTRODUCTION. Several groups of anonymous treatises are excluded from this article, such as works of ancient Greek, Byzantine or Arabic music theory, works closely associated with named writers, and unpublished anonymous works. In addition, several significant anonymous works, such as the *Musica enchiriadis*, are the subjects of separate articles, and many minor works are treated in articles appropriate to their subject, such as CONTRAPUNCTUS; COUNTERPOINT; DISCANT; FABURDEN; FAUXBOURDON; MODE; ORGANUM; THEORY, THEORISTS; or TONARY. Numerous artefacts of music have survived to modern times without clearly identifying their author. These include musical works, pictures, court records, theoretical treatises and other documents. The corpus of anonymous theoretical works, therefore, comprises only a portion of all anonymous works in the history of music. In music theory, anonymous sources primarily span the time from antiquity to the early Renaissance, when texts were copied by hand. After the advent of printing, few theoretical works were transmitted anonymously.

(i) Reasons for anonymity. There may be as many explanations for anonymity as there are anonymous treatises, but certain aspects of anonymity involve essential questions regarding an author's intent. How did these unknown writers see themselves and their writings? Did they consider themselves 'authors' in a modern sense of producing original and stable texts for a wide and unknown audience, or 'compilers' or 'commentators' working within a tradition of common knowledge? The answers to these questions may vary for each author and work and may often be unanswerable, but these issues must be kept in mind as the treatises are read. These writings, though now anonymous, are the products of individuals whose thoughts and actions were affected by their own time and place.

While the unique circumstances of each treatise and author must be accepted, a number of traditional models are recognizable within the corpus of anonymous theoretical sources, creating small clusters or constellations of anonymous treatises. These include works derived from similar sources (such as the numerous anonymous treatises beginning 'Gaudent brevitate moderni' and drawn from the teaching of FRANCO OF COLOGNE; see Ristory, 1987), anonymous notes probably used in university courses, and treatises on a discrete subject such as the division of the monochord, counterpoint or Ars Nova notation. In these cases, it may be posited that the writers did not consider their works to be 'original' but rather saw their efforts as continuing a well-known tradition.

Beyond the unknown intent of these authors, the process of manuscript production surely added to the anonymity of many works. Most manuscript sources for anonymous theoretical works post-date the assumed writing of the treatise by a substantial period, in some cases centuries. Modern readers, therefore, can hardly be sure of seeing a treatise as its 'author' intended it. The copying of manuscripts offered numerous opportunities for errors, deletions and additions in the texts as well as in their attributions. Treatises may have become separated from their authors through accidents in copying, and it is easy to imagine a title, incipit or explicit (where the author's name often appears) disappearing over the centuries. Later copyists might falsely ascribe a treatise to a famous theorist if the work's contents were consistent with that theorist's teachings. In some cases, a scribe cited in a work's explicit has been credited as the author of the work, an error uncovered by subsequent research, which then designates the work as anonymous. Finally, manuscripts often contain ambiguous designations. The best known of these are the works cited in the sources as 'secundum Johannem de Muris' where 'secundum' might mean authorship by JOHANNES DE MURIS or merely that the treatise follows his teachings. In a small number of cases, it appears that the medieval author wished to remain anonymous (as seems to have been the case with JOHN OF TEWKESBURY, author of the *Quatuor principalia musice*) or tried to conceal their names from the casual reader (as is done in the acrostic formed by the first letter of each book in the *Speculum musice* of JACOBUS OF LIÈGE).

Given the various factors that have contributed to the current anonymous state of these works (the unknown intent of the authors and the variety of transmission errors the works may have been subjected to), it is impossible to posit a single theory, such as a medieval cult of humility, to explain the large number of anonymous theoretical sources.

(ii) Past and present scholarship in relation to anonymity. Consideration of the scholarship on anonymous sources must start with the manuscripts containing these works. The creators of these codices could themselves be seen as the first 'scholars' working on these treatises. They decided which works to copy, in what format, with what other works and with what commentary, additions or deletions. These codices also dictated how these works were read, studied and transmitted and thus determined the present state of the individual treatises. Understanding the nature and history of the original sources is a crucial prerequisite to understanding the theoretical texts they contain.

The modern study of these works can be said to begin with the multi-volume editions of Gerbert and Coussemaker. In presenting their monumental collections of music treatises, these pioneering scholars established and disseminated the basic texts of the field and helped to establish the modern study of the history of music theory.

They have often been criticized in modern times, however, for errors in attribution and editing. In some significant cases, Coussemaker and Gerbert misattributed anonymous treatises, conflated individual treatises with other works, or even printed the same work twice with divergent attributions (to say nothing of their errors in the texts themselves). As scholars continue to unravel the history of music theory, it is only to be expected that some previously anonymous works will be ascribed to specific authors while other works (even well-established texts) will be newly designated as anonymous or will have their attributions and contents questioned.

Since the publications of Gerbert and Coussemaker, the activities of scholars in this field can be roughly divided into several broad areas: (*a*) publication of individual works omitted by Gerbert or Coussemaker or more accurate editions of previously edited works (especially in such series as MSD, CSM and GLMT), (*b*) publication of related works in a single volume (for example, the study of organ pipe treatises by Sachs, 1970–80), (*c*) production of accurate descriptions of the manuscript sources for music theory (most notably RISM, B/III) and (*d*) publication of studies on the entire contents of individual manuscripts (such as Catalogue no.65).

2. Catalogue. References to anonymous writings in modern scholarship are inconsistent and often vague. Some anonymous works are commonly known by their title or the city in which a manuscript is preserved, while other works have authorial attributions with 'pseudo' or 'secundum' prefixed. Editors' names have been attached to some works, such as 'Debenedetti's anonymus', and some anonymous treatises in collections have been numbered, such as Coussemaker's *Anonymus 4* (*CoussemakerS*, i). Any catalogue of anonymous works must therefore impose an arbitrary order on this random tradition of scholarship. Hüschen cited 72 treatises alphabetically by editor in his seminal article 'Anonymi' (*MGG1*). Conversely, Gushee (*Grove6*) arranged the corpus of anonymous theoretical writings into eight different categories by topic (such as plainchant, organum and mensural treatises). In revising Hüschen's work, Sachs (*MGG2*) has appended 49 treatises to Hüschen's original list, mostly works edited since the earlier article.

The following catalogue of anonymous theoretical writings reverts to an alphabetical listing by the work's first editor and concentrates on treatises in Latin and European languages (French, German or Italian). Each anonymous work is listed by the name of its first editor, and further details – including numbers, dates or other clarifications as appropriate – are given for precise identification (e.g. '*CoussemakerS*, ii, Anon.1' or 'Müller anon. 1886').

Following the model of Gushee's article (*Grove6*), each entry in the present catalogue includes (where possible) the work's title, incipit, date, first printed edition and a select bibliography. The catalogue also includes citations to other important reference works, especially the catalogue number from the article 'Anonymi' in *MGG* (*MGG2* incorporates and extends *MGG1*). Writings cited above in the General Bibliography are referred to by author and date. Ellipses (...) within an incipit indicate the beginning of an introductory section followed by the first line of the treatise proper. For editions in journals or sections of books, the full pagination of the article is given, followed as appropriate by the pagination of the edition and translation. A short description of the work's contents is also provided. Since these entries serve only as brief introductions to the works, listings of manuscript sources for the treatises are not provided, except in cases were a work is drawn from a single source or from a small number of known sources.

For Latin works, references are included to the two principal research projects on Latin music theory currently underway, the *Thesaurus Musicarum Latinarum* (*TML*), directed by Thomas Mathiesen, and the *Lexicon musicum latinum medii aevi* (*LmL*), directed by Michael Bernhard. The *TML* represents the full Latin texts as they currently stand in printed editions and manuscripts. The *LmL* is a lexical project based on a standardized text for each work. Thus an anonymous work published in several sources (e.g. the *Discantus positio vulgaris*) has only one entry in the *LmL* (DISC.POS.VULG.), while every printed edition and manuscript version of the treatise receives a separate entry in the *TML* (DISVUL for the version in *CoussemakerH*, DISPOS for its appearance in *CoussemakerS*, i, DISPOVU for Cserba's edition of Hieronymus de Moravia and DISPOSI MPBN 1666 for the version in *F-Pn* lat.16663). The *TML* reference cited in this catalogue will be to the first edition of the work with

references as appropriate to the most recent printed edition in the database. Thus, in the example of the *Discantus positio vulgaris*, the work is listed as '*CoussemakerH*, Anon.3 (Document 3); *Discantus vulgaris positio*' because Coussemaker first edited the work in his *Histoire*, under that title, and the *TML* reference will read 'DISVUL (cf DISPOVU)'.

No catalogue of anonymous theoretical sources can be complete. This catalogue generally omits works that serve as prefaces to tonaries, didactic poems and treatises in which the discussion of music is only a small section of the whole. A more specific omission concerns three anonymous fragments edited in Adrien de La Fage's extremely rare *Nicolai Capuani presbyteri Compendium musicale* (Paris, 1853; only 50 copies were printed), catalogued only by Hüschen (*MGG1*, nos.54–6); these fragments are not indexed here.

1. *Adler anon.* Incipit (of Fr. trans.) 'Juda fils du s[aint martyr] r[abbi] Issac a dit'. 12th–14th century. Ed. Heb. with Fr. trans. I. Adler: 'Le Traité anonyme du manuscrit Hébreu 1037 de la Bibliothèque Nationale de Paris', *Yuval*, i (1968), 1–47; edn 15–47. J. Smits van Waesberghe: 'The Treatise on Music Translated into Hebrew by Juda Ben Issac (Paris B.N. Héb.1037, 22*v*–27 *v*)', *Yuval*, ii (1971), 129–61; *MGG2*: 73.

A Hebrew translation of an unknown Latin original made by Juda Ben Isaac in the 15th or 16th century. The five-chapter work from *F-Pn* héb.1037, ff.22*v*–27*v*, mostly concerns *musica plana*. There are brief discussions of the notation of polyphonic music and instruments (such as the monochord and organ pipes). Smits van Waesberghe proposed that the *musica plana* portions of the work were derived from the same source as Johannes de Garlandia, *Introductio musicae* (*CoussemakerS*, i, 157–75).

2. *Amon anon*; *Tractatus de musica cum glossis*. Incipit 'Qui caret ipse fide'. Mid-15th century. Ed. and Ger. trans. J. Amon: *Der 'Tractatus de musica cum glossis' im Cod. 4774 der Wiener Nationalbibliothek*(Tutzing, 1977). *LmL*: TRAD.Holl.III; *MGG2*: 74.

An extensive treatment of *musica plana* (including discussion of the gamut, intervals, church modes) from *A-Wn* 4774, ff.35*v*–91*r*.

3. *Anglès anon. 1929*. Incipit 'Omni desideranti notitiam artis mensurabilis'. Late 14th or early 15th century. Ed. H. Anglès: 'Dos tractats medievals de música figurada', *Musikwissenschaftliche Beiträge: Festschrift für Johannes Wolf*, ed. W. Lott, H. Osthoff and W. Wolffheim (Berlin, 1929/*R*), 6–12; edn 6–10. *LmL*: TRAD.Phil.III; *MGG2*: 1; *TML*: AGANONT.

A mensural treatise from *E-Sc* 5.2.25, ff.63*r*–64*v*, with parallels to the *Ars perfecta in musica* attributed to PHILIPPE DE VITRY (*CoussemakerS*, iii, 28–35) and the brief *Sub brevissimo compendio Philippus de Vitriaco in musica* (CSM, viii, 1964, pp.80–81).

4. *Anglès anon. 1958*; *De cantu organico*. Incipit 'Ad evidentiam cantus organici est sciendum'. *c*1350. Ed. H. Anglès: '*De cantu organico*: tratado de un autor catalán del siglo XIV', *AnM*, xiii (1958), 3–24; edn 18–24. *LmL*: ANON.Barcin.I; *MGG2*: 75; *TML*: AGANOCO.

A brief treatise on mensural music from an eight-folio fragment in *E-Bc* with several musical examples. The writer refers in passing to musical practices in the Catalan region.

5. *Bailey anon.*; *De modis musicis*. Incipit 'Autenticus autoralis et auctoritate plenus'. Mid-9th century. Ed. T. Bailey: 'De modis musicis: a New Edition and Explanation', *KJb*, lxi–lxii (1977–8), 47–60; edn 50–54. *LmL*: MOD.Autenticus; *MGG2*: 76; *TML*: ANODM.

The work, which also appears as part of the *Alia musica* (*GerbertS*, i, 149, where it is attributed to HUCBALD OF ST AMAND), presents the intonation syllables (parapters) for the eight modes of the Byzantine practice, such as 'noeagis', and proposes four additional modes (and their parapters) to accommodate antiphons which do not fit within the eight-mode system. Bailey notes parallels with the *Musica disciplina* of Aurelian of Réomé.

6. *Bartha anon.* Incipit 'Pro themate presentis operis assummo Cassiodorum'. *c*1463. Ed. D. von Bartha: 'Studien zum musikalischen Schrifttum des 15. Jahrhunderts', *AMf*, i (1936), 176–99; edn 180–99. *LmL*: TRAD.Holl.V; *MGG2*: 77; *TML*: ANOPRO.

A learned treatise on philosophical topics such as the purposes of music, the difference between a singer and a musician, and definitions of music with references to Scripture, scholastic philosophy, Pythagoras, Guido of Arezzo, Boethius and Johannes de Muris. Bartha based his edition on *D-Mbs* Clm 1573 and noted parallels with Cat. no.40.

7. *Becker anon.* Incipit 'Diatessaron alia constat ex tono et semitonio et tono'. 14th century. Ed. A. Becker: 'Ein Erfurter Traktat über gregorianische Musik', *AMw*, i (1918–19), 145–65; edn 151–61. *LmL*: INTERV.Diatessaron, NEUM.Gurtulus, ANON.Erford.; *MGG2*: 2; *TML*: BECANO.

A work from *D-EF* Ca.8°94, ff.80*r*–84*r*, describing musical practice of the 11th century with extensive musical examples of psalm tone terminations. Becker noted parallels with HERMANNUS CONTRACTUS, *Musica* (cf pp.159–60 with *GerbertS*, ii, 152). The brief poetic verses on neume names (Incipit 'Gurtulus, epiphonus, clivis', p.160) and a short passage on note names and the gamut (Incipit 'Pythagoras philosophus primus apud Graecos', p.160) at the end of Becker's text are considered to be separate items.

8. *Bernhard anon. 1987*; *Dulce ingenium musicae*. Incipit 'Dulce ingenium musicae, quamvis instrumentis plurimis vigeat'. 10th–11th century. Ed. M. Bernhard: *Anonymi saeculi decimi vel undecimi tractatus de musica 'Dulce ingenium musicae'* (Munich, 1987). *LmL*: ANON.Bernh.; *MGG2*: 78; *TML*: ANODUL, ANODUL2.

An introduction to the elementary aspects of music theory and plainchant. Bernhard noted that much of the treatise is not original and draws from such sources as Boethius, Martianus Capella and *Alia musica* (Cat. no.55).

9. *Bernhard anon. 1990*. Incipit 'Quomodo organice modulentur. Quicumque organalem scientiam cupit attingere'. 12th century. Ed. M. Bernhard: 'Ein weiterer Text zur Klangschritt-Lehre', in Bernhard, ed., 1990, pp.68–70; edn 68. *LmL*: DISC.Quicumque I.

A brief work from *A-Wn* Gud.lat.8°334, ff.111*v*–112 *r*, on terminology in organum.

10. *Brearley and Wray anonymi*. 13th century. Ed. D. Brearley and T. Wray: 'The British Museum Ms. *Arundel 43* Monochord Fragments', *Mediaeval Studies*, xxxvi (1974), 160–73. *MGG2*: 79.

Four fragments on monochord tuning interpolated into the works of the 9th-century grammarian Sedulius Scottus (*GB-Lbl* Arundel 43, ff.66*v*–67*r*).

a. Fragment 1. Incipit 'Si monocordum mensurare desideras, quamcumquevis lineam in quatuor eque partire'. Edn and Eng. trans. 164–5; also ed. J. Smits van Waesberghe: *De musico-paedagogico et theoretico Guidone Aretino* (Florence, 1953), 183–4. *LmL*: MON.Si mon.

Instructions for Boethian tuning comparable to *I-MC* Arch.318, ff.216*v*–217*r*.

b. Fragment 2. Incipit 'Notae in monocordo hae sunt'. Edn and Eng. trans. 166–8.

An excerpt from Guido of Arezzo, *Micrologus* (ed. in CSM, iv, 1955, pp.93–101. *LmL*: GUIDO.micr.; *TML*: GUIMICR).

c. Fragment 3. Incipit 'Divide in quatuor a puncto'. Edn and Eng. trans. 169–70. *LML*: MON.Divide in.

A short commentary on Fragment 4.

d. Fragment 4. Incipit 'Totum monocordum partire inprimis in quatuor'. Edn and Eng. trans. 169–71.

The text is parallel to the anonymous division of the monochord in Cat. no.58*a*.

11. *Briner anon.* Incipit 'Musica est motus vocum rationabilium in arsim item thesim'. *c*1437. Ed. A. Briner: 'Ein anonymer unvollständiger Musiktraktat des 15. Jahrhunderts in Philadelphia, USA', *KJb*, l (1966), 27–44; edn 27–38. *LmL*: ANON.Philad.; *MGG2*: 80; *TML*: ANOPHIL.

A compilation from *US-PHu* lat.36, ff.207*v*–216*v*, on note names, mutation of hexachords, church modes and psalm tones. Briner notes parallels with Egidius de Zamora, Cat. no.39 and Cat. no.49.

12. *Carapetyan anon.*; *Notitia del valore delle note del canto misurato*. Incipit 'Per avere alcuna notitia del valore ... Per che dico essere note del canto misurato sei'. Late 14th century. Ed. A. Carapetyan, CSM, v (1957). *MGG2*: 81.

A Tuscan treatise from *I-Fl* Redi 71, ff.13*r*–24*r*, treating French

mensural notation with special attention to the *modi maximarum*. The last section of the treatise is drawn from the *Libellus cantus mensurabilis* ascribed to Johannes de Muris.

13. *Casimiri anon.*; *Ars et modus pulsandi organa*. Incipit 'C. D. E. F. ... Nota quod omnes voces totius organi'. 14th century. Ed. R. Casimiri: 'Un trattatello per organisti di anonimo del sec. XIV', *NA*, xix (1942), 99–101; edn 100–01. *LmL*: ARS ORG.; *MGG2*: 82; *TML*: ANOAMP.

A brief work from *I-Rvat* Barb.307, ff.37*v*–38*r* (29*v*–30*r* new pagination), proposing a range of over three octaves with unusual chromaticisms. The lowest 6th from C is diatonic, but starting with B♭ the treatise proposes that the syllables *mi* or *fa* are possible on any pitch, creating a chromatic scale for the rest of the gamut.

14. *CoussemakerH, Anon.1* (*Document 1*; *Ad organum faciendum* [Milan organum treatise]. Incipit 'Cunctipotens genitor [with polyphonic example] ... Cum obscuritas diaphoniae'. Second half of 11th century. Edn and Fr. trans. 226–43. New edn and Eng. trans., J.A. Huff: *Ad organum faciendum et Item de organo* (Brooklyn, 1963), 41–67; new edn and Ger. trans., H.H. Eggebrecht and F. Zaminer: *Ad organum faciendum: Lehrschriften der Mehrstimmigkeit in nachguidonischer Zeit* (Mainz, 1970). *LmL*: ORG.Mediol.pros., ORG.Mediol.rhythm.; *MGG2*: 4; *TML*: ADORFA (cf ADORFAC).

A work on note-against-note organum based on *I-Ma* M.17 sup., ff.56*v*–61*r*. The treatise is now considered to be in two sections, the second beginning 'Cum autem diapente et diatessaron organizamus' (p.235).

15. *CoussemakerH, Anon.2* (*Document 2*); *Libellus in gallico de arte discantandi*. Incipit 'Quiconques veut deschanter, il doit premiers savoir'. 13th century. Edn 245–6. New edn, G. Reaney, CSM, xxxvi (1996), 58–63, edn 60–63. Sachs, 1971, p.261; *MGG2*: 5.

French treatise from the margins of *F-Pn* lat.15139 (formerly St Victor 813), ff.269*r*–270*r*. Transmits basic contrapuntal rules ('Se li chans monte d'une note ...'). Gushee (*Grove6*) observed parallels with various Latin discant treatises, especially *E-Sc* 5.2.25, ff.81*v*–82*v*.

16. *CoussemakerH, Anon.3* ((*Document 3*); *Discantus vulgaris positio*. Incipit 'Nunc vero de cantu ecclesiastico ... Viso ergo quid sit discantus'. 13th century. Edn and Fr. trans. 247–53. New edn in S.M. Cserba: *Hieronymus de Moravia O.P., Tractatus de musica* (Regensburg, 1935), 189–94; Eng. trans. (based on version in Hieronymus de Moravia) J. Knapp: 'Two 13th-Century Treatises on Modal Rhythm and the Discant', JMT, vi (1962), 200–15; trans. 203–7. Sachs, 1971, pp.255–8; Eng. trans. J. McKinnon, *Strunk/SR2* 219–22. *LmL*: DISC.POS.VULG.; *MGG2*: 6; *TML*: DISVUL(cf DISPOVU).

A treatment of modal rhythm and counterpoint (discant, conductus, organum, hocket and motet). A longer version of the work is included in connection with Hieronymus de Moravia's *Tractatus de musica* under the title *Discantus positio vulgaris* (*CoussemakerS*, i, 94–7; *TML*: DISPOS) where it begins 'Viso igitur quid sit discantus'.

17. *CoussemakerH, Anon.4* (*Document 4*). Incipit 'Ars probat artificem ... Si cantus ascendit duas voces'. 13th century. Edn and Fr. trans. 255–8. New edn, C. Sweeney: 'The *Regulae organi Guidonis Abbatis* and 12th Century Organum/Discant Treatises', *MD*, xliii (1989), 7–31; edn 27–30. *LmL*: DISC.Si cantus asc.; *MGG2* 7; *TML*: GUICHA (cf ABGUREG).

A counterpoint treatise from *F-Psg* 2284, ff.109*v*–110*v*. For the question of authorship *see* GUIDO OF CHERLIEU. Hüschen (*MGG1*) combined this work with the following treatise, considering Documents 4 and 5 respectively to be French and Latin versions of the same treatise.

18. *CoussemakerH, Anon.5* (*Document 5*);.*De arte discantandi* Incipit 'Quando duae notae sunt in unisono et tertia ascendit'. Late 13th century. Edn 262–73. *LmL*: TRAD.Franc.V; *MGG2*: 7 (as part of Cat. no.17); *TML*: ARTDIS.

From the margins of *F-Pn* lat.15139 (formerly St Victor 1106), ff.270–75. A short treatment of counterpoint (pp.262–5) followed by a version of the 'Gaudent brevitate moderni' mensural treatise after the teachings of Franco of Cologne.

19. *CoussemakerH, Anon.6* (*Document 6*); *Quaedam de arte discantandi*. Incipit 'Figura est repraesentatio vocis in aliquo modorum ordinatae'. Late 13th century. Edn 274–94. New edn as *Ars musicae mensurabilis secundum Franconem*, G. Reaney and A. Gilles, CSM, xv (1971), 38–54. *LmL*: PS.-PETR.CRUC.; *MGG2*: 8 (as 'Anonymus 5 aus CH'); *TML*: ANOQUA(cf ANOFIG).

A brief section on mensural music after Franco of Cologne (pp.274–83) with three-voice contrapuntal rules beginning 'Sciendum est quod in plana musica vel mensurabili' (pp.283–94).

20. *CoussemakerS, i, Anon.1*; *Tractatus de consonantiis musicalibus*. Incipit 'Tredecim consonantie [with didactic melody] ... Harum consonantiarum'. Late 13th–early 14th century. Edn i, 296–302. R. Bragard: 'Le Speculum musicae du compilateur Jacques de Liège', *MD*, viii (1954), 1–17; *LmL*: IAC.LEOD.cons.; *MGG2*: 9; *TML*: ANO1TRA.

Discusses types of consonance and dissonance from *B-Br* 10162/66, ff.1*r*–3*v*. The work cites Boethius as a source and ends with a discussion of discant. Attributed by Bragard to Jacobus of Liège.

21. *CoussemakerS, i, Anon.2*; *Tractatus de discantu*. Incipit 'Gaudent brevitate moderni. Quandocunque punctus quadratus, vel nota quadrata tractum habens'. Late 13th century. Edn i, 303–19. New edn and Eng. trans., A. Seay: *Anonymous II: Tractatus de discantu* (Colorado Springs, CO, 1978). Ristory, 1987, pp.95–110; Sachs, 1971, pp.234, 250, 259, 269; *LmL*: TRAD.Franc.I; *MGG2*: 10; *TML*: ANO2TRA (cf ANOTDD).

One of several treatises derived from Franco of Cologne beginning 'Gaudent brevitate moderni' (see also following entry), from *F-SDI* 42, ff.34*r*–43*r*. A first section on mensural notation is followed by discussion of intervals and discant rules.

22. *CoussemakerS, i, Anon.3*; ; *De cantu mensurabili*. Incipit 'Gaudent brevitate moderni. Quandocunque nota quadrata, vel punctus quadratus invenitur, quod idem est'. Late 13th century. Edn i, 319–27. Partial new edn as *Compendium musicae mensurabilis artis antiquae*, G. Reaney, CSM, xxxiv (1987), 27–36; partial new edn as *Tractatus de discantu*, G. Reaney, CSM, xxxvi (1996), 37–45, edn 39–45. Ristory, 1987, pp.95–110; Sachs, 1971, pp.261, 269; *LmL*: TRAD.Franc. II, DISC.Quicumque II; *MGG2*: 11; *TML*: ANO3DEC (cf ANOCMM).

From *F-SDI* 42, ff.54*r*–58*v*. Like the previous entry, this treatise is one of several works derived from Franco of Cologne beginning 'Gaudent brevitate moderni'. Reaney divides Coussemaker's treatise into two smaller works, a larger *Compendium* (CSM xxxiv) followed by a shorter *Tractatus* beginning 'Quicumque bene et secure discantare voluerit' (CSM xxxvi).

23. *CoussemakerS, i, Anon.4*; *De mensuris et discantu*. Incipit 'Cognita modulatione melorum'. *c*1270–80. Edn i, 327–64. New edn and Eng. trans., L. Dittmer: *Anonymous IV* (Brooklyn, NY, 1959); new edn, F. Reckow: *Der Musiktraktat des Anonymus 4* (Wiesbaden, 1967), i, 22–89; Eng. trans., J. Yudkin: *The Music Treatise of Anonymous IV: a New Translation*, MSD, xli (1985). *LmL*: ANON.Couss.IV, *MGG2*: 12; *TML*: ANO4DEM (cf ANO4MUS).

Anon.4 is central to understanding the so-called Notre Dame school; the treatise not only describes musical techniques (rhythmic modes, organum, discant) but also mentions the composers Leoninus and Perotinus and several works of music.

Coussemaker included a passage on *musica ficta* beginning 'Sequitur de sinemenis' as a final section of Anon.4, but it is now considered a separate work. Incipit 'Sequitur de sinemenis sic: b, c, cujus medium erit ♮ parvum'. Edn i, 364–5. New edn and Eng. trans., J. Herlinger: *Prosdocimo de' Beldomandi: Brevis summula proportionum ...*, GLMT, iv (1987), 123–35; *LmL*: INTERV.SIT ♮–O; *MGG2*: 12; *TML*: ANODES.

24. *CoussemakerS, i, Anon.5*; *De discantu*. Incipit 'Est autem unisonus quando due voces manent in uno et eodem loco'. 14th century. Edn i, 366–8. *LmL*: CONTR.Est autem; *MGG2*: 13; *TML*: ANO5DED.

A treatise in *GB-Lbl* Roy.12.C vi, ff.50*r*–51*v*, and other sources. The work begins with a description of intervals followed by discant rules. It considers 3rds and 6ths as consonances and uses *minimae* in its examples.

25. *CoussemakerS, i, Anon.6*; *Tractatus de figuris sive de notis*. Incipit 'Cum in isto tractatu de figuris sive de notis'. Mid-14th century. Edn i, 369–77. New edn, G. Reaney, CSM, xii (1966), 40–51. *LmL*: ANON.London.I; *MGG2*: 14; *TML*: ANO6TRA (cf TRADEF).

A treatise in the tradition of Johannes de Muris; it emphasizes smaller notes (*minima*, *semibrevis*, *brevis*) with references to larger values (*longa*, *larga*, *largissima*). Reaney suggested JOHN TORKESEY as possible author.

26. *CoussemakerS, i, Anon.7*; *De musica libellus*. Incipit 'Modus in musica est debita mensuratio temporis'. *c*1270–80. Edn i, 378–83. New edn, G. Reaney, CSM, xxxvi (1996), 11–35, edn 19–35; Eng. trans. J. Knapp: 'Two 13th-Century Treatises on Modal Rhythm and the Discant', *JMT*, vi (1962), 200–15; trans. 207–13. S. Pinegar: 'Exploring the Margins: a Second Source for Anonymous 7', *JMR*, xii (1992), 213–43; *LmL*: ANON.Couss.VII; *MGG2*: 15; *TML*: ANO7DEM (cf ANODML).

Edited from *F-Pn* lat.6286, ff.13*r*–15*v*. Compilation on diverse topics: modal rhythm, 'pre-Franconian' notation, intervals and church modes.

27. *CoussemakerS, ii, Anon.1*; *Tractatus de musica plana*. Incipit 'Etsi multi musici his tribus vocabulis'. Late 14th or early 15th century. Edn ii, 434–83. M. Bernhard: 'Clavis Coussemakeri', Bernhard, ed., 1990, pp.12–14; L. Aluas: *The 'Quatuor principalia musicae': an Introduction, Critical Text, and English Translation with Commentary* (diss., Indiana U., 1996), 191–3; *LmL*: ANON.Carthus., QUAT.PRINC.; *MGG2*: 16; *TML*: CARTRA.

The work, a compilation relying heavily upon the *Quatuor principalia musicae*, appears in *B-Gu* 70 (71) (formerly 421), ff.124*r*–159*v*. Coussemaker attributed the treatise 'cuiusdam Carthusiensis monachi'. The text covers a wide range of topics including church modes, psalm tones, the muses and famous 'inventors' of music, and the monochord.

28. *CoussemakerS, ii, Anon.2*; *Tractatus de musica* [Louvain Treatise, Löwener Traktat]. Incipit 'Musica est ars recte canendi sono cantuque consistens'. 13th century. Edn ii, 484–98. Sachs, 1971, pp.243–50; *LmL*: ANON.Lovan.; *MGG2*: 17; *TML*: ANOMUPO.

From *B-LVu*, destroyed by fire in 1914. Topics include: gamut, consonances, poetic metres, church modes and organum.

29. *CoussemakerS, iii, Anon.1*; *De musica antiqua et nova*. Incipit 'Dictis aliquibus circa planum cantum'. 14th century. Edn iii, 334–64. L. Aluas: *The 'Quatuor principalia musicae'* (diss., Indiana U., 1996); *LmL*: QUAT.PRINC.; *MGG2*: 18; *TML* ANO1DEM.

The text reproduces the fourth part of John of Tewkesbury, *Quatuor principalia musice*, and as such appears after a short introduction in *CoussemakerS*, iv, 254–98, beginning 'Cum omnis quantitas aut est continua'. Discusses basic issues of *musica mensurabilis* of the early 14th century.

30. *CoussemakerS, iii, Anon.2*; *De musica antiqua et nova*. Incipit 'Ad evidentiam valoris notularum'. Early 14th century. Edn iii, 364–70. New edn as *De valore notularum tam veteris quam novae artis*, G. Reaney, CSM, xxx (1982), 13–28. *LmL*: ANON.Paris.I; *MGG2*: 19; *TML*: ANO2DEM (cf ANO2DEV).

A treatise on notation from *F-Pn* lat.15128, ff.120*r*–122*v*. Reaney observes that the treatise is of note because it considers pairs of *minimae* to be unequal (the second is always altered).

31. *CoussemakerS, iii, Anon.3*; *Compendiolum artis veteris ac novae*. Incipit 'Quoniam per ignorantiam artis musice'. Early 14th century. Edn iii, 370–75. New edn, A. Gilles: 'L'Anonyme III de Coussemaker "Scriptores" III', *MD*, xv (1961), 27–38; edn 29–38; also ed. idem as *De arte musicae breve compendiolum*, CSM, viii (1964), 84–93. *LmL*: TRAD.Phil.II; *MGG2*: 20; *TML*: ANO3COM (cf ANOART).

A work on notation and mensurations with references to Franco and Philippe de Vitry, from *F-Pn* lat.15128, ff.127*r*–129*r*. Mentions the *dragma* or *fusicée* (a *semibrevis* with tails both above and below) equal to two *minimae*.

32. *CoussemakerS, iii, Anon.4*;.*Compendium artis mensurabilis tam veteris quam novae* Incipit 'Si quis artem musice mensurabilis tam veterem quam novam'. Early 14th century. Edn iii, 376–9. New edn as *Compendium musicae mensurabilis tam veteris quam novae artis*, G. Reaney, CSM, xxx (1982), 33–41. *LmL*: ANON.Paris.II; *MGG2*: 21; *TML*: ANO4COM (cf ANO4CMM).

A treatise on mensural notation from *F-Pn* lat.15128, ff.129*r*–131*v*. Topics include rhythmic modes, ligatures, mensurations and red notation, which is described as indicating either a change from one mode or *tempus* to another or octave transposition.

33. *CoussemakerS, iii, Anon.5*; *Ars cantus mensurabilis mensurata per modos iuris*. Incipit 'Ad honorem et gloriam Sanctissime Trinitatis ... Cum multi antiqui modernique cantores'. Late 14th century. Edn iii, 379–98. New edn and Eng. trans., C.M. Balensuela, GLMT, x (1994). *LmL*: ANON.Couss.V; *MGG2*: 22; *TML*: ANO5ARS (cf ANO5ACM).

The treatise presents a mensural theory after Johannes de Muris within a Scholastic framework with references to canon and civil law; it cites several composers including Machaut, Landini and the otherwise unknown Nicolaus de Aversa. The counterpoint treatise Coussemaker associated with the work, beginning 'Cum notum sit', is most likely not a part of the treatise.

34. *CoussemakerS, iii, Anon.6*; *De musica mensurabili*. Incipit 'Quum dictum sit musicam in numero ternario sumere perfectionem'. *c*1321. Edn iii, 398–403. New edn as part of *Petrus de Sancto Dionysio: Tractatus de musica*, U. Michels, CSM, xvii (1972), 154–66. K. von Fischer: 'Eine wiederaufgefundene Theoretikerhandschrift des späten 14. Jahrhunderts', *Schweizer Beiträge zur Musikwissenschaft*, i (1972), 23–33; *LmL*: PETR.DION.; *MGG2*: 23; *TML*: ANO6DEM (cf PSDTRA, ANODEF).

This work is now regarded as part of the compilation *Tractatus de musica* of PETRUS DE SANCTO DIONYSIO and contains substantial borrowings from Johannes de Muris's *Notitia artis musice*. The present section (the second part of the complete treatise) presents a detailed explanation of the note values and their relationships from the *minima* to the *longissima* (equal to 81 *minimae*). The *TML* considers the last section of the treatise on figures and ligatures (beginning 'Duplex est notula') to be an independent work.

35. *CoussemakerS, iii, Anon.7*; *De diversis maneriebus* [*manieribus*] *in musica mensurabili*. Incipit 'Sic formantur breves plicate'. Mid-14th century. Edn iii, 404–8. New edn, G. Reaney, CSM, xxx (1982), 51–62. F.A. Gallo: *La teoria della notazione in Italia dalla fine del XIII all'inizio del XV secolo* (Bologna, 1966), 53–7; *LmL*: ANON.Deodat.; *MGG2*: 24; *TML*: ANO7DED(cfANO7DDM).

A fragment from *F-SDI* 42, ff.123*r*–127*v*, discussing Italian Trecento notation with reference to Ars Nova notation and Philippe de Vitry. Reaney's edn (which begins with a fragmentary phrase omitted in *CoussemakerS*: '... ascendo vel descendo, ut hic supra. Sic formantur breves plicatae') has shown Coussemaker's text to be of two parts; Reaney does not include the latter, on French notation, beginning 'Si due breves inter duas longas' (iii, 408).

36. *CoussemakerS, iii, Anon.8*; *Regulae de contrapuncto*. Incipit 'Consonantie contrapuncti demonstrativi ad oculum sunt sex'. 15th century. Edn iii, 409–11. Sachs, 1974, pp.208, 217; *LmL*: CONTR.Consonantie, CONTR.Quatuor sunt; *MGG2*: 25; *TML*: ANO8REG.

A counterpoint treatise, without musical examples, from *I-Fl* Plut.29.48, ff.72*r*–73*r*. Sachs divides Coussemaker's text into two separate works, the second beginning 'Quatuor sunt species ...' (iii, 410–11).

37. *CoussemakerS, iii, Anon.9*; *De musica mensurabili*. Incipit 'In der mensurabili musica so heissen die noten lang'. Late 14th or early 15th century. Edn iii, 411–13. New edn, R. Denk: *Musica getuscht: deutsche Fachprosa des Spätmittelalters im Bereich der Musik*(Munich, 1981), 18–22. *MGG2*: 26.

A German work from *F-Sm* 222, ff.7*v*–8*r* (destroyed by fire in 1870). Apparently a summary of 13th-century mensural practice after Franco of Cologne.

38. *CoussemakerS, iii, Anon.10; De minimis notulis*. Incipit 'Item notandum quod notularum species quantum plures'. Late 14th century. Edn iii, 413–15. *LmL*: MENS. Item notandum; *MGG2*: 27; *TML*: ANO10DEM.

Like the previous item, Coussemaker's text was from *F-Sm* 222, ff.10*v* (destroyed in 1870). Discusses notes smaller than the *minima* and red or void notation, and mentions compositions of Zeltenpferd.

39. *CoussemakerS, iii, Anon.11*; *Tractatus de musica plana et mensurabili*. Incipit 'Quare musica studetur? Respondetur quod illo

modo'. Mid-15th century. Edn iii, 416–75. New edn and Eng. trans., R.J. Wingell: *Anonymous XI (CS III): an Edition, Translation, and Commentary* (diss., U. of Southern California, 1973). M. Bernhard: 'Clavis Coussemakeri', Bernhard, ed., 1990, pp.29–32; *LmL*: TRAD.HOLL.II, CONTR.Et primo I, CONTR Et primo II, CONTR.Si enim, CONTR.Septem s. cons., MAN.GUID., VERS.Imparitas, MENS.Ista autem, INTERV.Notandum, VERS.Primus habet, TON.Trev., PROP.MENS.Sequitur, MOD.Not.quotiensc., PROP.Prop.est duorum; *MGG2*: 28; *TML*: ANO11TRA (cf ANO11TDM).

A compilation on various subjects from *GB-Lbl* Add.34200, ff.1*r*–41*r*, including treatment of both countrapuntal and mensural issues as well as a tonary. What Coussemaker subsumed as one treatise is not a unified work by one person. Modern scholars have divided the text of Coussemaker's Anon.11 in various ways: Wingell (358–9) proposes a sevenfold division and begins his edition with a short phrase omitted by Coussemaker, 'Item diceres, quare musica studetur?'; C. Meyer (RISM B/III/4, 54–5) gives nine different entries; and the *LmL* divides the text into 14 different works.

40. *CoussemakerS, iii, Anon.12*; *Tractatus de musica*. Incipit 'Quoniam per magis noti notitiam'. 15th century. Edn iii, 475–95. New edn and Eng. trans., J.M. Palmer: *Coussemaker's Anonymous XII: a Text, Translation, and Commentary* (thesis, Brigham Young U., 1975); new edn as *Tractatus et compendium cantus figurati*, J.M. Palmer, CSM, xxxv (1990). M. Bernhard: 'Clavis Coussemakeri', Bernhard, ed., 1990, p.32; *LmL*: ANON.Couss.XII, MENS.Item nota, VERS.Profert, ANON.London.II; *MGG2*: 29; *TML*: ANO12TRA(cf ANO12TCF).

A mensural treatise in 15 chapters with an introduction on the definitions and etymology of music. A short commentary on practical music follows the main treatise, summarizing its contents and adding a short discussion of counterpoint.

41. *CoussemakerS, iii, Anon.13*; *Tractatus de discantu*. Incipit 'Qui veult savoir l'art de deschant'. 14th century. Edn iii, 496–8. New edn as *Traitié de deschant*, G. Reaney, CSM, xxxvi (1996), 65–75, edn 69–75. Dahlhaus, 1986, pp.71–3; *MGG2*: 30.

A French treatise on counterpoint from *F-Pn* lat.14741 (formerly St Victor 665), ff.8*v*–9*v*. Principles of improvised counterpoint are based on distinctions called 'notes appendans', 'notes non appendans' and 'notes désirans appendans'. Unfortunately the musical examples for these terms are missing in the source, but Reaney proposes brief examples in his edition.

42. *CoussemakerS, iv, Anon.1*; *Tractatus de musica figurata et de contrapuncto*. Incipit '[hexachord diagram] Item notandum quod septem sunt reformationes in manu'. Second half of 15th century. Edn iv, 434–69. *LmL*: ANON.Couss.I; *MGG2*: 31; *TML*: TRADEM.

A work with numerous illustrations and examples from *F-Pn* lat.16664, ff.62*v*–85*v*. Topics include mensural notation, proportions and counterpoint. Coussemaker's text concludes with a collection of polyphonic works in French, Dutch and Latin.

43. *Crawford anon*; *Compendium musices*. Incipit 'Proprietas in musica est derivatio plurium vocum'. *c*1500. Ed. D. Crawford, CSM, xxxiii (1985). *LmL*: COMPEND.MUS.; *MGG2*: 83; *TML*: ANOCMU.

44. *Czagány anon.*; *Terminorum musicalium diffinitorium*. Incipit 'De diffinitione musice imprimis'. Late 15th century. Ed. Z. Czagány: 'Ein *Diffinitorium musicum* aus dem späten 15. Jahrhundert', *Cantus Planus IV: Pécs 1990*, 127–39; edn 132–9.

A brief musical dictionary arranged by topics from *I-Vnm* lat.Cl.VIII.82, ff.142*r*–147*r*. The work defines the basic vocabulary of music (such as *sonus*) as well as terms related to mensural music (such as *prolatio* and *sincopa*). The author borrows from several sources including Boethius, Nicolò Burzio and Guido of Arezzo.

A popular introduction derived from several sources (including the *Declaratio musice discipline* of UGOLINO OF ORVIETO, and the *Lucidarium* of MARCHETTO DA PADOVO, *Lucidarium*) on the basics of *music plana* (gamut, mutation, intervals and church modes) published 29 times in Venice between 1499 and 1597. The work contains lengthy parallels with Cat. no.110. Cf Cat. nos.111, 24 and index.

45. *Debenedetti anon.*; *Capitulum de vocibus applicatis verbis*. Incipit 'Postquam in precedenti capitulo dictum est'. 1313–32. Ed. S. Debenedetti: 'Un trattatello del secolo XIV sopra la poesia musicale', *Studi medievali*, ii (1906–7), 59–82; edn 79–80. *LmL*: GEN.DISC.Postquam; *MGG2*: 84; *TML*: ANOCAP.

A commentary on the *Summa artis rythimici* of ANTONIO DA TEMPO, from *I-Vnm* lat.Cl.XII.97, ff.19*v*–20*v*. The author describes the texts and musical styles (both Italian and French) of several 14th-century genres (including ballata, motet, caccia and madrigal), and makes a number of references to the teaching of Aristotle.

46. *Ellsworth anonymi*. Before 1375. Ed. and Eng. trans. O. Ellsworth: *The Berkeley Manuscript*, GLMT, ii (1984). *LmL*: GOSCALC., ANON.Ellsworth, INTERV.Tonus div.; *MGG2*: 85; *TML*: BERMAN.

A collection of five treatises in *US-BEm* 744 (formerly Phillipps 4450) with a short introduction.

a. Incipit 'Quoniam in antelapsis temporibus quamplures de cantibus ... Cum autem cognoscere cuius modi sive toni'. Edn 30–108.

A short introduction followed by an initial treatise on modes in both chant and polyphony.

b. Incipit 'Quoniam musici, antiquorum philosophorum ab usu discrepare nolentes'. Edn 110–46.

A work on discant based upon the *Ars contrapuncti secundum Johannem de Muris* (*CoussemakerS*, iii, 59–68).

c. Incipit 'Quilibet igitur in arte practica mensurabilis'. Edn 148–82.

A work on mensural music based upon the *Libellus cantus mensurabilis*, attributed to Johannes de Muris (*CoussemakerS*, iii, 46–58). Ascribed in a concordant manuscript to 'Goscalcus francigenus'.

d. Incipit 'In omnibus requiem quesivi'. Edn 184–238.

Discusses what the anonymous writer calls the 'harmonic body', a series of proportions used for intervals 6 : 8 : 9 : 12, and the development of the ancient Greek and medieval scales (with several references to instruments). May contain an acrostic naming 'Johan Vaiant' (?= VAILLANT, JEHAN); see C. Page: 'Fourteenth-Century Instruments and Tunings: a Treatise by Jean Vaillant?', *GSJ*, xxxiii (1980), 17–35.

e. Incipit 'Tonus dividitur in 3 partes'. Edn 240–46.

A brief work on dividing the tone into three equal parts.

47. *Federhofer and Federhofer-Königs anon.*;*Musica*. Incipit 'Musica est recte modulandi scientia, cuius duae sunt partes'. Mid-16th century. Ed. H. Federhofer and R. Federhofer-Königs: 'Ein anonymer Musiktraktat der Stiftsbibliothek Fiecht', *Festschrift Walter Senn*, ed. E. Egg and E. Fässler (Munich, 1975), 36–52; ed. 36–43.

An introduction to the basic issues of *musica plana* such as solmization, intervals, mutation and modes from *A-F* 252, ff.97*r*–127*r*. The editors note similarities to the *Tetrachordum musices* of JOHANNES COCHLAEUS and other sources.

48. *Federhofer-Königs anon. 1960* [Graz anon.]. Incipit 'Musica disciplina est, quae de numeris loquitur'. 14th century. Ed. R. Federhofer-Königs: 'Ein unvollständiger Musiktraktat des 14. Jahrhunderts in Ms. 1201 der Universitätsbibliothek Graz', *KJb*, xliv (1960), 14–27; edn 14–19. *LmL*: ANON.Grac.; *MGG2*: 86; *TML*: ANOMUSD.

An incomplete work from *A-Gu* 1201, ff.61*v*–63*r*, on speculative and philosophical musical issues such as the etymologies of musical terms, the zodiac, modal ethos and planetary motion. The work abounds with references to the Bible and classical mythology; Federhofer-Königs notes parallels with numerous sources, including Cassiodorus, Isidore of Seville, Aristotle and Plato.

49. *Federhofer-Königs anon. 1962* [Michaelbeuern anon., Prague (Praha) anon.]. Second half of 14th century. Ed. R. Federhofer-Königs: 'Ein anonymer Musiktraktat aus der 2. Hälfte des 14. Jahrhunderts in der Stiftsbibliothek Michaelbeuern/Salzburg', *KJb*, xlvi (1962), 43–60; edn 44–54. *MGG2*: 87; *TML*: ANOMIC.

A compendium from *A-MB* cart.95, ff.148*r*–153*r*.

a. Incipit 'Musica est motus vocum rationabilium in arsim et a thesim'. Edn 44–8. *LmL*: ANON. Michaelb. I.

A short work on the formation of church modes.

b. Incipit 'Nota triplex est proportio'. Edn 48–9. *LmL*: ANON.Michaelb.II.

Further information on the modes with parallels from Boethius and comments on the ethical characteristics of the modes.

c. Incipit 'Iam post has normas'. Edn 49–54. *LmL*: VERS.Iam post.

A discussion of mensural music in verse.

50. *Feldmann anon.*; *Regulae generales de compositione cantus*. Incipit 'Qui vult componere aliquem cantum'. 15th century. Ed. F. Feldmann: *Musik und Musikpflege im mittelalterlichen Schlesien* (Breslau, 1938), 193–4. *LmL*: REG.COMP.; *MGG2*: 88.

A brief guide to the composition of chant from Breslau [now Wrocław], Staatsbibliothek, I.Qu.43 (lost), f.142*r*.

51. *Ficker anon.*; *Ars organi* [Vatican Organum Treatise]. Incipit 'Organum est cantus subsequens precedentem'. Early 13th century. Part ed. R. Ficker: 'Der Organumtraktat der Vatikanischen Bibliothek', *KJb*, xxvii (1932), 65–74; edn 65–6. New edn, F. Zaminer: *Der Vatikanische Organum-Traktat* (Tutzing, 1959); new edn and Eng. trans., I. Godt and B. Rivera: 'The Vatican Organum Treatise: a Colour Reproduction, Transcription, and Translation into English', *Gordon Athol Anderson, 1929–81, in memoriam*, ed. L.A. Dittmer (Henryville, PA, 1984), ii, 264–345; ed. 293–345. *LmL*: ORG.Vatic.; *MGG2*: 67*b*; *TML*: ARSORG (ed. Godt and Rivera).

An extensive organum treatise from *I-Rvat* Ottob.3025, ff.46*r*–50*v*. After a brief introduction, the treatise outlines 31 counterpoint rules and provides extensive examples.

52. *Gallo anonymi 1966*. 14th century. Ed. F.A. Gallo: *Mensurabilis musicae tractatuli*, AMI, *Scriptores*, i (1966).

Six brief works on 14th-century notation from various sources.

a. Capitulum de semibrevibus. Incipit 'Quandocunque due semibreves ponuntur pro tempore'. Edn 15. *LmL*: MENS.Quandoc.due.

A brief treatment of *semibreves* in *I-PAVu* Aldini 361, f.70*r*–*v*.

b. Fragmentum de mensuris. Incipit '[quaternaria, se]naria perfecta, senaria inperfecta'. Edn 51–2. *LmL*: PROP.MENS.senar.

A brief treatment of Italian temporal divisions from *F-SDI* 42, f.130*r*.

c. Fragmentum de proportionibus. Incipit 'Quaternarium vocatur proportio dupla minor'. Edn 55. *LmL*: PROP.MENS.Quat.

Seven lines on proportions in *I-PAVu* Aldini 450, f.7*v*.

d. Capitulum de modo accipiendo. Incipit 'Nota quod modus accipitur a longa'. Edn 59. *LmL*: PROP.MENS.Nota quod I.

A brief treatment of mensural notation in *I-CATc* D39, ff.121*v*–122*r*.

e. Musice compilatio. Incipit 'Nota quod tresdecim sunt species cantus'. Edn 63–75. *LmL*: ANON.Mediol.

The work (from *I-Ma* M.28 sup., ff.114*r*–117*r*) touches briefly upon intervals, counterpoint and mensural issues (such as note shapes, mensuration, diminution and *sincopa*).

f. Tractatulus de figuris et temporibus. Incipit 'Sciendum est, quod quatuor sunt tempora discantus'. Edn 79–85. P. Schreur: *Tractatus figurarum*, GLMT, vi (1989), 4; *LmL*: MENS.Sciendum est.

A treatise on complex notational practices from *E-Sc* 5.2.25, ff.93*r*–94*v*. The proposed note shapes combine multiple stems, flags and half-coloured note heads to achieve subtle temporal divisions. The author associates PHILIPPUS DE CASERTA with these complicated notational techniques, and the notation in the work is similar to the theory proposed in Philippus's *Tractatus figurarum*.

53. *Gallo anon. 1971a*; ; *Compendium musicae mensurabilis artis antiquae* [Faenza anon.]. Incipit 'Gaudent brevitate moderni. Quandocumque punctus quadratus vel nota quadrata'. Late 13th century. Ed. F.A. Gallo, CSM, xv (1971), 66–72. Ristory, 1987, pp.95–110; *LmL*: TRAD.Franc.III; *MGG2*: 89; *TML*: ANOCOM.

One of several mensural works derived from Franco of Cologne beginning 'Gaudent brevitate moderni'. The treatise (from *I-FZc* 117, ff.23*r*–24*r*) mentions Petrus de Cruce and cites several musical works of the late 13th century.

54. *Gallo anon. 1971b*; *Tractatulus de cantu mensurali seu figurativo musice artis* [Melk anon.]. Incipit 'Quoniam cantum mensuralem seu figuratum musice artis'. Mid-14th century. Ed. F.A. Gallo, CSM, xvi (1971), 11–37. *LmL*: ANON.Mell.; *MGG2*: 90; *TML*: ANOTRA.

A mensural treatise from *A-M* 950 (dated 1462), ff.76*v*–83*v*, derived from Johannes de Muris. The work demonstrates the diffusion of Ars Nova teaching to east central Europe.

55. *GerbertS, i, Anon.1*; *Musica*. Incipit 'Duo semisphaeria, quas magadas vocant'. 11th century. Edn i, 330–38. New edn, J. Smits van Waesberghe: *Bernonis Augiensis De mensurando monochordo*, Divitiae musicae artis, ser.A, via (Buren, 1978), 27–114. *LmL*: BERNO.mon.; *MGG2*: 32; *TML*: ANO1MUS (cf BERNDEM).

The text, on the division of the monochord and church modes, is now attributed to Berno of Reichenau. The source used by Gerbert (from the monastery of St Blasien) is no longer extant. Smits van Waesberghe's edition begins with a prologue, 'Quicumque aliquod sibi artificium inchoat'.

56. *GerbertS, i, Anon.2*; *Tractatus de musica*. 10th–11th century. Edn i, 338–42. *MGG2*: 33; *TML*: ANO2TDM.

Gerbert's text is currently considered to be a compendium of three sections.

a. Incipit 'Quinque sunt consonantiae musicae'. New edn as 'Ratio breviter excerpta de musica' in Bernhard, 1989, pp.90–189. *LmL*: TON.Lugd.

On consonant intervals with references to Greek pitches. The section presented in *GerbertS* serves as an introduction to a tonary, included in Bernhard's edition.

b. Incipit 'Indicis a summo capiens exordia primus'. Edn i, 342. New edn, T.A. Russell: 'A Poetic Key to a Pre-Guidonian Palm and the "Echemata"', *JAMS*, xxxiv (1981), 109–18; edn 110. *LmL*: VERS.Indicis.

A brief poem on using the hand as a mnemonic aid for the church modes.

c. Incipit 'Prius dividenda est tota linea in quatuor partibus'. Edn i, 342. New edn as 'Ratio breviter excerpta de musica' in Bernhard, 1989, pp.191–2. *LmL*: MON. Prius dividenda.

A brief treatment of the division of the monochord.

57. *GerbertS, i, Anon.3*; *Fragmentum musices*. 12th century. Sachs, 1970–80, ii, pp.183, 186, 189; Bernhard, 1989, pp.192–3; *MGG2*: 34; *TML*: ANO3FRA.

Three separate items related to BOETHIUS, *De institutione musica*, from the same source as Cat. no.55.

a. Incipit 'Ad omni superparticulari si continuam ei … Ac si dixisset'. Edn i, 343.

Gloss to Boethius, *De institutione musica*, ii. 21.

b. Incipit 'Ab omni superparticulari si continuam ei … Quod dicit, his exemplis probari potest'. Edn i, 343–4. New edn, N. Bubnov: *Gerberti … Opera mathematica* (Berlin, 1899), 30–31.

An excerpt from a letter of Gerbertus Scholasticus (Pope Sylvester II) to Constantinus, *c*980.

c. Incipit 'Si superparticularis proportio binario multiplicatur'. Edn i, 344. New edn, N. Bubnov: *Gerberti … Opera mathematica* (Berlin, 1899), 29–30.

Another excerpt from the letter of Gerbertus to Constantinus, commenting on Boethius, *De institutione musica*, iii. 1.

58. *GerbertS, i, Anon.4*; *Mensura monochordi Boetii*. 12th century. *MGG2*: 35; *TML*: ANOMEN.

Six short monochord excerpts. Items *b*, *c* and *d* were edited from the same source as Cat. no.55, which was destroyed by fire.

a. Incipit 'Totum monochordum partire inprimis in quatuor'. Edn i, 344–5. New edn in Bernhard, 1989, pp.193–4. *LmL*:MON.Totum mon.

From *D-Mbs* Clm 4622, f.178*v*. Cf Cat. no.10*d*.

b. Incipit 'Monochordum disparaturus totam epiphaniam in novem partes distribue'. Edn i, 345. New edn in Bernhard, 1989, p.194. *LmL*: MON.Mon.disparat.

c. Incipit 'Si regularis monochordi divisionem secundum authenticam Boetii institutionem scire volueris'. Edn i, 345–7. New edn in Bernhard, 1989, pp.195–7. *LmL*: MON.Si regularis.

d. Incipit 'Organalis mensura hoc exigit'. Edn i, 347. New edn in J. Smits van Waesberghe: *Aribonis De musica*, CSM, ii (1951), 45. *LmL*: MON.Organalis.

e. Incipit 'Cum primum a G. ad finem novem passibus monochordum patiris'. Edn i, 347–8. New edn in Bernhard, 1989, p.198. *LmL*: MON.Cum primum.

From *D-Mbs* Clm 4622, f.177*v*.

f. Incipit 'Quidam Ratisbonensis monachus nomine Otkerus'. Edn i, 348. New edn in Bernhard, 1989, pp.199–200. *LmL*: QUADR.FIG.

From *Mbs* Clm 4622, f.178*v*–179*r*.

59. *GerbertS, i, Anon.5*; *Monacho qua mente sit psallendum*. Incipit 'Iunior quidam monachus, D. Antonii Abbatis discipulus'. 8th century. Edn i, 4–5. Bernhard, 1989, p.3. *MGG2*: 36; *TML*: MONPSAL.

A dialogue on various psalm verses.

60. *GerbertS, i, Anon.6*; *Instituta patrum de modo psallendi sive cantandi*. Incipit 'Sancti Patres nostri antiqui docuerunt'. *c*1200. Edn i, 5–8. New edn in Bernhard, 1989, pp.5–8. J. Smits van Waesberghe: 'De verklaring der letters: Appendix, De "Instituta patrum" van Sint Gallen', *Muziekgeschiedenis der Middeleeuwen*(Tilburg, 1938–42), ii, 197–205; S.A. van Dijk: 'Saint Bernard and the *Instituta patrum* of Saint Gall', *MD*, iv (1950), 99–109. *LmL*: INST.PATR.; *MGG2*: 37; *TML*: PATPSAL.

A non-technical discussion of proper singing in church, repr. by Gerbert from J.M. Thomasius: *Opera omnia* (Rome, 1748–54), iv, 353. Now attributed to EKKEHARD (5) OF ST GALLEN.

61. *GerbertS, i, Anon.7*; *Alia musica*. Incipit 'De harmonica consideratione Boetius ita disseruit'. 9th–10th century. Edn i, 125–52 (as part of Hucbald of St Amand, *Musica*). New edn, J. Chailley (Paris, 1965); new edn and Eng. trans., E.B. Heard: *'Alia musica': a Chapter in the History of Music Theory* (diss., U. of Wisconsin, 1966). Bernhard, 1989, pp.16–17; *LmL*: ALIA MUS.; *MGG2*: 38; *TML*: ALIMUS (cf ALIAMU).

A central treatise in the early integration of the seven octave species and eightfold modal system in the West. Chailley demonstrated three layers in the text: a Model Treatise that uses the word *tonus* for each mode (with the incipit 'Tonus primus NONANOEANE'), a Principal Treatise (the central portion of *GerbertS*) that uses both *tonus* and *tropus* and a New Exposition that uses only *tropus*.

GerbertS, i, Anon.8. *See* MUSICA ENCHIRIADIS, SCOLICA ENCHIRIADIS.

62. *GerbertS, i, Anon.9*; *Commemoratio brevis de tonis et psalmis modulandis*. Incipit 'Debitum servitutis nostrae'. *c*900. Edn i, 213–29. New edn and Eng. trans., T. Bailey (Ottawa, 1979); new edn in Schmid, 1981, pp.157–78. Bernhard, 1989, p.37. *LmL*: COMM.BR.; *MGG2*: 40; *TML*: ANOCOMB (cf ANOCMB).

Discusses modes and psalm tones using dasian notation similar to that of the musica enchiriadis and *Scolica enchiriadis*. Bailey notes several textual parallels between the *Commemoratio brevis* and the *Enchiriadis* treatises.

GerbertS, i, Anon.10. *See* BERNELINUS.

63. *GerbertS, ii, Anon.1*; *De mensura fistularum in organis*. *c*12th century or before. *MGG2*: 42–3 (as Anonymi 1–2); *TML*: ANOFIS.

A collection of short works on organ pipes and bells. Gerbert based his edition on a manuscript from St Blasien which was destroyed by fire in 1768. A partial copy from the 18th century remains as *I-Bc* A43; portions also in *US-R* 92 1200 (formerly Admont 494), ff.74*v*–75*v*.

a. Incipit 'Fac tibi fistulam secundum aestimationem'. Edn ii, 283. New edn in Sachs, 1970–80, i, p.115. *LmL*: FIST.Fac tibi.

b. Incipit 'Primam fistulam quam longam'. Edn ii, 283–5. New edn in Sachs, 1970–80, i, p.116–125. *LmL*: FIST.Primam fist.II.

c. Incipit 'Si velis fundere cymbala'. Edn ii, 285–6. New edn in J. Smits van Waesberghe: *Cymbala*, MSD, i (1951), 44–5. *LmL*: CYMB.Si velis.; *TML*: ANOCYM.

d. Incipit 'Cognita omni consonantia fistularum in organis'. Edn ii, 286. New edn in Sachs, 1970–80, i, pp.99–113. *LmL*: FIST.Primam fist.I.

e. Incipit 'A C. novem passus usque ad sustentationem'. Edn ii, 286–7. J. Smits van Waesberghe: *De musico-paedagogico et theoretico Guidone Aretino* (Florence, 1953), 169; idem: 'Organistrum, Symphonia, Drehleier' (1972), *HMT*, 3. *LmL*: ORGANISTR.A C.

64. *Gilles anon.*; ; *De musica plana breve compendium*. Incipit 'Quoniam de plana musica sive de compositione gammatis breviter'. Late 13th century. Ed. in A. Gilles: '*De musica plana breve compendium* (Un témoignage de l'enseignement de Lambertus)', *MD*, xliii (1989), 33–62; edn 40–51. *LmL*: TRAD.Lamb.; *MGG2*: 91; *TML*: ANODMP.

An introductory work (from *F-Pn* lat.15128, ff.124*r*–127*r*) on *musica plana* including definitions of music, the gamut, hexachords and intervals. Gilles notes parallels with LAMBERTUS, John of Tewkesbury, *Quatuor principalia musicae*, and other sources.

65. *M.L. Göllner anonymi*. 13th century. Ed. M.L. Göllner: *The Manuscript Cod lat.5539 of the Bavarian State Library*, MSD, xliii (1993).

Two works from *D-Mbs* Clm 5539.

a. *Practica musicae artis mensurabilis magistri franconis*. Incipit 'Gaudent brevitate moderni. Quandocunque punctus quadratus seu nota quadrata tractum habet a parte dextra descendentem'. Edn 101–8. Ristory, 1987, pp.95–110. *LmL*: TRAD.Franc.I; *TML*: ANOPRA.

One of several works on mensural notation after Franco of Cologne beginning 'Gaudent brevitate moderni'. The present version is in the MS on ff.24*r*–27*r*.

b. *Tractatulus anonymus de tonisque intervallibus, cum litteris musicis*. Incipit (with letter notation above) 'Cantus dicitur autenticus melodia cuius diapente'. Edn 110–13. Partially ed. D. Mettenleiter: *Musikgeschichte der Stadt Regensburg* (Regensburg, 1866), 78. *TML*: ANOCADI.

A narrative text with accompanying melody written above in letter notation. The text (in the manuscript on ff.189*r*–191*r*) discusses various issues of chant including modes, solmization and intervals. The text proposes a 'cantus indifferens' which includes all the notes of both the authentic and plagal forms of the mode. Cf Cat. no.92*c*.

66. *T. Göllner anon. 1961*. Incipit 'Concordanciarum perfecte, ut unisonus, id est eadem'. First half of 15th century. Ed. and Ger. trans. T. Göllner: *Formen früher Mehrstimmigkeit in deutschen Handschriften des späten Mittelalters* (Tutzing, 1961); edn 167–81; Ger. trans. 183–94. P. van Poucke, 'Musicus computans or the "*Ars organica*" Treatise in *Codex latinus 7755*', *Gentse bijdragen tot de kunstgeschiedenis en oudheidkunde*, xxviii (1988), 171–85 (with facs. of ff.279*v*–280*r* of source). *LmL*: TACT.Concordanciarum; *MGG2*: 92.

A lengthy treatise on 'tactus' (discant on the organ) from *D-Mbs* Clm 7755, ff.276*r*–280*r*, with several musical examples.

67. *T. Göllner anon. 1968*; *Nota regulas supra tactus*. Incipit 'Prima est quod manendum est ante concordanciam'. 15th century. Ed. and Ger. trans. T. Göllner: 'Eine Spielanweisung für Tasteninstrumente aus dem 15. Jahrhundert', *Essays in Musicology: a Birthday Offering for Willi Apel*, ed. H. Tischler (Bloomington, IN, 1968), 69–81; edn 70–71. *LmL*: TACT.Prima est; *MGG2*: 93.

A brief presentation, only 19 lines, of six rules on 'tactus' (discant on the organ) from *D-Mbs* Cgm 811, f.22*v*.

68. *T. Göllner anon. 1969* [Füssen Treatise]. Incipit '[With musical example] At illi dixerunt ... Parumper hesito, quin is cantus sit valde acceptabilis'. Mid-15th century. Ed. and Ger. trans. T. Göllner: *Die mehrstimmigen liturgischen Lesungen* (Tutzing, 1969); edn ii, 131–3; Ger. trans. ii, 133–4. *LmL*: CANT.PASS.; *MGG2*: 94.

This brief work (from *D-HR* II.2.2°, p.6) suggests guidelines for the polyphonic recitation of dialogues in the Passion text using 5ths and octaves.

69. *Gümpel anonymi 1968*. 15th century. Ed. K.-W. Gümpel: 'Zur Frühgeschichte der vulgärsprachlichen spanischen und katalanischen Musiktheorie', *Spanische Forschungen der Görresgesellschaft*, 1st ser.: *Gesammelte Aufsätze zur Kulturgeschichte Spaniens*, xxiv (Münster, 1968), 257–336. *MGG2*: 95.

Two works from Spanish sources, the first in Spanish, the second in Latin.

a. Incipit 'Devemos saber que en el arte del canto llano'. Edn 282–322.

Covers the fundamentals of music, especially solmization, drawn from several sources. Gümpel notes parallels with John of Tewkesbury, *Quatuor principalia musice*.

b. *Ars musice, que apellatur liberalis*. Incipit 'Musica est una de septem artibus quas liberales appelamus'. 15th century. Edn 326–9. *LmL*: ANON.Barcin.II; *TML*: ANOAM.

A brief collection of basic musical concepts such as definitions and etymologies. Gümpel notes parallels with several sources, including JOHANNES COTTO, Boethius and EGIDIUS DE ZAMORA.

70. *Gümpel anonymi 1978*. 11th century. Ed. K.-W. Gümpel, 'Spicilegium Rivipullense', *AMw*, xxxv (1978), 57–61. K.-W. Gümpel: 'Musica cum Rhetorica: die Handschrift Ripoll 42', *AMw*, xxxiv (1977), 260–86. *TML*: ANOSPI.

a. *De Guidonis musica*. Incipit 'Omnes autenti quinto loco' (text to

musical example: 'Diapente et diatesseron Simphonie et intense et remisse ...'). Edn 57–8. *LmL*: MOD.Omnes authenti.

A brief text on church modes attributed to Guido of Arezzo on f.5*r* of *E-Bac* Ripoll 42.

b. Incipit 'Discipulus. Diapason quid est?'. Edn 58–9. *LmL*: INTERV. Diapason.

A brief dialogue on intervals on f.5*r* of the MS.

c. See Cat. no.84*c*.

71. *Gümpel anon. 1990a*; *Cartula de cantu plano*. Incipit 'Et dixit <Guido>: Qui nescit palmam'. 14th century. Ed. K.-W. Gümpel: 'Gregorianischer Gesang und Musica ficta: Bemerkungen zur spanischen Musiklehre des 15. Jahrhunderts', *AMw*, xlvii (1990), 120–47; edn 144–7. *LmL*: CART.PLAN.; *MGG2*: 98; *TML*: ANOCAR

A brief work from *E-Bc* M.883, ff.70*v*–71*v*, on the basics of *musica plana* (gamut, solmization, finals and conjunctions) with several references to specific chants.

72. *Gümpel anonymi 1990b*. Ed. K.-W. Gümpel: 'Zwei unbeachtete Fragmente der altkatalanischen, *Art del cant pla*', *De musica hispana et aliis: miscelána en honor al Prof. Dr. José López-Calo*, ed. E. Casares and C. Villanueva (Santiago de Compostela, 1990), i, 111–44.

Two fragments on plainchant from *E-Bbc* 390. Gümpel notes parallels with treatises in his Cat. no.69.

a. Incipit 'Cante per becayre e pren la ueu de gamut'. Edn 122–6.

b. Incipit 'En befabemi no y a mutaca que'. Edn 126–30.

A fragment on mutation on f.144r–*v* of the MS.

73. *Gümpel and Sachs anon. 1974*. Incipit 'Quoniam homine senescente senescunt'. Second half of 15th century. Ed. K.-W. Gümpel and K.-J. Sachs: 'Der anonyme Contrapunctus-Traktat aus Ms. Vich 208', *AMw*, xxxi (1974), 87–115; edn 93–7. *LmL*: CONTR. Quoniam hom.; *MGG2*: 96; *TML*: ANOVIC.

A counterpoint treatise from the Catalonian source *E-VI* 208, ff.3*r*–8*r*, with learned allusions to Virgil, Boethius and Guido of Arezzo.

74. *Gümpel and Sachs anon. 1988*. Incipit 'Species plani cantus sunt terdecim. Vnisonus. Semitonus. Tonus'. Mid-15th century. Ed. K.-W. Gümpel and K.-J. Sachs: 'Das Manuskript Girona 91 und sein Contrapunctus-Traktat', *AMw*, xlv (1988), 186–205; edn 193–6. *LmL*: CONTR.Species plani; *MGG2*: 97; *TML*: ANOSPE.

A didactic counterpoint treatise from the Catalonian source *E-G* 91, ff.118*r*–119*v*. The treatise gives two definitions of counterpoint: (1) note-against-note writing or (2) the ornamentation of a musical line itself and the tenor ('est ornamentum sui rei et tenoris', p.194).

75. *Guentner anon.* [Cistercian anon.]. Incipit 'Cantum quem Cisterciensis ordinis ecclesiae cantare consueverant'. 1142–7. Ed. and Eng. trans. F.J. Guentner, CSM, xxiv (1974). *LmL* ANON.Cist I; *MGG2*: 99; *TML*: BEREPI.

The work begins with a brief letter attributed to Bernard of Clairvaux. The body of the anonymous treatise is devoted to correcting errors in singing plainchant on such topics as text, modal assignment and range. The work is an example of the general reforms of chant attributed to St Bernard.

76. *Hammerstein anon.*; *Epistola ad Dardanum* [Pseudo-Jerome]. Incipit 'Cogor a te ut tibi Dardane'. Mid-9th century. Ed. R. Hammerstein: 'Instrumenta Hieronymi', *AMw*, xvi (1959), 117–34. *PL*, xxx (1846), 213–15. *LmL*: PS.-HIER.ep.; *MGG2*: 100.

A description of various instruments, based on several sources, traditionally attributed to St Jerome. The work mentions instruments from scripture such as the *organum*, *tuba*, *cithara*, *sambuca* and *timpanum*; several sources transmit extensive illustrations.

77. *Handschin anon. 1930* [Montpellier Organum Treatise]. Incipit 'Diaphonia duplex cantus est; cuius talis est diffinitio'. Second half of 11th century. Ed. J. Handschin: 'Der Organum-Traktat von Montpellier', *Studien zur Musikgeschichte: Festschrift für Guido Adler* (Vienna, 1930/*R*), 50–57; edn 50–51. New edn and Eng. trans., F. Blum: 'Another Look at the Montpellier Organum Treatise', *MD*, xiii (1959), 15–24; edn and Eng. trans. 21–4; new edn and Ger. trans., H.H. Eggebrecht and F. Zaminer: *Ad organum faciendum: Lehrschriften der Mehrstimmigkeit in nachguidonischer Zeit* (Mainz, 1970); edn 187–8; Ger. trans. 189–90. *LmL*: ORG.Montep.; *MGG2*: 45, *TML*: ANOMON (cf ANOMONT).

A brief work (from *F-MO* H.384, ff.122*r*–123*r*) on two-voice note-against-note organum, with special attention to cadences. The treatise considers 3rds and 6ths to be appropriate intervals for organum.

78. *Handschin anon. 1943*. Incipit 'Ratio sequitus est ista. Si aliquis vult scire sequitum'. 15th century. Ed. J. Handschin: 'Aus der alten Musiktheorie, III: Zur ambrosianischen Mehrstimmigkeit', *AcM*, xv (1943), 2–15; edn 5–6. *LmL*: ORG.Ambros.; *MGG2*: 101.

A brief organum treatise, including a poem beginning: 'Ex una sursum tertia infra'.

79. *Handschin anon. 1944*; *Compositio clavicordium secundum Baudeceti*. Incipit 'Volens facere clavicordium in hunc modum procedat'. Late 15th century. Ed. J. Handschin: 'Aus der alten Musiktheorie: V. Zur Instrumentenkunde', *AcM*, xvi–xvii (1944–5), 1–10; edn 7–9. *LmL*: CLAVIC.; *MGG2*: 102.

Description for building a 'clavichord' (i.e. a monochord) from *CH-Gpu* lat.80, ff.44*r*–45*v*.

80. *Huglo anon.* Incipit '(De notulis) Sciendum est quod in notulis pro exigentia motellorum'. 13th century. Ed. M. Huglo: 'Le traité de *cantus mensurabilis* du manuscrit de Bamberg', *Pax et sapientia: Studies in Text and Music of Liturgical Tropes and Sequences in Memory of Gordon Anderson*, ed. R. Jacobsson (Stockholm, 1986), 91–5; edn 94–5. *LmL*: MENS.Sciendum; *MGG2*: 103; *TML*: ANOCANT.

A brief work on polyphonic genres of the 13th century: motet, organum and conductus.

81. *Kellner anon.* [Brieg (Brzeg) anon., Kremsmünster anon.]. Incipit 'Pro facili informatione eorum, qui ad culmen artis musicae scientiae'. *c*1400. Ed. P.A. Kellner: 'Ein Mensuraltraktat aus der Zeit um 1400', *AÖAW*, xciv (1957), 72–85; edn 73–85. Partial Eng. trans. C.E. Brewer: *The Introduction of the Ars Nova into East Central Europe: a Study of Late Medieval Polish Sources* (diss., CUNY, 1984), i, 167–74, ii, 419–21. *LmL*: ANON.Kellner; *MGG2*: 104; *TML*: ANOBRI.

A Silesian treatise on Ars Nova mensural notation (*A-KR* 312, ff.210*v*–212*v*) notable for its attention to note values smaller than the *minima* (*fusielis*, *semifusielis* and *semifusielis semi*).

82. *LaFageE, Anonymi 1*. 12th century. *TML*: ANOFRA.

Excerpts from *F-Pn* lat.10509 (cited in *LaFageE* as supp.lat.990).

a. Incipit 'Proportio est divisarum rerum ad se invicem'. Edn 72–3. *LmL*: COMPIL.Paris.II, *MGG2*: 46–52*a*.

On proportions and church modes, ff.58*r*–61*r*.

b. Incipit 'Monocordum compositurus accipe'. Edn 73–4. J. Smits van Waesberghe: *De musico-paedagogico et theoretico Guidone Aretino* (Florence, 1953), 168, 169; *LmL*: MON.Mon.compos.; *MGG2*: 46–52*b*.

On division of the monochord, f.64*r*–*v*. Smits van Waesberghe regarded this as two short works, the second beginning 'Compositio monocordi secundum enchiriadem' (*LaFageE*, 74).

c. Incipit 'Primam fistulam quantaevis magnitudinis facies'. Edn 74–5. New edn in Sachs, 1970–80, i, 116–25. *LmL*: FIST Primam fist.IV; *MGG2*: 46–52*c*.

On the length of organ pipes, ff.65*v*–66*r*.

83. *LaFageE, Anon.2*. Incipit 'In defectionibus hujusmodi solet necessario synemenon'. 11th century. Edn 87–9. *LmL*: CANT.In defect.; *MGG2*: 46–52*d*; *TML*: ANOCAN.

A treatment of plainchant excerpted from *I-Rv* B.81, ff.75*r*–76*r*.

84. *LaFageE, Anonymi 3*. 11th–12th century. *TML*: ANOFRA2.

Excerpts from *F-Pn* Colb.lat.7211.

a. *Liber argumentorum*. Incipit 'Interrogatio. Musica a quo inventa?'. Edn 185–8. New edn, J. Smits van Waesberghe: *Expositiones in Micrologum Guidonis Aretini* (Amsterdam, 1957), 19–30. *LmL*: LIB.ARGUM.

Brief dialogue on basic elements of *musica plana* including discussion of the gamut and intervals, ff.115*v*–125*v*.

b. Incipit 'Sunt in numeris pythagoreorum malleorum'. Edn 191–3. *LmL*: COMPIL.Paris.I, *MGG2*: 46–52*e*.

On proportions, ff.145*r*–146*v*.

c. Incipit 'Si vis metiri monochordum'. Edn 193–4. New edn

(based on *E-Bac* Ripoll 42, f.70*r–v*), K.-W. Gümpel: 'Spicilegium Rivipullense', *AMw*, xxxv (1978), 59–61. K.-W. Gümpel: 'Musica cum Rhetorica: die Handschrift Ripoll 42', *AMw*, xxxiv (1977), 283; *LmL*: MON.Si vis metiri and MON.Divide mon.; *MGG2*: 46–52*f–g*.

On divisions of the monochord, ff.146*v*–147*r*. The excerpt is divided into two sections in the *LmL*, the second beginning 'Altera divisio monochordi. Divide monochordum in quatuor partes' (*LaFageE*, 194).

85. *LaFageE, Anon.4*. Incipit 'Quemo[a]dmodum, ut ait ille venerabilis doctor Ambrosius'. 15th century. Edn 241–8. *LmL*: ANON.La Fage III; *MGG2*: 46–52*h*; *TML*: ANOMUS.

A work in two parts (excerpted from *I-Rv* B.83, ff.39*r*–55*v*), the first on counterpoint, the second on *musica plana*.

86. *LaFageE, Anonymi 5*. 12th century. *TML*: ANOFRA3.

Excerpts from *I-Fn* Magl.F.III.565.

a. Rhythmus de cantu Philomelae. Incipit 'Aurea personet lyra clara modulamina'. Edn 275–9.

A poem with letter notation, ff.4*v*–6*r*.

b. Incipit 'Melorum genera sunt tria'. Edn 282–4.

Short passages on various aspects of music, ff.85*r*–97*v*.

c. Incipit 'Aetherium dulci laudantem carmine regem'. Edn 287–8.

A poem on music, f.97*r*.

87. *LaFageE, Anon.6*; *De musica*. Incipit 'Semidictonus est inaequalium notarum consonantia, tonum perfectum cum semitonio'. 15th century. Edn 346–50. New edn, R. Bragard: CSM, iii (1955–73), ii, 178–307. *TML*: ANOFRA4.

Excerpts from Jacobus of Liège, *Speculum musicae* (ii.73–125), drawn from *I-Fl* Plut.29.16, ff.54*r*–124*r*.

88. *LaFageE, Anon.7* [De La Fage anon., St Martial anon.]. Incipit 'Ex duobus tonis et semitono et tono'. 12th century. Edn 355–61. New edn, A. Seay: 'An Anonymous Treatise from St. Martial', *AnnM*, v (1957), 13–42. J. Handschin: 'Zur Geschichte der Lehre vom Organum', *ZMw*, viii (1925–6), 321–41; S. Fuller: 'An Anonymous Treatise *dictus de Sancto Martiale*: a New Source for Cistercian Music Theory', *MD*, xxxi (1977), 5–30; C. Maître: 'Etude lexicologique d'un traité dit de Saint Martial', *Cantus Planus III: Tihány 1988*, 257–65. *LmL*: ANON. La Fage I; *MGG2*: 53; *TML*: ANOFRA5.

The best-known anonymous work from La Fage's *Essais*, excerpts from *I-Fn* II.I.406 (formerly Magl.XIX.D.19), ff.1*r*–4*r*. La Fage presented several passages from this incomplete source, giving the treatise's incipit in a descriptive paragraph and beginning his first long excerpt, 'Viso de gravibus ordine ad acutas'. Handschin noted that the work derived from the St Martial school of polyphony and printed a long excerpt of the treatise beginning 'Discantus cantui debet esse contrarius' (Handschin, 1925–6, pp.333–6; cf *LaFageE*, 358). Seay presented a hypothetical completion of the work based on other manuscripts with the incipit: 'Quoniam de canendi scientia doctrinam sumus facturi'.

89. *LaFageE, Anon.8*. Incipit 'Sex sunt species discantus: scilicet unissonus [sic], semiditonus, ditonus'. 15th century. Edn 381–3. *LmL*: CONTR.Sex s.spec.II, CONTR.Volens igitur; *MGG2*: 46–52*i–k*; *TML*: CICNM.

A discussion of counterpoint excerpted from *I-Fr* 734, ff.103*r*–104*r*. The *LmL* divides the excerpt into two shorter works, the second beginning 'Volens igitur multos' (f.103*r*). La Fage's excerpts did not include that incipit, but began with the following line in the manuscript, 'Contrapunctus idem' (p.382).

90. *LaFageE, Anon.9*. Incipit 'Arythmetica: Disciplina numerorum'. 11th century. Edn 404–7. *LmL*: VOCAB.MUS., *MGG2*: 46–52*l*; *TML*: JOAMUS.

A musical dictionary excerpted from *I-MC* Arch.318, pp.298–300, and attributed by La Fage to Joannes Presbyter.

91. *LaFageE, Anon.10*. Incipit 'Notandum est quod regula subscripta'. 14th–15th century. Edn 423–8. *LmL*: ANON.La Fage II; *MGG2*: 46–52*m*; *TML*: ANOMUS2.

A compilation excerpted from *I-Rv* C.105, ff.119*r*–157*r*. Topics include church modes, hexachords, intervals, mensural notation.

Mettenleiter Anon.1. *See* FRUTOLFUS OF MICHELSBERG.

92. *Mettenleiter Anon.2*; *Regulae de musica*. Incipit 'Venerantissimis et in Christo plurimum diligendis dominis suis ... Omnium humanarum actionum seu studiorum que moderantur'. 1295. Excerpts ed. D. Mettenleiter: *Musikgeschichte der Stadt Regensburg* (Regensburg, 1866), 61–70. *LmL*: ANON.Hailspr.; *MGG2*: 58: *TML*: METANO2.

The work of two monks from Hailsprunne, from *D-ERu* 66 (cited by Mettenleiter as 193; cf RISM B/III/3, 45–6) in two long sections; the first part is on ecclesiastical modes, the second a 'commendatio omnium scientiarum et specialis musice'.

93. *Mettenleiter Anon.3*; *Ratisbonensis cuiusdam ars musica*. Incipit 'Reverentissimo domino patri ... Huius artis (musicae) experienciam querere cupientibus'. *c*1277–96. Ed. D. Mettenleiter: *Musikgeschichte der Stadt Regensburg* (Regensburg, 1866), 70–78. New edn, M.L. Göllner: *The Manuscript Cod. lat. 5539 of the Bavarian State Library*, MSD, xliii (1993), 69–94. *LmL*: ANON.Ratisb.; *MGG2*: 59; *TML*: METANO3 (cf ANOARSMU).

After a short preface to Bishop Heinrich of Regensburg (1277–96), the treatise (*D-Mbs* Clm 5539, ff.1*v*–24*r*) addresses such basic issues of chant as the Guidonian hand, intervals (called 'modi' in the treatise), origins of music, etymologies, psalm tones and *differentiae*.

94. *Meyer anonymi 1984*. Ed. C. Meyer: 'Ein deutscher Orgeltraktat vom Anfang des 15. Jahrhunderts', *Musik in Bayern*, xxix (1984), 43–60. *MGG2*: 105.

Two brief treatises on 'tactus' (counterpoint on the organ).

a. Incipit 'Reperi in una carta unum modum organizandij qui est antiquus'. First half of 15th century. Edn 44–8. *LmL*: TACT.Reperi.

From *D-Rp* Th98, pp.411–13.

b. Incipit 'Sequitur de quarto membro uidelicet de tactibus. Nota quod omnis tactus incipiens in ut'. *c*1470. Edn 56. *LmL*: TACT.Sequitur.

From *B-Br* II.4149, f.48*v*.

95. *Meyer anon. 1995*; *Tractatus de contrapuncto et de musica mensurabili*. Incipit 'Ad sciendum artem cantus'. *c*1400. Ed. C. Meyer, CSM, xl (1995). *TML*: ANOTDCM.

A treatise of south German provenance in *D-Mbs* Clm 16208, ff.145*r*–151*r*, and Clm 24809, ff.132*r*–136*r*, covering solmization, counterpoint and the basics of mensural notation.

96. *Meyer anonymi 1997*. *c*1430–1520. Ed. C. Meyer: *Tractatus de cantu figurativo et de contrapuncto*, CSM, xli (1997).

A collection of 11 brief mensural and counterpoint treatises drawn from late medieval German sources.

a. Ars et practica cantus figurativi. Incipit 'Discantus est diversorum cantuum secundum modum'. Edn 36–47. *TML*: ANOAPC.

From *D-Mbs* Clm 19851, ff.110*r*–113*v*. The beginning of the work is paralleled in Cat. no.40 (cf *LmL*: ANON.London.II).

b. Regulae cantandi contrapunctum. Incipit 'Quid est contrapunctus. Contrapuntus nil aliud est nisi notam contra aliam notam ponere'. Edn 50–52. *TML*: ANORCC.

From *I-Vnm* lat.Cl.VIII.82, ff.63*r*–65*r* and *D-Mbs* Clm 15632, ff.103*v*–104*v*.

c. De contrapuncto. Incipit 'Nota quinque sunt species eius'. Edn 54–5. *TML*: ANODCON.

From *D-Tu* Mc 48, ff.62*v*–63*r*.

d. De vera et compendiosa seu regulari constructione contrapuncti. Incipit 'De vera et compendiosa seu regulari constructione contrapuncti ... Prima regula contrapuncti est quod omnis contrapunctus debet perfecte incipi'. Edn 58–65. *TML*: ANODVC.

From *Tu* Mc 48, ff.64*v*–67*r*.

e. De contrapuncto plano. Incipit 'Tractatus compendiosus et brevis de contrapuncto plano ... Notandum quod novem sunt species contrapuncti'. Edn 68–72.

From *Tu* Mc 48, ff.79*r*–80*v*.

f. Regulae de contrapuncto. Incipit 'Contrapunctus est ars flectendi'. Edn 74–6. *TML*: ANORDC.

From *A-Wn* Cpv 3646, f.305*r–v*.

g. De consonantia et dissonantia. Incipit 'Consonantia est duorum sonorum sibimet permixtorum'. Edn 78–9.

From *Wn* Cpv 3646, ff.306*r*–307*r*. *TML*: ANODCD.

h. De formatione contrapuncti. Incipit 'Prima regula. Si discantus ordinatur in unisono cum tenore'. Edn 82–3. *TML*: ANODFC.

From *Wn* Cpv 3646, f.312*r–v*.

i. Excerpta de consonantiis et de contrapuncto. Incipit

'Consonantiarum simplicium alia est vel dicitur'. Edn 86–7. *TML*: ANOEXC.

From *A-Wn* Cpv 3646, ff.230*v*–231*r*, 302*r*, 314*v*.

j. Regulae contrapuncti. Incipit 'Item organisandi breviori conquirere cupiens modo'. Edn 90–96. *TML*: ANORCPT.

From *A-Ssp* b.II.42, ff.334*r*–338*v*.

k. Iuxta artem conficiendi compositiones. Incipit 'Iuxta artem conficiendi compositiones ... est primo videndum quid sit componere'. Edn 98–115. *TML*: ANOIUX.

From *D-Gs* Mus.IV 3000 Rara, suppl. ms., ff.26*r*–45*r*.

97. *Michels anon.* [OP anon., Anon. OP]. Incipit 'Quod punctus per sui additionem ... Illud est causa alicuius'. *c*1320. Ed. U. Michels: 'Der Musiktraktat des Anonymus OP', *AMw*, xxvi (1969), 49–62; edn 56–62. *LmL*: ANON. Michels; *MGG2*: 106; *TML*: ANOPTRA.

An early Ars Nova treatise from *GB-Ob* Bodley 77, ff.104*r*–105*v* and *F-Pn* lat.14741, ff.5*r*–6*r*. The work is a scholastic *disputatio* on five theses of mensural music (particularly imperfection and alteration).

98. *Moberg anon.*; *Tractatus brevis de musica mensurata*. Incipit 'Notularum alia longa, alia brevis, alia semibrevis'. 13th–14th century. Ed. C.A. Moberg: 'Om flerstämmig musik i Sverige under medeltiden', *STMf*, x (1928), 5–92; edn 82–6. *LmL*: MENS.Notularum; *MGG2*: 107.

A short treatment of mensural notation in the tradition of Franco of Cologne with several brief examples with particular emphasis on ligatures from *S-Uu* C.55, ff.26*r*–27*r*.

99. *Müller anon 1884* [Müller Anon.1, Cologne Organum Treatise]. Incipit 'Diaphoniam seu organum constat ex diatessaron symphonia'. *c*900. Ed. H. Müller: *Hucbalds echte und unechte Schriften über Musik* (Leipzig, 1884), 79–80. New edn, E.L. Waeltner: *Die Lehre vom Organum bis zur Mitte des 11. Jahrhunderts* (Tutzing, 1975), 54; new edn, H. Schmid: *Musica et Scolica enchiriadis una cum aliquibus tractatulis adiunctis* (1981), 222–3. *RiemannG*, 20. *LmL*: ORG.Colon.; *MGG2*: 60; *TML*: COLORG (cf COLORGS).

An early and very brief work (approximately 200 words) on organum; it considers the 4th an appropriate interval for organum.

100. *Müller anon. 1886*; *Regulae super discantum et ad discernendum ipsas notas discantus* [Müller Anon.2, Karlsruhe anon.]. Incipit 'Ad discendam artem discantandi notandum est, quod omnis discantus uno sex modorum habet fieri'. *c*1270–80. Ed. H. Müller: *Eine Abhandlung über Mensuralmusik in der Karlsruher Handschrift St. Peter pergamen. 29a* (Leipzig, 1886), 5–7. *LmL*: PS.-DIETR.; *MGG2*: 61; *TML*: DIEREG.

A brief work on rhythmic notation from *D-KA* St.Peter pergamen.29a, ff.7*v*–8*r*, attributed to a writer named Dietricus. The work names six rhythmic modes, indicating that it is independent of the teaching of Franco of Cologne, who proposed only five modes.

101. *Palmer anon.*; *Tractatus de musica compendium cantus figurati*. Incipit 'Praesens compendium secundum famosiores musicos in quindecim capitula dividitur'. 1490. Ed. J. Palmer: 'A Late Fifteenth-Century Anonymous Mensuration Treatise', *MD*, xxxix (1985), 87–106; edn 89–103. *LmL*: ANON.Salisb.; *MGG2*: 108; *TML*: ANOCOMP.

A compendium on white mensural notation in 15 brief chapters 'secundum famosiores musicos' from *A-Ssp* a.VI.44, ff.68*v*–75*r*. Palmer notes parallels with Cat. no.40.

102. *Pannain anon.*; *Liber musicae* [Schneider anon., British Museum anon.]. Incipit 'Unde constet diatesseron. Decem sunt modi quorum tantum tres dicuntur consonantiae'. 14th century. Ed. G. Pannain: 'Liber musicae: un teorico anonimo del XIV secolo', *RMI*, xxvii (1920), 409–39. Partial new edn in Schneider, 1934–5, ii, 106–20. *LmL*: ANON.Pannain; *MGG2*: 63 (as 'Anonymus Schneider'); *TML*: ANOLIBM.

A work on plainchant with a brief concluding section on discant from *I-Nn* VIII.D.12, ff.1*r*–20*v*. The work draws heavily on Guido of Arezzo and Johannes Cotto. A second source for a substantial portion of the work (*GB-Lbl* Eg.2888, ff.27*r*–39*r*) was published by Schneider with the incipit 'Primum tractatum huius voluminis de symphonia' (cf Pannain, 416).

103. *Pinegar anon.* [Bruges Organum Treatise]. Incipit 'Dicturi de organo, prout organum est generale ad omnem mensurabilem musicam'. Late 13th or early 14th century. Ed. and Eng. trans. S. Pinegar: 'Exploring the Margins: a Second Source for Anonymous 7', *JMR*, xii (1992), 213–43; edn 232–7; Eng. trans. 238–43.

An organum treatise in the margins of *B-BRs* 528, ff.54*v*–58*v*, with parallels to Cat. no.26 and additional material drawn from the theory of Johannes de Garlandia, the *Micrologus* of Guido of Arezzo and Cat. no.14.

104. *Reaney anon. 1983*; *De origine et effectu musicae*. Incipit 'Musica est scientia recte canendi'. Early 15th century. Ed. G. Reaney: 'The Anonymous Treatise *De origine et effectu musicae*: an Early 15th Century Commonplace Book of Music Theory', *MD*, xxxvii (1983), 101–19; edn 109–19. *LmL*: ORIG.ET.EFF.; *MGG2*: 109; *TML*: ANOOREF.

An introductory compilation on acoustics, chant and mensural music; it borrows heavily from the *Quatuor principalia musicae*. The work is in *GB-Lbl* Lansdowne 763, ff.55*v*–59*r*, and a partial version appears in *Ob* Bodley 515, ff.89*r*–90*v*.

105. *Reaney anon. 1997*; *Tractatus de contrapunto*. Incipit 'Inprimis dicetur qualiter contrapuntus'. Late 15th century. Ed. G. Reaney, CSM, xxxix (1997), 44–58. *TML*: ANOTDC.

A set of counterpoint rules in seven chapters (from *I-Vnm* lat.Cl.VIII.82, ff.30*r*–37*r*) similar in terminology to GUILIELMUS MONACHUS, *De preceptis artis musicae*.

106. *Riemann anon. 1897*; *Introductorium musicae*. Ed. H. Riemann: 'Anonymi Introductorium musicae (ca.1500)', *MMg*, xxix (1897), 147–64; xxx (1898), 1–8, 11–19. C. Miller: Introduction to *Johannes Cochlaeus: Tetrachordum musices*, MSD, xxiii (1970), 2. *MGG2*: 62; *TML*: ANOLEIP.

An anonymous abbreviation of Johannes Cochlaeus, *Tetrachordum musices*, from a manuscript in *D-LEu*.

107. *Riemann 'anon.' 1901*; *De cantu fractibili* [Leibowitz anon.]. Incipit 'Quum de contrapuncto, id est nota contra notam'. Ed. H. Riemann: 'M. Ugolini de Maltero Thuringi ... "De cantu fractibili"', *Präludien und Studien*, iii (Leipzig, 1901), 185–95. New edn and Fr. trans., R. Leibowitz: *Un traité inconnu de la technique de la variation, XIVme siècle* (Liège, 1950). H. Besseler: 'M. Ugolini de Maltero Thuringi "De cantu fractabili": ein scherzhafter Traktat von Hugo Riemann', *AcM*, xli (1969), 107–8.

A spurious work subsequently cited by several scholars as a genuine treatise of the early 14th century. The first example in the work (attributed to a 'venerable Joseph') is the pitch outline of Haydn's *Gott, erhalte [Franz] den Kaiser!*, HXXVIa:43.

108. *Ristory anonymi 1987*. Ed. H. Ristory, CSM, xxxiv (1987). *MGG2*: 110.

Two anonymous works from *A-Wn* 5003 (a source associated with the monastery at Mondsee) published together with two other works related to Franconian notation.

a. Compendium musicae mensurabilis artis antiquae. Incipit 'Gaudent brevitate moderni. Quandocumque nota quadrata vel punctus quadratus invenitur'. *c*1400. Edn 49–58. *LmL*: TRAD.Franc.IV; *TML*: ANOCOMM.

One of several works beginning 'Gaudent brevitate moderni' derived from the teachings of Franco of Cologne. On ff.200*r*–202*v* of the MS.

b. Tractatus artis antiquae cum explicatione mensurae binariae. Incipit 'Notandum quod, muteto vel conducto qui mensurabiliter cantantur'. Late 13th century. Edn 69–73. *LmL*: MENS.Notandum quod; *TML*: ANOTAA.

This treatise directly follows the preceding item on ff.202*v*–204*r*; it concerns pre-Franconian mensural theory.

109. *Ristory anonymi 1996*. Late 15th century. Ed. H. Ristory, CSM, xxxviii (1996). J. Herlinger: 'A Fifteenth-Century Compilation of Music Theory', *AcM*, liii (1981), 90–105.

A series of anonymous 15th-century works from *B-Br* II.785.

a. Capitulum de quattuor mensuris. Incipit 'Item nota tria consistunt in cantu'. Edn 62–3. *TML*: ANOCQM.

On f.8*v* of the MS.

b. Tractatulus mensurationum. Incipit 'De alteratione sub

brevitate. Nota quod ubi est perfectio numeri'. Edn 66–73. *TML*: ANOTRAM.

On ff.8*v*–9*v* of the MS. Previously considered part of ANTONIUS DE LUCA, *Ars cantus figurati*, *CoussemakerS*, iv, 424–6.

c. Compendium breve de proportionibus. Incipit 'De proportionibus breviter. De proportionibus aliquid clarius tractare'. Edn 76–82. *LmL*: PROP.MENS.De prop; *TML*: ANOCBP.

On ff.9*v*–11*r* of the MS. Previously considered part of Antonius de Luca, *Ars cantus figurati*, 426–8.

d. Tractatulus prolationum cum tabulis. Incipit 'Nota quod quatuor sunt partes prolationis'. Edn 84–92. Cf GLMT, x (1994), 124–9. *LmL*: PROP.MENS.Nota quod II; *TML*: ANOTPT.

On ff.11*v*–13*r*, 14*v* of the MS. Previously considered part of Antonius de Luca, *Ars cantus figurati*, 429–33, but also related to Cat. no.33.

110. *Schmid anon. 1990a*. Incipit 'Cum animadverterem iuxta hoc dictum: "longa solent sperni, gaudent brevitate moderni"'. 15th century. Ed. B. Schmid in Bernhard, ed., 1990, pp.71–6; edn 74–6. *LmL*: MENS.Cum animadv.; *MGG2*: 111.

A summary of mensural music in the tradition of the various 'Gaudent brevitate moderni' works after Franco of Cologne; it briefly treats such topics as *tempus*, prolation, note shapes, ligatures, plicated notes and the *punctus*. The treatise is in *D-Mbs* Clm 24809, ff.144*r*–145*r*. Schmid notes parallels with the works of Johannes de Muris, Johannes de Garlandia and other sources.

111. *Schmid anon. 1990b*. Incipit 'Quoniam circa artem musice figurative'. Mid-15th century. Ed. B. Schmid in Bernhard, ed., 1990, pp.77–98; edn 82–98. *LmL*: ANON.Monac.; *MGG2*: 112.

A work from *D-Mbs* Clm 26812, ff.344*r*–355*v*; it treats basic issues of mensural notation, including the possibility of notes smaller than a *minima*. The anonymous author mentions theorists including Boethius, Guido of Arezzo, Johannes de Muris and Marchetto de Padova.

112. *Schubiger anonymi*. Ed. A. Schubiger in PÄMw, v, Jg.iv/2 (1876). Sachs, 1970–80, ii, 251–67, 305–8, 239–45. *MGG2*: 64.

An excerpt on organ pipes from *CH-BEsu* B56, ff.2*v*–3*r*, now considered three separate works.

a. Incipit 'Cuprum purissimum'. Edn 82–4. New edn, Sachs, 1970–80, i, 55–8. *LmL*: FIST.Cuprum pur.

b. Incipit 'Mensuram et'. Edn 84. New edn, Sachs, 1970–80, i, 93–5. *LmL*: FIST.Mensuram et.

c. Incipit 'Si fistulae aequalis grossitudinis fuerint'. Edn 84–5. New edn, Sachs, 1970–80, i, 49–51. *LmL*: FIST.Si fistulae I.

113. *Seay anon. 1964*; *Libellus musicae adiscendae valde utilis et est dialogus*. Incipit 'Discipulus: Modo quaeritur quid est musica?' *c*1400. Ed. A. Seay: *Anonymus ex codice Vaticano Lat. 5129*, CSM, ix (1964), 21–48. *LmL*: ANON.Seay; *MGG2*: 113; *TML*: ANOLIB.

A treatise on both plainchant and counterpoint in *I-Rvat* vat.lat.5129, ff.145*r*–157*r*. The dialogue format is used only for the first few lines. Topics include hexachords, church modes, intervals and basic counterpoint rules. The work also discusses how to recognize the mensurations of Ars Nova polyphonic works.

114. *Seay anon. 1977a*; *Quaestiones et solutiones*. Incipit 'Primo videndum est quid sit introductio et unde dicatur'. Late 15th century. Ed. A. Seay, Critical Texts, ii (Colorado Springs, CO, 1977). *MGG2*: 114; *TML*: ANOQS.

A chant treatise from *I-PEc* 1013 (M.36), ff.47*r*–68*v*. The work begins in Latin and ends in Italian; it is based upon the *Introductio musicae* of JOHANNES DE GARLANDIA (*CoussemakerS*, i, 157–75; *LmL*: IOH.GARL.plan.) and discusses the mutation of hexachords, intervals, church modes and intonation formulas. The work contains lengthy parallels with Cat. no.44.

115. *Seay anonymi 1977b*. 15th century. Ed. A. Seay: *Quatuor tractatuli italici de contrapuncto*, Critical Texts, iii (Colorado Springs, CO, 1977).

Four counterpoint treatises, mostly in Italian, from two different sources.

a. Regule de contrapuncto. Incipit 'El contrapunto e semplice de unica sola nota in grave'. Edn 1–7.

From *I-Fl* Conv.Soppr. 388, ff.29*r*–34*r*.

b. Incipit 'Concioscia cossa che el contrapunto'. Edn 8–16.

From *Fl* Conv.Soppr.388, ff.68*r*–74*r*; text changes to Latin at the end.

c. Ad avere alcuna notitia del contrapunto. Incipit 'Per che dico il contrapunto richiede avere quatro cose'. Edn 17–24.

From *Fl* Redi 71, ff.24*v*–28*v*.

d. Incipit 'Dico che noi abbiamo nel contrapunto quattro gradi'. Edn 25–39.

From *Fl* Redi 71, ff.48*v*–59*v*, with a concluding chapter on proportions.

Smits van Waesberghe anonymi. Gushee's term (*Grove6*) for a collection of works (*Liber specierum*, *Liber argumentorum*, *Commentarius in Micrologum* and *Metrologus*) related to GUIDO OF AREZZO.

116. *Smits van Waesberghe anon. 1975*; *Commentum super tonos*. Incipit 'Dilectissimo coepiscopo e., a. divina gratia dispensante episcopus'. *c*1000. Ed. J. Smits van Waesberghe, *De numero tonorum litterae episcopi A. ad coepiscopum E. missae ac commentum super tonos episcopi E. (ad 1000)*, Divitiae musicae artis, A/i (Buren, 1975), 24–93. *LmL*: COMM.TON.; *MGG2*: 115; *TML*: ANOCST.

A brief discussion of chant modes before a lengthy tonary, based on *I-Nn* VIII.D.14, ff.19*r*–40*v*, and *D-BSb* lat.8°265, ff.1*v*–8*r*.

117. *Sowa anon. 1930*; *De musica mensurata* [St Emmeram anon.]. Incipit 'Quoniam prosam artis musice mensurabilis'. 1279. Ed. H. Sowa: *Ein anonymer glossierter Mensuraltraktat, 1279* (Kassel, 1930). New edn and Eng. trans., J. Yudkin: *De musica mensurata: the Anonymous of St. Emmeram* (Bloomington, IN, 1990). *LmL*: ANON.Emmeram.; *MGG2*: 65; *TML*: ANO1279 (cf ANODMM).

A lengthy work on mensural music from *D-Mbs* Clm 14523 (formerly in the monastery of St Emmeram, Regensburg), ff.134*r*–159*v*. It covers such topics as note shapes, rhythmic modes, hocket, discant and organum. The core of the treatise is a 410-line poem in Leonine verse characterized by a complex literary style. The poem is glossed and accompanied by a prologue and a lengthy prose commentary.

118. *Sowa anonymi 1933*. 11th century. Ed. H. Sowa: 'Zur Handschrift Clm 921', *AcM*, v (1933), 60–65, 107–120. *MGG2* 116.

A series of brief works from *D-Mbs* Clm 921.

a. (Tractatulus 1) Incipit 'Denique si *a* acuta habet XII'. Edn 61–2. *LmL*: PROP.Denique si.

A brief work on proportions in the margin of f.18*r*.

b. (Tractatulus 2–3) Incipit 'Hac ex lege protus autentus sit tibi notus'. Edn 63. *LmL*: VERS.Hac ex lege.

A short discussion on church modes in the margins of ff.18*v*–19*v*. Eight lines of verse are followed by a brief passage in prose.

c. (Tractatulus 4) Incipit 'Duo sinemena. Unum constat ex tono et semitonio et tono'. Edn 65. *LmL*: DIETKER.

A brief reference to tetrachords with a lengthy musical example in the margin of f.19*r*, attributed to a certain Dietker.

d. (Tractatulus 5) Incipit 'Sunt in uoce orationis'. Edn 107.

Three short phrases on non-musical topics (speech, the soul and the Muses) in the margin of f.19*v*.

e. (Tractatulus 6) Incipit 'Protus finit in lichanos ypaton'. Edn 107–8. *LmL*: MOD.Protus finit.

A short prose discussion of church modes in the margin of f.20*r*.

f. (Tractatulus 7) Incipit 'Cumque tam paucis clausulis tota armonia formetur'. Edn 108. *LmL*: TRAD.Hermann.I.

A commentary on the teaching of HERMANNUS CONTRACTUS, on f.20*v*.

g. (Tractatulus 8) Incipit 'Cantor cantores excitet ad cantandum sollicitet'. Edn 110.

A brief poem in the margin of f.21*v*.

h. (Tractatulus 9) Incipit 'Primam fistulam tante longitudinis'. Edn 111.

A short work on organ pipes in the margin of f.22*v*.

i. (Tractatulus 10) Incipit 'Pone primam nolam id est C'. Edn 113. New edn in J. Smits van Waesberghe: *Cymbala*, MSD, i (1951), 47. *LmL*: CYMB.Pone primam; *TML*: ANOCYM.

A paragraph on the measurement of bells in the margin of f.25*r*.

j. (Tractatulus 11) Incipit 'Tonus intensus, tonus remissus'. Edn 113–14.

A fragment on intervals in the margin of f.39*r*.

k. (Tractatulus 12) Incipit 'Primus igitur tonus uel tropus'. Edn 115–19.

A brief discussion of the church modes with diagrams and musical examples, on f.39*v*. Sowa suggests it is by Dietker, the author of Cat. no.118*c*.

119. *Sowa anon. 1935*. Incipit 'Graecam litteram ideo moderni maluerunt ponere quam latinam'. *c*1075. Ed. H. Sowa, 'Tractatus anonymus de musica et de transformatione specialiter, Cod.1492 Univers.-Bibl. Leipzig', *Quellen zur Transformation der Antiphonen: Tonar- und Rhythmusstudien* (Kassel, 1935), 154–60. Pesce, 1987, pp.37–9. *LmL*: ANON.Lips.; *MGG2*: 117; *TML*: ANODMT.

The work (from *D-LEu* lat.1492, ff.94*r*–98*v*) addresses issues of church modes including the gamut, transformation and transposition. The treatise cites several chants by name, and Sowa notes parallels with the work of Guido of Arezzo.

120. *Staehelin anon.* Incipit 'Differentia est inter motetos, ballados, vireletos et rondellos et fugas'. 15th century. Ed. M. Staehelin: 'Beschreibungen und Beispiele musikalischer Formen in einem unbeachteten Traktat des frühen 15. Jahrhunderts', *AMw*, xxxi (1974), 237–42; edn 239. *LmL*: GEN.DISC.Differentia; *MGG2*: 118; *TML*: ANOTDM.

Short definitions of forms with references to specific works.

121. *Steglich anon.*; *Quaestiones in musica* [Pseudo-Rodulfus of St Trond]. Incipit 'Quare non possint esse plura quam septem vocum discrimina. Natura omnium rerum antiquissima'. *c*1100. Ed. R. Steglich: *Die Quaestiones in musica: ein Choraltraktat des zentralen Mittelalters und ihr mutmasslicher Verfasser Rudolf von St. Trond* (Leipzig, 1911). *LmL*: QUAEST.MUS.; *MGG2*: 66; *TML*: RUDQUA.

A lengthy and detailed treatise on chant theory in 27 chapters or questions from *D-DS* 1988, ff.110*v*–143*v*, conjecturally attributed to RODULFUS OF ST TRUIDEN. The treatise cites several chants; musical incipits are notated *in campo aperto* or with a one-line staff. Steglich notes parallels with Guido of Arezzo, *Micrologus*; Aribo, *Musica*; Cat. no.127 and other sources.

122. *Sweeney anon.*; *De semibrevibus caudatis*. Incipit 'Primo nota quod omnes notulae sunt aequivocae'. Late 14th century. Ed. C. Sweeney, CSM, xiii (1971), 65–79. *LmL*: SEMIBR.CAUD.; *MGG2*: 119; *TML*: ANOSEM.

This mensural treatise from *F-Psg* 1257, ff.37*r*–40*r*, begins with a discussion of the *semibrevis caudata a parte inferiori* and mentions *modus*, *tempus*, prolation, red notation and the *semiminima*.

123. *Van Dijk anon.*; *Rubrica de modo cantandi et psallendi divinum officium*. Incipit 'Dum Domino psalles. psallendo tu tria serves'. 12th century. Ed. S.A. van Dijk: 'Saint Bernard and the *Instituta Patrum* of Saint Gall', *MD*, iv (1950), 99–109; edn 109. *LmL*: ANON.Cist.IV; *TML*: ANOVER.

A brief, non-technical poem on psalm recitation edited from *GB-Occc* D.44, f.194*r*.

124. *Vecchi anon.*; ; *Rubrice breves*. Incipit 'Tempus perfectum recte divisium in duodecim'. 14th century. Ed. G. Vecchi: 'Anonimi rubrice breves', *Quadrivium*, x (1969), 125–34; edn 128–34. *LmL*: RUBR.BREV.; *MGG2*: 120.

A gloss on the concluding passage of Marchetto da Padova, *Pomerium*; the work provides lengthy examples of various mensurations.

125. *Vetter anon.*; *Summula tractatus metricus de musica glossis commentarioque instructus*. Incipit 'Dat de psallendi metis pariterque canendi'. 14th century. Ed. E. Vetter, Divitiae musicae artis, A/viiia (Buren, 1988). *LmL*: SUMM.GUID.; *MGG2*: 121; *TML*: ANOSUM.

A 318-line poem on chant theory with commentary (beginning 'De regulis, numero, proprietatibus et clavibus finalibus tonorum primum capitulum'), formerly attributed to Guido of Arezzo.

Vivell anon.; *Commentarius in Micrologum*. *See* GUIDO OF AREZZO.

126. *Wagner anon. 1904* [Vatican anon.]. Incipit 'Quid est cantus? Peritia musicae artis inflexio vocis'. 10th century. Ed. P. Wagner: 'Un piccolo trattato sul canto ecclesiastico in un manoscritto del secolo X–XI', *Rassegna gregoriana*, iii (1904), 482–4; partial facs. (f.38*v* of source) in *KJb*, xix (1905), 70; partial edn and partial Ger. trans. in *Neumenkunde: Paläographie des liturgischen Gesanges* (Leipzig, 2/1912), 355–6. *LmL*: CANT.Quid est cant.; *MGG2* 67*a*; *TML*: ANOQUID.

A chant treatise from *I-Rvat* vat.lat.235, ff.38*v*–39*r*, covering the performance of neumes, 12 church modes (including four 'toni moesi') and examples of modal ambiguity in specific antiphons.

127. *Wagner anon. 1929–30*. Incipit 'Viginti et una littera sunt in monocordo'. 14th century. Ed. in P. Wagner: 'Aus dem St. Thomas-Archiv zu Leipzig, III: Ein didaktischer Musiktraktat', *ZfMw*, xii (1929–30), 129–37; edn 130–37. *LmL*: COMPIL.Lips.; *MGG2*: 122.

A compilation on plainsong written in a gradual (Leipzig, Archiv der St Thomaskirche, MS 371; now in *D-LEu*). The work discusses modes and intervals with references to specific chants. Wagner noted borrowings from Johannes Cotto and Guido of Arezzo.

128. *Wolf anon. 1893a* [Wolf Anon.1]. Incipit 'Quindecim chordae habentur in monochordo secundum Boetium'. Late 11th or early 12th century. Ed. J. Wolf: 'Ein anonymer Musiktraktat des elfen bis zwölften Jahrhunderts', *VMw*, ix (1893), 186–234; edn 194–226. *LmL*: ANON.Wolf; *MGG2*: 69; *TML*: WFANON1.

A lengthy treatise from *D-DS* 1988, ff.182*r*–189*v*, with parallels to Berno of Reichenau, Hermannus Contractus, Notker and Cat. no.55. Wolf suggested that the work was known to the author of Cat. no.121.

129. *Wolf anonymi 1893b* [Wolf Anon.2, Basel anon., Pseudo-Thomas Aquinas]. 13th century. Ed. J. Wolf: 'Anonymi cujusdam Codex Basiliensis', *VMw*, ix (1893), 408–17; edn 410–12. New edn, M. di Martino: *S. Tommaso d'Aquino: Ars musice* (Naples, 1933). *MGG2*: 70.

A collection in *CH-Bu* F.IX.54, ff.1*r*–8*v* (Wolf's edn; cf RISM, B/III/1, pp.69–71) and *I-Rvat* vat.lat.4357, ff.57*r*–64*r* (Martino's edn; cf RISM, B/III/2, p.95), consisting of excerpts from Johannes Cotto, Cat. no.121 and other sources. Wolf described the collection and edited only a short excerpt; Martino reproduced the full text and attributed it to Thomas Aquinas.

a. Incipit '[Figure with text: Ad iocundos primus 7mldr;] Quatuor ecce tropi natura matre creati'. Ed. Wolf, 410–12; Martino, 23–4. *TML*: WFANON2.

The portion published by Wolf is a brief excerpt on church modes including an extensive diagram of their ethical character.

b. Incipit 'Tractaturi de musyca videndum est quid sit musyca'. Ed. Martino, 24–9. *LmL*: PS.-THOMAS AQU.I.

A brief introduction to issues of *musica plana* (omitted by Wolf) including definitions of music (with references to Boethius, Pythagoras and Guido of Arezzo) and descriptions of the church modes.

c. Incipit 'Quoniam inter septem liberales artes'. Ed. Martino, 29–38. *LmL*: PS.-THOMAS AQU.II.

Further definitions of music (omitted by Wolf) with references to Boethius, followed by a discussion of intervals.

130. *Wolf anon. 1908*; *Compendium totius artis motetorum* [Wolf Anon.3]. Incipit 'Primo punctus quadratus vel nota quadrata'. *c*1340. Ed. J. Wolf: 'Ein anonymer Musiktraktat aus der ersten Zeit der "Ars Nova"', *KJb*, xxi (1908), 33–8; edn 34–8. *LmL*: MENS.Primo punctus; *MGG2*: 71; *TML*: WFANON3.

An early Ars Nova mensural treatise from *D-EF* Ca.8°94, ff.68*v*–70*r*, with some traces of Franconian influence, especially in the description of note shapes. The work is also notable for presenting notes smaller than a *minima* (*semiminima*, *minima addita* and *fusella*), the frequent citation of motets by name (including *de Garyson* and *Adesto sancta trinitas*) and suggesting that red notation indicates either a change of mensuration or octave displacement.

131. *Wolf anon. 1918–19*; *Tractatus de musica mensurabili* [Wolf Anon.4, Breslau (Wrocław) anon.]. Incipit 'Quoniam circa artem musicalis sciencie hodiernis temporibus cantando delyrant'. *c*1400. Ed. J. Wolf: 'Ein Breslauer Mensuraltraktat des 15. Jahrhunderts', *AMw*, i (1918–19), 329–45; edn 331–45. Partial Eng. trans. C.E. Brewer: *The Introduction of the Ars Nova into East Central Europe: a Study of Late Medieval Polish Sources* (diss., City of U. of New York, 1984), i, 174–217; ii, 427–30. *LmL*: ANON. Vratisl.; *MGG2*: 72; *TML*: WFANON4.

A lengthy mensural treatise from Wrocław (*PL-WRu* cart.IV.Qu.16, ff.144*v*–153*r*). The treatise's references to numerous pieces from the western European repertory (including works by Philippe de Vitry and Jean Vaillant) demonstrate the influence of

these compositions in central Europe. The treatise posits notes smaller than a *minima* (*semiminima*, *fusiel* and *dragma*) and ends with a long section on 'transmutacio' or syncopation.

3. INDEX. Here are listed putative authors, titles and alternative names of anonymous writings as well as editors subsequent to the first edition; references are to Catalogue numbers.

C. MATTHEW BALENSUELA

Ansalone. *See* ANZALONE family.

Ansanus S [Senese, Ser Ansano di Goro, Sano di Goro] (*b* *c*1470; *d* 1524). Sienese composer, singer and priest. Ansanus can now be identified as Sano di Goro, the son of a Sienese wool shearer, who is first recorded as a clerk in the cathedral of Siena in March 1484. He joined the chapel as a chorister in 1485, and was ordained in 1500, by which time he was an adult singer. He was dismissed from the choir in 1507 after having written a bitter letter complaining about his treatment by the *Opera* of the cathedral. He returned to the cathedral's services, at least temporarily, from April 1511 to March 1512. In April 1515 he is again listed as a singer there, and thereafter was more or less permanently employed in the choir until February 1524, serving as *maestro di cappella* in 1517 and again from 1520 to 1524. He died at the end of 1524.

The sole source of his music is the *Canzone, sonetti, strambotti et frottole, libro primo*, printed by Pietro Sambonetto in Siena in 1515 (RISM 1515[2]), where he is called Ansanus S[enese]. The print includes six *barzellette*, two *canzonette*, two *ode*, two *canzoni*, one *capitolo*, and one *strambotto* by him. In spite of his Tuscan training and experience, the works are squarely in the north-Italian frottola style, though the texts, with the exception of *Non expecto già mai*, a *capitolo* by the north-Italian poet Antonio Tebaldeo, seem to be local products. Of particular interest are three carnival songs, all *barzellette*: *Noi siamo galeotti*, *Chi volessi turchi siamo*, and *Logiamenti noi cerchiamo* (all ed. in Gallucci, Fusi, and Luisi, 1977). The three songs are mascheratas representing the ribald comments of men masquerading as galley slaves, Turkish warriors, and military quartermasters, respectively. Luisi (1977) associates Sano's canzone, *Volge fortuna*, with Sienese dramatic presentations.

Ansatz (i) (Ger.). In wind playing, EMBOUCHURE.

Ansatz (ii) (Ger.). In singing, the arrangement of the vocal apparatus or the attack of a note.

Ansatz (iii) (Ger.). In piano playing, touch.

Ansbach. Town in Germany. It was formerly the seat of the Hohenzollern margraves of Brandenburg-Ansbach in Bavaria. The margravate was established in the 14th century. An organ was installed in the newly built parish church of St Johannis in 1435, but it was only after Georg 'the Pious' (ruled 1536–43) had recognized Lutheranism as the official creed that music began to assume considerable importance. After 1565, under the Kapellmeister Jacob Meiland and Teodore Riccio, the music staff of the court included Flemings, Italians and Saxons, and the repertory became more cosmopolitan. Martin Zeuner, organist of the collegiate church of St Gumbertus – for which a new organ was built in 1565 – was for 40 years a conspicuous (if sometimes quarrelsome) influence on the music of the town. In 1579 the margrave became Duke of Prussia, which required his staff to serve from time to time at his residence in Königsberg.

In the later 17th century the Ansbach court began to develop towards its final Baroque splendour, and this was also a climactic period in the musical life of the court. In 1679 the opera *Die drey Töchter des Cecrops* by J.W. Franck, a court official and Kapellmeister from 1672 to 1679, was first performed, and his *Diocletianus* was produced in 1682 following its Hamburg première earlier that year. J.S. Kusser, fresh from his studies in Paris, was Kapellmeister in 1682–3; he was succeeded by J.G. Conradi (1683–6). The *Hochfürstliche Brandenburgisch Onolzbachischen Inventarium de Anno 1686* (Staatsarchiv, Nuremberg) suggests further French influence at this court. Many Lully operas were performed at Ansbach, and Kesser, one of Lully's violinists, introduced the French style of playing.

Under the enlightened rule of Margraves Georg Friedrich II (1692–1703) and Wilhelm Friedrich (1703–23), the palace developed into an acknowledged Baroque masterpiece. In 1697 a new opera house was inaugurated with the first performance of *Il Narciso* by F.A.M. Pistocchi, Kapellmeister from 1697 to 1701. C.L. Boxberg, already well known as an opera composer in Leipzig, was active at court in the late 1690s and his *Orion*, *Die verschwiegene Treue* and *Sardanapolus* were first performed at Ansbach in 1697–8. Queen Caroline, consort of George II of England and a friend of Handel, and J.C. Smith, Handel's amanuensis, were born and brought up in Ansbach. Although the 18th century was musically less interesting, musical activity continued at the court. Important Kapellmeister included J.C. Rau (1698–1717) and G.H. Bümler (1717–23 and 1726–45).

In 1831 a Singverein was founded (it later became the Sing- und Orchesterverein), and two years later a male-voice Liederkranz. Weber's nephew Anton Wilhelm was Kapellmeister for a time, and Johann Dürrner (1810–59) Kantor. A native of Ansbach, Dürrner was a pupil of Mendelssohn and in later life active in Edinburgh. He was a prolific composer, inflecting his partsongs with a Scottish idiom.

The biennial Ansbach Bach Festival, first held in 1948, was instigated partly because the Ansbachers J.M. Gesner and L.C. Mizler von Kolof were Leipzig acquaintances of Bach and because J.G. Voigt, organist of St Gumbertus (1752–65), was his pupil. Two dedicated Ansbach musicians, Edmund Hohmann (1858–1955) and Herman Meyer (1902–45), had laid the foundations for a Baroque revival on which the first directors of the Bach Festival, Ferdinand Leitner and Fritz Rieger, were able to build. Performances take place in the traditional auditoriums of the town: St Johannis, St Gumbertus (which has a fine neo-Baroque Steinmeyer organ, 1961), the state room of the Residenz and the orangery.

PERCY M. YOUNG

Ansbach, Elizabeth, Margravine of. *See* ANSPACH, ELIZABETH.

Anschlag (i) (Ger.). A 'double appoggiatura', that is, an ornament consisting of two notes rising by a leap and falling back by a step to the principal note. For illustration, *See* ORNAMENTS, §8, ex.95.

Anschlag (ii) (Ger.). In piano playing, touch (*see* TOUCH (ii)).

Anseaume, Louis (*b* Paris, ?1721; *d* Paris, ?7 July 1784). French librettist. From the 1750s he held various posts at the Opéra-Comique, including that of *sous-directeur* under Monnet, and wrote more than 30 *opéra comique* librettos during a period of important stylistic transition. His earliest works, often collaborations with the playwright Pierre-Augustin Lefèvre de Marcouville, were greatly reliant on vaudevilles and material parodied from the Bouffons' repertory. These were followed by collaborations with Laruette and Egidio Duni, the two composers most influential in the transition to the *comédie mêlée d'ariettes*.

Anseaume is best remembered for his successful partnership with Duni, beginning with *Le peintre amoureux de son modèle* (1757), although he also wrote important librettos for F.-A.D. Philidor and Grétry. His naturalism and lyric qualities were praised by F.M. Grimm, and he met Diderot's pleas for a more realistic style of acting, particularly through use of gesture, by including detailed stage directions. The emphasis on movement and action is exemplified further in Anseaume's treatment of the ensemble. In constructing complex and irregular texts in which up to seven characters could voice conflicting sentiments, he pioneered a dramatic, progressive type of ensemble in contrast to the traditional tableau effect of earlier operatic concerted writing. He developed, in particular, the ensemble of perplexity, an outstanding example of which is the septet finale to Act 2 of *L'école*

de la jeunesse (1765). Previously, and in conjunction with Marcouville, he had introduced the first known sextet in an *opéra comique* (*L'isle des foux*, 1760).

Anseaume's works enjoyed great public acclaim – *Le tableau parlant*, for example, remained in the repertory of the Opéra-Comique for almost one hundred years – and many librettos were published in the three-volume *Théâtre de M. Anseaume* (Paris, 1766).

WORKS

Le monde renversé (oc, after A.-R. Lesage and D'Orneval), 1753 (Gluck, 1758, as L'ile de Merlin, ou Le monde renversé); *Le boulevard* (oc, with F. de Hautemer), Laruette, 1753; *Bertholde à la ville* (oc, with G.C. de Lattaignant and P.-A. Lefèvre de Marcouville), after Ciampi, 1754; *Le chinois poli en France* (intermède), after Sellitto, 1754; *La nouvelle Bastienne* (oc, with J.-J. Vadé), ?Vadé, 1754; *Les amants trompés* (oc, with Marcouville), Laruette, 1756; *La fausse aventurière* (oc, with Marcouville), Laruette, 1757 (Gluck, 1758, as La fausse esclave); *Le peintre amoureux de son modèle* (oc), E. Duni, 1757 (rev. 1758); *Le docteur Sangrado* (oc, with J.-B. Lourdet de Santerre), Duni and Laruette, 1758

Le médecin de l'amour (oc, with Marcouville), Laruette, 1758 (Maldere, 1766); *Cendrillon* (oc), Laruette, 1759; *L'ivrogne corrigé, ou Le mariage du diable* (oc, with Lourdet de Santerre), Laruette, 1759 (Gluck, 1760); *Les épreuves de l'amour* (oc), J.-B. de La Borde, 1759; *Le maître d'école* (oc, with Marcouville), 1760; *Le procès des ariettes et des vaudevilles* (pièce, with C.-S. Favart), 1760; *Les précautions inutiles* (oc, with Achard), Chrétien, 1760; *La nouvelle troupe* (comédie, with Favart and C.H. Fusée de Voisenon), 1760; *Le soldat magicien* (oc), Philidor, 1760; *L'écosseuse* (oc, with Pannard), 1760; *L'isle des foux* (cmda, with Marcouville, after C. Goldoni), Duni, 1760; *Le dépit généreux* (oc, with A.-F. Quétant), Laruette, 1761

Mazet (cmda), Duni, 1761 (L. Kozeluch, 1780/86); *L'amant corsaire* (oc, with Salvert), Lasalle d'Offemont, 1762; *Le milicien* (cmda), Duni, 1762; *Les deux chasseurs et la laitière* (cmda), Duni, 1763; *L'école de la jeunesse, ou Le Barnevelt françois* (cmda), Duni, 1765 (A. Prati, 1779); *La clochette* (cmda), Duni, 1766; *Le tableau parlant* (comédie-parade), A.-E.-M. Grétry, 1769; *La coquette du village, ou Le baiser pris et rendu* (oc), L.J. Saint-Amans, 1771; *Le poirier* (oc, after Vadé), Saint-Amans, 1772; *La ressource comique, ou La pièce à deux acteurs* (cmda), N.-J. ELISABETH COOK

Ansell, John (*b* 26 March 1874; *d* Marlow, Bucks., 14 Dec 1948). English composer and conductor. He studied composition at the GSM with MacCunn and then pursued a career in London's West End, latterly as a musical director, especially at the Playhouse, Winter Garden, Alhambra, Shaftesbury and Adelphi theatres. He subsequently worked for the BBC from 1926 to 1930. Drawing on his theatrical background he composed incidental music and also operettas, of which *The King's Bride*, *Violette* and especially the well-characterized *Medorah* achieved modest success.

He was also adept at writing colourful, attractively scored and melodious suites and single movements. Some of these showed a fondness for Ireland, the country which also inspired his *Overture to an Irish Comedy*. Others sought to explore fresh ideas in the light concert suite, a common genre in the first half of the 20th century, as in his *Mediterranean Suite* (three dance movements representing Spain, Italy and France) and *The Shoe* (Sabot, Ballet Shoe, Court Shoe, Sandal, Brogue, Strathspey). His most popular piece was the rousing nautical overture *Plymouth Hoe*, really a potpourri of sea songs, and one of several lively overtures. Ansell is discussed in P.L. Scowcroft: *British Light Music: a Personal Gallery of Twentieth-Century Composers* (London, 1997).

WORKS
(*selective list*)

STAGE
all dates those of first London performance

The King's Bride (comic op, 2, N. Slee), Kennington, 19 July 1911

Mr Wu (Anglo-Chinese play, 3, H.M. Vernon and H. Owen), Strand, 27 Nov 1913

Violette (comic op, 2, Slee), Lyric, 13 May 1918

Medorah (comic op, V. Ennen and D. Spranklin), Alhambra, 1920

Incid music, incl. The Toymaker of Nuremberg (play, 3, A. Strong), Playhouse, 15 March 1910; Rip Van Winkle (play, 3, Strong), Playhouse, 21 Sept 1911; Colombine (fantasy, 1, Ansell and R. Arkell), Strand, 27 Nov 1913

INSTRUMENTAL

Orch ovs.: Ov. to an Irish Comedy (1912); Plymouth Hoe (1914); John and Sam (1918); Private Ortheris (1925); The Windjammer (1932); Tally-Ho (1933)

Orch suites: Danses miniatures de ballet (1905); Three Irish Dances (1908); Children's Suite (1916); Three Irish Pictures (1919); Innisfail (1928); Mediterranean Suite (1935); The Shoe

Other orch works: Serenade, vc, orch, 1898; Spick and Span, march, (1903); Le Printemps, waltz (1908); The Toymaker of Nuremberg, waltz (1910) [from incid music to play]; April Blooms, entr'acte (1924); The Grand Vizier (1925); The Elves Wedding; many others

Pf: Aubade (1905); Suite Pastoral (1922): 1 When the Hawthorn Blooms, 2 Poppies and Cornflowers, 3 The Autumn Moon, 4 Holly and Mistletoe

Principal publishers: Chappell, Hawkes & Sons/Boosey & Hawkes, Ascherberg, Hopwood & Crew

PHILIP L. SCOWCROFT

Anselmi, Giorgio (*b* Parma, before 1386; *d* *c*1440–43). Italian scholar and theorist. His many works, covering topics such as astronomy, astrology and medicine, also include a treatise *De musica*, notable for its influence on Gaffurius. He studied as a youth in Pavia and in about 1428 practised medicine in Ferrara, each time returning to Parma, where he was a member of a distinguished family.

The only remaining copy of Anselmi's treatise is Gaffurius's well-glossed mid-century exemplar (*I-Ma* H 233 Inf.). Written in April 1434, the work was purportedly the record of conversations between Anselmi and Pietro dei Rossi which took place in September 1433 at the Bagni di Corsena (now Bagni di Lucca). The treatise presents in dialogue form the topics of *harmonia celestis*, *harmonia instrumentalis* and *harmonia cantabilis*; each part represents one day's conversation. The influence of the medieval tripartite division is apparent, and although he did not disagree with the main ideas, Anselmi did not

accept certain details of the Boethian doctrines (e.g. the division of the tone).

The first part of the treatise leads from a discussion of Aristotle's doubts concerning the music of the spheres to a thorough exposition of number theory, including proportions and proportionality, which is then applied to musical intervals; it ends with an affirmation of celestial harmony, emitted by the planets and stars in all three genera, but substituting the nine orders of angels for Plato's sirens. The second section explains, with diagrams, the Greek harmonic system, then discusses the modern monochord, consisting of four octaves and including a complete set of flat semitones. The third day's discussion is devoted to more practical matters: learning to sing intervals (chromatic and enharmonic as well as diatonic) and read music, an explanation of the modes (based on Marchetto of Padua), mensural notation (both French and Italian) and advice on singing in an expressive manner according to the text (a passage taken over by Gaffurius). The most original part of Anselmi's treatise is his proposal for a new nomenclature and individual shapes for the 18 possible note values from the maxima down to the minor semiminim, a system designed to do away with the complexities of mensural notation. Perhaps owing in part to the limited circulation of his treatise, nothing came of his proposal.

Anselmi was not a professional musician and presented the elements of music in a way more accessible to the layman. The device of a dialogue allowed him to treat what interested him, to propose reforms, and to offer interesting sidelights on contemporary practice. Gaffurius appears to be the only theorist who had direct knowledge of Anselmi's treatise and its influence is traceable in the revised version of his *Theorica musicae* of 1492 and later writings.

CECIL ADKINS/BONNIE J. BLACKBURN

Anselmi, Giuseppe (*b* Nicolosi, nr Catania, 6 Oct 1876; *d* Zoagli, nr Rapallo, 27 May 1929). Italian tenor. He first appeared at the age of 13 as a violinist in his native city. After some experience in operetta he made his operatic début, by his own account, at Patras, Greece (*c*1896–8), singing various leading Italian roles. Serious studies with the conductor Mancinelli led to appearances in Genoa (1900) and soon afterwards at the S Carlo, Naples. In 1901 (and again in 1904 and 1909) he sang at Covent Garden; his success was still greater in Buenos Aires, Warsaw, Moscow and St Petersburg, and greatest of all in Spain. His warm, beautiful timbre and impassioned delivery (clearly evident in his many Fonotipia records made between 1907 and 1910) were helped by vivid enunciation as well as by a romantic appearance. He retired in 1918 and made his final public appearance, once more as a violinist, at Rapallo in 1926. Also a composer, he wrote songs, chamber music and a *Poema sinfonico* for orchestra.

DESMOND SHAWE-TAYLOR

Anselmo. *See* REULX, ANSELMO DE.

Ansermet, Ernest (*b* Vevey, 11 Nov 1883; *d* Geneva, 20 Feb 1969). Swiss conductor. He first followed his father's profession of mathematician, graduating from Lausanne University in 1903 and returning there as professor of mathematics, 1905–9. By then he had become more keenly interested in music, taking lessons in composition with Ernest Bloch and watching local conductors carefully. He decided to make music his career, and after a year in Berlin (where he sought advice from Nikisch and Weingartner) he conducted his first concerts at Lausanne and Montreux in 1910. In the following year he took over the Kursaal concerts at Montreux from Francisco de Lacerda (whom he acknowledged as the model for his mainly self-taught conducting technique), and in 1915 he became conductor of the Geneva SO.

During this time he formed friendships with several composers, including Debussy, Ravel and Stravinsky (then living in Switzerland). In 1915, on Stravinsky's recommendation, Ansermet became principal conductor for Diaghilev's Ballets Russes, with whom he made his North American début at New York in 1916, his South American début in 1917, and his London début in 1919. On the 1916 tour he made his first gramophone records with the orchestra of the Ballets Russes. His growing international reputation in this appointment was enhanced by his premières of such ballets as *El sombrero de tres picos* (Falla), *The Buffoon* (Prokofiev) and *Parade* (Satie), as well as various Stravinsky works including *Histoire du soldat*, *Pulcinella* and *Renard*.

Ansermet formed the Suisse Romande Orchestra at Geneva in 1918 and directed it continuously until his retirement in 1968. His performances were distinguished by his instinct for clarity of timbre and texture, and a scholar's concern for accuracy. He was a perceptive exponent of the classics but an even more persuasive

Ernest Ansermet

advocate for the music of his contemporaries – notably the French school of Debussy, Ravel and Roussel, as well as Stravinsky. He championed his compatriots, Honegger and Frank Martin, and displayed a particular regard for Bartók and Britten, conducting the premières of the latter's *The Rape of Lucretia* at Glyndebourne (1946) and the *Cantata misericordium* at Geneva (1963). He also gave the first performances of works by Bloch, Copland, Lutosławski, Martinů and Walton, among others.

Ansermet's earlier admiration for Stravinsky cooled with the composer's adoption of serial technique in the 1950s, and he published a strongly argued case against serial composition in a theoretical and philosophical treatise *Les fondements de la musique dans la conscience humaine*. Although he toured widely as a guest conductor, his sense of artistic responsibility kept him firmly linked to his own orchestra in Geneva in preference to tempting offers from elsewhere. With his Suisse Romande players he made numerous recordings which notably enriched the repertory and remain a testament to his musical character. His own compositions include *Feuilles au printemps* for orchestra, and settings of French verse.

NOËL GOODWIN

Ansink, Caroline (*b* Amsterdam, 8 Aug 1959). Dutch composer. She studied flute with Abbie de Quant at the Utrecht Conservatory, graduating in 1986, and composition with Joep Straesser (1983–8). In 1989 she won the composition prize from the Utrecht Conservatory. She has subsequently received a number of national and international awards. She currently teaches the flute at the Utrecht Conservatory. In 1992, together with the composer Catharina van Rennes, she was the subject of a documentary on Dutch television.

Her compositional output is considerable and ranges from chamber works to orchestral and choral works, many of which have been performed by leading Dutch soloists and ensembles. Her composing technique is expressive, often characterized by lyrical melodies, and does not eschew tonality. Her vocal works show a wide range of poetical sources, from ancient Greek texts to Paul Celan and contemporary Dutch writers, and often reflect her hatred of social injustice. Her dramatic monologue *Ni Dieu, ni Diable* (1995) is rich in contrasting textures and has a demanding role for the soloist, who portrays Jeanne d'Arc. Both accompanists, a percussionist and a pianist, participate in snatches of dialogue with the soloist in this colourful, theatrical work.

HELEN METZELAAR

Ansorge, Conrad (*b* Buchwald, Silesia, 15 Oct 1862; *d* Berlin, 13 Feb 1930). German pianist and composer. He studied at the Leipzig Conservatory and later with Liszt in Weimar (1885–6). He toured in the USA and in 1893 returned to Weimar, where he taught the piano. From 1898 to 1903 he served as a professor at the Klindworth-Scharwenka Conservatory in Berlin, and in 1920 became head of the piano master class at the German Academy in Prague. His pupils included Eduard Erdmann, Walter Schulthess, Selim Palmgren and Wilhelm Fürtwangler. Regarded as one of the most intellectual pianists of his time, Ansorge was a noted Beethoven interpreter. In the late 1920s he recorded the sonatas op.27 no.2 and op.13 for Vox. His compositions, none of which gained a foothold in the repertory, include a piano concerto (1922), three sonatas for piano, a Requiem (for male voice, chorus and orchestra), two string quartets and a string sextet.

RONALD KINLOCH ANDERSON/JAMES METHUEN-CAMPBELL

Anspach [Ansbach], **Elizabeth,** Margravine of [Craven, Elizabeth] (*b* London, 17 Dec 1750; *d* Naples, bur. 13 Jan 1828). English composer and playwright. She was the daughter of the Earl of Berkeley and at 16 married William Craven, later 6th Earl of Craven, with whom she had seven children. Beautiful, lively and indiscreet, she loved amateur theatricals and music. Her first play, *The Sleep-Walker* (1778), was published by Walpole at Strawberry Hill and her comedy *The Miniature Picture*

received an indifferent performance at Drury Lane in 1780. She provided music, as did Samuel Arnold and Tommaso Giordani, for her afterpiece *The Silver Tankard*, which had some success at the Haymarket Theatre in July 1781. On the day of the première Anthony Storer wrote to Lord Carlisle: 'If it is not a better piece than her Ladyship, the Lord have mercy upon it'. A week earlier an adaptation of her Christmas entertainment *The Baron*, with music by Arnold, had been a flop: the audience threw apples at the performers. For *The Arcadian Pastoral* she wrote the text, the young William Beckford provided music and a performance was given by her children and others at Queensbury House in 1782.

The following year she and her husband separated; she then travelled extensively, publishing a book on her trip through the Crimea to Constantinople. She settled in Anspach with Margrave Christian Friedrich (1736–1806) and wrote French plays and arranged productions for the court theatre, which had a good orchestra. They married in 1791, immediately after receiving the news of Craven's death; the next year the margrave sold his principality to the King of Prussia and they settled in England. Her private theatricals at Brandenburgh House, their home in Fulham, London, dazzled and scandalized polite society. She flung herself into acting, singing, writing and composing. The casts were stiffened by a few professionals, with Joseph Mazzinghi directing the orchestra in 1796, and in 1799 she allowed her opera *The Princess of Georgia* to be performed at Covent Garden for the benefit of the actor John Fawcett. The published text shows that she composed six of the airs and that at Brandenburgh House she sang the good fairy Nainda. None of her music survives apart from a two-part arrangement of her setting of *O mistress mine*, published about 1795.

OLIVE BALDWIN, THELMA WILSON

Ansseau, Fernand (*b* Boussu-Bois, nr Mons, 6 March 1890; *d* Brussels, 1 May 1972). Belgian tenor. A pupil of Demest in Brussels, he made his début at Dijon in 1913 as John the Baptist in *Hérodiade*. The war delayed his international recognition, but in 1918 he sang at La Monnaie, and from 1919 to 1928 he appeared at Covent Garden, where he was a favourite guest. At the Opéra-Comique (1920–21) he was the first tenor Orpheus in Paris since Nourrit and Duprez. Mary Garden engaged him for Chicago (1923–8). The Paris Opéra selected him for Admetus in *Alceste* (with Lubin), Tannhäuser and Lohengrin. From 1930 he sang mostly at La Monnaie, taking the role of Masaniello in *La muette de Portici*, performed to celebrate the centenary of the 1830 Revolution. His voice, wide-ranging in tone and register, was at home in both lyrical and dramatic parts, all of which he sang with inner conviction and outer verve, as can be heard in his many recordings, which include Orpheus, Des Grieux (*Manon*), Werther and Don José (*Carmen*).

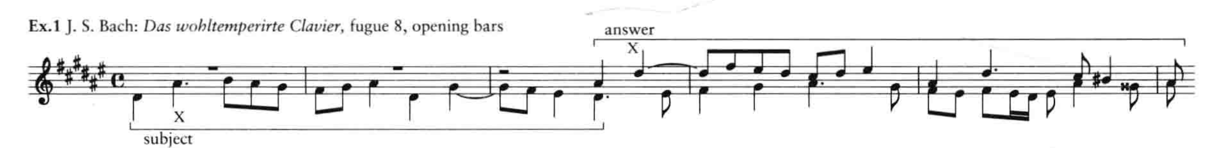
ANDRÉ TUBEUF/ALAN BLYTH

Anstieg (Ger.). *See* INITIAL ASCENT.



Answer. In a fugue, the second version of the SUBJECT, stated in the dominant key, generally by the second voice to enter. Writers during the Baroque period most often described this version as entering at the intervals of a 4th or 5th from the subject, but later writers, under the influence of tonal harmony, have most often described it as a transposition of the subject to the key of the dominant. Since the late Renaissance, musicians have recognized the need sometimes to alter certain notes of the answer in order to maintain the key or mode of the piece. More specifically, because a literal transposition of the dominant note a 5th higher or a 4th lower yields the supertonic note, composers often choose instead to answer the dominant note with the tonic note in order to avoid tonal movement into the key of the dominant and its dominant. In ex.1, brackets mark the subject in both subject and answer form, while 'x' shows where the tonal alteration occurs. Such alteration produces a TONAL ANSWER; if no alteration is present, the result is a REAL ANSWER (for further details see FUGUE, §1). There was no agreed terminology during the Baroque period for this phenomenon, although it was much discussed, with most writers of the period expressing preference for tonal answers. The adjectives 'real' and 'tonal' came into common use during the 18th century; G.B. Martini, for instance, in volume ii of *Esemplare, ossia Saggio fondamentale pratico di contrappunto* (1775), referred to the two types as *fuga reale* and *fuga del tuono*. Modern theorists, unlike their Baroque counterparts, have tended to consider the two kinds of answer equally valid. They may be swayed to that opinion by study of Bach's fugues, in which both real and tonal answers are to be found in abundance.

PAUL WALKER

Antara. Amerindian name for Peruvian PANPIPES.

'Antarī, Ṣāliḥ 'Abdallah al- (*b* Toḥayta, Tihama, South Arabia, *c*1892; *d* Ṣan'ā, 1965). Yemeni singer and lutenist. He began singing while in Zabid, accompanying himself on a copper plate. He studied the *qanbūs* (lute) with Muḥammad Sha'bān and Muḥammad al-'Attāb, both of whom he met in Ethiopia where they had taken refuge from the puritanism of Imām Yaḥyā. Al-'Antarī's life story is surrounded by legends, and it is also said that he met al-'Attāb in Ṣan'a and became his servant. Listening to al-'Attāb, al-'Antarī practised singing secretly until his master overheard him, recognized his talent and ordered him to sing to his guests. At the end of the 1930s al-'Antarī recorded 25 songs for the Odeon company in

Ex.1 J. S. Bach: *Das wohltemperirte Clavier*, fugue 8, opening bars

Aden, and his subsequent career included numerous radio broadcasts and performances at weddings. He had an exceptional voice and was an accomplished lute player; he excelled in both the classical repertory of Ṣan'ā (*al-ghina' al-ṣan'ānī)* and the *laḥjī* repertory (*see* LAHJĪ, MUḤAMMAD FAḌL AL-). He probably also sang in the Ethiopian language.

During the 1950s al-'Antarī retired to Zabid and gave up performing any music apart from religious song. His career was unexpectedly revived when he went to Ṣan'ā to support the new republic in 1962, and his last public performance took place at the Bilqis Cinema in 1965 on the anniversary of the revolution. He died shortly afterwards, his health undermined by alcohol; his death is rumoured to have been the outcome of a plot devised by jealous young musicians. He lived in a transitional period and represents a link between several geographical, social and aesthetic areas; he was the first Yemeni musician of true national stature.

JEAN LAMBERT

Antecedent and consequent (Ger. *Vordersatz* and *Nachsatz*). The names given to a pair of musical statements that complement one another by virtue of a rhythmic symmetry and, more important, a harmonic balance established by their juxtaposition (ex.1). Antecedent and

Ex.1 Mozart: Quartet in B♭ K458, theme of finale

consequent phrases often begin with the same musical material, the first phrase ending with an imperfect cadence and the second with a perfect cadence or a completed modulation to a new key; these make up what is commonly referred to as a PERIOD. The terms are most applicable to music built in regular (two-, four- or eight-bar) phrases grouped by pairs (*see* VIERHEBIGKEIT), especially dance music and settings of verse organized in couplets or quatrains.

See also FORTSPINNUNG.

Antegnati. Italian family of organ builders, composers and musicians. They were active from the last decades of the 15th century to the second half of the 17th. A Lorenzo Antegnati and his son Giovanni, a lawyer, established themselves in Brescia, coming from Lodi, assuming citizenship on 17 February 1431.

1. Organists and organ building. 2. Other keyboard instruments.

1. ORGANISTS AND ORGAN BUILDERS. Giovanni's son Bartolomeo (*d* 1501, called 'magister Bartholomeus de Lumesanis' probably because he had his shop in Lumezzane) was the first organ builder of the family, and was organist at Brescia Cathedral. He worked on organs at S Maria Maggiore and S Pietro de Dom, Brescia (1484), Milan Cathedral (the small organ, 1489–91); S Maria Maggiore, Bergamo (1496–8); S Lorenzo Maggiore, Milan (1498), and Albino, near Bergamo (1501).

Bartolomeo's son Gian Battista (*b* 1490; *d* before 1560) was a highly regarded organist, while Gian Giacomo (*c*1495–1563) and his son Benedetto (1535–1608) were organ builders.

Gian Giacomo's organs include instruments at Brescia: the Madonna delle Grazie and S Faustino in Riposo (both 1532–3), and S Maria de Dom (1536–7); Milan: S Eustorgio (1519–20), Cathedral (1552–9), S Maurizio (1554) and S Maria della Passione (1558); Salò Cathedral (1548) and Vigevano Cathedral (1554). Benedetto built organs at S Alessandro, Brescia (1564); S Vittore, Varese (1566); Turin Cathedral (1567–8); S Maria presso S Celso, Milan (1570–71); the Madonna della Steccata, Parma (1573), and Parma Cathedral (1575).

Gian Battista's son Graziadio (i) (*b* 1525; *d* after 1590) is considered the most outstanding builder of the family. He built organs at S Barbara, Mantua (1565); Santo Spirito, Bergamo (1566–7); S Agata, Cremona (1569); S Giovanni Battista, Morbegno (1572); Asola Cathedral (1575); S Giuseppe, Brescia (1581); collegiate church of SS Pietro e Stefano, Bellinzona (1584–8); S Rocco, Quinzano d'Oglio (1585); Crema Cathedral (1586); of these, only the one at S Giuseppe, Brescia, survives.

Graziadio's son Costanzo (*b* Brescia, 9 Dec 1549; *d* Brescia, 14 Nov 1624) is the best-known member of the family on account of his *L'arte organica* (Venice, 1608/*R*; see below). From 1570 he worked with his father and from 1584 to 1624 he was cathedral organist in his native city. He also composed music: a book of four-voice madrigals (1571), two books of masses for six and eight voices (1578, 1589), two books of four- and five-part motets (1575, 1581), a book of psalms (1592), a collection of masses, motets, and other works, for 12 voices (1603); a number of ricercares for organ (published as op.16 with his *L'arte organica*) and 15 *canzoni alla francese*. He built organs at S Giorgio, Bagolino (1590); the Madonna della Steccata, Parma (1593); S Maria Maggiore, Bergamo (1593–4); Gardone parish church (1594); Carmelite church, Salò (1594); S Agostino and S Grata, Bergamo (1604).

Costanzo's grandson, Graziadio Antegnati (ii) (*b* 1608; *d* 1656) is known to have worked on organs at Rovereto; S Marco and S Giorgio Maggiore, Venice; Padua Cathedral (1644–5) and S Antonio (1645–9); Vicenza Cathedral; and the Cathedral and S Maria dei Miracoli at Brescia (1644). For some time he was cathedral organist at Padua.

The typical Antegnati organ has a single manual and a pull-down pedalboard. Bartolomeo's organs at S Maria Maggiore, Bergamo, and at S Lorenzo Maggiore, Milan, belong to the type common in Italy during the second half of the 15th century, with 47 keys (*F'G'A'–f''*), spring-chest and six stops: Principale 12′, Ottava 6′, Quintadecima 3′, Decimanona 2′, Vigesimaseconda 11/2′, Flauto in quintadecima 3′. The later Antegnati organs have different compasses: that of a 16′ organ (53 keys) is *C–g''a''*; that of a 12′ organ can be *C'/E'–f''* (50 keys) with seven split keys for the D♭s and A♭s (S Barbara, Mantua), *F'G'–g''a''* (50 keys) or (at S Maria del Carmine, Brescia) *F'G'A'–c'''* (45 keys, S Maria al Campo, Almenno,

Costanzo Antegnati: title-page from his 'L'Antegnata, intavolatura de ricercari d'organo' (Venice: Angelo Gardano, 1608)

Cremona) or *C/E–f‴* (50 keys, S Carlo, Brescia); a 6′ instrument has *FGA–g‴a‴* (50 keys, Madonna di Campagna, Ponte in Valtellina), and a 3′ organ has *FGA–c‴* (42 keys, S Rocco, Viadana). Every organ has a Principale (16′, or 12′, or 8′, or 6′, or 3′; as an exception, for large churches, even 24′). The *ripieno* was then built up on this principale and consisted of single-rank stops, including an Ottava, Quintadecima, Decimanona, Vigesimaseconda, Vigesimasesta, Vigesimanona and, in larger organs, Trigesimaterza. The Antegnati never used double ranks for the Principale and the *ripieno*, unlike the majority of other Italian builders (especially in central Italy) who used double and even triple ranks (e.g. the organ by Lorenzo da Prato and Fachetti at S Petronio, Bologna). In addition to the *ripieno*, there were one, two, or even three Flauto ranks *in ottava, duodecima, quintadecima* or, at S Maria presso S Celso, Milan, *in decimanona*. In the second half of the 16th century the Fiffaro, a Principale (treble only) rank tuned slightly sharp to create an acoustic tremulant, was fairly common. A Tremolo was also used, which acted mechanically on the wind supply. In several of their contracts the Antegnati promised to supply reed stops, but appear never to have built them, with only one exception: a Cornamusa stop in the organ *in cornu epistolae* at S Maria Maggiore, Bergamo (Costanzo, 1593).

The organ tuning method described by Costanzo Antegnati in his *L'arte organica* is generally taken to be a description of mean-tone temperament with pure major 3rds and with 5ths tempered by a quarter of a comma. This assumption is based on Antegnati's direction that the 3rds should be tuned as pure as possible. However, since he first says that the 5ths are to be only slightly tempered (so as to be hardly noticeable), it would seem that they are to be tempered by less than a quarter of a comma, and that the 3rds should be tuned as pure as possible within the context of such 5ths. Such an interpretation is supported by Antegnati's failure to check every 3rd and 5th at the end of his tuning system.

In the *L'arte organica* Costanzo also suggested various registrations. Besides the complete *ripieno*, to be played without flutes at the beginning and at the end of the service, there is the *mezzo-ripieno* (Principale, Ottava, the two highest ranks of the *ripieno* and Flauto in ottava), and the *concerto di cornetti* (Ottava, Decimanona, a special Vigesimaseconda da concerto and Flauto in ottava). Other combinations include Principale and Flauto in ottava (with or without Ottava), Ottava and Flauto in ottava, Ottava and Decimanona, principale and Flauto in duodecima or Flauto in quintadecima, with or without Ottava (for further information *see* REGISTRATION, §I, 3).

2. OTHER KEYBOARD INSTRUMENTS. Another of Bartolomeo's sons, Giovan Francesco (*fl* 1533–85), was the only member of the family who constructed stringed instruments, specializing in harpsichords and polygonal virginals. In 1533 Lanfranco wrote of 'the monochordi, arpichordi and clavacymbali made with the utmost diligence by Giovan Francesco Antegnate from Brescia'. Giovan Francesco assisted his brother in the construction of the organ in Salò Cathedral: two autograph letters, held in the archive of the Comune of Salò and signed 'Jovan Francisco di Antegnati composittor di arpicordi' explain the delay in supplying the instrument. In 1566 he was a witness to Claudio Merulo's contract of employment as organist of Brescia Cathedral.

Several polygonal virginals by him have survived of a type that was widely used in Renaissance Italy, with a single 8′ register and an original compass of *FGA–f‴*. Often his instruments were elegantly decorated and had a detachable protective outer case. Three virginals bear the signature JOANNIS FRANSISCI BRISCIANI (1544, Museo Teatrale della Scala, Milan; *c*1550, Museo degli Antichi Strumenti Musicali, Rome; and 1554, now in the Ateneo in Brescia). One of 1569 (now in the Victoria and Albert Museum, London) which also bears the signature of Marco Jadra has the legend FRANCISCI BRIXIENSIS FECTI; the lid of another virginal in the same museum, dated 1537, bears his name but may be false, even if the instrument itself is authentic. A harpsichord with the double inscription '1554 FRANCESCUS GRIGENSIUS E DOMENICO DA PESARO 1590', held in the National Museum of Ireland, Dublin, is probably by him.

HANS KLOTZ/UMBERTO PINESCHI (1), LORENZO GHIELMI (2)

Antenoreo, Onofrio (*b* ?Padua; *fl* 1505–14). Italian composer. He is probably identifiable with the 'Honophrius Patavinus' of Petrucci's sixth and eleventh books of frottolas. His frottolas consist of nine *barzellette*, two *ode*, a ballata and a *strambotto*, the last, *Se un pone un fragil vetro*, a poem attributed to Serafino dall'Aquila. *Sed libera nos a malo*, from Petrucci's sixth book (RISM 1506[3]), is one of a group of macaronic works in the frottola repertory that parody biblical or liturgical texts; it begins with a phrase of music and text from the *Pater noster*. His *Se io ti dico el mio gran danno* from Petrucci's eighth book (1507[4]), uses the popular melody *Si vivesse cento e un anno* in its *ripresa*, and *Crudel amore*, from the same source, is one of the earliest settings of a ballata in the frottola repertory. Antenoreo's works are notable for their stereotyped hemiola rhythm.

WORKS

WILLIAM F. PRIZER

Antes, John [Johann] (*b* Frederick, nr Bethlehem, PA, 24 March 1740; *d* Bristol, England, 17 Dec 1811). American composer. He was educated in the Moravian boys' school at Bethlehem; among his early teachers was Johann Christoph Pyrlaeus (1713–85). For several years during the early 1760s Antes manufactured musical instruments in Bethlehem, and is known to have made at least seven string instruments (five violins, a viola, and a cello) of which a violin and viola are in museums in Nazareth and Lititz, Pennsylvania, respectively. He is thought to have also made several keyboard instruments, although none bearing his name is known. In 1764 he went to Herrnhut, Saxony, for further training and in 1765 to Neuwied to learn watchmaking. He was ordained a Moravian minister in 1769, and accepted missionary service in Egypt from 1770 to 1781. In 1779 he was captured by the henchmen of Osman Bey, whose intention was to extort money from him, and received a severe beating, which impaired his health for the rest of his stay. In 1781 he returned to Herrnhut, and in 1783 he was again living in Neuwied. In 1785 he became warder (business manager) of the Fulneck Moravian community in England, a position he occupied for most of the rest of his life.

Antes's extant music consists of three trios for two violins and cello op.3 (*c*1790), 31 concerted anthems and solo songs, and 59 hymn tunes. A letter from Antes to Benjamin Franklin, dated 10 July 1779, clearly indicates that Antes had composed 'Six Quartettos', presumably for strings. Besides the trios, only one solo song and several hymn tunes appeared in print during his lifetime. Manuscripts of his anthems are in the archives of the Moravian Church in Bethlehem and Winston-Salem, North Carolina, and in the Archiv der Brüder-Unität at Herrnhut. The London Moravian Archives have two manuscript books of hymn tunes. The music is close to Haydn's in technique and spirit. The three trios composed while Antes was in Egypt, the earliest known chamber music by a native American composer, show him as a composer of real talent with a good command of technique and a lively imagination. The anthems and solo songs are finely wrought works with instrumental accompaniment for strings and occasional wind: the solo and chorus *Go, congregation, go – Surely he has borne our griefs* is one of the most moving works in the Moravian repertory.

Antes was modest about his musical accomplishments, and referred to himself as a musical dilettante on several occasions. His long memoir, written shortly before his death, does not even mention his musical activities. He published a summary of his experiments for improving piano hammers, the violin tuning mechanism, and violin bows (*AMZ*, viii, 1806, 657), and invented a music stand, with which a player could turn pages automatically.

KARL KROEGER

Antesignanus, Pierre. *See* DAVANTES, PIERRE.

Antheil, George [Georg] **(Carl Johann)** (*b* Trenton, NJ, 8 July 1900; *d* New York, 12 Feb 1959). American composer and pianist of German descent.

1. Revolution: up to 1925. 2. Reaction: 1925–59.

1. REVOLUTION: UP TO 1925. Antheil began piano lessons when he was six and from the age of 16 travelled regularly to Philadelphia for theory and composition lessons with Constantin von Sternberg. On the advice of Sternberg, Antheil went to New York in 1919 to study composition with Ernest Bloch. In 1920 while studying with Bloch, Antheil began his first major work, the Symphonie no.1 'Zingareska'; it is interesting for the jazz rhythms in the last movement. After leaving Bloch's tutelage in 1921, Antheil returned to Philadelphia, where financial problems forced him to look for a patron. With Sternberg's help he gained the support of Mary Louise Curtis Bok; although she disapproved of Antheil's music,

she continued her financial assistance for the next 19 years.

With Bok's support, Antheil went to Europe on 30 May 1922 to pursue a career as a concert pianist. After presenting his first recital on 22 June 1922 at the Wigmore Hall in London, he settled in Berlin and from there made a successful tour of central Europe, often with recitals of his own music. In Berlin Antheil met Stravinsky, who exercised the single most important influence on his compositional style during the 1920s. The American's admiration of the Russian's anti-Romantic, machine-like, rhythmically propulsive style is reflected in the piano compositions *Airplane Sonata*, *Mechanisms*, *Sonata Sauvage*, *Death of Machines* and *Jazz Sonata*. The *Airplane Sonata* exemplifies Antheil's preoccupation with machines and time-space theories in the early 1920s. It is constructed out of the addition and manipulation of rhythmically activated blocks, each delineated by a different ostinato pattern. Stuckenschmidt (1923) summarized the style of Antheil's Berlin piano pieces as 'a most lively polyrhythmical homophony'.

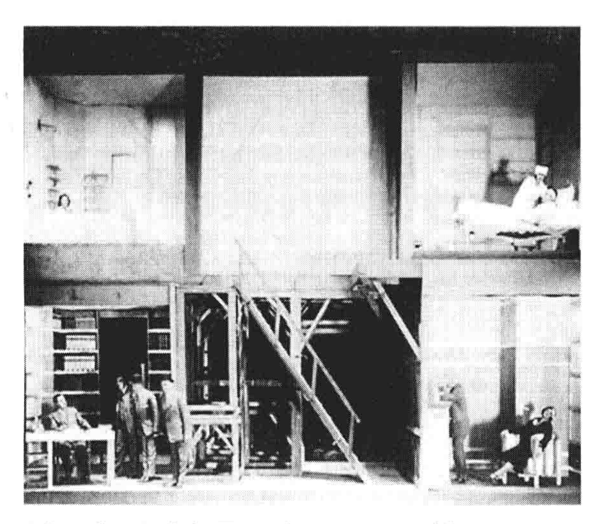
Antheil moved from Berlin to Paris in June 1923. His notoriety was ensured by the riotous reception of his performance of his piano pieces at the Théâtre des Champs-Elysées on 4 October 1923, and he was championed and befriended by Joyce, Pound, Yeats, Satie, Picasso and other artists, including the violinist Olga Rudge. Applauded as a genius by the Parisian literary community, he became the musical spokesman for their 'modernist' ideas. Pound wrote a book and numerous articles in praise of Antheil's music, and, together with Rudge, he commissioned two violin sonatas which were first performed on 11 December 1923 at the Salle du Conservatoire with Antheil accompanying Rudge; they performed them throughout Europe in the next few years. These sonatas, together with a third violin sonata (1924) and a string quartet (1924), illustrate Antheil's musical discourse of this period: an abstract juxtaposition of musical blocks on a time canvas, similar to the arrangements of objects in a Cubist painting. Summarizing the formal procedures of these chamber pieces is the massive *Ballet mécanique*, dating from the same period; it is a comprehensive statement of the composer's mechanistic outlook and time-space formulae modelled after Stravinsky's *The Wedding*. (Antheil sought to accompany this large-scale synthesis of his formal ideas with a motion picture. The problems of coordinating the film with the music, scored for 16 pianolas, xylophones, drums and other percussion, proved, however, insurmountable and both works became autonomous.) *Ballet mécanique* was first performed publicly on 19 June 1926 in a reduced version for one pianola with amplifier, two pianos, three xylophones, electric bells, small wood propeller, large wood propeller, metal propeller, tam-tam, four bass drums and siren. A milestone in the literature for percussion ensemble, the *Ballet mécanique* is more tightly unified than Antheil's other Paris works.

2. Reaction: 1925–59. With the enthusiastic reception of the *Ballet mécanique*, Antheil felt that he had become the leading young composer in Paris. He also believed that the *Ballet* had been a summary, and he consciously chose to change his compositional style in the *Symphonie en fa* (1925–6) and the Piano Concerto (1926), compositions which in 1936 he labelled neo-classic. The *Symphonie en fa* was well received when first performed with the *Ballet mécanique* (19 June 1926), but the Piano Concerto, given its première on 12 March 1927, was criticized as being a mere imitation of Stravinsky's neoclassicism and an abandonment of the earlier iconoclastic mechanistic style. Antheil's prominent position in Parisian musical life began to erode. The decline was cemented on the other side of the Atlantic by the disastrous American première of the *Ballet mécanique* on 10 April 1927 in Carnegie Hall, a carnival presentation by the over-eager promoter Donald Friede that alienated many.

Antheil's rejection in Paris and then New York in 1927 caused him to approach a new musical genre; attracted by the operatic 'renaissance' in Germany, he moved to Vienna in 1928 to complete *Transatlantic*, an opera whose plot centres on an American presidential election and presents a wild caricature of American life. Its première in Frankfurt am Main on 25 May 1930 was a modest success, as was its American première more than 50 years later (Trenton, New Jersey, 1981). Antheil electrifies the drama with fast cinematographic staging: the final act is played on an arrangement of four stages and a screen that allows quick cuts between scenes (see fig.1). Musically, the modular structure, jazz-inspired rhythms and parody of popular tunes reinforce the pace of the plot and underline the satirical tone of the opera.

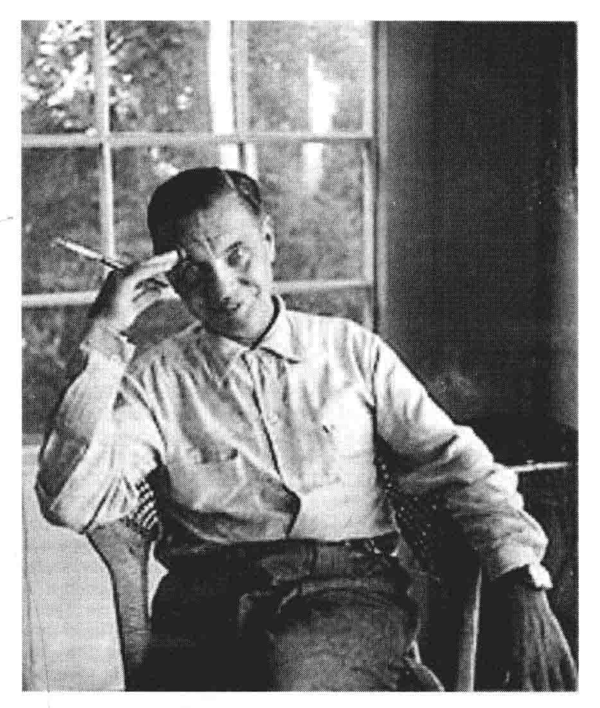
While Antheil was preparing for the production of this opera, he also worked on his second large-scale opera *Helen Retires*, which proved to be critically unsuccessful. From 1929 to 1933 he divided his time between Europe and America. In the two non-dramatic orchestral works *Capriccio* and *Morceau* Antheil solidified what he called 'a fundamentally American style', one that had appeared in embryo form in *Transatlantic* and would be strengthened by his study of symphonic form in the late 1930s and 40s, culminating in the Fourth Symphony. In both these works Antheil made a conscious effort to be 'popular', using a synthesis of American folk-like material that appears in almost all of his later compositions.

Before returning permanently to the USA in August 1933, Antheil completed *La femme 100 têtes*, a collection of 44 preludes and a concluding 'Percussion Dance' for piano after the surrealist collage novel of etchings by the painter Max Ernst; it presents the mechanistic style of Antheil's early Paris years within a controlled framework. Once home, Antheil continued to write works for musical theatre, a genre he believed could broaden the public's support for modern music. In New York he became a part of what he identified as 'a new theater movement – musical ballet-opera theatre', and wrote ballet scores for Balanchine and Martha Graham as well as several film scores for Ben Hecht and Charles MacArthur's Astoria production company.



Antheil settled in Hollywood in August 1936. He viewed Hollywood as 'the Mecca of young American composers', a place that offered him the opportunity of becoming financially independent. He became a respected film composer, completing 33 scores for such noted directors as Cecil B. DeMille and Nicholas Ray. His score for a documentary film for the 1939 World's Fair World's Communications Building is notable for its return to a bitonal machine aesthetic. In some 12 columns on film music published in *Modern Music* he articulated his belief that film music, like music theatre, provided composers with a means to educate and attract a large audience. His activities also included devising SEE-note, a tablature

notation for piano, and writing articles on topics from endocriminology to romance. By 1941, following the death of his brother, he felt he had reached the low point of his career.



In 1942, however, with the acceptance by Boosey & Hawkes of his Fourth Symphony Antheil recovered momentum and embarked on the most creative period of his life. The Fourth Symphony marks Antheil's turn to a Romantic spirit in music, embodies the preoccupation with symphonic form that had governed his musical philosophy for two decades, and reflects his admiration of Shostakovich's music. Its four programmatic movements are cast in traditional forms, and the entire cycle is unified through the transformation of thematic contours and intervallic patterns. Written to appeal to the public, the work's success is due to the infectious and 'schmaltzy' melodies, similar in character to those of *Capriccio* and *Morceau*. After the première by the NBC SO under Stokowski on 13 February 1944, the symphony was described in *Time* magazine as 'the loudest and liveliest symphonic composition to turn up in years' (xliii/9, 1944).

Antheil's embrace of a new Romanticism is most evident in his Symphony no.5 'Joyous' (this work is not the 'Tragic' Fifth Symphony discussed in his autobiography). It crystallizes the formal, stylistic and emotional principles of the Symphony no.4 and epitomizes his preoccupation with Beethoven and obsession with form dating from the mid-1920s. The Symphony no.5 was regarded by Virgil Thomson as Antheil's most skilfully crafted work. After 1942 Antheil wrote other compositions of a similar expressive intent with varying degrees of success. The best of the later works include the Serenade for String Orchestra, Violin Sonatina, Violin Sonata no.4, Piano Sonata no.4, *Songs of Experience* and *Eight Fragments from Shelley*.

In 1949 Antheil revived his interest in music drama with the opera *Volpone*, the most successful of a set of four operas completed in the early 1950s. The libretto is farcical, fast-moving and singable, and the music not only supports but, in the manner of Antheil's film music, expertly enhances the comedy. The heterogeneous harmonic language, the thematic versatility, the rhythmic continuum, the mosaic construction and the colourfully programmatic timbres all combine to reinforce the plot dramatically. Antheil's talent for satire and caricature also promotes the spirit of his last ballet *Capital of the World*. It attracts, as does the best in all Antheil's music, because of its rhythmic vitality, harmonic pungency and melodic vigour.

1. Scene from Antheil's 'Transatlantic', Act 3, Frankfurt, May 1930; the set, divided into four stages and a projection screen, was designed by Ludwig Sievert

2. George Antheil, California, c1952

WORKS

projected and incomplete works not listed; for a fuller list see Whitesitt (1983)

STAGE

Transatlantic (op, 3, Antheil), 1927–8, Frankfurt am Main, 25 May 1930

Water-Music for 4th-of-July Evening, str, 1942–3; Decatur at Algiers, 1943; Heroes of Today [1st movt of Sym. no.6], 1945; Over the Plains, 1945; Sym. no.5 'Tragic', 1945–6; Vn Conc., 1946; Spectre of the Rose Waltz, 1946–7 [from film, 1946]; Autumn Song 'An Andante for Orch', 1947; Sym. no.5 'Joyous', 1947–8; Sym. no.6 'after Delacroix', 1947–8, rev. 1949–50; American Dance Suite no.1, 1948; McKonkeys Ferry Ov., 1948; Serenade, str, 1948; Serenade II, chbr orch, 1949; Tom Sawyer, 1949; Accdn Dance, 1951; Nocturne in Skyrockets, 1951

VOCAL

Choral: Election (Antheil), c1927, lost [from op Transatlantic]; Merry-go-round from 'Candide', 1v, unison chorus, pf, 1932 [from inc. musical play after Voltaire]; 8 Fragments from Shelley, chorus, pf, 1951, 3 movts orchd 1951; Cabeza de vaca (cant., A. Dowling, after A. Nuñez), mixed chorus, 1955–6, orchd E. Gold, 1959

Songs (1v, pf, unless otherwise stated): 5 Songs (A. Crapsey): November Night, Triad, Suzanna and the Elders, Fate Defied, The Warning, 1919–20; 5 Lieder, 1922; You are Old Father William (L. Carroll), 1924; Turtle Soup (Carroll), 1924; Nightpiece (J. Joyce), 1930; 6 Songs: The Vision of Love (G. Russell), Down by the Sally Gardens (W.B. Yeats), The Sorrow of Love (Yeats), Lightning (D.H. Lawrence), I Hear an Army (Joyce), An End Piece (F.M. Ford), 1933; Frankie and Johnny [arr.], 1936; Songs of Experience (W. Blake): The Garden of Love, A Poison Tree, The School Boy, The Sick Rose, The Little Vagabond, I Told my Love, I Laid me Down upon a Bank, Infant Sorrow, The Tyger, 1948; Sighs and Grones (G. Herbert), 1956; The Ballade of Jessie James, n.d.; Bequest (M. Shelton), n.d.; Madonna of the Evening Flowers (A. Lowell), n.d.; Song of Spring, n.d.; In Time of Death (Lowell), n.d.

CHAMBER

Sym. for 5 Insts, fl, bn, tpt, trbn, va, 1st version, 1922–3, 2nd version, 1923; Sonata no.1, vn, pf, 1923; Sonata no.2, vn, pf, drums, 1923; Sonata no.3, vn, pf, 1924; Str Qt, 1st version, 1924, 2nd version, 1925; Str Qt no.2, 1927, rev. 1943; Concertino, fl, bn, pf, 1930; 6 Little Pieces, str qt, 1931; Concert, wind qnt, dbn/db, tpt, trbn, 1932; Sonatina, vn, vc/pf, 1932; Sonatina, vn, pf, 1945; Sonata no.4 (no.2), vn, pf, 1947–8; Str Qt no.3, 1948; 2 Odes (J. Keats): Ode to a Nightingale, Ode on a Grecian Urn, spkr, pf, 1950; Sonata, fl, pf, 1951; Sonata, tpt, pf, 1951; Bohemian Grove at Night, fl, ob/eng hn, cl, b cl, bn, 1952

PIANO

Fireworks and the Profane Waltzers, 1919, part lost; Golden Bird, 1921, orchd c1921; 4-hand Suite, 1922, rev. 1939; Airplane Sonata (Sonata no.2), 1921; Sonata Sauvage (Sonata no.1), 1922 or 1923; Death of Machines (Sonata no.3), 1923; Jazz Sonata (Sonata no.4), 1922 or 1923; Sonata no.5, 1923, part lost; Sonata, 1923; Woman Sonata (Sonata no.6), c1923, lost; The Perfect Modernist, c1923, lost; Mechanisms, pianola, 1923 or 1924, lost

Habañera, Tarantelle, Serenata, 2 pf, 1924; Sonatina für Radio, 1929; Tango, arr. A. Steinbrecher, c1930 [from op Transatlantic]; La femme 100 têtes, 44 preludes and Perc Dance, 1933; La vie Parisienne, 1939; Suite, pedagogical, 1941; The Ben Hecht Valses, 1943; Musical Picture of a Friend, 1946; Sonata no.3, 1947; Prelude, d, c1948; Sonata no.4, 1948; 2 Toccatas, 1948; Valentine Waltzes, 1949; Sonata no.5, 1950; Waltzes from Volpone, 1955 [from op]; Piano Pastels, pedagogical, 1956

FILM, TELEVISION, AND RADIO SCORES
directors' name in parentheses

Ballet mécanique [music never synchronized with film; see ORCHESTRAL]; Harlem Picture, 1934 or 1935; Once in a Blue Moon (B. Hecht), 1935; The Scoundrel (B. Hecht and C. MacArthur), 1935, lost; The Plainsman (C.B. DeMille), 1936; Make Way for Tomorrow (L. McCarey), 1937, lost; The Buccaneer (C.B. DeMille), 1938, lost; Music to a World's Fair film for World's Communications Building, 1939; Angels Over Broadway (B. Hecht), 1940; Orchids for Charlie, 1941; The Plainsman and the Lady (C.B. DeMille), 1946; Spectre of the Rose (B. Hecht), 1946; That Brennan Girl (A. Santell), 1946; Repeat Performance (A.L. Werker), 1947; The Fighting Kentuckian (G. Waggner), 1949; Knock on any Door (N. Ray), 1949; Tokyo Joe (S. Heisler), 1949; We Were Strangers (J. Huston), 1949 House by the River (F. Lang), 1950; In a Lonely Place (N. Ray), 1950; Sirocco (C. Bernhardt), 1951; Actors and Sin (B. Hecht), 1952, lost; The Juggler (E. Dmytryk), 1952; The Sniper (E. Dmytryk), 1952; Conquest of the Air (TV score), 1955, lost; Dementia, 1955; Hunters of the Deep, 1955; Not as a Stranger (S. Kramer), 1955; Target Ploesti (TV score), 1955, lost; The Pride and the Passion (S. Kramer), 1957; The Young Don't Cry (A.L. Werker), 1957, only 2 songs extant; Woman Without Shadow (CBS TV), 1957; The Twentieth Century Series, 10 CBS TV documentaries, 1957–8; 2 Edward R. Murrow programmes, 1959, lost; Rough Sketch; Airpower (TV score); The Path and the Door (radio score)

Anthem. A choral setting of a religious or moral text in English, generally designed for liturgical performance. *See also* NATIONAL ANTHEMS.

I. England. II. America.

I. England

1. Terminology. 2. History c1549–65. 3. History c1565–c1644. 4. History c1660–c1770. 5. History c1770–c1890. 6. History c1890 to the present.

1. TERMINOLOGY. In the Middle Ages the term derived from and was synonymous with ANTIPHON. After the Reformation the term denotes a polyphonic setting of a sacred English text, normally sung by the choir after the collects at Matins and Evensong; the text is freely chosen, most often from the Bible (especially the psalms) or from the Book of Common Prayer. The connection between Latin antiphon sung within the Office and English anthem sung as an appendage to Matins or Evensong is found in the Commemoration, Memoiral or Suffrage in which the antiphon was the most important musical element. In the medieval liturgy a Commemoration, Memorial or Suffrage was often appended to the main Office (e.g. Lauds or Vespers); this observance normally consisted of *Benedictus* or *Magnificat* antiphon, versicle and response, and collect – effectively a truncated Office commemorating an intention additional to the main Office (e.g. the saints, the dead, or a saint remembered on that day but not taking precedence in the main Office; see *LU*, 260–61, 273–7 for Roman Catholic equivalents). In the 15th and early 16th centuries popular devotion to the Blessed Virgin Mary was such that a Commemoration was sung at least daily and often at a specified place in the church – Lady Chapel, Lady altar, or statue of the Virgin – by a designated group of singers (e.g. choristers with their master in a cathedral, Lady Chapel choir in a monastery, choristers and chaplains in a collegiate foundation). This took place most often in the later afternoon, after Vespers or Compline, as a distinct ceremony. In some institutions the Lady antiphon was sung with elaborate polyphony and became the focus of the ceremony; modern scholars (following Harrison) have coined the term 'votive antiphon'. Many texts were specially written, and a substantial repertory of musical settings survives (e.g. the Eton Choirbook).

In the 1540s the opposition to what was perceived as superstitious devotion to the saints, together with the promotion of comprehensibility in worship and the desire among reformers for scriptural authority, resulted in the replacement of the Lady antiphon; in 1548 the Royal Injunctions for Lincoln Cathedral required that

> They shall from henceforth sing or say no anthems of our Lady or other Saints, but only of our Lord, and them not in Latin; but choosing out the best and most sounding to Christian religion they shall turn the same into English, setting thereunto a plain and distinct note for every syllable one: they shall sing them and none other. And after them read the collect for the preservation of the King's Majesty and the magistrates, which is contained and set forth in the English suffrage.

The adaptation of an existing practice is evident in this injunction, which though specific to Lincoln is indicative of a wider trend. Under the terms of the First Act of Uniformity (January 1549) English replaced Latin as the principal language of the English Church. The new liturgical book, the Book of Common Prayer, contains few rubics relating to music in the first version (1549); there are fewer still in the second version (1552) which has formed the basis of all subsequent issues of the book. There is no reference to the anthem in the pre-Commonwealth prayer books, but the Wanley Partbooks (*GB-Ob* Mus.Sch.E.420–22, c1546–8; ed. in RRMR, xcix–ci, 1995), an early source of English service music, include 'antems' – settings of sacred texts, some taken from the Henrician Primers. The Elizabethan Injunctions (1559), based substantially on those of Edward VI (1548), add specific guidance on music in cathedrals and other churches with choirs:

> *Item*, because in divers collegiate and also some parish churches heretofore there hath been livings appointed for the maintenance of men and children to use singing in the church ... that the same so remain. And that there be a modest and distinct song, so used in all parts of the Common Prayers in the Church, that the same may be as plainly understanded, as if it were without singing. And yet, nevertheless, it may be permitted, that in the beginning, or in the end of Common Prayers, either at morning or evening, there may be sung an hymn, or such-like song, to the praise of Almighty God, in the best sort of melody and music that may be conveniently devised, having respect that the sentence [sense] of the hymn may be understanded and perceived.

There is careful distinction between the 'modest and distinct song' of the service and the 'best sort of melody and music' of the 'hymn, or such-like song'. The avoidance of the term 'anthem' may represent caution because of its association with Latin antiphons, and specifically those addressed to the Blessed Virgin Mary, used during the restoration of the Latin Rite under Mary I. The first published collection of English service music, John Day's *Certaine Notes* (London, 1560), uses 'anthem' and 'prayer' synonymously. By the beginning of the 17th century the term was well established, and widely used in both printed and manuscript collections to define a polyphonic composition set to an English text generally of the composer's choosing and deriving from the Bible, the Prayer Book, or from a work of a religious or moral character. Such works are found in both liturgical and domestic sources; this indicates the overlap of religious observance in church and in the home, and is a reminder that choral polyphony was sung in fewer than 60 ecclesiastical institutions at this time. After the Restoration the anthem was increasingly regarded as a composition appropriate only to a church service or religious ceremony. Although by 1600 the anthem had become one of the principal musical forms of English choral service, only in 1662 was the anthem rubric added to the Book of Common Prayer after the third collect at Matins and Evensong: 'In Quires [i.e. choral foundations] and Places where they sing, here followeth the Anthem'.

2. HISTORY c1549–65. Knowledge of the early history of the English anthem derives from a handful of imperfect sources, of which the most important are the Wanley and Lunley Partbooks (*GB-Ob* Mus.Sch.E.420–22, c1546–8; ed. in RRMR, xcix–ci, 1995, and *Lbl* Roy.App.74–6, c1549; ed. in RRMR, lxv, 1985) and John Day's *Certaine Notes*. The provenance of the Wanley and Lumley books is not known, but there are good reasons for believing

that both may have been designed for small choirs, the first more likely for a parish church, the second for a private chapel. The preponderance of music for men's voices in the Wanley Partbooks and the absence of communion music in the Lumley books lend support to this supposition. Most of the anthems in the three sources are based on texts from the Bible, English primers, metrical psalters and from the Prayer Book. The composers are for the most part anonymous; the named composers include Caustun, Heath, Robert Johnson (i), Mundy, Okeland, Sheppard, Tallis, Tye and Whitbroke. Tallis's *Hear the voice and prayer*, Sheppard's *Submit yourselves*, Mundy's *He that hath my commandments* and the anonymous *Rejoice in the Lord* well represent the style of the early anthem. The four-part textures are predominantly imitative in a regular note-against-note counterpoint typical of the simpler Netherlandish motet of the early 16th century (ex.1). Attempts at word-painting are few, the characteristic mood being of measured solemnity. The simplicity of these anthems is attributable in part to the concern, often expressed at that time, to develop an idiom that would ensure the maximum clarity of diction while at the same time allowing for some interesting variation in musical textures. Although the liturgical reformation undoubtedly acted as a catalyst in the process of change from luxuriant melisma to syllabic, note-against-note counterpoint, the new musical techniques came from abroad, and from countries that had not yet been touched by Protestant ideologies. Some anthems are Latin motets adapted to English texts (contrafacta), among them Tallis's *Arise, O Lord* and *With all our hearts* (both from *Salvator mundi*); others make use of the form of the English partsong (*ABB*), including Tallis's *If ye love me*, *O Lord, give thy Holy Spirit* and *Purge me, O Lord*; Tallis's *I call and cry* also exists as a Latin motet (*O sacrum convivium*) and an instrumental fantasia.

3. History *c*1565–*c*1644. Easily the most significant development of the period was the creation of the 'verse' style, in which verses for solo voices and instrumental accompaniment (normally organ) alternated with passages for full choir. The basic principle may indeed have emerged in about 1550, for there is what appears to be an embryonic verse anthem in the Wanley Partbooks: an anonymous setting of *Now let the congregation*. The first verse of this metrical psalm seems to have been scored for a solo alto, the verse then being repeated in a harmonized version for all the voices. As Thomas Sternhold pointed out in the preface to his *Certayne Psalmes* (London, 1549; 19 psalms with no musical settings), metrical psalms were frequently sung at the time by a soloist, to a simple instrumental accompaniment. The first substantial verse compositions, however, date from the 1560s and early 1570s. Two of the very earliest are Richard Farrant's *When as we sat in Babylon* (reconstructed in *Le HurayMR*) and William Mundy's *Ah, helpless wretch* (see le Huray, *The Treasury*, ii, 1965, p.28). These, like nearly all pre-Restoration verse anthems, open with a brief introduction for organ, after which follows a verse for a solo voice or voices supported by a fully independent instrumental accompaniment. This leads into the first chorus where the instrumental part(s) do no more than double the voices. The full section comes to a close, and the anthem continues with as many verse/chorus pairs as the text demands. In some anthems the text of the verse is reworked in the succeeding chorus, and in certain anthems (notably those by Weelkes and Gibbons) musical ideas are repeated and developed. Most full and verse anthems, however, are through-composed.

The verse anthem has its roots not only in the early metrical psalm but also in the Elizabethan Consort song, and in the Elizabethan choirboy play. Most consort songs dating from *c*1550–80 are scored for a solo boy with an accompaniment of three or four viols. Some were written for the choirboy plays performed with music which were fashionable at that time. The dramatic productions presented by the boys of the Chapel Royal were especially popular during Richard Farrant's term of office as Master of the Choristers, and it is perhaps significant that the earliest extant verse anthems are by composers closely associated with the Chapel Royal, including Farrant himself. Some of Byrd's consort songs suggest possible links between the consort song and the early verse anthem: *Lord, to thee I make my moan* has a short closing phrase of some three bars that is repeated; in at least one of the manuscript sources words have been added to the supporting instrumental lines at the repetition, to make a very elementary verse-chorus structure.

The advantages of the new style must soon have been obvious, for by the turn of the century (judging by the extant repertory) composers were writing rather more verse anthems than full anthems. The verse style obviously saved a good deal of rehearsal time; it was potentially a most colourful medium, and musicians found that words tended to be more audible (and more moving) when sung

Ex.1 William Mundy: *O Lord, the maker of all things*

Transposed up a minor 3rd

by solo voices against an instrumental background than when sung chorally. In domestic situations anthems with instrumental ensemble were most probably accompanied by viols; in the Chapel Royal, and some cathedrals and collegiate chapels, cornett and sackbut players were engaged, especially during the reign of Charles I, at least on important feast days.

Byrd's fine Easter anthem for two solo boys, five-part choir and viols, *Christ rising again*, well illustrates the new verse anthem at its best (*Songs of Sundrie Natures*, London, 1589). Compared with Tallis's setting of the same text its impact is subjectively dramatic; the words are 'presented' to the listener with admirable clarity and its moods are 'represented' with great originality and power (ex.2). Byrd may not have been the first to develop the new verse style but he was certainly the first to reveal its very considerable potential. Well over a dozen of his verse anthems are still extant. His full anthems, which far outnumber them, also reveal a close concern for the spirit of the text. The most substantial of these are of considerable proportions. *Sing joyfully*, for six-part choir, is a particularly imaginative composition, with a well-planned cadential scheme: Byrd published most of his settings of English texts in his three great English anthologies of 'psalms' and 'songs' (1588, 1589, 1611); many of these were intended for devotional use in the home rather than in the liturgy.

The most distinguished of Byrd's younger contemporaries was perhaps Thomas Morley, whose setting of *Out of the deep* for solo alto, five-part choir and organ, is one of the most moving verse anthems of the entire period. Morley indeed conceived it to be the musician's task 'to draw the hearer as it were in chains of gold by the ears to the consideration of holy things'. Of Morley's immediate contemporaries the most important were the Chapel Royal musicians Nathaniel Giles and Edmund Hooper, who both wrote much for the English rites, mostly in verse form. Other comparatively minor composers included John Mundy, the two John Hiltons, John Holmes, Matthew Jeffreys, John Milton (father of the poet) and William (?or Thomas) Wilkinson.

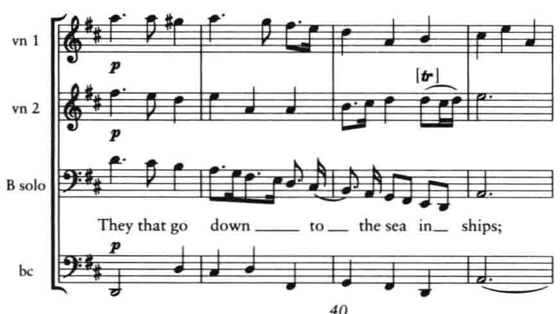
The next generation, of which Orlando Gibbons, Tomkins and Weelkes are the principal representatives, sought to give even greater dramatic impact to the anthem; they used more vivid contrasts of texture, developed a widening range of harmonic and melodic rhythms, and they began to seek out ways of integrating the total structure of an anthem by means of motivic recapitulation and redevelopment. Weelkes approached the anthem from a madrigalian standpoint, and it is no accident perhaps that his most effective anthems are in the full style. The full anthems *Alleluia, I heard a voice*, *Gloria in excelsis Deo* and *Hosanna to the Son of David* reach the highest levels of inspiration, and of the verse anthems, *Give ear, O Lord* is of the highest formal and musical interest. Gibbons, most of whose anthems are in the verse style, was equally forward-looking. He was particularly successful in conveying the declamatory shape of a text: *This is the record of John*, *Glorious and powerful God* and especially *See, the Word is incarnate* all owe much in this respect to Morley, and are some of the most remarkable verse anthems of the pre-Restoration period. His full anthems are less demonstrative but mature, accomplished essays in polyphony, among them *Almighty and everlasting God*, *Hosanna to the son of David*, *O Lord, in thy wrath*, and the celebratory eight-part *O clap your hands*. Tomkins was a particularly prolific composer, with an unusually keen ear for vocal colour, and a feeling for imitative polyphony. In matters of structure and style, however, he was comparatively conservative, although there are one or two exceptional anthems such as the chromatic *Know ye not*, written for Prince Henry's funeral in 1613, and the very moving anthem or 'sacred madrigal', *When David heard*. A profusion of minor composers continued to work the established idioms of the full and verse anthem. Some, like Amner, Batten, Michael East, Nicholson, William Smith and Ward, produced worthwhile music that still merits a hearing. Others, such as Cranford, Fido, Hinde, Thomas Holmes, the Lugges, Palmer, Portman, Stonard, Giles and John Tomkins, Warwick, Wilson and the Woodsons, are now primarily of historical interest.

Although the decani/cantoris disposition of the Anglican choir was well suited to the exploitation of polychoral effects, English composers in the 16th and 17th centuries showed little interest in these possibilities. Even in so extensive a work as Tomkins's 12-part *O praise the Lord*, spatial considerations play very little part in the overall disposition of voices. Nor indeed did English composers show a great interest in the innovations of the *stile nuovo*. One or two Chapel Royal composers did graft italianate mannerisms on to a basically English idiom with some success, notably William Child, William and Henry Lawes and Walter Porter. Child's *Turn thou us* contains some very italianate turns of phrase for the solo voices, and the harmonic idiom is unusually tonal, as are also the harmonies of the full anthems *O God, wherefore art thou absent* (*Treasury*, ii, 1965, p.248) and *Bow down thine ear*. Porter, a pupil of Monteverdi, was the most obviously italianate composer in London before the Civil War, so much so that his many anthems failed to gain a foothold outside the Chapel Royal. If the verse anthem *O, Praise the Lord* (*Treasury*, ii, 1965, p.232) is typical of his general style it is easy to see why this was so, for the solo lines are full of melisma and ornament, and extremely difficult to sing. George Jeffreys's style is somewhat akin to Porter's. His church music dates from considerably later, however, and is unlikely to have influenced the mainstream development of the English anthem.

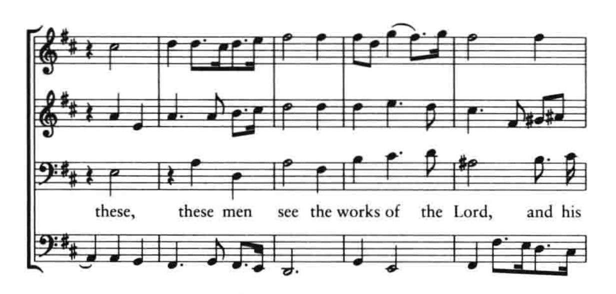
4. History *c*1660–*c*1770. After a break of some 15 years during the period of the Civil War and the Commonwealth, choral services were resumed in 1660. To judge from James Clifford's wordbook of anthems, *The Divine Services and Anthems* (1663, enlarged 2/1664), a great deal of pre-Restoration music had been recovered and was forming the bulk of the daily repertory. At the Chapel Royal Henry Cooke and Matthew Locke were writing anthems in a wholly new style for performance at the Sunday and festal services, when the king was present. Textures in their anthems are basically homophonic, the harmonic idiom is tonal rather than modal, and the structure is less an alternation of verses and choruses than a succession of contrasting verses, interspersed with an occasional chorus, often of a somewhat perfunctory kind. Both composers had been abroad during the Commonwealth, and the influence of French and Italian styles is very evident in their work.

A further step away from the pre-Restoration style was taken in 1662, when the king's enlarged violin band was introduced to the Chapel Royal to play symphonies and

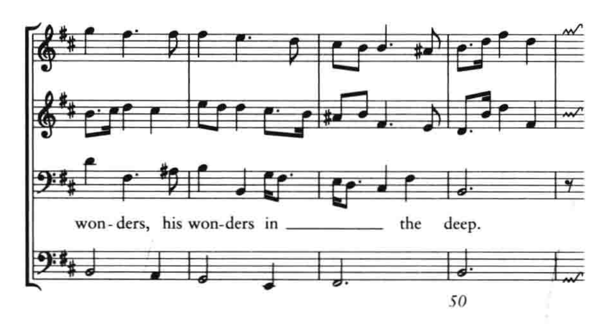
ritornellos between the verses of the anthem, a practice that continued regularly until 1688 and after that sporadically on special occasions. Locke's *Be thou exalted Lord* represents an early example of an occasional 'orchestral' anthem and is also one of the grandest, being scored for three four-part choirs with soloists, five-part string band, a consort of viols and two theorbos. Some Chapel Royal anthems still made use of the wind ensemble



Ex.3 Purcell: *Let mine eyes run down with tears* (?1682)



as in pre-Commonwealth times, including Locke's *I will hear what the Lord God will say*, accounting for some angular instrumental writing. Of Purcell's other elder contemporaries, Pelham Humfrey wrote orchestral anthems which are much less angular than Locke's, the French influence being much in evidence. Blow had already written much when Purcell came of age, and was still active some ten years after Purcell's death. His style is most akin to Locke's, although it has a greater sense of harmonic direction, as for instance in the powerful orchestral anthem for the 1685 coronation, *God spake sometime in visions*. Of all Restoration composers, Blow was the most prolific.

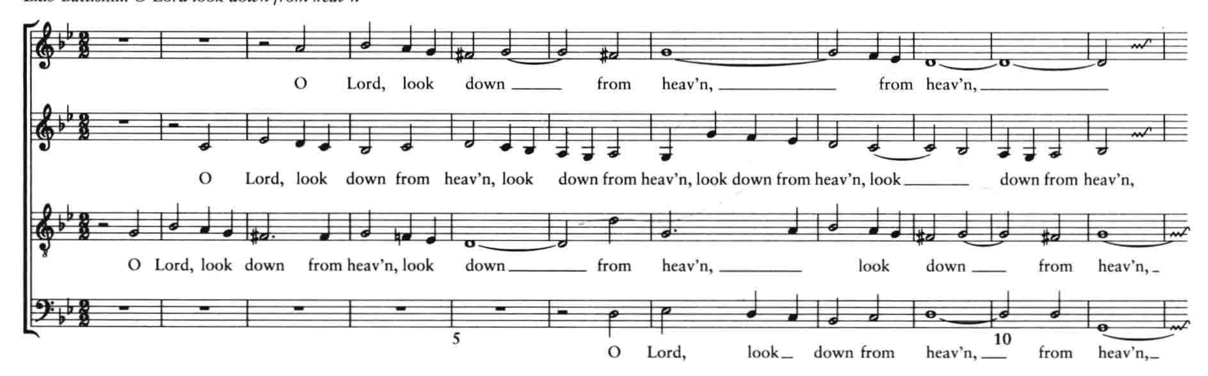


The Restoration period is often spoken of as the 'Purcellian' period, however, for Purcell synthesized and developed all that was most successful in the work of his predecessors. His full anthem *Hear my prayer, O God* (the opening section of a larger work never completed) represents a moving continuation of the 16th-century polyphonic style: his early verse anthem, *Let mine eyes run down with tears* is richly harmonic in Blow's best manner (ex.3); and the orchestral anthems, of which *Rejoice in the Lord*, *My heart is inditing* and *They that go down to the sea* (ex.4) are particularly effective examples, owe much to Locke and Humfrey.

At no time before or since the Restoration was the Chapel Royal so central to the history of English cathedral music, for every composer of standing was connected with it in some way or other. After the accession of James II (a Catholic convert) in 1685, however, the Chapel Royal steadily lost its pre-eminence, and patronage of Anglican church music declined. During the 18th century the opera house and the concert hall were of greater interest to the musical public. Although much agreeable

Ex.4 Purcell: *They that go down to the sea* (after 1685)

church music was composed, little of it was of great spiritual depth.



Handel's Anglican music comprises a set of 11 anthems for the Duke of Chandos, the last and in many ways the grandest of the Restoration orchestral anthems (1716–18), and some ten other occasional anthems. Of Purcell's younger contemporaries, William Croft achieved some eminence. Other minor figures include Aldrich, Jeremiah Clarke, Robert Creighton, James Hawkins and Roseingrave. Of the many English composers of the early 18th century Greene and Boyce deserve some attention. Greene's indebtedness to Handel has perhaps been overstressed. His most effective full anthems look back to the time of Gibbons – his *O clap your hands* is akin to Gibbons's setting of the same text in strength and dignity; his most original verse anthems, notably *Lord, let me know mine end*, also have a personal stamp.

Although no anthem by Boyce quite measures up to Greene's best work, verse anthems such as *O where shall wisdom be found?* and *I have surely built thee an house* are creditable extensions of the Restoration tradition. Other minor figures include John Alcock, Thomas Kempton, Thomas Kelway, James Kent, James Nares and John Travers.

5. History *c*1770–*c*1890. The period from 1770 to 1817 was described by Foster as a 'trackless desert'. It was the period of adaptations and arrangements, in which some editors dismembered the compositions of English and foreign composers, replacing the original texts with incongruously chosen passages from the Bible. Nevertheless, Jonathan Battishill and Samuel Wesley will continue to be remembered for some effective anthems. Of Battishill's anthems, *O Lord look down* has a contrapuntal and harmonic strength that places it in the highest class (ex.5). Samuel Wesley was largely responsible for bringing the music of J.S. Bach before the English public, and the best of his own anthems and motets reflect the influence of Bach both in the scale of their design and in the strength of their melodic lines. The impressive motets *Exultate Deo* and *In exitu Israel*, especially, foreshadow later developments, and are of considerable intrinsic musical interest. Among Wesley's contemporaries, Thomas Attwood, John Clarke-Whitfeld, Benjamin and Robert Cooke, William Crotch, Thomas Ebdon and Thomas Norris deserve mention.

The nadir of the English anthem, and of English cathedral music generally, was reached during the early years of the 19th century. The daily services were performed in a perfunctory and incompetent manner; the average repertory was small and representative of only the simplest 18th- and early 19th-century composition. As S.S. Wesley remarked (*A Few Words on Cathedral Music*, 1849), no cathedral in the country possessed 'a musical force competent to embody and give effect to the evident intentions of the Church with regard to music'. The foundations of the Victorian revival, however, were being laid at this time. Maria Hackett (1783–1874) and S.S. Wesley led vigorous campaigns, the former to improve working conditions and the latter to raise levels of musical competence in cathedral establishments. Scholars such as

Ex.5 Battishill: *O Lord look down from heav'n*

Ex.6 S.S. Wesley: *Blessed be the God and Father*

John Jebb, Frederick Oakley and Thomas Helmore sought to restore to the musical part of public worship the same propriety and dignity that was being sought in other fields by leaders of the Oxford Movement and the Cambridge Camden Society. Among composers active at the time were Sterndale Bennett, J.B. Dykes, G.T. Elvey, John Goss, F.A.G. Ouseley, R.L. Pearsall, Henry T. Smart, T.A. Walmisley and S.S. Wesley. Of these S.S. Wesley is unquestionably pre-eminent. Many of his best anthems (composed between 1830 and 1850) were published in a collected edition of 1853, and several are of considerable proportions, lasting between 15 and 20 minutes, *The wilderness and the solitary place*, *O Lord, thou art my God*, *Let us lift up our heart*, *Blessed be the God and Father* (ex.6) and *Ascribe unto the Lord* are particularly memorable. Like Mendelssohn's *Hear my prayer* (1844) these anthems clearly show the influence of contemporary oratorio: the organ accompaniments are conceived in more orchestral terms than had formerly been the case, a trend that was greatly assisted by the introduction of pedals and easily manipulated stop-change mechanisms. Wesley's use of clearly differentiated recitative and aria styles and his imaginative harmonic vocabulary point to the awareness of developments well beyond the confines of the cathedral organ loft. None of his immediate contemporaries was in any way his equal, and many of the younger composers, including Joseph Barnby, G.M. Garrett, Stainer and Sullivan, fell too easily under the saccharine influence of Spohr, Gounod and Mendelssohn himself.

6. History *c*1890 to the present. The two names most commonly associated with the English musical renaissance are those of Parry and Stanford. Stanford was particularly influential in the field of church music. He condemned the practice, common in his younger days, of adapting as anthems compositions that had been 'imported from sources, foreign in more senses than one, foreign to our buildings, to our services and to our tastes' ('The choice of Music in Church Choirs', *The official Report of the Church Congress . . .* , 1899). He was greatly concerned to further a 'genuinely English' school of composition, and paid a generous tribute to the Wesleys and to 'their influence upon the modern renaissance in England, of which they were as undoubtedly as they were unconsciously the forerunners'. While Stanford's own church music reflects his lively interest in contemporary music abroad, it is unmistakably English in style and structure. The anthem *The Lord is my Shepherd* well illustrates the composer's concern to integrate large-scale forms by means of motivic development. It also contains many imaginative harmonic turns of phrase, as indeed do all his most memorable anthems, not least being the three splendid motets *Coelos ascendit hodie*, *Justorum animae* and *Beati quorum via* (ex.7), written for the choir of Trinity College, Cambridge.

Ex.7 Stanford: *Beati quorum via*

During this time of renaissance, a multitude of minor craftsmen, nearly all of them church musicians, produced well-wrought, if generally unremarkable, music for the Anglican rites, including Edward Bairstow (whose fine *Let all mortal flesh keep silence* will long be remembered), Ernest Bullock, Darke, Dyson, Harris, Basil Harwood, C.S. Lang, Moeran, Sydney Nicholson, Thiman and Wood.

Few major English composers since the 1920s, however, have written much of significance for the Anglican rites; Vaughan Williams's greatest contribution in this field is his imposing Mass in G Minor, which far outweighs the few incidental 'anthems' that he wrote. John Ireland's *Greater love hath no man* was his only essay in this form. Berkeley wrote anthems of distinction for a number of special events. Isolated compositions of an anthem-like character suggest what might have been achieved had there been more effective communication between the organ loft and the outside world, notably Holst's setting of *The Evening-Watch*, Bax's motets *This worldes joie* and *Mater ora filium*, Walton's *The Twelve* and Britten's *Rejoice in the Lamb*. None of these, however, is practicable for daily use.

The work of 20th-century scholars in publishing editions of anthems by composers from the Reformation to the 18th century has added to the repertory so that choirmasters may now draw on the best Anglican music from all periods; the demand for new works in the form is therefore relatively small. Though less striking than his settings of canticles, Howells's anthems include the early partsong-like carol-anthem *Here is the little door*, the accompanied *Like as the hart*, and the late, unaccompanied eight-part *Take him, earth, for cherishing*. Post-1945 musical complexity and technical demands were ill-suited to the ethos or practicalities of Anglican church music; in setting sacred texts Leighton, Mathias and Richard Rodney Bennett adopted idioms informed by Bartók and later Stravinsky. After 1970 Jonathan Harvey and John Tavener achieved a significant and welcome revaluation of the spiritual nature and musical style of the anthem. Harvey's work follows on from late modernist complexity but adopts the medieval practice of composing outwards from the tenor, exemplified in *Come, Holy Ghost* (1986) based on the plainchant hymn. Tavener's conversion to the Greek Orthodox Church brought together the innocence of his early vocal music (e.g. *The Lamb*) and the incantation and rich textures of the Orthodox tradition, imbuing an intrinsically simple post-modern idiom with considerable spiritual power; *Song for Athene* (1994) has received worldwide attention as a result of its use at the funeral of Diana, Princess of Wales (1997).

II. America

The American anthem originated in the late 18th century. Its models were the English anthems which had begun to appear in American publications about the middle of the 18th century and in the collections of church music brought by immigrants or imported from England. The most important of those collections were William Tans'ur's *The Royal Melody Compleat* (1754–5) and Aaron Williams's *The Universal Psalmodist* (1763). Two Americans, Josiah Flagg of Boston and Daniel Bayley of Newburyport, Massachusetts, were most influential in introducing the anthem into the New World. Flagg issued *Sixteen Anthems* in 1766, and Bayley was responsible for printing and distributing Tans'ur's collection as well as his own *New Universal Harmony* (1773), which contained 20 anthems by seven English composers including John Arnold, William Knapp, Joseph Stephenson and Aaron Williams. He also published John Stickney's *The Gentleman and Lady's Musical Companion* (1774), the largest collection of English anthems compiled in America during the 18th century. English composer-musicians such as William Tuckey and William Selby were also influential when they emigrated to the Colonies and established themselves as leaders of the musical communities in New York and Boston.

Generally, these English anthems, composed for rural Anglican parishes or nonconformist congregations, were short unaccompanied works for four-part mixed chorus with occasional brief solos. Each line of the text, usually a paraphrase of verses from the *Psalms*, served as the basis of an independent section, most of which were chordal with only short insertions of imitative polyphony.

After independence was established, works by native composers quickly outnumbered the English models in American publications. The centre of anthem composition during the 18th century was New England, where the pioneer was William Billings. 47 of his anthems appeared in his several collections of church music beginning with *The New-England Psalm-Singer* (1770) and ending with *The Continental Harmony* (1794). Other leading composers of anthems in New England were Jacob French, Daniel Read, Jacob Kimball and Oliver Holden. While the earliest efforts of American anthem composers were understandably primitive, though not without a certain charm of naivety, those of the second generation were equal in musical technique to their English models, which, in turn, were predictably inferior to the products of the cathedral and collegiate composers trained in the polyphonic tradition.

Outside the mainstream were the Germanic immigrants, most notably the Moravians (*see* MORAVIANS, MUSIC OF THE) who settled in Pennsylvania and North Carolina. Chief among them were Christian Gregor, Johannes Herbst, John Antes and J.F. Peter; their works, unlike the English models, featured combinations of voices and instruments. Their anthems appeared in several 19th-century American collections but, unfortunately, were mostly confined to their isolated communities.

In general, the English anthem continued to be the standard for Americans during the first half of the 19th century, after the model of such British immigrants as George K. Jackson in Boston, Benjamin Carr in Philadelphia, and later Edward Hodges in New York. Although Lowell Mason's first publication *The Boston Handel and Haydn Society Collection of Church Music* (1882), contained a number of congregational hymn and psalm tunes adapted from continental operatic and instrumental works, in keeping with Mason's objective of elevating Americans' musical taste, all but one of the 13 anthems and set-pieces for choir and figured bass or a simple keyboard accompaniment in the collection were by English church musicians of the period, among them Martin Madan, Samuel Arnold and James Kent. *The Boston Handel and Haydn Society Collection* went through 22 editions over the next 17 years and exerted a strong influence on American church music well into the 1850s.

Subsequent compilations by Mason and such contemporaries as George Webb, Nathaniel Gould, Thomas Hastings and William Bradbury included some anthems by American composers. In general, these were simple pieces, imitating the English model. Their overall texture was chordal and hymn-like with some contrasting of chorus and smaller ensembles. For the most part, however, American church choirs of the era sang imported music, including English anthems (some from as early as the 16th century), some continental motets or mass movements with texts translated or adapted, oratorio movements, and settings of sacred texts to music from the operatic and orchestral repertories.

During the second half of the 19th century the European influence on American anthems was intensified because a large number of American composers spent time studying in Europe, especially in Germany. At the same time numerous anthems by local composers were published, either singly or in collections or magazines, simply because the form was functional and demand was great. Edmund Lorenz's *The Choir Leader* followed the pattern of Novello's *Musical Times* in issuing a monthly publication containing anthems suitable for a volunteer choir. Most of these works were as undistinguished and undemanding as many of their English counterparts of the period, although some anthems by Americans trained in Europe were musically admirable and suitable primarily for the professional quartet choirs then popular.

The two most influential anthem composers in America around the turn of the century were Dudley Buck and his younger contemporary Horatio Parker, both of whom had studied in Europe. Although Buck took a dim view of professional quartet choirs, his anthem style, with its lyrical melodies and colourful harmonies, was admirably suited to that kind of ensemble. His 55 published anthems were a mainstay of most Protestant church choirs' repertories well into the 20th century; indeed, through much of that period Buck's anthems were performed with a frequency exceeded only by those of the English composer Joseph Barnby.

Parker's anthems were more difficult and more sophisticated than Buck's and accordingly achieved nowhere near their popularity and widespread use. Nevertheless his work compares favourably with that of such English contemporaries as Stanford and Parry. Parker's melodic material is not as immediately engaging as Buck's; rather, his anthems' effect grows out of their strong diatonic harmony and excellent counterpoint juxtaposed against dramatic choral unison passages. A more popular composer of Parker's generation was Buck's pupil Harry Rowe Shelley, whose anthems are similar to his teacher's, although he was clearly less gifted than Buck. When he chose, Buck could and did write effective counterpoint; Shelley generally avoided contrapuntal textures, relying instead for effect on engaging melodies and dramatic harmonies.

Large numbers of anthems continued to be published in America after 1900. Most of the pieces lacked noteworthy merit; however, a number of composers did write distinctive and original anthems during the first half of the 20th century, among them Everett Titcomb, F. Melius Christiansen, Leo Sowerby, Clarence Dickinson, and two British immigrants, Tertius Noble and the naturalized Canadian Healey Willan.

The anthems of both Noble and Willan are typically English, with strong diatonic harmonies, full-textured organ accompaniments, and the use of choral unison for contrast. Many of Willan's most effective anthems are based on hymn tunes. Titcomb's anthems, by contrast, generally lacked the professional polish of Willan and Noble, but their clear diatonic harmony and uncomplicated melodies made them especially effective for choirs of limited proficiency, and they thus gained wide use. Many of Dickinson's most distinctive anthems are based on European folktunes. His style, like Titcomb's, usually consisted of a simple and engaging melody over clear diatonic harmonies, making his music practical for choirs of limited skill. Sowerby's idiom was the most advanced of the group, and distinctively American. He placed elegant, often asymmetric, melodies over modal and chromatic harmonies, sometimes approaching in flavour the popular music idioms of his time, but always with subtlety and sensitivity.

In the late 20th century, the flow of anthems from numerous publishers continued unabated. As in earlier

times, most of the pieces were of indifferent quality. During the 1960s and 70s popular musical idioms made distinct inroads in American as well as English church music, and numerous anthems with elements of folk, country and even rock style continue to be issued. Few if any of these have established themselves as staples of the choral repertory. Rather, the prevailing style in the century's last decades, to be seen in the anthems of such major figures as Daniel Pinkham, Alan Hovhaness, Lee Hoiby, David Hurd and Alec Wyton, each with his own distinctive idiom, can be characterized as clear textual declamation combined with expressive pictorialism.

Anthologia [Anthologion anoixantarion]. *See* AKOLOUTHIAI.

Anthology. A printed or manuscript collection of musical works selected from a particular repertory. Most anthologies contain works by more than one composer. Certain types of collection, which may be anthologies in the broadest sense – folksong collections, tune books, songsters, hymnals, psalters, pasticcios, ballad operas, organ and lute intabulations, and theory or performance manuals with music examples – are not considered in this article, which is confined to printed anthologies of music roughly contemporary with date of publication and containing works by different composers. For manuscript anthologies, *see* SOURCES, MS; for printed anthologies, *see* EDITIONS, HISTORICAL.

The value of printed anthologies for the musical scholar and performer goes beyond the individual musical items contained, for the entire make-up of each one reflects the judgment of a knowledgeable contemporary, its compiler, of the interests, tastes and needs of the musical public of that time and place. Thus anthologies can suggest many aspects of social usage. Sometimes the very wording of an anthology title can offer a surprisingly vivid picture of the circumstances of its intended use, as in *Apollonian Harmony: a Collection of ... Glees, Catches, Madrigals, Rounds, & Canons ... Sung at the Nobleman's Catch Club*, London, *c*1790, 'the words consistent with female delicacy'; or *Parlor Gems: a Choice Selection of Music, Instrumental and Vocal*, edited by C.M. Cady, New York,

1875, 'to which is added original charades for parlor performance'.

Throughout the 16th century, beginning with the earliest printed anthology (Petrucci's *Odhecaton*, 1501, which contains for the most part French polyphonic chansons), it is most common for anthology contents to be chosen from a specific and cohesive repertory, as in Petrucci's other early publications devoted entirely to masses, motets, frottolas or settings of the Lamentations of Jeremiah. Relatively few anthologies offer mixed contents, so that collections such as *Motetti novi e chanzoni franciose* (Venice, 1520[3]) remain exceptional, while collections of separate popular forms proliferate. Attaingnant alone published over 70 separate chanson collections between 1528 and 1552. Publication of madrigal collections began in 1530 (*Madrigali de diversi musici*, 1530[2]) and grew to dominate the secular music anthologies of the second half of the 16th century and the opening decades of the 17th. Instrumental anthologies, among which those for solo lute predominate, are far fewer than vocal ones, but it is not uncommon for titles to state that the vocal contents are also suitable for performance on instruments. Bicinia, especially instrumental ones, appeared frequently in the second half of the century, with one collection (1559[24], containing works by Bernardino Lupacchino, G.M. Tasso and anonymi) attaining an astounding publication record: 20 extant editions by 14 different publishers in six cities, appearing between 1559 and 1701.

In the last decades of the 16th century, and continuing well into the first half of the 17th, collections of religious but non-liturgical vocal music became more popular, such as the several books of *laude* printed by Gardane in Rome between 1583 and 1591. Many compilers assembled collections of favourite secular music which they supplied with new religious texts, one example of which is provided by the publishing history of the famous madrigal collection *Il trionfo di Dori* (1592[11]). It became immediately popular and was reprinted by its original publisher, Gardane of Venice, in 1599, and published in Antwerp by Phalèse in 1595, 1596, 1601, 1614 and 1628. It also served as model for the English madrigal collection *The Triumphes of Oriana* (1601[16]) in honour of Queen Elizabeth. In 1619 it appeared in Leipzig but with changed texts, entitled *Triumphi de Dorothea* (1619[16]). Several extensive liturgical collections were also produced in the first half of the 17th century, one of the best known being the *Promptuarii musici* which appeared between 1611 and 1627, edited by Abraham Schadaeus. It is in four volumes, arranged according to the liturgical year, and contains 436 compositions by 114 composers.

Anthology publications of the second half of the 17th century clearly reflect a growing market for music suitable for domestic music-making, and especially for performers of modest technical attainment. Music of this sort had by no means been neglected earlier, but from this period onwards it began to occupy an increasing proportion of anthology publications. Collections of simple music for few parts became prominent, such as the several multi-volume publications by the house of Ballard in Paris, of which one, *Airs de différents autheurs à deux parties*, ran to 37 volumes between 1658 and 1694. It is significant that the medium alone gained this popularity, as the composers are not identified. The increasing attention of publishers to amateur needs is also shown in the greater tendency to include both vocal and instrumental works in the same collection, and in the frequent addition of instructional material to assist beginners, a practice that continued throughout the 20th century. Both tendencies are apparent in *A Musicall Banquet* (1651[6]), which contains lessons for the lyra viol, a collection of dances for treble and bass viol, catches and rounds for three and four voices, and 'some few rules and directions for such as learne to sing, or to play on the viol'.

In the last decade of the 17th century the demand for collections of new music was large enough to create a new type of publication: the periodical of music scores. The earliest was probably *Mercurius Musicus: or, the Monthly Collection of New Teaching Songs* (London, 1699–1702). Before this many successful publications had extended to cumulatively long series (such as the Ballard *Airs* cited above), but the continuation had probably not been planned in the first place. An ambiguous case, perhaps the first yearbook of music, was another Ballard publication, *Airs sérieux et à boire*. Irregular previous publications of this title were succeeded in 1694 by a volume 'pour les mois d'octobre, novembre et decembre 1694', and in 1695 appeared a volume 'pour l'année 1695', to start an annual series which continued until 1724. Throughout the 18th century many dozens of periodical publications of music were initiated, catering for a wide variety of musical interests and performing media. Only a small number of these ambitious starts, however, continued beyond a few years, and many ceased publication within a year. One of the most successful was *Journal hebdomadaire ou recueil d'airs choisis dans les opéra-comiques* (Paris, 1764–83), which continued as *Journal hebdomadaire, composé d'airs d'opéra et opéra comiques* from 1784 until 1808.

Separate anthologies in the 18th century show the same emphasis on music for home performance, with greater numbers of collections offering arrangements as well as, or often instead of, original compositions for favourite instruments, such as the flute, harp, violin and guitar. Collections of piano music and solo songs are prominent in publications of the later decades of the century, becoming the most common sorts of anthology in the 19th and 20th centuries. During the latter part of the 18th century Charles Burney and G.B. Martini published anthologies devoted to music of the past. Curiosity about early music had taken root in England when the Academy of Ancient Music was founded in the 1720s. Interest in early repertory had a gradual but increasing effect on anthology contents in the 19th century, which tended to include music from earlier periods along with contemporary pieces.

Music anthologies issued periodically remained a popular publication type in the 19th century, although most titles were short-lived. By the early 20th century Krehbiel (*Grove2*, iii, 687–8) could refer to a large number of periodicals 'filled with music for choirs, brass bands, banjo and mandoline clubs, small dance orchestras and the like ... Few are devoted to the art in its highest phases'. The periodical of music became virtually extinct during the later part of the 20th century (although several music literature periodicals include music scores occasionally or regularly). Among the few new ventures was the *Journal of Music Scores*, a publication of the American Society of Composers which began publication in 1973.

Throughout the centuries there have been many anthologies of special interest because of their selection of some particular focus for the contents. One type is the musical equivalent of the Festschrift or 'In memoriam' volume of essays. An early example is *Le septiesme livre contenant vingt et quatre chansons ... composées par feu de bonne memoire et tres excellent en musicque Josquin des Pres, avecq troix epitaphes dudict Josquin* (1545[15]). Another is *In epitaphiis Gasparis Othmari* (1554[30]). *Choice Psalmes* (1648[4]) includes 'divers elegies, set in musick by sev'rall friends, upon the death of William Lawes'. This tradition has continued in the 20th century with such anthologies as *Hommage à Gabriel Fauré* (*Revue musicale*: supplement to Année iii, Oct 1922); *Homage to Paderewski* (New York and London, 1942); and *Words and Music: the Composer's View: a Medley of Problems and Solutions, Compiled in Honor of G. Wallace Woodworth by Sundry Hands* (Cambridge, MA, 1972). There are also numerous examples of anthologies honouring non-musical figures, such as *The Triumphes of Oriana* (cited above), *Choral Songs by Various Writers and Composers, in Honour of Her Majesty Queen Victoria* (London, 1899) and *Garland for the Queen* (London, 1953). A new area of interest is demonstrated by the publication of *Women Composers* (Boston, 1996).

Another class of anthology centres on a single event, such as the one commemorating five Protestant martyrs: *Suyte du premier livre des chansons spirituelles: contenant cinq chansons spirituelles composées par cinq escholiers detenus prisonniers à Lyon pour le tesmoignage de nostre Seigneur Iesus Christ, en l'an 1553, au moys de juing & qui depuis souffrirent mort cruelle soustenans constamment la querelle de l'Evangile* (1554[19]). There are many others whose entire contents are the music performed on a specified occasion, such as a funeral (e.g. *Exequiae saxonicae*, 1606[14]); a wedding (e.g. *Musiche fatte nelle nozze dello illustrissimo Duca di Firenze il signor Cosimo de Medici et della illustrissima consorte sua mad. Leonora da Tolleto*, 1539[25]); or a victory celebration (e.g. *Breve racconto della festa o ballo fattasi in Napoli per l'allegrezza della salute acquistara della Maestà Cattolica di Filippo III. d'Austria, rè delle Spagne ... al I di marzo, 1620*, 1620[14]). Broader but still specialized coverage is offered by a large number of anthologies which purport to present the repertory of particular places, organizations or individual performers, such as: *Musica de' virtuosi della florida capella dell'illustrissimo et eccellentis. S. Duca di Baviera* (1569[19]) or *Farinelli's Celebrated Songs* (London, c1736–55).

Some vocal anthologies gain added literary interest by presenting a collection of texts by a single poet. Examples of such collections are *Odes d'Anacréon, traduites en français, avec le texte grec* (Paris, 1798); *Herrn Professor Gellerts Oden und Liedern nebst einigen Fabeln* (Leipzig, 1759); *Songs from the Published Writings of Alfred Tennyson* (London, 1880); and *The Joyce Book* (London, 1933). A small category of anthologies, but one of particular interest, presents settings of the same text or topic by different composers, as in *L'amorosa Ero* (1588[17]); *Sdegnosi ardori* (1585[17]); *Rosetum Marianum* (1604[7]); *Angst der Helleñ und Friede der Selleñ, das ist: der CXVI. Psalm* (1623[14]); and *Vierzehn Compositionen zu Schillers Ode an die Freude* (Hamburg, c1800).

SYDNEY ROBINSON CHARLES/R

Anthonello de Caserta. *See* ANTONELLO DA CASERTA.

Anthonii [Anthony], **Cristofferus** (*fl* c1440–70). ?Italian composer. Previously thought to have been English, he is now presumed to have been a native of the Trentino, perhaps identifiable with the nobleman and lawyer Christophorus Anthonii de Molveno, traceable in Trent in 1449–68. His works, comprising a Sanctus, *Magnificat primi toni*, and a hymn (all for three voices), are all copied in *I-TRmp* 90, the *Magnificat* is also in *I-TRcap* 93 (all of his works are ed. M. Gozzi, Collana per la storia della musica nel Trentino, xvi, 1991). Two of his cantus firmi suggest Germanic connections: the chant that appears in decorated form in the Sanctus (superius) resembles Sanctus IV in the Passau gradual, and the chant used in *Ut queant laxis* (also in the superius) is from the Klosterneuburg hymnal. A contrafactum of the latter work honours St Vigilius, patron of Trent. Anthonii's music seems to lack sophistication, often using progressions of consecutive 6-3 chords and employing strict fauxbourdon in the *Magnificat*.

BRIAN TROWELL

Anthony, Jacob (*b* 1736; *d* Philadelphia, 29 Dec 1804). American woodwind instrument maker of German birth. He was one of the earliest woodwind makers to take his skills to the New World. He arrived in Philadelphia about 1764 and continued in business as a turner and musical instrument maker until his death in 1804. Three of his instruments are in the Dayton C. Miller Collection at the Library of Congress. One of these is an excellent ebony flute with three *corps de rechange*, a foot extension to *c′* and five silver keys. Although this instrument has a *c′* key there is no key for *c*♯′. The other instruments are a four-key cane flute and a five-key clarinet. Anthony's business was continued by his son Jacob Anthony jr until 1811.

ROBERT E. ELIASON

Anthony, James R(aymond) (*b* Providence, RI, 18 Feb 1922). American musicologist. He attended Columbia University (BS 1946, MA 1948), the University of Paris (diploma 1951) and the University of Southern California, where he took his doctorate in 1964 with a dissertation on André Campra's *opéra-ballets*. After serving on the faculty of the University of Montana (1948–50) he became a professor at the University of Arizona (1952); he retired in 1992. Anthony's particular area of study is French music of the 17th and 18th centuries, and he has concentrated on *opéra-ballet* of the French Baroque in many of his writings. His book on French Baroque music is valuable as an introduction to a vast body of instrumental and vocal music which has not been thoroughly explored; the volume has been cited as the classic study of its subject. Anthony is also known as a harpsichordist. The Festschrift *Jean-Baptiste Lully and the Music of the French Baroque: Essays in Honor of James R. Anthony*, ed. J.H. Heyer and others (Cambridge, 1989), has been published in recognition of his work.

PAULA MORGAN

Antichi, Adam degli. *See* ANTIQUIS, A. DE.

Anticipation. An unaccented NON-HARMONIC NOTE, sometimes regarded as an ornament, that belongs to and is repeated in the harmony immediately following; an extra statement of an entire chord on a preceding weak beat is called 'rhythmic anticipation'.

Anticipazione della nota [syllaba] (It.). *See* PASSING NOTE; *see also* ORNAMENTS, §8.

Antico. *See* STILE ANTICO.

Antico [Anticho, Antigo, Antiquo, Antiquus], **Andrea** (*b* Montona [now Motovun], Istria [Croatia], *c*1480; *d* after 1538). Italian woodblock cutter, editor, publisher and composer of Croatian birth. His birthplace is frequently appended to his name, as in his papal privilege of 1516: 'to our beloved son Andreas Antiquus de Montona, cleric of the diocese of Parenzo now living in Rome'. (Despite the reference to clerical status, there is no evidence that he was ordained as a priest or served the church.) Active as a woodblock cutter, editor and music publisher in Rome from 1510 to 1518, in Venice 1520–21 and again from 1533 to 1539, he was the earliest competitor of OTTAVIANO PETRUCCI, who had initiated the printing of volumes of polyphonic music at Venice in 1501. Antico was the first to publish such books in Rome.

Antico's method differed fundamentally from Petrucci's: Antico was a cutter of woodblocks from which music and text were printed in one impression, whereas Petrucci employed multiple impression from moveable type. Antico both cut the blocks for and published, in collaboration with printers and others, his Roman editions and those of his first two years in Venice. After 1533, however, he was mainly a woodblock cutter and editor for the SCOTTO publishing firm in Venice, although he initiated the publication of the last of the many editions with which he was involved in 1539.

His career began with a collection of frottolas entitled *Canzoni nove* (9 October 1510), which he cut and published in collaboration with the printer Marcello Silber (*alias* Franck). Giovanbattista Columba, also mentioned in the colophon, may have been the graphic artist responsible for the title-page design. Although not named, he may have designed illustrated title-pages for some of Antico's other Roman editions, including the *Liber quindecim missarum* (1516), *Frottole intabulate* and *Canzoni … libro quarto* (both 1517). However, Boorman (1985) attributes the 1510 and *Frottole intabulate* title-pages to Antico himself, and the more elegant ones of 1516 and *Canzoni … libro quarto* to a Roman artist of the circle around Raphael.

The *Canzoni nove* in oblong quarto is based on the design and content of Petrucci's frottola books, from which about half its pieces are drawn. Antico encountered no difficulty in this reprinting since Petrucci's privilege from the Venetian signory (1498) afforded protection only within its territory. Antico's subsequent frottola books, however, show little or no dependence on Petrucci.

Before issuing a second book, Antico secured from Leo X the first privilege (dated 3 October 1513) to print music in the papal states, providing a ten-year copyright for all the music to be published by him. Petrucci received a similar privilege on 22 October, as well as the exclusive right to print organ tablature.

Antico probably issued the first edition of his *Canzoni libro secondo* shortly thereafter. *Libro tertio*, which includes two frottolas composed by Antico himself, contains a reprint of his papal privilege: *Libro quarto* was printed in association with Nicolò de Judici. The second

and third books were reprinted in 1518 from the original blocks (without crediting Antico) by Jacopo Mazzocchi and Jacopo Giunta in Rome.

On 27 January 1516 Leo X awarded Antico a new privilege for the exclusive printing of music 'in magno volumine' for ten years, specifically prohibiting Petrucci from printing such books. Antico issued only one large folio choirbook, his *Liber quindecim missarum*, dated 9 May 1516 and containing masses by Josquin, Brumel, Févin, Mouton and others. The title-page depicts the pope receiving a music book from Antico's hands (see illustration; *see also* PRINTING AND PUBLISHING OF MUSIC, fig.2*b*). In the dedication, addressed to Leo X, Antico stated:

> Your generation seems to me to have reached the highest perfection ... From the works of these many excellent musicians I have collected fifteen masses that seem to me of high significance and quality, and for these I have cut the notes on wooden blocks (which no-one before me had done) and executed them with a new method of printing and with the aid of partners in meeting the expense; and moreover I have published them in royal volumes with great care and long labour; indeed, I have devoted nearly three years to this from its inception.

Contracts dealing with the printing and sale of the work show that Antico shared expenses with Ottaviano Scotto and that the printing was done by Antonio GIUNTA.

On 27 December 1516 the pope cancelled Petrucci's privilege for printing organ tablature because of his failure to issue such music and transferred it to Antico. Less than a month later Antico issued his *Frottole intabulate da sonare organi*, consisting of keyboard arrangements of pieces drawn mostly from his frottola collections, the majority by Bartolomeo Tromboncino. It was the first book of Italian keyboard music to be printed. The term 'organ' in its title must be understood to mean keyboard instruments in general since the illustrated title-page depicts a harpsichord, played by Antico himself.

Title-page of 'Liber quindecim missarum' (Rome: Scotto & Giunta, 1516): woodcut by Andrea Antico

Between 1518 and 1520 Antico moved to Venice where he entered into partnership with Luc'Antonio Giunta, uncle of Jacopo Giunta of Rome and one of the most active printers in Venice. In addition to reprints of earlier books, they published music by Franco-Netherlanders and a new book of arrangements for voice and lute, *Frottole de Misser Bortolomio Tromboncino & de Misser Marcheto Carra*. Its contents are drawn in large part from Antico's fourth book of frottolas. It was probably modelled on Petrucci's two books of Bossinensis's intabulations (1509, 1511); Antico even included Petrucci's 'Regula' for reading the tablature, in somewhat simplified form. In the same year he also brought out three books of *Motetti novi* with Giunta, and in 1521, together with Andrea Torresani, Antico published several volumes of sacred music including the important *Missarum diversorum authorum* (containing masses by Mouton, De Silva and Gascongne).

Antico's activities from 1522 to 1533 are unknown. Since he had obtained no privilege from the Venetian authorities but relied solely on his papal privileges, he may have encountered legal difficulties in his publishing activities.

In 1533 he cut the blocks for a book of Verdelot's madrigals commissioned by Scotto and printed by the brothers Da Sabio. Antico seems to have been Scotto's employee rather than partner, working on several publications for him in the 1530s. In addition he cut the blocks for *La couronne et fleur des chansons a troys* (printed by Anthoine dell'Abbate) in 1536. His last work was the *Mottetti di Adrian Willaert, libro secondo a quattro voci* (1539). In this, a companion volume to the first book printed by Scotto in the same year, Antico is credited with initiating its publication. An elegantly produced volume of motets by Venice's pre-eminent composer, it is the only print of Antico's last period to name him as publisher; typographically it is far superior to Scotto's first book and the new editions of both books by Gardano (1545). Thus Antico's final publication brought his long career as a woodblock cutter, editor and publisher to a fitting close.

Antico included two of his own frottolas in his *Canzoni ... libro tertio* (1513): *S'il focho in chui sempre ardo* and *De chi potra piu mai*. Both are signed 'Andrea Anticho D. M.' ('de Montona' in the 1520 edition) and are in a simple, homophonic style. Inscribed on the title-pages of the *Liber quindecim missarum* (1516) and *Canzoni ... libro quarto* (1517) is a canon 'Vivat Leo Decimus, Pontifex Maximus', probably composed by Antico. Many writers also assign to Antico the 17 pieces attributed to 'A(dam) de Antiquis (Venetus)' in Petrucci's frottola and *laude* collections (1505–9) and in Antico's own *Canzoni nove* (1510). However, since Antico never signed his name in this way, it is doubtful that A. DE ANTIQUIS is to be identified with him.

EDITIONS

printer's name where known follows date of publication or RISM siglum

ROME, 1510–18

Canzoni nove con alcune scelte de varii libri di canto (1510; M. Silber), 2 pieces ed. in Jeppesen (2/1960), 2 pieces ed. in IMi, iii, new ser. (1964); Canzoni, sonetti, strambotti et frottole, libro tertio (1513[1]), ed. in SCMA, iv (1941); Canzoni libro secondo con cose nuove (1516), lost, mentioned in the catalogue of Columbus's library [probably a revised enlarged edn of a book first pubd in 1513 before 1513[1]], *R*1518 ed. in Musiche rinascimentale in Italia, iii (Rome, 1975–6); Liber quindecim missarum (1516[1]; O. Scotto & A. Giunta), 4 masses ed. in MMRF, viii–ix (1898–9); Canzoni, sonetti, strambotti et frottole, libro quarto (1517[2]; N. de Judici), 1 piece ed. in Jeppesen (2/1960), 1 piece ed. in NRMI, x (1976); Frottole intabulate da sonare organi, libro primo (1517[3]/*R*), 6 pieces ed. in Jeppesen (2/1960), 7 pieces ed. in IMi, iii, new ser. (1964), 2 pieces ed. in Plamenac (1966); Frottole, libro quinto (1518), lost, mentioned in the catalogue of Columbus's library; Motetti libro primo (1518), lost, mentioned in the catalogue of Columbus's library

VENICE, 1520–21

B. Tromboncino and M. Cara: Frottole ... per cantar et sonar col lauto (*c*1520[7]; L.A. Giunta), 4 pieces ed. in NRMI, x (1976); Chansons, 3vv (1520[6]; L.A. MARTIN PICKER

Antient Concerts. Concert series given in London from 1776 to 1848 by the Concert of Ancient (Antient) Music. *See* LONDON, §VI, 4(i).

Antier, Marie (*b* Lyons, 1687; *d* Paris, 3 Dec 1747). French soprano. Trained as a singer and actress by Marthe le Rochois, she made her début at the Opéra in the 1711 revival of Michel de la Barre's *La vénitienne* (1705). For the next 30 years she sang major roles in up to five productions each season, and she retired with a generous pension at Easter 1741. After her début she was immediately given important roles in new productions beginning with Campra's *Idomenée* (1712) and Salomon's *Médée et Jason* (1713); 23 years later she sang the same role, Cléone, in a revival of the Salomon opera and was warmly praised by the *Mercure* (Dec 1736). Antier appeared in almost two dozen Lully revivals; at one performance of the 1713–14 revival of *Armide* (1686) she had the honour of presenting the victorious Marshal of Villars with a laurel crown. In 1720 she became *première actrice* of the Académie Royale de Musique and in the following year she was appointed a *musicienne de la chambre du roi*, a post that required her to sing at Versailles, Marly and Fontainebleau.

In the early 1720s Antier sang at the Château des Tuileries in private performances of *opéras-ballets*, in which Louis XV loved to dance, and later in the 'concerts chez la Reine'. She became *maîtresse en titre* to the Prince

of Carignan and on her marriage in 1726 to Jean Duval, a Parisian *inspecteur du grenier à sel*, she received lavish gifts from the royal family. A love affair in 1727 with Le Riche de La Pouplinière caused him to be temporarily banished from Paris. Antier herself was installed for a time in the Convent of Chaillot while apparently continuing her career at the Opéra. Beginning in 1725, she frequently served as a soloist in motets by Destouches and Lalande performed at the Concert Spirituel; in 1727–9 she was the soloist in cantatas at the Concert Français, but her career had passed its zenith: major roles at the Opéra were increasingly given to her younger colleagues – Le Maure, Pélissier, Erremans and Petitpas – and Destouches wrote somewhat disparagingly about her in a letter of 8 February 1728 (trans. from Tunley):

Mlle Antier has a most beautiful voice, of noble quality and fantastic flexibility; it is a pity that she does not possess an extra semitone at both ends of her range. She sings all styles – gracious, tender, expressive, and above all shines in cantatas .... As nothing is perfect in this world these fine qualities are balanced by faults. Sometimes she lacks intonation; her tendency to sing light music has somewhat diminished the beauty of her trills and takes away that intensity of tone so necessary when expressing terror.

Nevertheless, she took roles in such important new productions as Montéclair's *Jephté* (1732), Rameau's *Hippolyte et Aricie* (1733), *Les Indes galantes* (1735) and *Castor et Pollux* (1737). Her last appearances were in revivals of works in which she had sung earlier in her career; she retired in 1741. After maintaining a lavish residence at 47 rue d'Auteuil from 1715 until 1729, she spent her last years living rent-free in accommodation attached to the Opéra; she was survived by her husband (*d* 1755). Her younger sister sang in the chorus of the Opéra from 1719 until 1743. She was the mother of the soprano Mlle de Maiz.

JULIE ANNE SADIE

Antigo, Andrea de. *See* ANTICO, ANDREA.

Antill, John (Henry) (*b* Sydney, 8 April 1904; *d* Sydney, 29 Dec 1986). Australian composer. At the age of ten Antill joined St Andrew's Cathedral Choir School, Sydney, and later trained as an apprenticed mechanical draghtsman with the NSW Government Railways. He studied composition with Alfred Hill at the NSW Conservatorium, and in 1932 he joined the J.C. Williamson Imperial Opera Company as a tenor and rehearsal conductor. He began work with the ABC in 1936 and was to remain there until his retirement 33 years later. In 1949 he was appointed federal music editor, in which capacity he became arbiter in the selection of new Australian and overseas compositions submitted for broadcasting. He supported many musical organizations and was made an OBE (1971) and a CMG (1981) for his services to music.

Antill's achievement rests primarily but securely on the significance of *Corroboree*. Though it was originally conceived as a ballet, it was in its more focussed form as a concert suite that the work was first performed in 1946 by the Sydney SO under Eugene Goossens; it was an instant success. Further concert performances followed, and it was first staged as a complete ballet in Sydney in 1950 by the National Theatre Ballet. *Corroboree* represents one of the most notable attempts by a composer of European descent to evoke something of the atmosphere and ritual of Australian aboriginal music. But despite its inclusion of clapping sticks and a bullroarer in its orchestration, the work is entirely Western in purpose and content, its pounding rhythms inevitably suggesting comparison with Stravinsky's *The Rite of Spring*.

Antill knew that he could not continue re-composing *Corroboree*, and its modernism, rare within the then conservative context of Australian musical life, remained equally something of an exception within Antill's compositional output. Most of his works are firmly indebted to the traditions in which he grew up, especially those of the English choral movement and the more readily accessible styles of late 19th- and early 20th- century European orchestral writing. Typical examples are his oratorio *The Song of Hagar to Abraham the Patriarch* (1958) and his *Festival Te Deum* (1964).

PATRICIA BROWN

Antimasque. A comic or grotesque interlude in a MASQUE, normally preceding the terminal dances of the masquers. There were usually more than one and they consisted of a variety of spoken dialogue, pantomime, singing and dancing. Unlike the grand masquing dances, which were performed by a group of nobility from the floor of the

hall, antimasques were usually danced by professional actors from the stage.

In contrast to the serious matter of the main masque (allegory, mythology, *deus ex machina*) the themes of the antimasques concentrated on mundane humour and the bizarre: the low-class comedy of beggars, cripples and drunkards, housewives and shopkeepers, barmaids and chimney-sweeps, foreigners, criminals, soldiers and common labourers; the pantomimed antics of dancing birds, bears, cats, apes and baboons; and the fantastical capers of furies, witches, spirits, sprites, satyrs and other magical beings. The spoken burlesques, usually in low prose, often imitated folk characters and situations, as well as *commedia dell'arte* types. The music, in addition to partsongs and solo airs, ballads, catches and drinking-songs, included dances in fast duple or triple time (jigs, country dances, 'moriscos', 'corantos', galliards and 'almans'). These dances, though of a different character from the masquers' dances, were also choreographed and referred to as 'measures'. However, those that were specified as measures were often the slower dances such as the pavan or alman, which were also used in comic situations. Dance improvisation was probably an important part of these 'anticks'.

Antimasque dances can often be identified by such characteristics as the reversed *alla breve* sign (Ɔ), notes marked with fermatas indicating held choreographic gestures, lively repeated notes on one pitch or a series of disjunct intervals portraying a prancing or cavorting action, and the linking of several short strains in contrasting metres indicating quick changes in mood and character. Often these dance sequences were accompanied by violins or folk instruments and even by mock musical instruments.

Comedy had been an important element of the masque since the early 16th century, but the term 'antimasque' was probably not coined until 1609, when it was used by Ben Jonson in his introduction to the *Masque of Queens* (*see* MASQUE, §2). Before this, and even afterwards, the terms 'antick masque' and 'antemasque' are encountered; the latter probably arose because of its position before the main masque, whereas the former may have contributed to the term 'antimasque' as a portmanteau formed from 'antick' and 'masque'. Jonson's usage introduced the element of antithesis: the number of farcical characters balanced that of the noble grand masquers, the actors playing both types of role in elaborate contrasting disguises. Jonson attempted, unsuccessfully, to use this 'foil' technique to control the amount of comedy in his masques. However, after his quarrel with Inigo Jones, which resulted in his own defeat, the number of antimasques rapidly increased, so that the norm of one, two or three in the Jacobean masque rose to as many as 20 'entries' in the last of the Caroline masques, thereby contributing to the transformation and demise of the court masque. Influences from the contemporary French *ballet à entrées* also played a prominent role in this dissolution.

The antimasques of the Caroline period were also used for purposes of satire and political propaganda, and by the time of James Shirley's *Cupid and Death* (1659) they had become a stock genre, integrated and dispersed throughout the work. Antimasque elements continued to exert strong influence on the masque interludes of Restoration and 18th-century drama, most notably in the operas and semi-operas of Dryden and Purcell. Many antimasque dances with their characteristic titles ('the beares dance', 'turkes dance', 'antick' etc.) survive in the most important extant manuscript source (*GB-Lbl* Add.10444) and in such early publications as William Brade's *Newe ausserlesene liebliche Branden* (Hamburg, 1617[25]), John Adson's *Courtly Masquing Ayres* (London, 1621), Thomas Simpson's *Taffel Consort* (Hamburg, 1621[19]), and John Playford's *Court-Ayres* (London, 1655[5]) and *Courtly Masquing Ayres* (London, 1662[8]). A large number of antimasque dances are included in Sabol, and some of the many designs for the costumes of antimasque characters that are extant in the collection of the Duke of Devonshire are reproduced in Simpson and Bell.

MURRAY LEFKOWITZ

Antinello, Abundio. *See* ANTONELLI, ABUNDIO.

Antinori, Luigi (*b* Bologna, *c*1697; *d* Florence, ?March 1734). Italian tenor. He sang in Rome (Giovanni Bononcini's *Etearco*, 1719), Ferrara (1724), Bologna (1724, 1731), Milan (1724, 1727) and other Italian cities, and was engaged on Owen Swiney's recommendation by the Royal Academy in London, replacing Francesco Borosini in revivals of *Elpidia* (by Vinci and Orlandini) and *Rodelinda* (Handel) in 1725, and appearing in the unsuccessful pasticcio *Elisa* in 1726. Handel composed the parts of Laelius in *Scipione* and Leonatus in *Alessandro* (only one aria) for him and evidently had little confidence in his powers, but Fétis described him as a fine singer with an excellent method. The compass is *d* to *a'*, the tessitura fairly high. Antinori sang in Venice (1726 in Porpora's *Imeneo in Atene*, 1731), Livorno (1725, 1730–31), Turin (1728), Genoa (1728, 1732), Mantua (1729), Reggio nell'Emilia (1732) and Florence (1733–4 in operas by Pergolesi and Alessandro Scarlatti).

WINTON DEAN

Antioch [now Antakya, Turkey]. Ancient city in Asia Minor. It was an important centre of early Christian chant. *See* BYZANTINE CHANT, §1; CHRISTIAN CHURCH, MUSIC OF THE EARLY, §I, 4(i); PLAINCHANT, §1; SEVERUS OF ANTIOCH; and SYRIAN CHURCH MUSIC, §1.

Antiphon. In Latin Christian chant generally, a liturgical chant with a prose text, sung in association with a psalm. In Gregorian psalmody, for example, psalms and canticles are usually preceded and followed by a single antiphon, and the psalm tone used for the recitation of the psalm itself is often musically incomplete without the antiphon.

Antiphons of this kind may be regarded as typical and are represented above all by the Gregorian antiphons to the psalms of Matins, Lauds and Vespers in the Divine Office. There are also other categories of antiphon, some of which may lack psalmody or have versified texts.

The antiphon and responsory are the two musical genres with Latin prose texts that occur in all the Western liturgies and are the most abundant within the chant repertory. A given medieval Office source might have as many as 1500 antiphons, and even up to 2000; such a large number could occur in a monastic usage, whereas the secular (or canons') repertory would generally have fewer (see §4 below).

The term 'antiphon' in early texts is frequently to be distinguished from 'antiphony' (i.e. antiphonal psalmody). Though etymologically related, these terms designate different practices: 'antiphon' referring to a musical composition does not imply an alternating or 'antiphonal' style of performance; and 'antiphony' referring to the alternation of performing groups does not necessarily suggest the use of antiphons.

1. Early history and temrinology. 2. Origins and composition of texts. 3. Origins and composition of melodies: (i) Overview (ii) Adaptation (iii) Centonization. 4. The Gregorian antiphons to the psalms at Matins, Lauds and Vespers. 5. Other antiphons in the Gregorian repertory: (i) Antiphons to the Psalter (ii) Antiphons with verses (iii) Antiphons to the *Benedictus* and *Magnificat* (iv) Antiphons for the Mass: introits and communions (v) Marian antiphons (vi) Processional antiphons (vii) Versified antiphons.

1. EARLY HISTORY AND TERMINOLOGY. The Greek word *antiphōna*, derived from the classical Greek *antiphōnos* ('resonating with'), was adopted in Latin without translation. For Pseudo-Aristotle (*Problems*, xix.39) the neuter adjective *antiphōnon* signified the interval of an octave. Like other ancient Greek theorists, he scarcely distinguished *antiphōnia*, the octave, from the unison (*Problems*, xix.17). Even in the writings of the 14th-century Byzantine theorist Manuel Bryennius the term retained this meaning.

In the writings of the Jewish philosopher Philo of Alexandria (*d c*54 CE), the term 'antiphon' refers to a practice of the Therapeutae sect. It has been asserted that in this context the word indicates the singing in alternation of male and female choirs (*De vita contemplativa*, xi), a usage that may reflect some element of the term's original meaning, since women's voices are pitched an octave above those of men. According to another interpretation, all the ways in which Jewish communities sang the psalms during this period involved a soloist, and thus the kind of alternation referred to in Philo's description would have been responsorial rather than antiphonal (Bailey, 1994).

The writings of the historians Socrates and Sozomen testify that sung pieces called antiphons were used in Antioch in the 4th century. These may have been texted with theological tenets connected to the Arians, or they may simply have been doxological in nature. It has been suggested that, at this early time, an antiphon was a piece characterized by its non-biblical words and intended for popular singing outdoors (Hucke, 1953). Such music seems to have involved some manner of performance by one or more soloists and an assembly.

In the West the term *antiphona* first appeared in the late 4th-century *Itinerarium* of the Gaulish pilgrim EGERIA. Describing in detail the Jerusalem liturgy as she witnessed it, Egeria referred to the antiphon about 30 times, usually associating it with the psalms ('psalmi et antiphonae'). Here the term apparently means a piece sung with the psalms rather than the practice of psalmody in antiphonal style. Although antiphonal psalmody had been in use in Jerusalem, this ancient form did not survive. In the Byzantine rite it was replaced by *troparia* and *kanōnes* (*see* TROPARION and KANŌN). Vestiges of it are found in the West, however: the Mozarabic chant *Introeunte te* is one of several antiphons that are literal translations of Byzantine *stichēra* derived from the old antiphonal psalmody of Jerusalem.

The term *antiphona* (taken as a neuter plural) appeared at an early date in Provence. It is found in the writings of John Cassian (*d* 435), who had lived among monks of the East for a time and who later founded the abbey of St Victor at Marseilles ('cum stantes antiphona tria concinuerint', *Institutiones*, iii, 8; cf ii, 2), and the Rule of Aurelian of Arles (*c*547), modelled on the usage at Lérins ('antiphona tria parvula').

Communal monastic life as established by St Benedict (*d c*547) offered a permanent context in which the antiphon would flourish in the Western liturgy. In the Rule of St Benedict, dating from about the mid-6th century, chapters viii to xviii contain a developed Office, which includes the obligation to recite the enitre Psalter on a weekly basis. The rule uses the term 'antiphon' for a separate chant sung with a psalm, although it does not specify the number of repetitions of this chant. The Rule of the Master, now thought to be from the first quarter of the 6th century, mentions the term 'antiphon' only twice.

The manner of performance and psalms referred to in the monastic Rules may have involved some kind of alternation among the singers, but performing practice did not necessarily remain consistent or unchanged from the early centuries onwards. In a study that thoroughly reconsiders past assumptions, Joseph Dyer concluded that in monastic practice from the Egyptian monks to Carolingian times, the psalms in the communal Office were sung by individuals rather than by the assembly as a whole (Dyer, 1989). The leadership of a soloist highly skilled in psalmody would explain why the number of psalm terminations is much greater in early tonaries than in later ones, when choral psalmody had become the customary method of performance. It has been proposed that in the Old Roman repertory at least, and possibly much more widely, the antiphon itself may originally have been performed with solo intonation of the first half and with more soloists – or with any of the community who were able – completing the second half (Nowacki, 1995).

Isidore of Seville (*d* 636) seems to have been responsible for the long-standing credit given to Ambrose of Milan (*d* 397) rather than to monastic circles for the introduction and spread of antiphons in the West. Isidore's comments accord with those of Ambrose's biographer, Paulinus, who reported that antiphons and hymns were sung by the bishop Ambrose and his flock during a siege in 386 (*PL*, xiv, 31). What were called antiphons in the report of Paulinus appear not to have been the type of antiphons intricately linked to psalmody as known later; and in any case, the psalmody practised in the time of Ambrose must have been responsorial. Thus, the attribution to Ambrose of a historic role in the spread of antiphons of the kind later universally sung in the West cannot be upheld (Bailey, 1994; Nowacki, *MGG2*).

Isidore, and similarly Aurelian of Réôme in his writings of the mid-9th century, used the term 'antiphon' in reference to a chant with two choirs in alternation ('antiphona ... vox reciproca duobus scilicet choris alternatis psallentibus', *Etymologies*, vi, 19.7). In Spanish and Greogrian antiphoners and in manuscript fragments of the late 8th century, the abbreviations, 'A', 'AN', or 'ANA' (i.e. 'antiphona') simply indicated a chant to be performed with a psalm. Also in the late 8th century and onwards, psalmody sung in alternation by two choirs was described in Frankish sources as if it were the customary kind. The earliest unequivocal description of refrains in alternating choral psalmody – that is, the first account f regular medieval psalmody with antiphons – was given the first quarter of the 9th century by Amalarius of Metz.

Most of the antiphons for the Psalter have brief texts, not always grammatically self-contained, consisting of a simple invocation or acclamation of a few words; they are quite similar to the responds (*responsae*) used in ancient responsorial psalmody (Huglo, 1982). In the psalter of St Germain-des-Prés (*F-Pn* lat.11947, written in 6th-century uncials), which may have originated in Italy, the *responsae* are indicated by the letter 'R' in gold. These responds are very brief; they include 'Praeceptum Domini lucidum' (f.30*v*) for Psalm xviii, 'Beatus qui intelligit' (f.77*v*) for Psalm xl, and so on. Even the responds for the vesper psalms are equally terse, such as 'Juravit Dominus nec penitebit eum' (f.225*v*) for Psalm cix. For Psalms cxlviii–cl, sung in most liturgies at Lauds (*Ainoi*), the respond is 'Alleluia' (written in gold at f.288*v*); this corresponds to the *alleluiaticum* of the old Gallican liturgy (*see* GALLICAN CHANT, §10). These ancient responds, like many antiphons, are very short – between three and six words as a rule – and often consist of the first words of the psalm. The following examples of antiphons from the Roman Psalter make this clear: 'Diligam te Domine virtus mea', antiphon to Psalm xvii, borrowed from the beginning of the psalm; 'Benedictus Dominus in aeternum', antiphon to Psalm lxxxviii; and 'Benedicite gentes Deum nostrum', antiphon to Psalm lxv. Of the 95 antiphons to the Psalter, 50 consist of the opening words of the psalm. This evidence could suggest that the antiphons to the Psalter were derived directly from the older responds, but such a conclusion is by no means definitive.

In antiphoners of the late 8th century the number of repetitions of the antiphon in performance is never indicated. Descriptions of contemporary practice may, however, be found elsewhere. For the antiphons of the Mass (e.g. introits), the usage is described in the medieval liturgical documents *Ordines romani* (*see* INTROIT (i), §1), For the antiphons of the Office, according to Amalarius of Metz, in the 9th century the antiphon was repeated after each verse of the psalm ('antiphonis, quas vicissim chori per singulos versus repetunt', *PL*, cv, 1251). This practice was maintained in the INVITATORY psalm, the *Venite* (Psalm xciv, sung daily at the beginning of Matins except during the final days of Holy Week): the antiphon is sung in full (e.g. for Tuesday, 'Jubilemus Deo salutari nostro') at the end of all the odd-numbered verses as well as the doxology; besides this, the antiphon is sung in full, as normal, before and after the invitatory psalm. It was impossible for musical reasons to separate the antiphon from the psalm and sing it merely at the beginning and the end, as was done elsewhere. The invitatory has eight special melodies, one in each mode except for the 1st and 8th (none), and 4th (three), although in many instances the number varies from one source to another. The potentially numerous and time-consuming repetitions of the antiphon (especially at Matins, with nine psalms in the secular usage and 12 in the monastic) caused these particular settings to be rapidly abandoned in subsequent centuries for other psalms (see Stäblein, *MGG1*).

In the various ancient Latin rites – Gregorian, Ambrosian, Gallican and Mozarabic – the term *antiphona* generally precedes specific short chants with texts averaging between ten and 25 words and with simple melodies. These antiphons appear before psalms and are also occasionally copied before the final melodic formulae of the psalms. Such indications were essential to the performance of the antiphons, which were conceived as integral parts of the psalm in the succession antiphon – psalm – antiphon. This form has several consequences. The antiphon ends with a clear cadence on a final note, which then determines the choice of the reciting note for the psalm (in Gregorian psalmody five reciting notes are possible; in Ambrosian chant, seven). The psalm tone ending (*differentia*, *diffinitio*, or *varietas*) can be chosen with the first notes of the antiphon in mind to ensure a smooth progression between the psalm and the recurring antiphon. While the latter explanation became the conventional one put forth by many theorists, there is often no perceptibly close relationship between the psalm tone ending and the opening of the antiphon.

In Offices written at the end of the 9th century and beginning of the 10th, both by East Frankish composers (as in the Office of St Otmar composed at St Gallen) and West Frankish (as in the Office *In plateis* by Hucbald and the Offices by Stephen of Liège), the numerical position of a chant in an Office determines the choice of its psalm tone. Thus the antiphon corresponds to a psalm sung to the 1st psalm tone, and so on until the eighth antiphon; the ninth antiphon again corresponds to a psalm sung to the 1st psalm tone, and the pattern continues. Psalm tones continued to be chosen according to their numerical order in the Office until the end of the Middle Ages, especially in the 13th-century VERSIFIED OFFICE.

Several categories of antiphon developed without any link to psalmody: they include the great processional antiphons in the Gregorian repertory (see §5(vi) below); and the Gallican and Ambrosian antiphons with verses, which resemble responsories in that the antiphons are repeated after the verse (see §5(ii) below).

2. ORIGINS AND COMPOSITION OF TEXTS. The antiphons of the various Latin rites normally have biblical texts. Those of the regular Sunday and weekday Offices are drawn from the Psalter (see §5(i) below), the earliest source of Latin antiphon texts. Some Mozarabic antiphons retained textual variants originating in the African Psalter; this seems to indicate that during the revision attributed to Isidore of Seville of biblical texts and the liturgy, no-one dared touch the oldest antiphons in the repertory, perhaps for the sake of their melodies. Similarly, certain Ambrosian antiphons display textual variants older than the Milanese Psalter.

The antiphons of the Proper of the Time are biblical, often taken from texts read during the Office or the Mass of the day; the same biblical extract may be used in a variety of ways and liturgical positions in the different Western liturgies. The antiphons of the Proper of the

Saints have texts based on the *Acta martyrum* or biographies of famous saints. The Gregorian antiphoner also contains about 100 antiphon texts drawn from Christian poets or basilical inscriptions; these are in metrical or rhymed verse. Many of the prose texts, too, are assonanced and balanced quantitatively in the manner of verse. Finally, a few antiphon texts in Latin are known in Greek as well, although resemblances between their respective melodies are not always evident.

Deciphering the origins of antiphon texts had already fascinated scribes associated with the Mozarabic Léon Antiphoner and with the Gregorian Zwiefalten Antiphoner (*D-KA* Aug.LX). Some years after the latter had been completed, an obviously experienced scribe went through the manuscript repeatedly, indicating in the margins the biblical sources of many antiphons and marking with the term 'cantor' those texts of ecclesiastical origin for which he had been unable to discover the source. During the 20th century, research on texts and textual sources of antiphons became available in a number of publications (Marbach, 1907; Lipphardt, 1965; Hesbert, in CAO, iii, 1968; Bailey, 1994; and Halmo, 1995).

Throughout the various Western liturgies, a literary comparison of antiphon texts with their sources illustrates the independence of the respective authors, who aimed to create a balanced verbal structure by means of additions (such as the word 'Dominus' before 'Jesus', or one or two 'alleluias' at the end of a chant), or omissions (e.g. of the enclitic 'autem', common in the Gospels). In such ways the author generally produced two subdivisions, each further divided into two clauses. Other schemes are also found, some with tripartite divisions, and some with even greater complexity, especially in the antiphons from Offices composed in the 10th and 11th centuries. Clearly the authors of antiphon texts felt free to modify the original biblical or ecclesiastical literature according to the requirements of musical composition.

The creation of new antiphons seems to have come to an end fairly early in the Ambrosian and Mozarabic liturgies, but it continued in other places, notably in ecclesiastical centres of the Carolingian Empire, even after the promulgation of the 'antiphoner of St Gregory' (*see* OLD ROMAN CHANT, and GREGORY THE GREAT). The composition of Proper chants for the Office, both antiphons and responsories, never really ceased, particularly for the patron saints of dioceses and great abbeys. By contrast, very few new Proper chants for the Mass came into the repertory apart from alleluias. In the Proper of the Time for the Office, for example, the antiphon O *virgo virginum* was added to the series of seven Advent 'O' antiphons after the diffusion of the original Gregorian antiphoner (*see* O ANTIPHONS). The same is true of the antiphon *Rex pacificus* and others for First Vespers of Christmas, composed in about 800 CE (see Hucke, *KJb*, 1953); the *Veterem hominem* antiphons for the octave of Epiphany, with texts translated from the Greek and melodies related to the surviving Byzantine melodies (see Strunk, 1964); and, according to Amalarius of Metz, the antiphons for the three Matins psalms of Easter and Pentecost.

Several observations can be made about the texts of antiphons with regard to their liturgical functions, especially during the Proper of the Time and the Proper of the Saints. Endeavouring to make the Office increasingly specific for feasts and seasons, medieval liturgists or musicians gradually replaced antiphons of the psalmic or ferial series with new ones. In many instances – and this has been demonstrated in detail for the Ambrosian liturgy (Bailey, 1994) – the newer substitute antiphons were attached to psalms with which they had some kind of textual link, perhaps only a single key word, so that very often there exists a nuanced and sensitive alignment of antiphon text and psalm text.

In the celebration of a given liturgical day, antiphons thus came to serve not only a musical function but also a liturgical one, that is, to convey concisely through their texts the spirit of a particular feast. The theological and spiritual aspects of feasts and seasons as reflected within the psalms and canticles are highlighted by the imagery of the antiphons. Further, when juxtaposed with the regular psalmic cursus sung week by week, various antiphons may summon quite different resonances from the same psalms on different occasions, while themselves acquiring an increasing wealth of meaning. During the liturgical year as a whole, therefore, these richly multifaceted antiphon texts, along with other Propers and psalms of a given day, often allude to words and phrases linked to other festivities and seasons. Repeated in changing contexts over time, they form a mosaic of connected liturgical themes and associations. In this contemplative interweaving of theological thought and spiritual expression, which is certainly one raison d'être of the Office, antiphons play a very significant role.

3. ORIGINS AND COMPOSITION OF MELODIES.

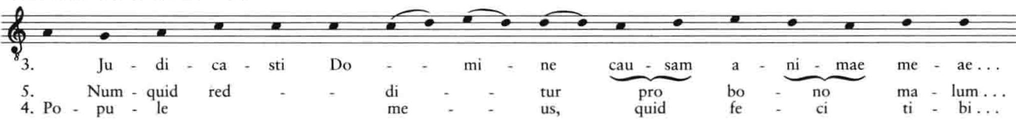
(i) Overview. There is no evidence that the writers of antiphon texts, even where known (e.g. St Ildefonsus of Toledo, *c*606–67, author of an alleluia and other chants for St Leocadia), also created the melodies; experienced singers are just as likely to have been the composers. The musical evidence – the manner in which melodies are adapted to texts, and the relationships between text and music – suggests that the composers knew Latin at least as thoroughly as Carolingian scholars such as Alcuin, Hrabanus Maurus and Loup de Ferrières. It suggests also a remarkable knowledge of music theory, in particular of the rules governing the relationship between words and music.

These composers did not, however, always place the textual accents in accordance with the practice of classical Latin (the accents normally correspond to a note or melisma in the chant that is higher in pitch than the pitches for unaccented neighbouring syllables). Thus 'mulierem', originally accented on the antepenultimate syllable, was turned into a paroxytone (i.e. a word accented on the penultimate syllable) in the antiphons *Inter natos mulierum* and *Mulieres sedentes*. Latin, which was spoken by the educated throughout the Middle Ages, had continued to evolve. Thus the composers of Gregorian chant in the second half of the 8th century adopted the current rather than Ciceronian usage in pronunciation and accentuation. In later medieval antiphons, the Latin reflects further changes. The mid-16th century gave rise to a movement whose intention was to correct the accumulated 'errors' in chant, that is, deviations from the Ciceronian standard. In this attempt at revision, the melodic accentuation of words was usually 'corrected' by the placing of a single semibreve (lozenge-shaped note) on unstressed syllables, as, for example, in the normal cadence in the communion antiphon for Epiphany (ex.1).

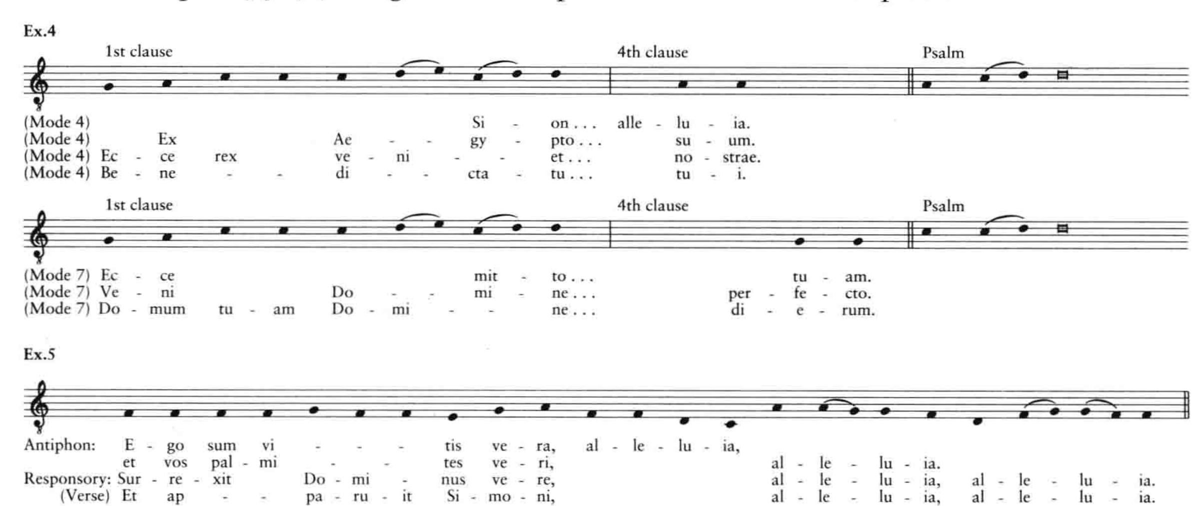
These melodic adjustments were retained by the composers of NEO-GALLICAN CHANT in the 17th century. The study of word accentuation has been revolutionized since the late 19th century, however, and chant melodies have accordingly been reconstructed in careful editions such as those of Solesmes (although, most recently, the search for historical authenticity has prompted scholars and performers alike to favour the use, whenever possible, of individual manuscript sources rather than even these very reliablecomposite editions).

Although the origins of individual antiphon melodies cannot be determined, close analysis suggests that their roots can often be identified. For this, Hucke (1951) proposed three categories of song, recitiation-like melody, and free-form 'Strophen', each one giving rise to certain characteristics: the song is musically cohesive and resistant to significant alteration; a melody based on recitative gravitates towards one pitch or a pitch area that might coincide with the psalm recitation tone; and free-form melodies consist of somewhat standard melodic phrases employed as needed, with melodic adjustments for textual requirements. Further, the melodic invention evident within the antiphon repertory has not taken place independently of the characteristics of the modes themselves, for certain modes tend to produce melodies of a particular form or style. Mode 1 and 2 melodies, for instance, move within a more limited melodic ambit, and mode 2 antiphons could even be described as having a propensity towards recitation. On the other hand, mode 8 abounds in melodic patterns, some circumscribed and others expansive, and has yielded melodies that are especially favourable to multiple adaptation (Hucke, 1951; Halmo, 1995).

As the repertory continued to develop, composers of antiphon melodies, like all composers of chant, borrowed the elements of their compositions from pre-existing models rather than seeking complete originality. For Gregorian chant the melodic models seem to have been fixed in the second half of the 8th century. In the period that followed, the expansion of the repertory involved various processes, including two seemingly contradictory ones: model melodies with the greatest adaptive possibilities generated a variety of others; yet at the same time a relatively small number of model melodies came into use more and more frequently but with particular exploitation of their own musical potential (see Crocker, 2/1990). Because of the size of the antiphon repertory, these and other kinds of development are readily discernible. Among those who have explored such musical interrelationships within the vast antiphon repertory, two scholars were pioneers in the field: F.-A. Gevaert, who identified 47 'themes' based on the incipts of antiphons (Gevaert, 1895); and W.H. Frere, whose analysis of antiphons also took account of the interior phrases of their melodic structure (Frere, 1901–24).



(ii) Adaptation. In the process of melodic adaptation, an existing antiphon melody was given a new text similar in shape and structure to its old one. There is thus a correspondence of melodic accentuation in the two texts. A melody used in this way is termed a 'prototype melody' and is cited by one of its texts, most often the first in order in the antiphoner. This process was extremely common: sometimes two successive antiphons in the same Office could be sung to the same melody, for example, the *Veterem hominem* antiphons for the octave of Epiphany (see CAO, i–ii, no.25) and three antiphons for Passion Sunday (no.66; see ex.2). The alleluiatic antiphons of Septuagesima, for the Office of 'farewells' to the alleluia, and of Paschaltide, which consist of numerous repetitions of the word 'alleluia', are other examples of the procedure. The oldest antiphoners, which lack neumatic notation, explicitly gave the incipts of the prototype antiphons as indications of the melodies to be used (CAO, iii, nos.1327–38).



The number of prototype melodies is fairly limited. There are none in the modes on D, except among the 'O' antiphons sung to the *Magnificat* during Advent. Some of the prototypes had more texts adapted to them than others. One of the most common prototypes in the antiphoner is in the 4th mode (ex.3, transposed up a 4th).

This melody was used for a number of texts consisting of four clauses, and was adapted to them by *syneresis* (the contraction of occasional notes, indicated in the example with a horizontal bracket) or *dieresis* (the expansion of formulae with extra notes, here placed in parantheses). It is found with some 90 different texts in an antiphoner copied in about 1000 CE, even though it is totally absent from the series of antiphons to the Psalter, and no similar melody occurs in the Ambrosian repertory. This melody must have been utilized by the Gregorian composers when they needed to organize quickly a complete series, such as the antiphons for the weekdays of Advent and those of Lent. Of the 50 antiphons for the weekdays of Advent, 21 (i.e. 42%) are set to this prototype; the proportion is smaller for the weekdays of Lent (seven out of 56, or 12.5%) but almost as great for the weekdays of the two Passion weeks (16 out of 40, or 40%).

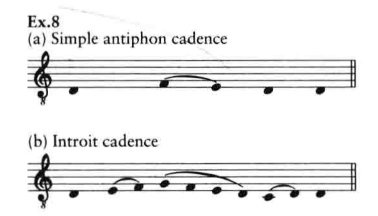
This prototype presents difficulties from the modal point of view, and was often criticized or even altered by theorists. Its modality is ambiguous, especially when it is adapted to short texts in which the note above the final does not occur at the end of the fourth phrase. The first two phrases lack a semitone; the third has a semitone, which creates a 1st-mode cadence (*g–f–e–d–c–d*); only in the fourth phrase is the mode clear, and even then only if

the text is long enough to require the full number of notes. In the late 9th century the *Commemoratio brevis* proposed the use of the 2nd psalm tone rather than the 4th with this antiphon, a solution entirely justified when the antiphon text has a short fourth phrase, as in *Benedicta tu* and *Ex Aegypto*.

Another approach to this problem was proposed by Regino of Prüm and 12th-century Italian theorists, and was adopted in 1134 by the Cistercians. These theorists noted that the first phrase of the antiphon is identical to certain intonations of the 7th psalm tone (ex.4).Since any chant should be modally unified, it was proposed that this chant be modified so as to continue and conclude in the 7th mode. The Cistercians even went beyond the obvious logical changes required by these proposals and reshaped the melody completely, in the same way as they modified the antiphons using the *tonus peregrinus* (see §5(i) below).

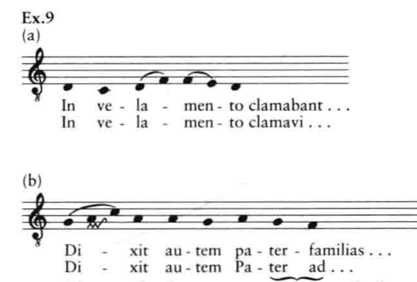
Of the two prototype melodies in the F mode, the one set to the text *Alleluia, Lapis revolutus est* is used for several antiphons in Paschaltide. It may be of Gallican origin: similar chants framed by alleluias occur among Gallican fragments in certain antiphoners written in insular script, such as *Alleluia, Quem quaeris mulier* (CAO, iii, no.1350) and *Alleluia, Noli flere Maria* (no.1348). At a later date further texts of similar structure were set to the same melody, such as the following, which occur in German antiphoners: *Alleluia, Resurrexit Dominus*; *Alleluia, Ego sum vitis vera*; *Alleluia, Quoniam in eternum*; and *Alleluia, Nimis exaltatus es* (CAO, iii, nos.1352, 1342, 1351, 1347). This melody, recurring as a Paschaltide antiphon and frequently associated with the evening Offices, may suggest that some melodies are linked to a specific liturgical role. As another example, the 4th-mode melody discussed above (ex.3) appears in liturgical times that the medieval church considered to be sombre and penitential, that is, Advent, Lent and Passiontide. At least in some period of the development of the repertory, then, certain melodies must have been considered capable of conveying a special meaning or spirit appropriate to a particular liturgical observance.

The second prototype melody in the F mode is used for about 20 antiphons for Paschaltide and for six from the Christmas cycle, and is associated with the 6th psalm tone. Its structure, identical with that of the lesser responsories in Paschaltide, is characterized by repetition in its two phrases (see ex.5, with the text *Ego sum vitis vera, alleluia*, CAO, iii, no.2604). Notably, high festive seasons are the context for this melody.



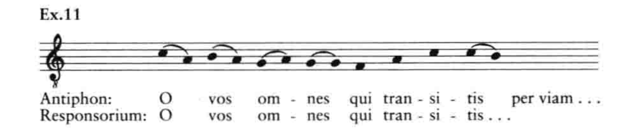
There are three prototypes in the G mode for four-clause antiphons. That of the antiphon *Tu es Petrus* was adopted for some 60 other texts and uses the 7th psalm tone, whereas the other two use the 8th. The *Ecce ancilla* prototype occurs with about ten more texts, and the *Omnes de Saba* prototype with more than 20 different texts (see comparative table in Ferretti, 1934, pp. 112–13).

(iii) Centonization. Another way in which new antiphons could be created without original composition in the proper sense has often been termed CENTONIZATION. According to Ferretti and others who have adopted his theory, this process occurred in the early liturgical repertories, in which the material was transmitted orally, and can only be fully understood in this light. The proponents of the centonization theory explain that once a psalm tone had been chosen (along with a psalm tone ending), possible formulae for the intonation came straightaway to the mind of the 'composer'. If, for example, the first tone had been selected, together with the ending whose cadence is on the 3rd above the final of the mode, the choice of a readily compatible intonation would be possible (ex.6).



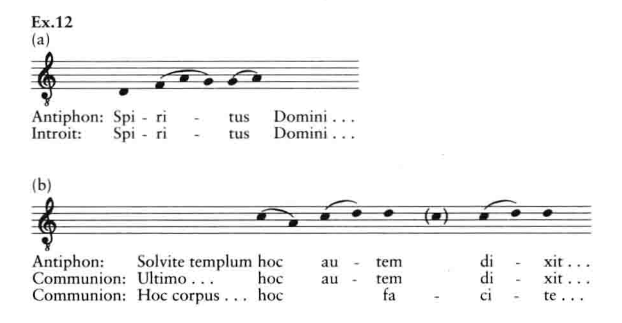
After the intonation and some of the melody, the singer would reach an intermediate cadence. Intermediate cadences, which were given particular attention by theorists such as Pseudo-Odo (*see* ODO; also *GerbertS*, i, 257–8) or Wilhelm of Hirsau (*GerbertS*, ii, 172), are those that fall on the final of the mode or on a degree compatible with it.

The final cadence is the most important of all, for it introduces the intonation of the psalm and also stands at the close of the chant, thus defining the mode. It must therefore fall on the final of the mode. Nevertheless, the singer again would have a choice of several possible formulae (ex.7 shows the possibilities in the D mode). Of the formulae in ex.7 the last occurs only in later chants such as the antiphons *Montes Gelboe* (CAO, iii, no.3807) and *Angeli archangeli* (no.1398) for All Saints. The same cadential formulae occur in introits and communions, together with others that are more ornate despite being merely elaborations of simple cadences ex.8). Many cadential and intonation formulae also appear in the same form in Byzantine chant (Huglo, 1966).



It would be possible to number the formulae used and then, by substituting numbers for the formulae, look at how chants were allegedly centonized; all possible combinations could be analysed by computer if the formulae were to be replaced by a series of numbers for each mode. However, it must be emphasized that Gregorian composition was not simply a matter of juggling formulae, for many and various factors could modify the structure of a chant. In particular, important words tended to attract to themselves the melodies to which they were sung in other chants, in spite of the change of context. This practice is common in repertories whose transmission is oral. For example, the word 'ascendit' in *Assumpsit Jesus* (CAO, iii, no.1501) is sung to the same figure as 'ascendam' in *Vos ascendite* (no.5493). Even the opening phrase of the antiphon may be affected by this practice (see ex.*9a*: *In velamento clamabant* and *In velamento clamavi*, CAO, iii, nos.3306–7; and *9b*: the antiphons *Dixit autem paterfamilias*, *Dixit autem Pater* and *Dixit Jesus discipulis*, nos.2281, 2280 and 2296).

Even a single syllable, regardless of sense, can attract the same melody, as occurs in the three antiphons *Pater manifestavi*, *Vadam ad Patrem* and *Pacem relinquo* (ex.10: CAO, iii, nos.4237, 5299 and 4205). Sometimes a similar melodic fragment may appear in chants of different categories (see ex.11, with the antiphon *O vos omnes*, CAO, iii, no.4095; and the responsory *O vos omnes*, CAO, iv, no.7303), or in antiphons of both Mass and Office (ex.12, with the antiphon *Spiritus Domini*, CAO, iii, no.4998; and the introit *Spiritus Domini*, in Hesbert, *Antiphonale missarum sextuplex*, no.106; and with the phrases 'hoc autem' and 'hoc facite' from the antiphon *Solvite templum*, CAO, iii, no.4982; and the



communions *Ultimo* and *Hoc corpus*, in *Antiphonale missarum sextuplex*, nos.105 and 67*b*). These correspondences presuppose an amazing familiarity with the whole repertory, and they testify to the unified style of composition governing the redaction of the Gregorian gradual and antiphoner.

The concept of centonization in the strict sense has come under scrutiny as to whether it is an appropriate means of melodic analysis, and the validity of applying principles of the literary technique of centonization to musical compositions has been questioned. Scholars continue to seek a better understanding both of the vast expansion of the antiphon repertory and of its many areas of interrelatedness. László Dobszay and colleagues, through their extensive investigations of Central and Eastern European chant sources, have applied the principles of classification and analysis gained from the experience of systematizing folksongs. They have

explored, for example, the process by which basic melodic structures can evolve into progressively more complex ones, according to textual needs, by the emergence of cadences from within the pitch structure: that is, a pitch

that in one antiphon is merely a part of the melodic sequence assumes in another antiphon a new role as a cadential point or as an opening pitch in the subsequent phrase. When more musical material is needed to accommodate the text further, additional melodic elements are incorporated into the framework of the original sequence of pitches. This continuing process of understanding antiphon composition and melodic development involves collecting and ordering hundreds of antiphon melodies of varying length and complexity, and analysing and comparing them for aspects of internal stylistic articulation and other devices of composition.

Further aspects of compositional processes reflected in the more elaborate antiphons of the original Gregorian corpus, and of the evolution in musical style that began in the 10th century and became more marked in the 13th, are discussed below (§§5(iii) and (vi) in particular).

Seven main categories of Gregorian antiphon may be distinguished, and these can be grouped primarily according to their texts as related to liturgical function: antiphons of Matins, Lauds and Vespers; antiphons to the Psalter; antiphons to the *Benedictus* and *Magnificat*; Mass antiphons; Marian antiphons; processional antiphons; and versified antiphons. These, along with a smaller subgroup – antiphons with verses – are discussed individually below.

4. The Gregorian antiphons to the psalms at Matins, Lauds and Vespers. The antiphons to the psalms at the major Hours of Matins, Lauds and Vespers are the most characteristic of the repertory and form the Gregorian antiphoner's basic corpus promulgated in the late 8th century. They were transmitted in two main branches of the antiphoner tradition: the secular and the monastic.

Secular antiphoners, used by diocesan canons, canons regular (those bound to a community rule, or *regula*) and Dominican and Franciscan friars, prescribe for Matins nine antiphons for the psalmody, distributed over three 'nocturns', each of which contains three psalms, lessons and responsories. Five antiphons are assigned to Lauds, and these are repeated at Vespers (except at certain festivals such as Christmas, St Peter, etc., when specific antiphons are laid down). Monastic antiphoners, on the other hand, which were used by members of monastic houses (Benedictines, Cistercians and Carthusians), prescribe 13 antiphons for Matins, distributed over three nocturns (6 + 6 + 1), five for Lauds and only four for Vespers.

Because of the differing structure and length of individual Hours in the two traditions, secular and monastic antiphoners agree in their series of antiphons only at Lauds, when both have five antiphons. Here, indeed, there is fairly close agreement, especially for the festivals of the Proper of the Time and of the Saints, as may be seen in Hesbert's concordance of autiphoners (CAO, i–ii). For Matins, monastic antiphoners give the nine antiphons of the secular antiphoners as their first nine; they then include a further four borrowed from the Common of the Saints for the feasts of the Proper of the Saints and from a series of interchangeable pieces for the feasts of the Proper of the Time. Occasionally the extra antiphons were composed following pre-existing models. An exception to the monastic–secular distinction occurs in the major Hours from Maundy Thursday Matins to Easter Sunday Matins inclusive, when, for this most sacred time of the Church year, an intentional uniformity of structure prevails in the Offices. The brief comments above partly explain the differences between secular and monastic antiphoners; no such differences characterize the graduals of the two traditions.

In modern editions of the chant it is, unfortunately, impossible to distinguish the antiphons of the original Gregorian repertory from those composed in later centuries. At least 200 or 300 years separate the two groups. Although composition may have proceeded along broadly similar lines during that time, the resulting forms are sometimes very different, as can be seen by comparing the 13th-century antiphons for the feast of Corpus Christi or those of contemporary versified Offices (e.g. of St Dominic or St Francis) with the old repertory of antiphons for the greater festivals of the Proper of the Time (Christmas, Easter and Pentecost) or of the Proper of the Saints (24 and 29 June, 10 August etc.). Study of the Gregorian antiphon must begin from the original repertory.

The texts of the antiphons of the original repertory consist of between one and four clauses. Some are very brief – between three and eight words – and are performed as a single phrase; some have two clauses separated by a caesura; some contain three clauses; and some, with four, seem to be modelled on the distich of Latin prosody. The following examples illustrate a variety of possibilities:

Omnis plebs ut vidit/dedit laudem Deo (two clauses: CAO, iii, no.4149); *Dixit angelus ad Petrum/Circumda tibi vestimentum tuum/et sequere me* (three clauses: no.2268); *Hic vir despiciens mundum/et terrena triumphans//divitias coelo/condidit ore, manu* (four clases: distich; no.3069); *Solve jubente Deo/terrarum Petre catenas//qui facis ut pateant/coelestia regna beatis* (four clauses: two hexameters; no.4981); *In praesepio jacebat/et in coelis fulgebat//ad nos veniebat/et apud Patrem manebat*(four clauses: assonanced prose; no.3272).

By contrast with this group of antiphons, the antiphons to the *Magnifcat* and *Benedictus* normally tend towards a greater number of clauses (see §5(iii) below). Other lengthier antiphon texts also exist, in particular those from the late 9th century onwards composed in honour of the patron saints of dioceses and of monasteries.

5. Other antiphons in the Gregorian repertory.

(i) Antiphons to the Psalter. The Psalter is distributed over the Divine Office of each week in 'cursus' or a generally consecutive order, and most of the antiphons used during its recitation are rather more simple than

Ex.13

Antiphon to Psalms lxiii—lxvii [lxii—lxvi]	In ma - tu - ti - nis Do - mi - ne me - di - ta - bor in te.	(CAO, iii, no. 3252)
Antiphon to Psalm cxx [cxix]	Cla - ma - vi et ex - au - di - vit me.	(CAO, iii, no. 1824)
Antiphon to Psalm cxxxi [cxxx]	Spe - ret Is - ra - el in Do - mi - - no.	(CAO, iii, no. 4990)
Antiphon to Psalm cxxxii [cxxxi]	Et om - nis man - su - e - tu - di - nis e - - jus.	(CAO, iii, no. 2713)
Antiphon to Psalm cxlvii	Lau - da Je - ru - sa - lem Do - mi - - num.	(CAO, iii, no. 3582)
Antiphon to Canticle of Moses	Can - te - - mus Do - mi - no glo - ri - o - se.	(CAO, iii, no. 1765)

those assigned for specific feasts and seasons at Matins, Lauds and Vespers. Usually each psalm has its own antiphon with a text derived from that psalm, but some psalms are linked as pairs (e.g. Psalms lxii and lxvi in the Roman Office of Lauds) or as groups of three (e.g. Psalms cxlviii–cl, also at Lauds) under a single antiphon. In the Little Hours, on the other hand, Psalm cxviii is subdivided into 22 sections of eight verses each, with a particular antiphon for each section. The invitatory (Psalm xciv) is a special case (see §1 above and *see* INVITATORY).

For the Offices of Sunday and the days of the week, the antiphon texts are drawn from the psalm; for the feasts of the Proper of the Time and of the Saints, the texts are of 'ecclesiastical composition' (i.e. they are non-biblical), but similar in spirit to Psalm xciv – in other words, an exhortation to praise.

In early psalters, the antiphons are located in relationship to the beginnings and ends of their psalms; in antiphoners, they are grouped together with a body of chants for use in the post-Epiphany period; in noted breviaries, they are found with the Psalter, usually at the front of the manuscript. The various invitatory melodies often occur in the final section of the antiphoner, sometimes together with the tonary, as was the custom in Cistercian antiphoners.

Most of the Psalter antiphons are very short and their melodies almost entirely syllabic. Many could be regarded as melodically bipartite but have texts that are virtually indivisible. It is perhaps the brevity of the texts that prevents melodic development as extended as in other antiphons, where the melody is able to rise to a climax and fall again over three or four phrases. The simple melodies of Psalter antiphons often consist of a few notes around a central pitch – sometimes the reciting note of the appropriate psalm tone – and confined within the range of a 4th or 5th. The simplicity of these melodies makes their transmission unreliable. An individual melody may have numerous variants; sometimes what is essentially the same melody has different modal assignments; and some antiphons exist in totally different versions. All of these factors pose many challenges for investigation of the sources.

When, in the late 8th century, the eight Gregorian psalm tones were adopted for the singing of the weekday Offices, it was found difficult to fit them to the Psalter antiphons, which more closely resemble Ambrosian antiphons than classical Gregorian ones. In Ambrosian practice, where the antiphon style itself determines the psalmody, the psalm tones had to be imposed on the antiphons indiscriminately, with the result that the tones and antiphons are at times at odds with one another. Even quite late in medieval times, theorists such as Frutolfus of Michelsberg (*d* 1103) continued to address the difficulties of classifying Psalter antiphons according to the eight-mode system. The musical evidence of those antiphons described as 'of irregular tone' should also be considered (see *AM*); although the tonaries and antiphoners designate the 4th psalm tone for these, Joseph Gajard in his edition prescribed a tone borrowed from Ambrosian psalmody, restricted in range to a 4th and better suited to them despite its lack of authenticity (ex.13).

The celebrated *tonus peregrinus* ('wandering' or 'alien' tone; the name appeared in the 12th century in Germany) is another irregularity within the system, since it has two different reciting notes and thus disobeys the rules of Gregorian psalmody. It was prescribed for six antiphons (ex.14). No doubt it was taken over into Gregorian psalmody from the Gallican rite, but it may ultimately be of Jewish origin (Huglo, 1971). It was adopted in the tonary not as a part of the 8th tone (as is commonly believed) but originally as an appendix, quite separate from the tonary proper and added after the last psalm tone ending of the 8th tone. The *tonus peregrinus* then, omitted from the antiphoner but recorded in the tonary, is further evidence of the conservative attitude of the organizers of Gregorian chant: in their unwillingness to touch the Psalter antiphons they even tolerated elements that disturbed the system.

Nevertheless, the *tonus peregrinus* antiphons were reshaped in various ways during the course of time in order to bring the final note into conformity with the intonation. The most far-reaching of these changes occurred in about 1134, when the Cistercians, pursuing their ideal of modal unity within each chant, modified the *tonus peregrinus* antiphons to fit the 1st psalm tone.

Very few additions were made over the centuries to the Psalter antiphons. For the Sunday Offices of the year, however, there is a series of versified antiphons, *Pro fidei meritis* (CAO, i, no.36; cf iii, no.4383), created perhaps by King Robert the Pious (*d* 1031), to whom some chants have been falsely attributed. This series has also been associated with Drogo, abbot of Bergues in Flanders; or, as another possibility, with an anonymous composer in northern Italy, since the series appeared first in Italy in the Silos Antiphoner (see CAO, i, iii).

(ii) Antiphons with verses. Antiphons that are sung with verses occur in a few places, such as in three festive Offices in the Proper of the Saints: the two feasts of St Paul, 25 January (CAO, i–ii, no.47) and 30 June (ii, no.102), and that of St Lawrence, 10 August (CAO, i–ii, no.103). These antiphons are followed by verses reminiscent of the *versus ad repetendum* of the introit. Such verses are also found

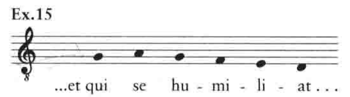
in the antiphons of Gallican chant, especially the *Mandatum* antiphons sung during the Washing of the Feet on Maundy Thursday, as well as in the Ambrosian repertory. A given verse, using the same melody as the psalm, is sung after the doxology following the psalm, and again after the repetition of the antiphon; the antiphon itself is performed at the end as a conclusion (*see* GALLICAN CHANT, §12.)



(iii) Antiphons to the 'Benedictus' and 'Magnificat'. The antiphons to the Gospel canticles of Lauds (*Benedictus*) and Vespers (*Magnificat*) are very similar to the other antiphons of Matins, Lauds and Vespers. Even though the Gospel canticles are sung to a more ornate psalm tone than the psalms and other canticles (attested in the late 9th-century *Commemoratio brevis* and in the tonaries), the musical style of the antiphons is not analogously ornate. They are distinguished, however, by their liturgical function and by their literary sources. The antiphons to the Gospel canticles are normally settings of texts drawn from or summarizing the Gospel of the Mass of the day; this series of antiphons was originally probably intended to provide two antiphons for each Sunday, but additions to it may have been made quite soon. The series of antiphons to the Gospel canticles for the Sundays in summer, whose texts are drawn from the Gospels of the Sundays after Pentecost, often gives more than two antiphons per Sunday (see CAO, i–ii, no.144). The absence of some of these antiphons from the original repertory is also suggested by the fact that a number are polymelodic (i.e. they exist with different melodies in different geographical regions). It is a fundamental rule of criticism that such pieces cannot have been present in a general original source. An example of this kind of chant is *Scriptum est enim quia*, an antiphon with a verse (CAO, iii, no.4836), which occurs in most manuscripts with an 8th-mode melody (*AM*, p.600), but in German antiphoners with a 1st-mode melody, and in Cluniac manuscripts and in the gradual-antiphoner of Brescia (*GB-Ob* misc.lit.366, f.260) with a 4th-mode melody. The proliferation of the Gospel canticle antiphons is also related to the fact that the series of Gospels of the day varied, especially towards the end of the liturgical cycle, from one church to another. Further, over time, Gospel canticle antiphons were provided not only for Sundays but for increasing numbers of feasts and saints' days, and also for some ferias, especially in Advent and Lent. Since antiphons for the *Benedictus* and *Magnificat* constitute a minimum set of Propers for a given day, a great many of these antiphons were required, and the resulting repertory is large, numbering several hundred.

Some antiphons to the Gospel canticles from the Sundays in summer contain melodic formulae that do not occur in the antiphons discussed in previous sections. For example, *Scriptum est enim quia* cited above has a melisma on the first syllable of 'docens'. This syllable is the fifth from the end of the chant, that which in prolix responsories generally bears a melisma. The same melisma occurs on the sixth syllable from the end of *Dixit Dominus ad Adam*, the *Magnificat* antiphon for Septuagesima. Since this antiphon replaced another from the alleluiatic Office of 'farewell to the alleluia', it is not an antiphon from the original corpus of the antiphoner. Comprehensive melodic analyses have prompted the observation that, indeed, most Gospel canticle antiphons do not use ancient melody types but particular adaptations of melodic elements from the older musical material (Dobszay, 1988); and also that there is considerable melodic interrelationship within this category of antiphon.

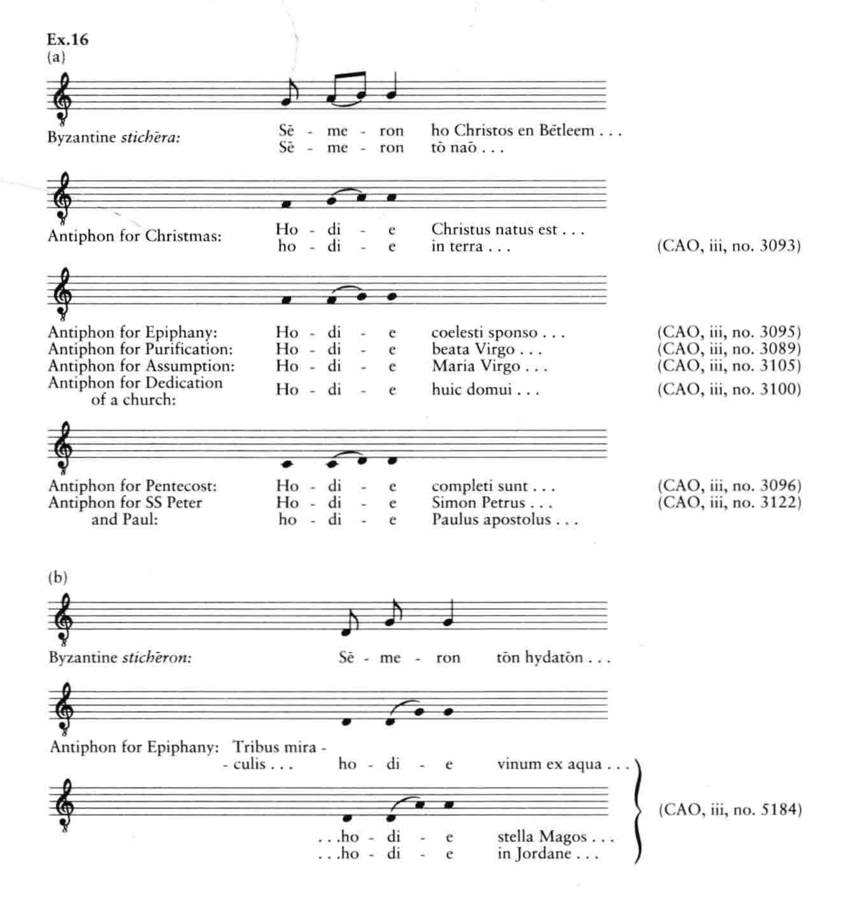
Some of the antiphons of this group have intermediate cadences on the note below the final (e.g. *d–e–f–c–c* in the 1st mode). These 'lowered' cadences are comparable with inverted cadences (e.g. *f–g* instead of *g–f*) and serve to avoid the monotony of several identical candences in an extended chant. Examples occur on 'thronos' in *Qui coelorum* (CAO, iii, no.4460) and on 'altare' in *Si offers* (no.4903). These cadences are followed by the usual re-intonations, or by others, for instance *a–g–g–f–g–a* on 'et', 'ut' or 'ex-' in the antiphons *Exi cito*, *Vide Dominum sedentem*, *Si offers* and *Qui coelorum* (CAO, iii, nos.2785, 5404, 4903 and 4460).

In a few passages in the Gospel canticle antiphons, it is not unreasonable to speak of descriptive music in which, for instance, a descending melody is used to suggest the idea of descent or of humility. Examples are found in the antiphon *Descendit hic* (ex.15: CAO, iii, no.2158); and

Ex.15

in *Homo quidam* (no.3131), where the melody moves downwards at the words 'descendebat ab Jerusalem in Jericho'.

The antiphons to the *Magnificat* for Saturdays in summer, unlike those for Sundays, are settings of texts from the Old Testament readings for Matins of the following day. This is true of the feasts of the Proper of the Time and of many in the Proper of the Saints. In the latter, however, the antiphons to the Gospel canticles, like other chants in the Office, may have texts drawn from the martyrology; or the *Magnificat* antiphon at Second Vespers might be a text summing up the significance of the feast, as in the *Hodie* antiphons (CAO, iii, nos.3088–124). The latter texts may have been suggested by Byzantine *stichēra* beginning with the word 'sēmeron' ('today'). Interestingly, the word 'sēmeron' in the Byzan-



tine *stichēra* has the same rising melody as is given to the word 'hodie' in the Latin antiphons (ex.16). This represents a further example of a key word attracting similar or virtually identical melodic contours even in different contexts (see §3(iii) above). In other Latin antiphons the texts are translations of Byzantine chants, but the melodies are not necessarily dependent on Byzantine models (Huglo, 1966). This is the case in the following chants honouring the Nativity and Mary respectively: the *Benedictus* antiphon *Mirabile mysterium* (CAO, iii, no.3763), and the *Magnificat* antiphon *Nativitas tua* (no.3852).

Finally, identifiable groups of antiphons associated with the *Magnificat* and the *Benedictus* have texts drawn from or paraphrasing the canticles themselves and assigned to the ferial Office. In the case of those for the *Magnificat*, for instance, this body of antiphons is found in greatest abundance in older antiphoners and in fewer numbers in later sources, suggesting that this repertory was set before the mid-9th century and that it preceded both the ferial Office as an organized entity in the antiphoners as well as the assignment of Propers for every Sunday (Udovich, 1980).

(iv) Antiphons for the Mass: introits and communions. In the Western Church, the eucharistic service, or Mass, provided another context for the development and use of a repertory of antiphons. Responsorial psalmody was originally the sole form of psalmody at the Mass and survives, for example, in the gradual. It was replaced by antiphonal psalmody at the entrance of the presiding celebrant and at the distribution of Communion. The chant at the entrance is termed the *antiphona ad introitum*, or introit; that at the Communion is called the *antiphona ad communionem*, or communion. In the introit, the psalm verses are sung to a more ornate psalm tone than the ones used for the psalms and canticles of the Office. The intermediate cadences are accentual (governed by the rules of Latin accentuation). This type of psalmody also influenced the composition of the antiphons themselves, which at times bear traces of embellished psalmody (*see* INTROIT (i); for the connection of the offertory with psalmody *see* OFFERTORY). As with the other categories of the Proper (except the alleluia), the introit repertory grew very little, except in south-west France and central and southern Italy. Troped introits appear from the 10th century on, with the tropes either preceding the introit or inserted within it.

The communion lost its psalmody between the 10th and the 12th centuries, according to region (see Huglo, 1971). The series of Roman communion antiphons is related to the two series of Ambrosian communion chants (the *confractoria*, chanted at the Fraction, and the *transitoria*, during Communion). A study of the Frankish–Roman communion series reveals that overall compositional planning was operative in the development of repertory and that some borrowing from the corpus of Office antiphons took place for this part of the Mass (McKinnon, 1992). The communion chants are less subject to troping than the introits and, from a modal point of view, are not as unified (*see* COMMUNION).

(v) Marian antiphons. Even though the antiphon is almost by definition a chant linked with a psalm, the

Marian antiphons, an important group within the Gregorian repertory, are independent of psalmody. Sung in veneration of Mary in devotional contexts that were often attached in some way to Hours of the Office, these chants are often called 'votive' antiphons. In antiphoners and processionals, they usually occur together, located with the Proper of the Assumption (15 August). The group as a whole consists of some from the early repertory of antiphons as well as later ones in a newer musical style. From the 13th century to the present, designated Marian antiphons have been sung at the close of Compline, the last Hour of the liturgical day.

Some of the early Marian antiphons have very ancient texts. *Sub tuum praesidium* (CAO, iii, no.5041), for example, was a part of the Ambrosian liturgy, and its original Greek text ('Hypo tēn sēn eusplanchnian') survives in a 3rd-century papyrus (see Mercenier,1940). The antiphon *Sancta Maria* (CAO, iii, no.4703) is derived from a prayer concluding a sermon formerly attributed to St Augustine but now to Ambrose Autpert (*d* 781), abbot of St Vincent on the Volturno; its earliest possible date is the 9th century. A similar date may be assigned to *Ascendit Christus*, which is given for 15 August in Anglo-Norman manuscripts. This antiphon is not Gallican as has sometimes been suggested, since the text is from the letter of Pseudo-Jerome now attributed to Paschase Radbert (*d c*865), abbot of Corbie. These two antiphons occur, moreover, with different melodies in different regions, a fact that supports a late date for them. The same is true of a series of antiphons based on the Song of Solomon and set out according to the numerical order of the modes, which is included in the antiphoners on either 15 August (CAO, ii, no.106f) or 8 September. Some Marian antiphons, such as *O virgo virginum*, are used independently and also as antiphons for the Gospel canticle.

The large-scale Marian antiphons are the most important of this group: *Alma redemptoris mater* (with a text in hexameters; CAO, iii, no.1356), *Ave regina caelorum* (no.1542), *Regina caeli* (no.4597) and *Salve regina*. Each became associated with that segment of the liturgical year for which its text is most appropriate: respectively, Advent to 1 February; 2 February (Purification) to Wednesday of Holy Week; Paschaltide and Pentecost week; and Ordinary Time, from Trinity Sunday to the day before Advent. The Cistercians chanted *Salve regina* daily from 1218; the Dominicans at Bologna chanted it daily at Compline after a miracle in 1230, and the custom was adopted by the entire Order in 1250. The general chapter of the Franciscans at Metz in 1249 prescribed all four of these antiphons for Compline, though not in the same way as would the Roman breviary of 1568. Indeed, practice has varied considerably in this matter, as may be seen in Table 1, which shows distribution of the Marian antiphons in four churches in the 15th century.

Of the four great Marian antiphons, *Alma redemptoris mater* seems to be the oldest; its text, along with that of the *Ave regina caelorum*, may have been used originally with psalmody. The *Regina caeli*, linked with devotions to Mary in Paschaltide, appears always to have been independent, as was the *Salve regina* also. The latter, due to its widespread adoption in medieval times and its liturgical placement in Ordinary Time (which can take up nearly half a calendar year), is the best known of these four Marian chants.

The unanimous adoption of the *Salve regina* for Saturdays suggests that this antiphon was composed around the time when the Saturday votive Mass of the Virgin was developing during the 11th century. The literary style and vocabulary of its text ('regina misericordiae', 'advocata', 'eia ergo') reflect the spirit of this period, although it has been suggested that the date of its composition could be as late as the very early 12th century (Colette, 1992). Attributions of text or music to individuals such as Peter of Compostela (*d c*1002) or Hermannus Contractus (*d* 1054) are still debated. However, the musical style of the 3rd-mode melody in certain German manuscripts is quite different from music of the Office of St Afra by Hermannus. A 1st-mode melody for the antiphon, and one widely known, makes its earliest appearance in the pontifical of Aurillac (*F-Pn* lat.944). This melody resembles the musical style common in 11th-century Offices in that it uses the entire theoretical ambitus of the mode (here *A* to *d*). Motifs are repeated from one clause to the next, and there is a melisma of significance near the end of 'O dulcis Maria'. It is possible that this version from the pontifical of Aurillac, which stems from the geographical area near Le Puy and St Martial de Limoges, may in fact represent the region of origin of the *Salve regina*.

(vi) Processional antiphons. Another segment of the repertory lacking psalmody is the group known as processional antiphons. These are given in medieval manuscripts for certain occasions, including the feast of St Mark (25 April), the three Rogation days before Ascension Thursday, Palm Sunday and other days of Holy Week, Purification and some lesser celebrations. While the earliest sources may have as many as 90 or 100 such antiphons, this number diminishes to about half by later medieval times.

The oldest group is associated with the Major Litanies of 25 April, a procession at Rome which replaced a pagan procession on the same day (*see* LITANY and PROCESSIONAL). An antiphon from this series, *Depreca-*

TABLE 1

	Senlis	*Aix-en-Provence*	*La Chise-Dieu*	*Sélestat*

mur te, was cited by Bede and is alluded to in the biography of St Augustine of Canterbury. Augustine, sent to England by Gregory the Great (*d* 604), is said to have chanted this antiphon together with his companions as they entered Canterbury; and the whole series probably dates from this period (see Hesbert, *Antiphonale missarum sextuplex*, p.CXXI). Among the processional antiphons of Roman origin there are, however, some from the Gallican liturgy, such as the antiphon *Collegerunt* with its verse (op.cit., no.213*b*) and the other Palm Sunday antiphons, whose musical and literary style is distinct from that of the rest of the repertory.

Many of the processional antiphons tend to be musically lengthy and embellished with melismas, and their texts are longer than those of regular Office antiphons. The literary sources include oration-like formulae, Greek *kontakia* in translation, and what appear to be free compositions (see Bailey, 1971). In the Ambrosian repertory there is considerable overlapping between the rich corpus of processional antiphons and Office antiphons (Bailey and Merkley, 1989). Both musically and textually, and in all liturgical usages, this repertory has greatly varied origins and is bound together primarily by its common liturgical function.

Processional antiphons were originally copied at the end of graduals (see, for example, the early group of manuscripts for the Mass represented in *Antiphonale missarum sextuplex*, nos.200ff). From the 10th century onwards, however, they were transferred to a liturgical book of their own, the PROCESSIONAL.

(vii) Versified antiphons. By the 9th century, and before in some instances, many antiphons began to reflect the influence of poetic techniques, including assonance and the use of metrical patterns. The texts were often taken from contemporary accounts of saints' lives which had been written in rhymed prose or with other poetic devices. Assembled into groups, these antiphons (along with responsories) functioned as hagiographical chants to be inserted, on the saints' feast days, into the usual places with psalmody and other regular elements in the Offices. Rhyme, though not invariably present (thus the term 'versified Office' is to be preferred to 'rhymed Office'; *see* VERSIFIED OFFICE), eventually emerged as the most prominent poetic feature in the construction of these antiphon texts. One of the earliest versified Offices is that for St Fuscianus, contained in the Mont-Renaud Antiphoner from the second half of the 9th century (PalMus, 1st ser., xiv,1931–6/*R*; see Jonsson, 1968).

In the 13th century, modal theory – by now fully developed – was applied to these chants in particular, with the result that the antiphons of versified Offices follow the numerical order of the modes. Also evidently cultivated within the Office at this time was a type of 'crescendo' effect, achieved through the progressive use of 'beautiful', 'more beautiful' and 'most beautiful' intervals ('pulcher', 'pulchrior' and 'pulcherrimus', as they were classified by Jerome of Moravia in his *Tractatus de musica*).

The antiphons of versified Offices evolved in musical style as well as in literary form, because new Office texts created to replace older ones were as a rule longer and more elaborate than those they supplanted; an example is the Office of St Martin composed by Odo, abbot of Cluny (ODO, §1). The melodies of versified antiphons are more symmetrical in structure than their non-versified counterparts and have somewhat stereotyped intonation and cadential formulae. The melodic range also tends to be greater than in the standard Gregorian repertory, with the complete octave more fully exploited and its contrasts of range highlighted. Melismas at the close of the *Benedictus* and *Magnificat* antiphons are similar to those in the final responsory of each nocturn at Matins. From the first half of the 12th century, the antiphons to the Gospel canticles were extended by a final melisma in the same mode as the antiphon and borrowed from modal formulae in the tonaries. This practice was attested by cathedral ordinals, by liturgists such as John Beleth (*d* *c*1165), Siccardo of Cremona (*d* 1215) and Guillaume Durand of Mende (*d* 1296), and by the English priest Alfred in *Practica artis musice* (1271), and was also popular in the late Middle Ages. These melismas or *neumae* were used as tenors in polyphonic works of the Notre Dame and Ars Nova periods. Much later, in the 16th century, such sung *neumae* were replaced by organ playing (Huglo, 1971).

Most of the versified Offices in which these antiphons occur honour local saints and were composed for dioceses or abbeys, generally for the occasion of the translation of relics or for a new dedication. Thus their area of diffusion was limited. They are often found in only one or two manuscripts, except where the saint was particularly popular. Examples of well-known Offices include that for St Nicholas composed by Regimbold of Eichstätt (966–91) – this saint was even more highly esteemed after the translation of his relics to Bari in 1087; and the Office of St Thomas of Canterbury, who was canonized in 1172, only two years after his death, and whose Office is found in nearly 300 extant manuscripts from across Europe (see Hughes, 1988). Most versified Offices, however, remained unknown outside their area of origin, for example, the Office of the Transfiguration by Peter the Venerable, abbot of Cluny (*d* 1156), which is preserved in a unique manuscript from St Martin-des-Champs (*F-Pn* lat.17716), and the chants in honour of the Holy Cross composed by Nicholas de Montiéramey, secretary to St Bernard, between 1140 and 1160 (*GB-Lbl* Harl.3073, ff.108f).

ELECTRONIC RESOURCES

A number of computer-assisted reserach projects have been established to enable scholars to locate chants and texts in various sources and to compare bodies of repertory. The most important are listed below, together with the name of the institution at which each project was first established, the name of the scholar responsible and the area of repertory concerned.

databases with particular focus on the antiphon; data also available in published form

Corpus Antiphonalium Officii-Ecclesiae Centralis Europae [CAO–ECE] (Budapest, Hungarian Academy of Sciences; L. Dobszay) [antiphoners of Central and East European origin]
CANTUS: a Database for Gregorian Chant (Washington DC, Catholic U. of America; R. Steiner) [on-line database of indexes of antiphons and other chants in important Office sources of European provenance; some material pubd in Musicological Studies, lv/1–, Ottawa, 1992–]
Late Medieval Liturgical Offices [LMLO] (U. of Toronto, Pontifical Institute of Mediaeval Studies; A. Hughes) [computer diskettes with selected versified Offices texts issued with *Late Medieval Liturgical Offices*, Toronto, 1994–6]

other materials previously in manuscript and/or in print

Antiphonale Missarum Sextuplex [AMS] (U. of Regensburg; D. Hiley) [on-line database of R.-J. Hesbert's text concordance for Mass Propers, Rome, 1963–79]
Thesaurus Musicarum Latinarum [TML] (Indiana U; T.J. Mathiesen) [on-line database of medieval and Renaissance theoretical treatises, many pertaining to chant and some particularly to antiphons]

MICHEL HUGLO, JOAN HALMO

Antiphona ad accedentes (Lat.). A Mass chant in the Mozarabic rite, corresponding to the communion of the Roman rite. See MOZARABIC CHANT, §4(xiii).

Antiphona ad confractionem [confractorium] (Lat.). In the early Latin Christian rites, a part of the Mass Proper sung during the Fraction. See AMBROSIAN CHANT, §7(i); GALLICAN CHANT, §7(xiii); and MOZARABIC CHANT, §4(xii).

Antiphona ad crucem. A processional chant sung at Matins in the Ambrosian rite. See AMBROSIAN CHANT, §6(ii).

Antiphona ad pacem (Lat.). A Mass chant sung at the kiss of peace in the Mozarabic rite. See MOZARABIC CHANT, §4(x).

Antiphona ad praelegendum (Lat.). A Mass chant of the Gallican and Mozarabic rites, corresponding to the introit of the Roman rite and the *ingressa* of the Ambrosian rite. *See* GALLICAN CHANT, §7(i) and MOZARABIC CHANT, §4(i).

Antiphona ante evangelium (Lat.: 'antiphon before the Gospel'). A Mass chant of the early Latin Christian rites. *See* AMBROSIAN CHANT, §7(ii); GALLICAN CHANT, §7(vii); and GOSPEL, §1.

Antiphona in choro. A chant sung in the choir at Vespers on Sundays and feast days in the Ambrosian rite. *See* AMBROSIAN CHANT, §6(ii).

Antiphonal (i). *See* ANTIPHONER.

Antiphonal (ii). A term describing works in which an ensemble is divided into distinct groups, performing in alternation and together. *See* ANTIPHONAL PSALMODY; CHORUS (I); AND CORI SPEZZATI.

Antiphona post evangelium (Lat.: 'antiphon after the Gospel'). A Mass chant of the Ambrosian rite. *See* AMBROSIAN CHANT, §7(ii).

Antiphonel. An automatic player attachment for harmoniums and organs. It was invented by ALEXANDRE-FRANÇOIS DEBAIN in 1846. *See* MECHANICAL INSTRUMENT.

Antiphoner [antiphonal, antiphonary] (from Lat. *antiphona*; *antiphonarius [liber]*, *antiphonarium*, *antiphonale*). Liturgical book of the Western Church containing the antiphons and other choir chants sung at the services of the DIVINE OFFICE.

1. Origins of the Gregorian antiphoner. 2. Evolution of the Gregorian antiphoner. 3. Important manuscript antiphoners: (i) 9th–10th-century sources (ii) Eastern sources (iii) Western sources; sources from the central region; England (iv) Italy and Spain (v) Manuscripts of the religious orders. 4. Printed antiphoners. 5. Modern research.

1. ORIGINS OF THE GREGORIAN ANTIPHONER. Although the word *antiphona* as a term for a liturgical chant can be traced back to the 3rd century, the term *antiphonarius* (rarely also *antiphonale* – see below) for a book of chants first appears in the 8th century. In his *Dialogus ecclesiasticae institutionis* Archbishop Egbert of York (*d* 766) refers to an 'antiphonarium' and even 'antiphonaria' of Gregory the Great (*d* 604), which he had seen in Rome in the 730s (*PL*, lxxxix, 440–42). The term was also used in Carolingian library catalogues from the end of the 8th century:

- Catalogue from St Wandrille de Fontenelle in Normandy, compiled between 787 and 806 ('antiphonarii romanae ecclesiae'; G. Becker: *Catalogi bibliothecarum antiqui*, Bonn, 1885/*R*, §4, no.21);
- Catalogue from St Riquier in Picardy, in 831 ('antiphonarii sex': ibid., §11, no.238);
- Catalogue from Cologne, in the 9th century (ibid., §16, nos.7, 18, 33);
- Catalogue from St Gallen in the mid-9th century ('antiphonarii III et veteres II'; *P. Lehmann, ed.: Mittelalterliche Bibliothekskataloge Deutschlands und der Schweiz*, i: *Die Bistümer Konstanz und Chur*, Munich, 1918/*R*, p.77);
- Catalogue from Reichenau, at the end of the 8th century (ibid., i, 236)

Another source is Amalarius of Metz (*c*775–*c*850), who at Corbie consulted Roman antiphoners presented to Abbot Wala (822–35) and compiled at the time of Pope Hadrian I (772–95). The antiphoner of Gregory the Great is mentioned again later in the 9th century by the pope's biographer John the Deacon (*Sancti Gregorii magni vita*, ii, §6: *PL*, lxxv, 90). There is further evidence of Roman antiphoners in a note made by the copyist of the Codex Blandiniensis (*B-Br* lat.10127–44) at the end of the 8th century: he noted that the Mass for the 7th Sunday after Pentecost was not in the Roman books ('ista ebdomata non est in antefonarios romanos'; see R.-J. Hesbert, *Antiphonale missarum sextuplex*, Rome, 1935/*R*, no.179). It is noteworthy that this copyist did not use the word *graduale* for his collection of Mass chants (*see* GRADUAL (ii)), but the word *antiphonarius*. At this period the antiphoner often contained both Mass and Office chants. The late 8th-century Lucca fragments (*I-Lc* 490), for example, contain chants (for Advent only) divided into two categories for each Sunday: first for the Office, then for the Mass.

According to Amalarius in the prologue to his *Liber de ordine antiphonarii*, the antiphoner once contained the Office antiphons and also the antiphons of the Mass (i.e. introits and communions), whereas the Office responsories were collected in a different book, the responsorial. This unexpected statement is confirmed by a phrase in a letter of Pope Paul I in about 760: 'antiphonale et responsoriale ... necnon et horologium nocturnum' (MGH, *Epistolae*, iii, *Karolini aevi*, i, Berlin, 1899/*R*, p.529). The division provides a clue about the process of transition from the earliest Roman system (a single book for all types of chant), found also in the Ambrosian (Milanese) and Spanish liturgies, to the subsequent Gregorian system, in which Mass chants were collected in the gradual and separated from the Office chants (antiphons and responsories) in the antiphoner.

For the sake of clarity in modern writings, it is best to avoid using the word 'antiphonale' (antiphoner) to signify a book of Mass chants (as Pamelius, Hesbert and Gamber have done); the latter is more appropriately termed a gradual, particularly when the word *antiphonarius* is by contrast to be reserved for a book of Office chants (as it has been by Gamber).

The traditional attribution of the antiphoner to St Gregory the Great has an echo in the verse prologue ('Gregorius praesul') that preceded the antiphoners (found in *I-Lc* 490), and in miniatures representing St Gregory setting down liturgical melodies under the inspiration of the Holy Spirit, as in the antiphoner of Hartker of St Gallen (see below, §3(i); for further details of the prologue *see* GREGORY THE GREAT). The new attribution of the chant to St Gregory was necessary to give it authority – an essential factor in medieval liturgy as much as in canon law or theology to provide a certain juridical validity. This is the time when 'Gregorian' chant was established in the Frankish kingdom, codified in the earliest known chant books to have survived (such as *I-Lc* 490, late 8th century) and organized into the eight-mode system (e.g. in the earliest surviving tonary *F-Pn* lat.15139, late 8th century).

Most 9th-century antiphoners contain all the chants for the period from Advent to Eastertide grouped into Offices according to the liturgical calendar. In the sequence of Sundays after Pentecost, the responsories were copied separately from the antiphons in five groups according to the months from July to November, corresponding with

the sapiential and prophetic books read on the Sundays of summer and autumn. The antiphons 'ex evangelio' to the *Benedictus* and *Magnificat* for the Sundays after Pentecost were grouped according to Sundays, corresponding with the Gospel readings. These 'Gospel antiphons' may not originally have been included in the book, as is suggested by a remark of Amalarius (*Liber de ordine antiphonarii*, lxviii) and by their omission in some antiphoners as well as their inclusion as an isolated group in others (*F-CHRm* 47: PalMus, 1st ser., xi, 1912/*R*, p.134; *Pn* lat.909, f.260*v*; *Pn* lat.1121, f.187) as a kind of supplement (*see* ANTIPHON, §4).

In these early antiphoners, the chants of the Proper of the Saints (*Sanctorale*) were partly mingled with those of the movable feasts of the Proper of the Time (*Temporale*). The Common of the Saints (*Commune sanctorum*) and the invitatory psalm of Matins were usually copied at the end. Occasionally these antiphoners ended with a brief tonary, in which the chants were grouped according to the eight psalm tones and, within each tone, by psalm endings (*differentiae*).

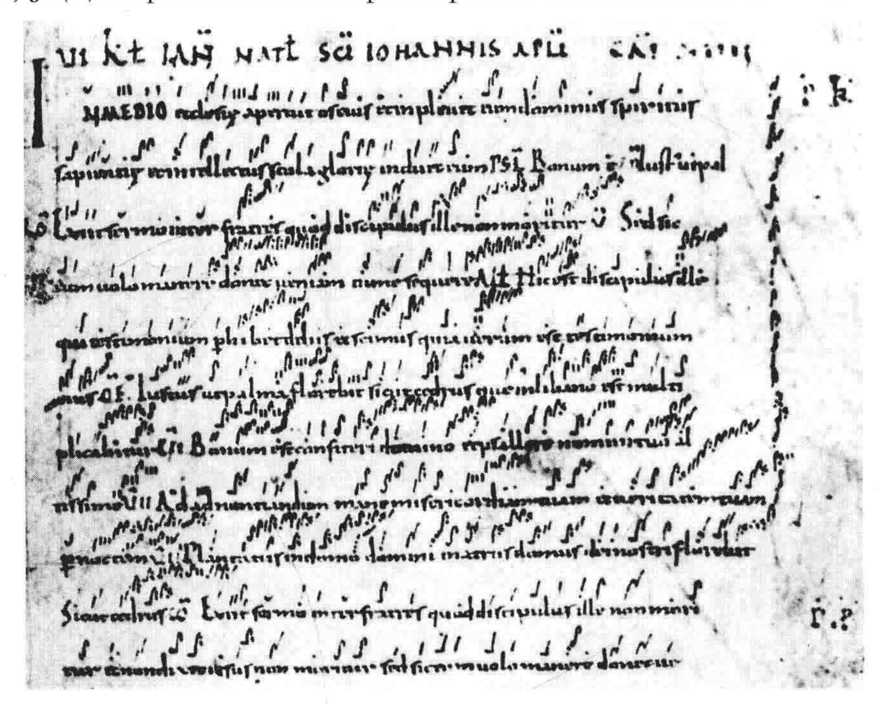
Antiphoners may be divided into two main classes, secular and monastic. The two are distinguished by the number of chants they contain for Matins, the Little Hours (Prime, Terce, Sext and None) and Vespers. Secular antiphoners were used by ordinary clergy, canons and friars of the 13th-century mendicant orders (Franciscans and Dominicans); they contain nine antiphons and nine responsories in groups of three for each of the three nocturns of Matins, a short responsory for the Little Hours and five psalms for Vespers. Monastic antiphoners (those used in monasteries, e.g. of the Benedictines, Cistercians and Carthusians) contain 12 antiphons and 12 responsories in groups of four for Matins, as well as another antiphon for the Old Testament canticles in the third nocturn of Matins. They contain no short responsories for the Little Hours and only four psalms for Vespers.

The majority of antiphoners contain antiphons and responsories for the *Temporale* and *Sanctorale*, with chants for the *Commune sanctorum* in sets in the middle (for Eastertide – 'tempore paschali') and at the end (the rest of the year) of the *Temporale*. Chants for the ordinary weekly ('ferial') Office cycle are less often included, being commonly placed alongside the appropriate psalms in a psalter. Some antiphoners also give hymns at the appropriate places in these cycles, but it is more common for them to be grouped together in a separate section, or in a book of their own or as part of a psalter.

2. EVOLUTION OF THE GREGORIAN ANTIPHONER. The Gregorian antiphoner was imposed throughout the Frankish kingdoms at the end of the 8th century; it spread throughout the Western Church at the same time as the Gregorian sacramentary and lectionary. At this time antiphoners lacked musical notation: according to Guido of Arezzo (11th century) the melodies were memorized, a feat that took 10 years to achieve. Consequently (according to a letter from Helisachar to Nibridius, archbishop of Narbonne, written some time between 819–22) an experienced singer accompanied an antiphoner to a church in order to teach the singers the melodies.

In the second half of the 9th century neumatic notation was introduced; this saved the singers some, though not all, of the effort of memorization. Traditional practice was disrupted at this time: copyists had formerly written the texts of chants in continuous lines of script, and had now to set them down with wider spaces between the lines and to break up words in antiphons and responsories where the syllables carried melismas that were at all elaborate. To do this, the copyists needed to know the traditional melodies or to work in association with singers who did.

This transition in practice was made only gradually. The conventional manuscript text abbreviations had to be expanded and the amount of space needed for the melismas had to be found by trial and error. If the space was insufficient, the copyist of the music would be forced to crowd the neumes along the margin; this can be seen in the antiphoner of Mont-Renaud (PalMus, 1st ser., xvi, 1956), where the text was written in the ordinary unbroken manner and neumatic notation (not originally envisaged) added to it some time later (fig.1).



It was presumably also during the 9th and 10th centuries that most of the local traditions were established which modern research has been able to distinguish by comparing the choice and order of liturgical items, their modality, and details of textual and musical readings. Generally speaking, sources from the German language area are both relatively homogeneous and clearly distinct from those of other areas. The latter, by contrast, tend to fall into smaller groups among themselves; their similarities can often be explained by mere geographical proximity. Groups may also be related because of historical circumstance (e.g. English antiphoners influenced by Norman traditions after the Conquest). Sources from monastic institutions may be related because of the circumstances of their foundation (daughter to mother relationship), or because of some monastic affiliation (e.g. Cluniac) or reform movement (e.g. Hirsau). The later religious orders (Cistercians, Carthusians, Dominicans etc.) used books based on a centrally preserved reference copy.

In consequence, the study of a particular melody or group of melodies involves investigation of its regional transmission, since its liturgical position, mode and textual and melodic readings might vary considerably.

3. IMPORTANT MANUSCRIPT ANTIPHONERS.

(i) 9th–10th-century sources. The earliest manuscript antiphoners contained the text alone, since they were written when the melodies were still memorized. The earliest of all is the Lucca fragment (*I-Lc* 490) mentioned above (§1), copied at the end of the 8th century. Its Mass chant texts have been edited by Hesbert (*Antiphonale missarum sextuplex*, Rome, 1935/*R*, p.xxvi with facs.) and its Office texts by Huglo (1951). The St Gallen fragments (*CH-SGs* 1399) contain a few texts for the Office of 2 February and of the 2nd Sunday in Lent, copied by Winithar in the second half of the 8th century (ed. A. Dold: 'Ein neues Winitharfragment mit liturgischen Texten', *Texte und Arbeiten*, xxxi, 1940, pp.77–84). Finally, in *F-R* A 292 (catal.26), there are a few texts without notation for Advent and for 27 December, copied in the 9th century but later erased to accommodate other texts; these were texts of pieces added to adapt the Roman antiphoner to the monastic use of Jumièges, as Hesbert (1954) has shown.

The only complete 9th-century antiphoner is the antiphoner of Compiègne (more accurately, the antiphoner of Charles the Bald: *F-Pn* lat.17436), which contains the texts of Mass chants followed by texts of the

1. Opening of the Mass for St John's Day from the antiphoner of Mont-Renaud, first half of the 10th century, with French neumes added later (private collection)

Office chants; this royal manuscript was probably copied at St Médard, Soissons (see Huglo, 1993), subsequently coming into the possession of Emperor Charles. An edition was made by the Benedictines of St Maur (1705, repr. in *PL*, lxxviii, 725–850) but it has been superseded by that of Hesbert (CAO, i, 1963). (See also Barber, 1972.)

Because of the importance of Metz in Carolingian times, much interest has been accorded to two 9th-century witnesses to its repertory of Office chants: the *Liber de ordine antiphonarii* (*c*830) by Amalarius of Metz (ed. Hanssens, 1950, with reconstruction of the Metz antiphoner); and the Metz tonary (*c*850), *F-ME* 351 (ed. W. Lipphardt: *Der karolingische Tonar von Metz*, Münster, 1965).

In addition to antiphoners with musical notation it is necessary to study breviaries, which are in effect antiphoners completed with lessons and prayers so that the Office may be read using a single book (*see* BREVIARY).

(ii) Eastern sources. The earliest eastern antiphoner with neumes was written and notated by Hartker, a monk of St Gallen (*c*980–1000) (facs. edn. in PalMus, 2nd ser., i, 1900, 2/1970; text ed. Hesbert, CAO, ii, 1965). It begins with a tonary and contains marginal letters indicating the psalm endings (*differentiae*) appropriate to the antiphons (see Huglo, 1971, pp.233–9). *CH-SGs* 388 is a 12th-century copy of this antiphoner.

The St Gallen group also contains the following, of which the first two are breviaries with neumatic notation: *CH-SGs* 414 (copied *c*1030); *SGs* 413 and 387 (copied between 1034 and 1047); *Zz* Rh.28 (the Rheinau antiphoner: ed. Hesbert, CAO, ii, 1965, pp.ix–xi).

Other important antiphoners with neumatic notation from the eastern area include the monastic antiphoner from Quedlinburg dating from about 1018, *D-Bsb* mus.40047 (study, with inventory and facs., by Möller, 1990); the so-called Codex Albensis, *A-Gu* 211, of the early 12th century, a secular antiphoner possibly from Transylvania or Székesfehérvár (Stuhlweissenburg) in Hungary (facs. ed. Falvy and Mezey, 1963; text ed. Barber); and two antiphoners of Bamberg Cathedral, *D-BAs* lit.23 (11th or 12th century; text ed. Hesbert, CAO, ii, 1965) and *BAs* lit.24 (12th or 13th century). The noted breviary *Mbs* Clm 23037 (*c*1140), from Prüfening near Regensburg, is a representative of an important group of monastic sources linked by the reform movement emanating from Hirsau in the Black Forest (sources from Hirsau itself have not survived). Austrian sources include *A-Wn* series nova 2700 (*Ssp* a.XIII.7 until 1937), a 12th-century gradual and antiphoner from St Peter's, Salzburg (facs., 1969–74; Engels, 1994); *Wn* Cpv 1826 (11th-century noted breviary); and *Wn* Cpv 14319 (12th century).

Not all centres in the eastern area adopted staff notation before the late Middle Ages. 12th- and 13th-century antiphoners with staff notation from this area are therefore not common. Among the earliest are the 12th-century manuscripts of the canons of Klosterneuburg (*A-KN* 1010, 1012 and 1013). The monastic antiphoner *D-KA* Aug.LX, from Zwiefalten, of the Hirsau congregation, had very fine 12th-century staff notation, which was erased and replaced by upright early Gothic notation (facs. ed. Möller, 1995; see also K. Hain: *Ein musikalischer Palimpsest*, Fribourg, 1925). Among the manuscripts copied by Franco, canon of Aachen Cathedral (*d* 1318) is the antiphoner *D-AAm* G.20 (see O. Gatzweiler: *Die liturgiegeschichtlichen Handschriften des Aachener Münsterstifts*, Münster, 1926, pp.109–25).

From Bohemia, the following two manuscripts may be mentioned: *CZ-Pu* VI.E.4.C (12th-century antiphoner from St Jiří, Prague); and *Pu* XII.C.3 (12th-century Bohemian antiphoner).

Staff notation was widely used in Hungary by the 13th century, but the earliest surviving Office books in which it is used are of the 14th: the notated breviary of Esztergom (Gran, Strigonium) and the antiphoner now in Istanbul (facs. ed. Szendrei, 1998, and 1999, respectively).

(iii) Western sources; sources from the central region; England. As in the eastern area, notated antiphoners in Western Europe do not appear before the end of the millennium. For example, the combined gradual and secular antiphoner *F-AI* 44 (late 9th or early 10th century), from Aquitaine, has almost no notation. The troper from St Martial, Limoges, *Pn* lat.1240 (*c*930) contains a table of incipits of chants for Vespers and Matins. In the abridged monastic antiphoner from St Martial *Pn* lat.1085 (late 10th century), notation is used only sparsely. The earliest fully notated Aquitanian antiphoner, *E-Tc* 44.1 (perhaps from Auch), of the early 11th century, was taken to Spain (see below, §3(iv)).

This pattern is repeated, for example, in northern France. The gradual-antiphoner of Mont-Renaud, originating at the monastery of Corbie, was written in the first half of the 10th century without musical notation; notation was subsequently added throughout, in the late 10th or early 11th century (fig.1; facs. in PalMus, 1st ser., xvi, 1955; see also Beyssac, 1957). The liturgical practice of Corbie was closely related to that of St Denis. At the end of the gradual from St Denis *Pm* 384 (11th century), there is a table of incipits of Office chants. Office chants then appear with staff notation in the 12th-century St Denis antiphoner *Pn* lat.17296 (text ed. Hesbert, CAO, ii, 1965). The 12th-century noted breviary of Vendôme *VEN* 17C is related to Corbie-St Denis use. On the other hand, the 13th-century noted breviary of Corbie *AM* 115 was written after Corbie had become affiliated to Cluny.

From Cluny itself there survives the late 11th-century noted breviary *F-Pn* lat.12601 (summer volume only). The monastery of St Maur-des-Fossés near Paris was a member of the Cluniac congregation, and its manuscripts include two antiphoners: the combined gradual-antiphoner with neumatic notation *Pn* lat.12584, of the late 11th or early 12th century (text of antiphoner ed. Hesbert, CAO, ii, 1965); and the antiphoner with staff notation *Pn* 12044, of the first half of the 12th century.

Norman monasteries are represented by *F-R* 209–10 (Y.175), a two-volume monastic noted breviary from Jumièges, partly provided with neumatic notation (12th century); and *R* 244 (A.261), a monastic breviary from Fécamp with staff notation (late 12th century).

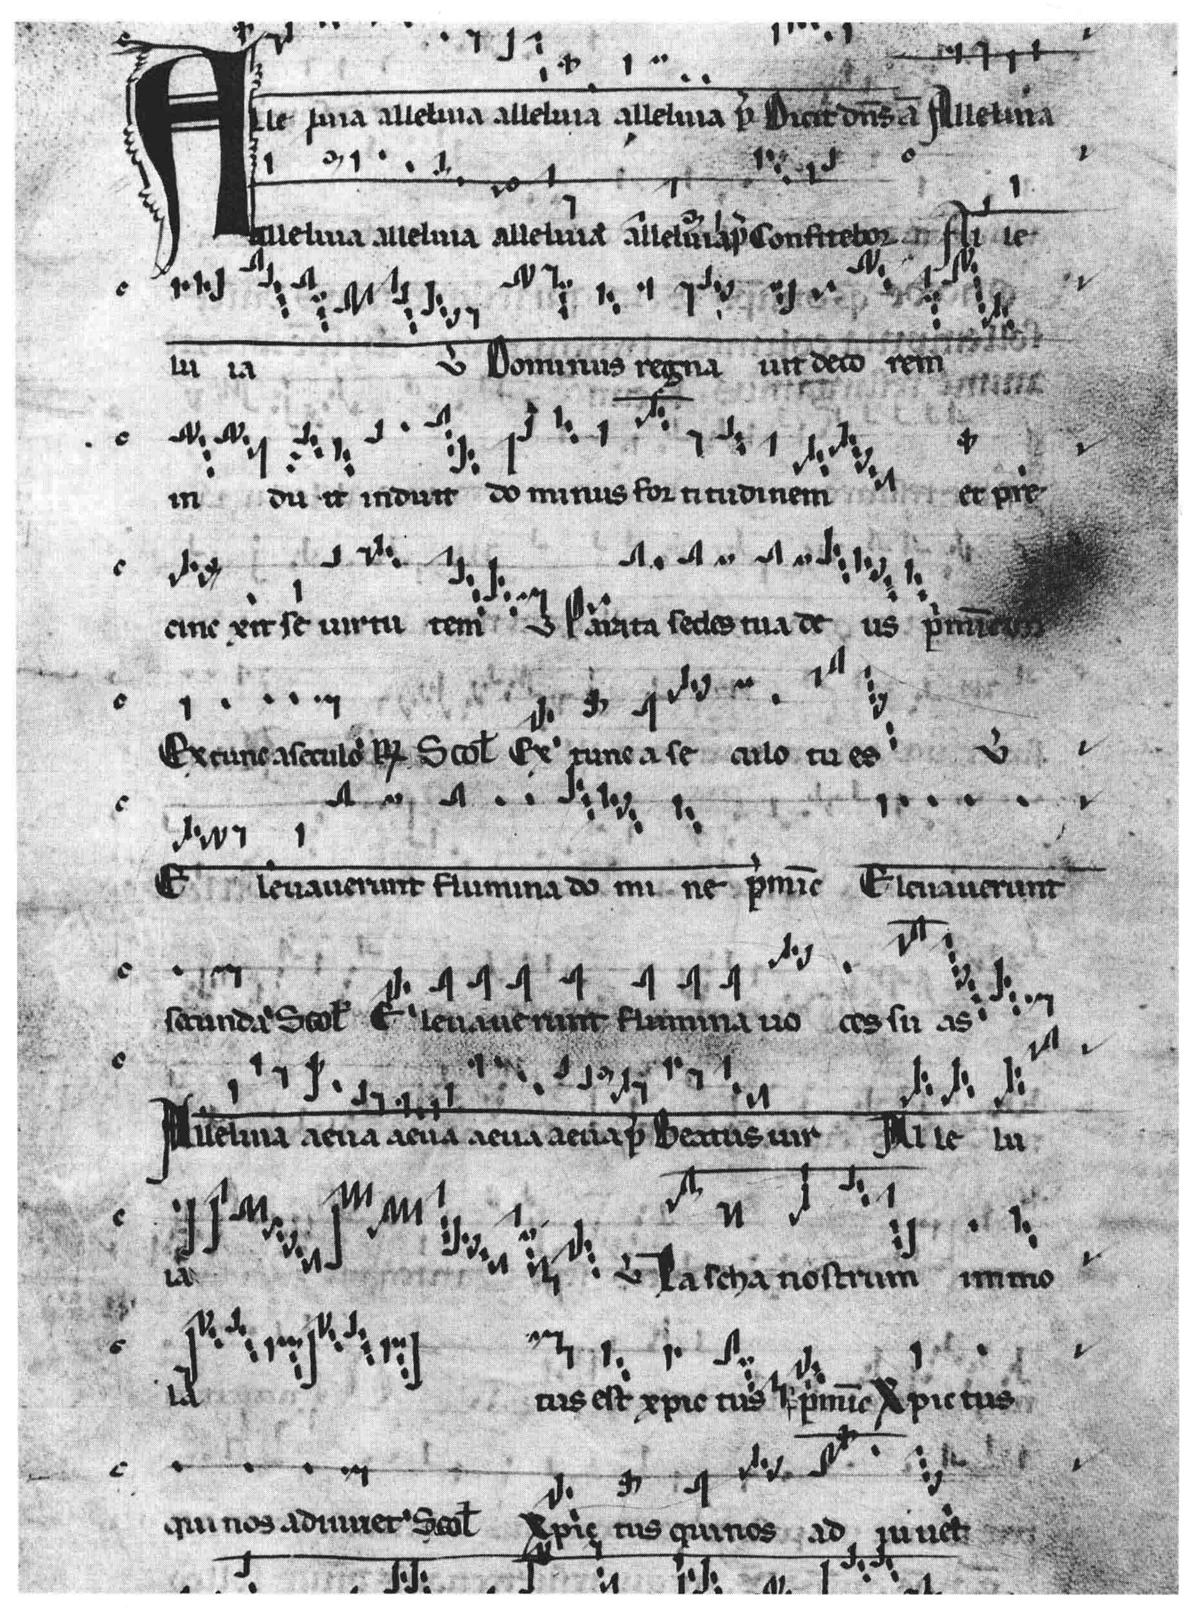
Other important 12th-century antiphoners with staff notation include *F-VAL* 114, from St Amand; *Pn* n.a.lat.1535, from Sens; and *Pn* n.a.lat.1236, from Nevers. The latter is only the winter volume of what must originally have been a two-volume antiphoner. The hymns are in the third volume of the set (a gradual with sequences and tropes), *Pn* n.a.lat.1235 (hymns ed. B. Stäblein in MMMA, i, 1956).

Lyons manuscripts represent a special tradition going back to the time of Bishop Agobard (*d* 840), the author of the *Epistola de correctione antiphonarii*; in them all chants with texts not drawn from the scriptures are excluded. Their musical tradition is seen, for example, in *F-LYm* 357 (457), from the 11th–12th century, with neumatic notation; C 43, a 13th-century noted breviary; and the printed antiphoner of Lyons of 1738.

Antiphoners from regions bordering the German area often display similarities with manuscripts of the eastern groups. Among them are sources from Metz, Liège and Utrecht. The significance of Metz in the Carolingian era was mentioned above (§3(i)). Two manuscript antiphoners of Metz were destroyed during World War II but survive in photographs: *F-ME* 83 and 461. *D-Bsb* Phillips 1678 is a 12th-century noted breviary from Metz. *GB-DRc* B.III.11 (facs. ed. Frere, 1923; text ed. Hesbert, CAO, i, 1963) is an 11th-century antiphoner (surviving only in part) from Liège diocese. Important sources from another area close to the eastern zone are those from Utrecht: *NL-Uu* 406 [3.J.7] (12th century; facs. ed. de Loos, Downey and Steiner, 1997) and *D-Ngm* 4984 (13th century).

The liturgical tradition established in England in the 7th and 8th centuries was unfortunately extinguished by Norse invasions in the 9th. Unless it survives in some way in the Gregorian tradition, to which Anglo-Saxons such as St Boniface and Alcuin may have contributed, no trace of it remains. English monastic antiphoners reflect traditions imported, from the 10th century onwards, from Corbie, and from Fécamp and Le Bec in Normandy. (See D. Hiley: *Proceedings of the British Academy*, lxxii, 1986, pp.57–90.) The most important sources are the following: *GB-Lbl* Harl.2961, a notated Office collectar with hymnal, from Exeter, from the mid-11th century, with neumatic notation (text ed. E.S. Dewick and W.H. Frere: *The Leofric Collectar (Harl. ms. 2961)*, London, 1914–21); *Ccc* 391, an Office collectar with selected portions of the breviary, from Worcester, 1065–6, with neumatic notation (text ed. A. Hughes: *The Portiforium of St Wulstan*, Leighton Buzzard, 1958–60); *WO* F.160, a book containing chants for the whole of the liturgy, Mass and processions as well as the Office, 13th century (facs. of the antiphoner, processional and hymnary in PalMus, 1st ser., xii, 1922/*R*); *Cmc* F.4.10, an antiphoner from Peterborough, 13th century; and *Ojec* 10, a diurnal from Gloucester, 13th century. The last three manuscripts have staff notation.

The Cluniacs were not strongly represented in England, but the 13th-century noted breviary-missal of Lewes *GB-Cfm* 369 (see Leroquais, 1935) is an important document of Cluniac use.



A development in the early 13th century which proved to be of major significance was the codification of the liturgy and its plainchant at Salisbury, in which Richard Poore (bishop of Salisbury 1217–28) played a leading role. The 'Use of Sarum', as it became known, appears to have been identical to that of the English royal chapel, and was eventually adopted by many parish churches and even secular cathedrals in England (with exceptions in the archdiocese of York), Scotland, Wales and Ireland (*see* SALISBURY, USE OF). A list of Sarum antiphoners was compiled by Frere in his introduction to a facsimile of a 13th-century Sarum antiphoner (*AS*, 76ff; facs. of *GB-Cu* Mm.II.9, completed from *SB* 152). Later additions to the list include the early 14th-century noted breviary used at Penwortham in Lancashire, *Lbl* Add.52359 (fig.2; and see D.H. Turner, *British Museum Quarterly*, xxviii, 1964, pp.85–8).

(iv) Italy and Spain. The indigenous chant tradition of Rome known as OLD ROMAN CHANT was not codified until the 11th century. Two 12th-century Old Roman antiphoners survive: *I-Rvat* S Pietro B.79 (facs. ed. Baroffio and Kim, 1995) and *GB-Lbl* Add.29988 (fig.3).

Antiphoners of another non-Gregorian chant tradition of southern Italy, the BENEVENTAN CHANT, have not survived, although many old Beneventan Office chants have been recovered from Gregorian manuscripts of the area. Gregorian antiphoners from Benevento and Monte

2. Vespers, first Sunday in Advent, from the Penwortham breviary (Salisbury Use), English, early 14th century (GB-Lbl Add.52359, f.1r)

3. Paschal alleluias peculiar to the Old Roman use, from an Old Roman antiphoner with central Italian Beneventan neumes, mid-12th century (GB-Lbl Add.29988, f.74r)

Cassino are among the most important of their kind and received particular attention when the *Antiphonale monasticum* (Solesmes, 1934) was being prepared. They include the following 12th-century manuscripts: *I-BV* 21 (text ed. Hesbert, CAO, ii, 1965), *BV* 19 and 20, and *MC* 542; and the 11th-century noted breviary *MC* 420.

Two important central Italian antiphoners survive from Norcia, *I-Rv* C5 and C13, both of the 12th century, with staff notation. An early 12th-century antiphoner from the archiepiscopal archives at Florence has outstandingly beautiful notation (see Huglo, 1971, p.186 and pl.iii). There exist numerous important antiphoners from northern Italy of the 11th century onwards, for example, from Pomposa, Emilia, Bobbio, Piacenza, and the northern cities of Ivrea, Pavia, Vercelli, Monza, Brescia and Verona. They occasionally display similarities with German or southern French traditions. Three were selected by Hesbert for his edition of Office chant texts (CAO, i, 1963): *IV* CVI, the neumed antiphoner of Ivrea (11th century); *MZ* C.12/75, the 11th-century Monza antiphoner; and *VEcap* XCVIII, the 11th-century antiphoner from Verona. *UD* f.20 is a breviary with neumatic notation from Pomposa; *Rvat* lat.7018, a noted breviary-missal of the 11th century from Emilia (see P. Salmon, *Mélanges Eugène Tisserant*, Vatican City, 1964, pp.327–43); *Tn* F.II.10, an antiphoner from Bobbio; *PCsa* 65, a magnificent manuscript begun in 1142 containing the complete liturgy of Piacenza and its chant in staff notation (facs. edn in *Liber magistri, Piacenza, Biblioteca capitulare c. 65*, Piacenza, 1997); *IV* LXIV, another early Ivrea antiphoner; *MZ* C.15/79, of the late 11th century, from Pavia; *VCd* LXX, a 13th-century antiphoner of Vercelli; *GB-Ob* Misc.lit.366, an 11th-century gradual-breviary with neumes from Brescia.

The Ambrosian chant of Milan and the Mozarabic chant of Spain were codified in books in which Mass and Office chants appeared side by side. The term 'antiphoner' is used of these manuscripts in its more general sense of 'chant book'. (*See* AMBROSIAN CHANT and MOZARABIC CHANT).

In the 11th century, after most of Spain had been reclaimed from the Moors, the Spanish Church preferred to import the Roman liturgy and Gregorian chant rather than preserve the Mozarabic rite. Thus in Spain a number of antiphoners exist that were imported from southern France or modelled on southern French exemplars. *E-Tc* 44.1, of the early 11th century, and *Tc* 44.2, of the 11th–12th centuries, with diastematic notation, were both imported from Aquitaine. Aquitanian notation was used for *F-Pn* lat.742, the noted breviary of Ripoll in Catalonia (the abbey was reformed from St Victor in Marseilles; see Lemarié, 1965). On the other hand, the antiphoners of Montserrat, *E-MO* 72, and S Feliù at Gerona use Catalan notation. At San Domingo de Silos the first Gregorian antiphoners were copied in Mozarabic script and notation: *GB-Lbl* Add.30850 (11th century; fig.4; facs. ed. Fernández de la Cuesta, 1985; text ed. Hesbert, CAO, ii, 1965) and *Lbl* Add.30848 (11th-century noted breviary). Later, Aquitanian notation was used at Silos as well, to be seen in *E-SI*, a 12th-century antiphoner from a dependent priory of Silos.

(v) Manuscripts of the religious orders. The Benedictines sometimes used a liturgy adapted from that of the diocese in which they lived. Very often, however, a liturgical use would be perpetuated from mother to daughter house, so that correspondences arise which transcend diocesan and geographical boundaries. This is also the case when monasteries became affiliated in congregations under the leadership of a house such as Cluny or Hirsau (both mentioned above).

The Augustinians (whose canonical use followed the secular cursus) were similarly flexible in matters of liturgical use, although some groups of affiliated sources may be distinguished. Antiphoners survive from many houses of Austrian Augustinian canons, such as Klosterneuburg (see §3(ii) above). Other examples of antiphoners from Augustinian houses are *F-Pm* 385, dating from about 1400, from the Augustinian canons of Utrecht, or *GB-Lbl* Add.35285, 13th century, from Guisborough in Yorkshire, where an antiphoner is bound together with two tonaries, a missal (without notation), calendar, psalter, an Office lectionary and a processional.

The Premonstratensians formed a particular congregation following the Augustinian canonical rule. Their liturgy was established under the successor of their founder St Norbert (*c*1080–1134). *F-Pn* lat.9425 is a 13th-century Premonstratensian antiphoner from Auxerre. An important group of antiphoners survives from the Premonstratensian monastery of Schäftlarn in Bavaria (see P. Ruf: 'Die Handschriften des Klosters Schäftlarn', *1200: Zwölfhundert Jahre Kloster Schäftlarn, 762–1962*, Munich, 1962, pp.21–122): *D-Mbs* Clm 17010 (12th century), Clm 17004 (dated 1331), and the 15th-century antiphoners Clm 17003, 17002, 17007, 17018 and 17001.

A Vallombrosan antiphoner survives: *I-Fl* Conventi soppressi 560 (11th–12th century, with diastematic notation); and two 12th-century manuscripts reflecting Camaldolese use: *Lc* 601 (with staff notation; facs. in PalMus, 1st ser., ix, 1906/*R*) and *E-Tc* 48.14.

In contrast to the above, the Carthusians, Cistercians, Dominicans and Franciscans celebrated the liturgy exclusively from books conforming to an approved norm.

The Carthusians used only chants with scriptural texts, as was the practice at Lyons. Their tradition is seen in the Carthusian antiphoner *F-G* 91(867), written between 1282 and 1318, and in seven later manuscripts (*G* 92–8); besides these there are about 30 antiphoners in various European libraries, including *GB-Lbl* Add.17302.

The Cistercians initiated their own tradition only after the order had existed for 30 years. In 1185 and 1191 the official liturgy and chant were gathered together in a single collection (*F-Dm* 114) in which all the liturgical books, with and without musical notation, were included. This collection served as a standard reference source for books copied for new foundations. Today the gradual and antiphoner are lost; the latter was originally preceded by a prologue (*Cantum quem cisterciensis ordinis*: *PL*, clxxxii, 1121–32) drawn up according to the *regulae* of the Cistercian Guido of Eu. This prologue set out principles underlying chant reform rather similar to those in the prologue of the Cistercian tonary (see Huglo, 1971, pp.357–67, with a table showing the psalm endings (*differentiae*) in the antiphons). About 75 Cistercian antiphoners survive; the earliest seems to be one in Gethsemane (USA) mentioned by Marosszéki (1952, p.142). Most large libraries have Cistercian antiphoners from the first period of the order (the 12th century), for example: *B-Br* 142 [cat.661]; *Br* 268 [cat.662]; *F-Pn* lat.8882; *Pn* n.a.lat.1410, 1411 and 1412 (from

4. Palm Sunday Vespers from a monastic antiphoner and tonary of the Roman rite from Silos, with Visigothic neumes, 11th century (GB-Lbl Add.30850, f.93r)

Morimondo). Examples from the beginning of the 13th century include *GB-Lbl* Eg.2977 (from Columbo in the diocese of Piacenza) and a manuscript in *D-KA*. Some of the sources remain in Cistercian abbeys: *A-HE* 20 (12th century); *HE* 65 (13th century); Mount Melleray, Co. Waterford, Ireland (from Hauterive, diocese of Fribourg in Switzerland); Westmalle, Belgium (12th century).

The Dominicans' reform was based on that of the Cistercians, though not identical in every detail. They collated their chant books with a standard copy at the convent of St Jacques in Paris (now in *I-Rss*); this was drawn up a little before 1254. The vicar-general of the order checked the accuracy of performance in the chant with a small book which he took with him when he visited

Dominican houses (*GB-Lbl* Add.23935). All the Dominican antiphoners in European libraries (especially at Brussels, Colmar, Freiburg, Karlsruhe and Rome) are thus identical. They did not all, however, contain the prologue setting out the rules of transcription for books with music (see M. Huglo: 'Règlement du XIIIe siècle pour la transcription des livres notés', *Festschrift Bruno Stäblein zum 70. Geburtstag*, ed. M. Ruhnke, Kassel, 1967, pp.121–33).

The Franciscans adopted the Roman curial breviary and antiphoner in 1223. In 1230 the chapter general sent copies of the new book to the provinces, and in 1254 an official prototype of the books of the order was drawn up, with square notation in place of the central Italian notation of the earliest notated Franciscan breviaries (*I-Ac* 694; antiphoner in *D-Ma*; *I-Nn* VI.E.20; *Rvat* lat.8737 and Borgia 405 (227)).

The Carmelites followed the tradition of the Roman antiphoner, except in a few details of ceremonial.

4. PRINTED ANTIPHONERS. The earliest printed antiphoners with musical notation were German: the antiphoner of Augsburg (1495; copies in *GB-Lbl* (IB 6753) and *Ob*), and the antiphoner of Würzburg (between 1496–9) using German Gothic notation. The earliest known antiphoners with square notation are the Hieronymite antiphoner (Seville, 1491; copy in *F-Pn* rés.vél.807) and, above all, the Roman antiphoner printed by Spira at Venice (1499; a copy at *GB-Lbl* (IC 24247)). Various churches began printing their own antiphoners, for example, Salisbury in 1519–20.

At the end of the 19th century and the beginning of the 20th, in order to improve the performance of the chant, performing editions of the antiphoner and diurnal were published, some for parish churches, others for religious orders, for example, the *Liber antiphonarius pro diurnis horis* (Solesmes, 1891) by Dom Pothier, and the *Antiphonale monasticum* (Tournai, 1934) by Dom Gajard. The Vatican edition of the Roman antiphoner, for parish use, was published in 1912. In 1903 the Cistercian antiphoner was printed as two folio choirbooks at Westmalle in Belgium. The Dominican antiphoner printed at Mechelen in 1862 was replaced by a vesperal in 1900. The Carthusians printed their antiphoner in 1876 and 1878 and published an *Antiphonarium abbreviatum* in 1881. Finally, the Benedictines of the Swiss Congregation published the *Antiphonale monasticum secundum traditionem helveticae congregationis* in 1943. The work of Solesmes in editing chant books has continued after the drastic liturgical changes determined at the Second Vatican Council. Their publications include the *Psalterium monasticum* (1981) and the *Liber hymnarius cum invitatoriis & aliquibus responsoriis* (1982).

5. MODERN RESEARCH. Two goals have determined the direction of modern research into the antiphoner. The pioneering work of the monks of Solesmes was largely directed towards the restitution of the medieval melodies for modern worship, even though the Office in its full medieval form was almost never celebrated. A second impulse has been to trace the origins and development of the Office repertory recorded in medieval manuscripts. In both cases the immense number of medieval sources and the considerable disparity among them present formidable obstacles. Furthermore, the very size of the repertories involved – a typical antiphoner will contain approximately 1500 antiphons and as many as 1000 responsories – means that the investigation of even a single document is a matter of some complexity.

No complete restoration of Matins – by far the longest and musically most interesting of the Office Hours – was attempted by the Solesmes monks. Their editions are based on selected manuscripts whose tradition could be identified as authoritative: first those with neumatic notation such as Hartker's antiphoner (*CH-SGs* 390–91: see above §3(ii)), complemented by later sources with diastematic notation such as those of Benevento (see above §3(iv)).

In the Corpus antiphonalium officii (CAO), R.-J. Hesbert tackled the issue of a critical edition by first listing the contents of 12 early antiphoners, six following the secular cursus (i, 1963) and six the monastic cursus (ii, 1965); the full text of each chant was then edited individually (iii–iv, 1968–70), and finally the selection of responsories and their verses for the Sundays of Advent in no less than 800 sources was compared, and sources with the same or similar selection and ordering were identified (v–vi, 1974–9). One of Hesbert's aims was to trace a common ancestor from which the sources might have descended. Although both the concept of a common ancestor and Hesbert's method of identifying it have been questioned, the patterns of relationships between the sources which he revealed have shed invaluable light on the manuscript corpus.

The work of making inventories of important antiphoners has been pursued most notably in the project CANTUS directed by Ruth Steiner and Terence Bailey. By the end of the century, the contents of over 50 were available in machine-readable or machine-sortable form, including information on modal assignment not given by Hesbert. Volumes published in the series Corpus antiphonalium officii ecclesiarum centralis Europae (CAO–ECE, also available in machine-readable form) by the Hungarian Academy of Sciences present incipits of all chants of a particular liturgical use, based on the critical comparison of multiple sources of the use in question.

These projects have shed much light on the great variety among medieval antiphoners, and they provide valuable data on which to base future work on the 'genealogy' of sources. Similar work on the chant melodies has hardly begun. A critical edition of a substantial and clearly defined Office chant corpus is the three-volume *Antiphonen* edited by László Dobszay and Janka Szendrei in the series Monumenta monodica medii aevi, which presents the complete antiphon repertory (over 2500 items) of two traditions in parallel – that of the Hungarian archdiocese of Esztergom (see §3(ii) above) and Franciscan-Roman use.

It is not unreasonable to hope that through the combination of work on the make-up of Office repertories (e.g. CAO, CANTUS, CAO–ECE) and critical editions of selected groups of sources, the outlines of development of the antiphoner from its beginnings in the 8th–9th century to its multifarious late-medieval manifestations, and post-medieval reformations, will become clearer.

BIBLIOGRAPHY

For a list of catalogues of large libraries with numerous antiphoners in their holdings, and also for brief descriptions of many antiphoners and other Office chant books, *see* SOURCES, MS, §II.

MICHEL HUGLO/DAVID HILEY

Antiphonia (Gk.: 'returning a sound'). In Greek and Byzantine theory, the octave (or double octave) and singing in octaves.

Antiphony. A term for music in which an ensemble is divided into distinct groups, used in opposition, often spatial, and using contrasts of volume, pitch, timbre etc. *See* CHORUS (i), §3 and CORI SPEZZATI.

Antiquis, A(dam) de (*b* ?Venice, *fl* early 16th century). Italian composer. 15 frottolas and 2 *laudi* are attributed to 'A. de Antiquis' (sometimes abbreviated to 'A. de A.') in the collections of Ottaviano Petrucci and Andrea Antico. Petrucci appended 'Venetus' to Antiquis's name in *Frottole libro quinto* (RISM 1505⁶), and once in *Laude libro secondo* (RISM 1508³) gave his name in full. Many scholars have attempted to identify Antiquis with ANDREA ANTICO, engraver, publisher and composer from Montona; however, Antico never signed himself 'Venetus' and it seems likely that different people are involved. Einstein cited Antiquis's setting of the sonnet *Io mi parto* as the first printed example of the polyphonic working out of an entire composition of the frottola type and an important precursor of the madrigal.

MARTIN PICKER

Antiquis, Giovanni Giacomo de (*b* Corato; *d* Bari, after 1608). Italian composer and anthologist. Antiquis was associated with the basilica of S Nicola, Bari, for most of his career, first as cleric (from 1565), then as canon and choirmaster. From 1606 to 1608 he was chaplain and singing teacher of the Conservatorio dei Poveri di Gesù Cristo in Naples. His two anthologies of 1574 (dedicated to the banker Daniello Centurione) contain 13 of his own villanellas and 31 by various musicians employed in Bari, among them Pomponio Nenna and Stefano Felis. His villanellas usually open homorhythmically and proceed in lightly imitative textures. Two books of madrigals by Antiquis are listed in the catalogue of the library of Federico Franzini, compiled in 1676 (Mischiati nos.XII:26–7); they do not survive. He also published a number of instrumental bicinia in anthologies.

DONNA G. CARDAMONE

Antiquo [Antiquus], **Andrea.** *See* ANTICO, ANDREA.

Antiquus episcopus Beneventinus. An unnamed Beneventan bishop credited in the 12th-century Calixtine manuscript (*E-SC*) with a conductus, *Jacobe sancte tuum repetito*, that appears in both monophonic and polyphonic settings. The somewhat vague attribution may be fictitious, particularly since the Beneventan see was an archbishopric from 969.

SARAH FULLER

Anton (Clemens Theodor), Prince of Saxony (*b* Dresden, 27 Dec 1755; *d* Dresden, 6 June 1836). German prince and amateur composer. The third son of Friedrich Christian of Saxony and the noted patron and composer Maria Antonia Walpurgis, he was originally intended for the Catholic priesthood, but in 1781 he married Maria Antonia of Sardinia, and after her death Maria Theresa of Austria (1787). Peter August was responsible for Anton's musical education, and he was later tutored by the court musician A. Schmiedel. He produced his first major composition, the cantata *Montagnes, ode di Fénélon* in 1772. Throughout most of his life he remained outside government, and instead pursued his favourite pastimes, musical composition and genealogy. On the death of his brother King Friedrich August I in 1827 he succeeded to the throne of Saxony. Religious controversies and his advancing age led to a co-regency with his nephew Friedrich August in 1830, and a constitutional monarchy in 1831.

Anton of Saxony was a skilful musical dilettante and one of the most prolific composers of the House of Wettin (his brothers Friedrich August and Maximilian and nieces Auguste and Amalie also composed). His works (which fill more than 50 manuscript volumes in *D-Dl*) include several operas and some 30 cantatas (several to texts by his brother Maximilian), and were performed by other amateur musicians at Dresden and Pillnitz to celebrate court occasions. Anton also composed sacred music, instrumental works and secular vocal pieces. Though Weber described the cantata *Il trionfo d'Imene* (1819) as being 'full of talent', Anton's wide-ranging compositions are rather monotonous with regard to harmony and motif. They belong to the *galant*, early Classical style, and hardly reflect the move towards early Romanticism which was occurring in Dresden.

DIETER HÄRTWIG

Antonelli. Italian family of composers. Abundio [Abbondio, Abondio, Abundii] Antonelli [Antonelli da Fabrica, Antonellio, Antinello] (*b* Fabrica, nr Viterbo; *d* probably at Rome, ? in or before 1629) was a composer and teacher. According to Casimiri he must have taught music at the Seminario Romano, Rome, some time between 1602 and 1606. The first post he held that is specifically documented is that of *maestro di cappella* of S Giovanni in Laterano, Rome, where he is recorded from 1 June 1611 to 20 July 1613 (there is no evidence to substantiate Pitoni's and Baini's statements that he was there by 1608); Tullio Cima was one of the boys who sang under him there. The title-pages and dedications of works that Antonelli published in 1614 and 1615 indicate that he was then *maestro di cappella* of Benevento Cathedral. That he had returned to Rome by February 1616 can be determined from the dedication of his print of that year. In 1619 he corresponded with Romano Micheli regarding what he considered to be Micheli's excessive application of *obblighi* to a ten-part mass by him; Micheli printed the letter and his replies in two theoretical works of 1621. Antonelli probably remained in Rome for the rest of his life. Casimiri conjectured that he was no longer alive in 1629, since a volume (RISM 1629^6) ostensibly by him (from the designation 'Liber quartus'), but also containing four pieces by his brother Francesco (*fl* 1629) and two by his brother Angelo Antonelli (*fl* 1614–?1629), was edited by Francesco (there are also three motets by Angelo

Antonelli in Abundio's 1614 volume). The presence of works by an Abundio Antonelli in six anthologies of the 1640s led early biographers to assume that Abundio Antonelli was in fact Antonello Filitrani.

Antonelli was primarily a composer of sacred works, most with continuo, which are typical products of the early 17th-century Roman school. The masses and many of the motets tend to be conservative, with mainly contrapuntal – frequently canonic – textures. Greater textural, harmonic and melodic diversity is to be found in the three books of 1615–16. These include pieces in which strict counterpoint or freely imitative two-part writing predominates and others in which solo and choral passages alternate. Antonelli's most progressive and interesting music is to be found in the occasional works for three and four choirs written for S Giovanni in Laterano, and in the Latin dramatic dialogues such as *Adiuro vos* (in RISM 1616[1], a publication associated with the Arciconfraternita di S Marcello), *Gaude virgo gloriosa* (*D-Rp*: a concerted dialogue for four soloists, four-part chorus and continuo) and *Abraham, tolle filium tuum* (*Rp*). The last of these is a cantata-like piece on subject matter from the Old Testament which is scored for soloists, eight-part chorus, violin, cornett, theorbo, lute and organ and is organized as follows: opening sinfonia for concerted instruments; bass solo accompanied by concerted instruments; instrumental interlude; tenor solo, with theorbo and organ; dialogue in recitative style accompanied by lute and organ; soprano solo accompanied by all instruments; and a concluding double chorus. Through the last two works Antonelli contributed to the early development of the oratorio.

PATRICIA ANN MYERS

Antonelli, Giulio Cesare (*fl* Mantua, 1606–49). Italian composer. He was a canon. His known works survive in two manuscripts (in *I-Mc*, Fondo S Barbara), the first containing 12 madrigals dated from Luzzara, near Mantua, in 1606, the second a setting in six sections of Rinuccini's *Lamento d'Arianna* which is ascribed to him on the cover in a contemporary hand. The title-page of the 1606 manuscript describes him as *maestro di cappella* of S Andrea, Mantua, and a copy of his will dated 22 March 1649 and kept with the manuscript implies that he was still at S Andrea at this date. The madrigals are all settings of Guarini, more specifically texts that had already been set by Monteverdi, then also working at Mantua, most of them in his fifth book of madrigals (1605). Reliance on Monteverdi's example is also evident in the *Lamento*, which thus places Antonelli even more firmly among those composers working at Mantua during the first decade of the 17th century – for example Amante Franzoni – who were heavily indebted to Monteverdi for textual, formal and sometimes stylistic models. At the same time the *Lamento* forms part of the more general fashion, to which composers such as Antonio Il Verso and Claudio Pari contributed, of composing works inspired by Monteverdi's original. Monteverdian gestures are, however, rare in Antonelli's music, which is generally closer to the sonorous homophony of another leading Mantuan composer, Gastoldi.

IAIN FENLON

Antonello [Anthonello, Anthonellus, (An)tonelus] **da Caserta** [Antonellus Marot de Caserta, A. Marotus de Caserta abbas] (*b* ?Caserta, nr Naples; *fl* ?northern Italy, late 14th and early 15th centuries). Italian composer.

1. Sources and chronology. 2. Works.

1. Sources and chronology. At one time Pirrotta proposed that Antonello was part of a Neapolitan school of early 15th-century polyphony, but the presence of his works exclusively in manuscripts of northern Italian provenance has led scholars more recently to doubt this possibility. Hard evidence of his whereabouts is practically nonexistent, however. Nádas and Ziino have suggested that the text of the ballata *Del glorioso titolo d'esto duce* celebrates the coronation of Giangaleazzo Visconti as Duke of Milan in 1395. Antonello's only madrigal, *Più chiar che'l sol in lo mio cor lucia*, may praise Lucia Visconti, Giangaleazzo's niece and ward, whose wedding took place in 1399. A 'frater Antoniello de Caserta' appears in a 1402 document recorded by a notary who worked in the archbishop's curia in Pavia, tending to favour the hypothesis that Antonello was in the vicinity of the Visconti court in Pavia in the last years of the 14th century. Although we cannot know if this 'frater' is the composer, we do know that Antonello was a member of a monastic community, as the attribution for *Più chiar che'l sol* in *I-PAas* Armadio B 75 is to 'A. Marotus de Caserta, abbas'.

Antonello's eight French settings survive in the older fascicles of *I-MOe* α.M.5.24, compiled in northern Italy in the first two decades of the 15th century, most likely in the circle of Pietro Filargo, cardinal and papal legate in Lombardy. Filargo was an adviser to Giangaleazzo Visconti and had a residence in Pavia; later he was elected the schismatic pope Alexander V (*d* 1410). Antonello is the most represented composer of the early layer of the

manuscript, and one fascicle appears to have been planned to collect his works. Two songs appear also in the Codex Reina (*F-Pn* n.a.fr.6771), copied in the Veneto, and one in the northern Italian Boverio Codex (*I-Tn* T.III.2). The principal source for Antonello's seven Italian works is *I-La* 184, in which his name appears in the forms 'Antonellus Marot de Caserta' and 'Antonellus Marot' above each of them. Only two Italian works are transmitted elsewhere: *A pianger l'ochi* in two fragmentary sources, and *Più chiar che'l* sol, possibly his only Italian work originally conceived in three voices, in the Parma fragment, with a substitute contratenor by Matteo da Perugia. The main composer of *I-MOe* α.M.5.24 and a member of the household of Pietro Filargo, Matteo is one more connection between Antonello and Pavia.

2. WORKS. Antonello was one of the finest and most sophisticated composers of the post-Machaut generation, and was one of the Italian composers of his time most steeped in the French tradition. His ballade *Beauté parfaite* is the only known setting by another composer of a text of Machaut (*Loange des dames*, no.140). It opens with a beautiful extended melisma that can be taken as a classic model of syncopation procedure. The ballade *Dame d'onour en qui* is also indebted to French models. The refrain quotes text and music of the popular *Par maintes foy*, by the Parisian composer Jehan Vaillant. The ballade contains stacked numbers that look like fractions to represent changes of mensuration, a device found otherwise at this period only in the ballade *En nul estat* in *F-CH* 564 by one GOSCALCH, possibly the author of the music theory compendium copied in Paris in 1375 and now in Berkeley (*US-BEm* 744). As Ursula Günther has shown (1990), Antonello's rondeau *Dame d'onour c'on ne puet esprixier* may borrow its juxtaposition of different mensuration signs from Matheus de Sancte Johanne's *Inclite flos ortis Gebenensis*. Antonello's remaining ballades explore rhythmic proportions in different ways. *Du val prilleus* is one of the earliest surviving works to use proportional numbers. *Tres nouble dame* employs units of two bars of perfect time in diminution against hemiola rhythm; a canon reveals that the special sign Ɔ means that the note values are to be altered in the proportion 4:3 ('de modo epitrito'). In *Dame d'onour c'on ne puet*, three different time signatures are combined so that the smallest note values coincide and bars of different lengths result. His French works thus represent a kind of summa of experimental techniques of Ars Subtilior rhythmic complexity.

Antonello's Italian works are considerably simpler in style than his French works; despite this difference, most scholars do not follow Wilkins's suggestion that they were written by another composer of the same name. The madrigal *Del glorioso titolo* is the most elaborate of his Italian settings, possibly reflecting its ceremonial origins. The two voices are given independent texts, and the lines are connected with linking phrases in the tenor. The several changes of metre and the nervous, syncopated rhythms recall the style of Bartolino da Padova. Antonello's ballatas are simpler: the two voices largely declaim the texts simultaneously, and both *piedi* in each piece end with the same cadence. Lively melismas occur at the beginning and end of all of them. The texts – like Antonello's French texts – are all courtly love lyrics.

Three works of dubious authenticity may be mentioned. The tiny ballata *De mia farina*, copied into *I-La* 184 below Antonello's *Del glorioso titolo*, was included as an *opus dubium* in *Grove6*; it is a charming account of the pleasures of making lasagne and is unlike Antonello's style in every respect. In *I-MOe* α.M.5.24, the hymn *Puer natus est* is ascribed to 'idem'; the previous folio has an erased ascription that seems to read 'Antonello', possibly indicating his authorship of the hymn. Finally, in the fragmentary source *I-Bu* 596, the anonymous ballade *Nulle pitie de ma dame* had a faint ascription to 'tanel', just legible to Besseler at the beginning of this century but now faded entirely. It is not impossible that this ballade represents another French work by Antonello.

URSULA GÜNTHER/ANNE STONE

Antoni, Antonio d' (*b* Palermo, 25 June 1801; *d* Trieste, 18 Aug 1859). Italian composer and conductor. His grandfather and father, both composers and conductors, gave him his first instruction in music, and at the age of 12 he conducted his own mass for St Cecilia's Day. In 1817 he made his début in Palermo, as both conductor and composer, with the *dramma giocoso Un duello per equivoco, ossia Gli amanti in disturbo*. He subsequently travelled for a number of years, as a conductor and an impresario, in Italy, France and England, and was in Venice as conductor of a regimental band in the Austrian army. In 1824 he moved to Trieste to conduct another military band; there his *opera semiseria Amina, ovvero L'innocenza perseguitata* was successfully given the following year. The libretto, written in 1824 by Felice Romani for Giuseppe Rastrelli, is not the same as that of Bellini's *La sonnambula*, as many sources say. His serious opera *Amazilda e Zamoro*, was performed in Florence at the Teatro della Pergola in the spring of 1826, but was not well received. In 1829 he was appointed musical director of the newly-formed Società Filarmonico-Drammatica, for the official inauguration of which he wrote the cantata *Il genio di Trieste* (22 June 1829) and the vaudeville *La festa dell'archibugio*. He lost this position one year later, and supported himself by teaching, playing the keyboard for the orchestra at the Teatro Grande, and playing the organ in various churches. He also encouraged the performance of instrumental music, especially German, and composed cantatas, fugues, canons and dances. His opera *Giovanna Gray*, composed in 1847, remained unperformed.

EMANUELE SENICI

Antoniazzi. Italian family of violin makers. Gaetano Antoniazzi (*b* Cremona, 7 Aug 1825; *d* Milan, 1 Aug 1897) probably learnt his craft in the Ceruti workshop in Cremona before establishing himself in Milan in 1870. It is only from this date until about 1890 that we find instruments signed by him. He also worked along with his sons for Leandro Bisiach. His work is good, original and spontaneous, but not always very careful. The varnish is yellow-brown or sometimes red-brown in colour. His labels were generally handwritten.

Riccardo Antoniazzi (*b* Cremona, 19 Dec 1853; *d* Milan, 10 Nov 1912), the sixth child and pupil of Gaetano, was the ablest and most consistent violin maker of his family. Unfortunately he lived somewhat in the shadow of Leandro Bisiach and he did not sign many of the instruments from his best period. His instruments can be divided into three periods: from his apprenticeship and early development until about 1887–8, during which he made instruments similar to those of his father; his best period, which lasted until about 1904, during which he developed his own style and worked primarily for Bisiach; and the period from about 1904 when he worked for the firm Monzino and Sons, during which he made beautiful instruments although working with less care, especially with regard to the varnish. Today these are his best-known instruments. He had many students and followers.

Riccardo used a great variety of models, and his varnish was yellow-orange or at times dark red. He is known to have used four different labels, and he also used a brand during his time with Monzino, with his initials A.R. inside a double circle surmounted by a cross. This brand is often attributed to Romeo, but it seems that he never used it.

Romeo Antoniazzi (*b* Cremona, 4 May 1862; *d* Milan, 7 May 1925) was the eighth son and pupil of Gaetano. Initially he worked with his father and brother and like them made instruments for Bisiach. However, depending on need or opportunity he worked in many different places. He worked on his own, with his brother, for Bisiach, for Monzino, or in Barlassina's shop. The unsettled aspect of his life influenced his work which was highly uneven in quality. His most interesting instruments, like those of his brother Riccardo, are from the late 19th century. He trained a large number of pupils. Despite the fact that his violin making was less refined than his brother's (especially during his last period), he made instruments with distinct personality and great spontaneity which today are much admired. His varnish varied in colour and quality depending on the period, going from a light orange-yellow to an orange-brown, sometimes dark brown (often the varnish of his last period faded and his instruments sometimes appear lacklustre). He used various labels. Later on he used one with 'fece in Cremona' and decorated with the Cremonese coat of arms on it even though he never returned to his native city to work (he probably introduced it for business reasons and to distinguish himself from his brother).

ERIC BLOT

Antonicek, Theophil (*b* Vienna, 22 Nov 1937). Austrian musicologist. He studied with Schenk and Wessely at the University of Vienna, taking the doctorate there in 1962 with a dissertation on Ignaz von Mosel; in 1967 he spent a year of study with Remo Giazotto in Italy. From 1963 to 1999 he was a research musicologist for the Music Research Commission of the Austrian Academy of Sciences. Concurrently he was secretary of the Gesellschaft zur Herausgabe der Denkmäler der Tonkunst in Österreich (1963–74), becoming director of publications (from 1998). He also served the newly created Österreichische

Gesellschaft für Musikwissenschaft as general secretary (from 1973), vice-president (from 1984) and president (1990–96). In 1979 he was appointed a reader at the University of Vienna. He was elected a corresponding member (1984) and later a full member (1995) of the Austrian Academy of Sciences. He became editor in 1976 (with C. Harten) of the series Musicologica Austriaca. He is in addition chairman of the editorial board for the *Österreichischen Biographischen Lexikons* and a director of the Anton Bruckner-Institut Linz.

Antonicek's chief areas of research have been Austrian (particularly Viennese) music history from the 17th century to the 19th, and relations between Italian and Austrian music of the same period; his publications include articles on Cavalieri, Cesti, Monteverdi and Beethoven.

Antonio da Tempo (*fl* Padua, early 14th century). Italian poet and theorist. He was a judge in Padua between 1329 and 1337, and in 1332 wrote a treatise *Summa artis rythimici* (ed. R. Andrews, Bologna, 1977) which he dedicated to Alberto della Scala, ruler of the city. This is a work on metrics which describes, with examples, the main poetic forms of the 14th century (sonnet, ballata, *cantio extensa*, *rotundellus*, *mandrialis*, *serventensius* and *motus confectus*). Although Antonio stated expressly that he was not a musician, the section of the treatise on 'scansione syllabarus' demonstrates his knowledge of contemporary musical style and the relationship between poetry and song. There are further references to music in the treatise, particularly concerning the madrigal, which is described as a composition preferably for two or more voices.

Antoniotto [Antoniotti], **Giorgio** (*b* ?Milan, *c*1692; *d* Milan, 1776). Italian theorist and composer. He was living in Holland in the mid-1730s but then moved to London, where he stayed for more than two decades and wrote his treatise *L'Arte armonica: or, A Treatise on the Composition of Musick* (1760). It was published in an anonymous English translation, which the *Monthly Review* found lacking in purity and elegance of style but intelligible and valuable for advanced students of music. In many respects it is an up-to-date and sophisticated presentation of theory, for instance in its use of Corelli's op.5 no.1 to illustrate the transformation of chord progressions into melodies and counterpoint. About 1770 Antoniotto returned to Milan, where he gave Giovenale Sacchi his scheme for creating dissonances by sustaining

chords until all the notes of the scale sound together. Fétis, the most important source of information on Antoniotto, reported that he died in Milan in 1776.

Until recently the only known music by Antoniotto was his 12 sonatas op.1 (Amsterdam, mid-1730s). A collection of 12 sonatas, for cello or viola da gamba and basso continuo, survives in manuscript in the Civico Istituto Musicale Gaetano Donizetti, Bergamo; it is not known whether these are the same or different pieces. Further autograph works survive at Durham Cathedral: a sonata in E minor for cello and bass, and the score of a cello concerto in A. Durham also houses a transcription of part of Antoniotto's *L'Arte armonica* by Richard Fawcett, a native of Durham who was associated for much of his life with Corpus Christi College, Oxford, and two pages of examples of modulations and the 'accachiatura' in Antoniotto's own hand. The stylistic characteristics of two of the solo sonatas from op.1 are described by Newman, who notes, in particular, 'the melodic pathos achieved by short sighs, yearning leaps, and expressive rests'.

SVEN HANSELL/EMILIA ZANETTI

Antoniou, Theodore (*b* Athens, 10 Feb 1935). Greek composer. He studied the violin, singing and composition at the National Conservatory, Athens (1947–58); he also studied composition with Papaioannou at the Hellenic Conservatory, Athens (1956–61). His studies were continued with Günther Bialas at the Munich Musikhochschule, where he gained his first experience in electronic music. He made a tour of the USA in 1966 and spent the year 1968 in Berlin. In 1967 he founded the Hellenic Group of Contemporary Music in Athens. He taught composition and orchestration at the universities of Stanford (1969–70) – where he founded the 'Alea II' ensemble – and Utah (1970), at the Philadelphia College of the Performing Arts as professor (1970–78), and at Tanglewood (1974–85), where he was also assistant director of contemporary activities. In 1979 he was appointed professor of composition at the University of Boston and in 1989 became president of the Union of Greek Composers. Since then he has divided his time between the USA and Greece, conducting many contemporary works, particularly by younger Greek composers. Awards made to him include the Richard Strauss Prize of the City of Munich (1964), the City of Stuttgart Prize (1966) for his Violin Concerto, the Steghi Grammaton Prize for his *Miniatures*, the Spanish television Premio Ondas for *Cassandra* in 1970 and two US National Endowment for the Arts grants (1975, 1977).

An enormously prolific composer, Antoniou's music hesitated at first between a simple atonality (Violin Sonatina, 1959) and an engaging Bartókian folklorism (Trio, 1961). Later he adapted serial procedures in writing pieces in elegantly constructed small forms; he has continued to favour such designs. The influences of Christou, Zimmermann and Penderecki and the use of other advanced techniques became evident in the large-scale works of the early 1970s. However, he always maintained his distance from avant-garde excesses, and has developed a highly practical 'synthetic' notation, which represents complex sound structures in an easily assimilable fashion. Describing himself as 'essentially a dramatic composer [of] abstract programme music', he has adopted a shrewd eclecticism, even on occasion mixing serial techniques with folk elements. In his opera *Bacchae* (1992), distant echoes of Orff, Stravinsky and Bernstein are combined with an extensive use of irregular rhythmic patterns. Meanwhile *Oedipus at Colonus* (1998), a sombre and tightly woven score, represents one of Antoniou's more mature achievements.

WORKS
(*selective list*)

STAGE

Epirus (ballet), 1964; Noh-Musik (music theatre), 4 pfms, 1964; Rhinoceros (ballet, after E. Ionesco), 5 insts, tape, 1964; Clytaemnestra (sound-action), actresses, dancers, orch, tape, 1967; Cassandra (sound-action for TV), mixed media, 1969; Protest I, actors, tape, 1970; Protest II, mixed media, 1971; Aftosyngentrossi-peirama [Meditation-Experiment], mixed media, 1972; Chorochronos I, mixed media, 1973; Parastasis II, dancer ad lib, perc, tape, 10 insts, 1978; Periander (mixed media op, 2, G. GEORGE LEOTSAKOS

Antonius de Arena. *See* ARENA, ANTONIUS DE.

Antonius de Civitate Austrie [Cividal, Civitato; Antonio da Cividale] (*b* ?Cividale in Friule; *fl* ? 1392–1421). Italian composer. He was a Dominican friar; his motet *Pie pater Dominice/O Petre martir inclite/O Thoma lux ecclesie* invokes three saints of the order. An 'Antonius de Civitato' entered the Venetian monastery of S Domenico in 1392, where the prior was Johannes Dominici of Florence, created cardinal by Pope Gregory XII in 1408. Antonius may have followed Cardinal Dominici to the Council of Cividale, convened by Gregory XII in 1409. The motet *Strenua/Gaudeat* celebrates the marriage of Giorgio Ordelaffi, lord of Forlì, with Lucrezia degli Alidosi on 3 July 1412. Antonius had moved to Florence by 1414, in which year he probably composed *O felix flos Florencia/Gaude felix Dominice*, in honour of that city and Leonardo Dati, newly elected Master General of the Dominicans. *Sanctus itaque patriarcha Leuncius* was written for the cathedral of Trani, specifically mentioning the death of S Leucio and the transfer of his relics, housed in that church. (The scribe of *I-Bc* Q15 adapted the name to S Leonzio, patron saint of Vicenza.) A motet with a probable ascription to Antonius, *Clarus ortus/Gloriosa mater*, honours Pope Martin V on his return to Rome after election at the Council of Konstanz, possibly in April 1421. The composer may have left for Rome when the papal curia departed from Florence in September 1420.

Two rondeaux are copied in a gathering in *I-La* 184 (*c*1410) otherwise devoted to Bartolino da Padova. Three mass movements, six motets and a virelai survive in the north Italian manuscripts *I-Bc* Q15, *I-Bu* 2216 and *GB-Ob* Can.misc.213, from the 1420s and 1430s, further suggesting activity in the Veneto. Antonius ranks among the more prolific motet composers of the early 15th century in Italy.

The repetition and sequential use of short figures characterize Antonius's style; frequent rests cause the melodic lines to be split up into short sections. The music is highlighted by a number of interesting formal constructions. In *Vous soyes* (ed. in Nádas and Ziino) the three-note tenor must be read forwards then backwards in a continual cycle, while the contratenor is read backwards and forwards. In this song and in *Loingtemps*, the upper voices labelled 'triplum' lack text altogether. The instruction for *Je suy si las venus* indicates that the canonic upper voices are to be read in perfect time with diminution. The fully texted tenor of *Pie pater Dominice/O Petre martir inclite/O Thoma lux ecclesie* borrows a sequence melody, while the tenor of *Clarus ortus/Gloriosa mater* is organized into six taleae, each of which is immediately repeated in coloration. The paired Gloria and Credo (*I-Bc* Q15, nos.83–84) share the same mode, clefs and mensuration and the use of brief points of imitation in their Amen sections, as well as other musical material; the Gloria tenor is sung three times in exact repetition.

HANS SCHOOP/ROBERT NOSOW

Antonius de Leno (*b* ?Leno, nr Brescia; *fl* 1st half of the 15th century). Italian theorist. An incomplete treatise on music, in Italian, found in a manuscript of the second half of the 15th century (*I-Vnm* Lat.336, coll.1581, 50*v*–64*r*), contains musical examples attributed to 'Antonius de Leno musichus'; it is uncertain, however, whether the text of the treatise can safely be attributed to him. Only three sections survive: the first, on mutations, may have been the final part of a larger section on *musica plana*; next follows a discussion of counterpoint – note-against-note, and two and three notes against one; and finally there is a section on the application of elements of mensural music to counterpoint (the prolations, alteration, dots of division, proportions and rests). These latter two sections have been published under the title *Regulae de contrapunto* (*CoussemakerS*, iii, 307–28; also ed. A. Seay, Colorado Springs, CO, 1977). Originally they may have been followed by a section on instrumental music. The treatise, which is obviously practical in aim, offers valuable evidence of compositional techniques in Italy in the first half of the 15th century. Folio 1*r* of the manuscript is probably the earliest writing on text underlay and may be closely related to the treatise. Since Antonius was from the vicinity of Brescia, it seems significant that the notation described in the treatise is precisely that used in *I-Bu* 2216, parts of which may have been copied near Brescia about 1440.

F. ALBERTO GALLO/ANDREAS BÜCKER

Antonius de Luca (*fl* 15th century). Italian theorist. He was a Servite friar and pupil of one Laurentius of Orvieto, a canon of S Maria Maggiore. His treatise *Ars cantus figurati* (*CoussemakerS*, iv, 421–33) is a compilation on *musica mensurabilis* according to the theories of Johannes de Muris; it deals with ligatures, alterations, proportions and prolations, giving diagrams and music examples. The work is discussed in A.M. Busse Berger: *Mensuration and Proportion Signs: Origins and Evolutions* (Oxford, 1993), 235–8.

See also THEORY, THEORISTS.

BEATRICE PESCERELLI

Antonius Romanus [Antonius de Roma] (*fl* 1400–32). Italian composer. The only secure facts of his life are that he was 'magister cantus' at S Marco, Venice, on 3 March 1420 and was listed in a notarial act of 20 July 1425 as a 'cantor S Marci'. The text of his motet, *Aurea flammigera*, in honour of Gianfrancesco Gonzaga, was probably composed in 1432 as a part of a welcome for the return of that captain from Milan, thus suggesting that Antonius was at that date still serving at S Marco.

Only seven works by him survive: three mass movements, three motets and one ballata. The sacred works (in *I-Bc* Q15) reflect the changes in style brought about by the impact of composers from the north. The Gloria–Credo pair has its uppermost voice or voices in sections alternately marked 'chorus' and 'unus', and also alternates duple time with major prolation. The earliest of the motets, *Ducalis sedes/Stirps Mocenigo*, probably dates from around 1415 and is in honour of the then doge, Tommaso Mocenigo. *Carminibus festos/O requies populi* is in honour of Francesco Foscari, who became doge in 1423; the second half of the work repeats the rhythmic pattern of the first, like a long talea without color. *Aurea flammigera* is built on a tenor whose sections are in part repeated exactly and which also contains isometric repetitions. The ballata *Deh s'i' t'amo con fede*, in *GB-Ob* Can.misc.213, is incomplete, only the uppermost voice existing with all its music but not the full poetic text.

Like several Veneto composers of these years (among them Antonius de Civitate Austrie, Petrus Rubeus and Cristoforus de Monte), he shows in all his music the strong influence of Ciconia (*d* 1412) and particularly Ciconia's late Paduan works. It is clear in the melodic details of his fragmentary song or in the structure and style of his motets, as well as in the layout of his mass music. But there are also many features in common with Du Fay's earliest music of the 1420s, notably the sweeter harmonic style and the rhythmic patterns in his discantus. Besseler implied an influence here, also drawing attention to the innovative use in his motets of *tempus perfectum diminutum* for the upper voices against major prolation in the lower parts. (His works are ed. F.A. Gallo: *Antonii Romani opera*, Bologna, 1965 [see also review by P. Gülke, *Mf*, xxii, 1969, p.135], and in CMM, xi/6, 1977.)

ALBERT SEAY/DAVID FALLOWS

Antunes. Portuguese family of harpsichord and piano makers. Manuel Antunes (1707–96) and Joaquim José Antunes (1731–1811), the only children of Julião Antunes, a maker of string instruments who served in the royal chapel, shared a workshop in Lisbon. Two harpsichords, dated 1758 (in the Museu da Música, Lisbon) and 1785 (in the Finchcocks collection, Goudhurst, Kent), are signed by J.J. Antunes. Other Antunes instruments are signed only with the surname, including a grand piano of 1767 (in the Shrine to Music Museum, Vermillion, South Dakota) and a harpsichord of 1789 (in the Museu da Música, Lisbon); these were presumably made by both brothers working together. The harpsichords each have a single manual with two 8′ stops. In 1760 Manuel Antunes

received a ten-year privilege for making pianos. The surviving example is virtually identical to Antunes harpsichords in design and construction, except for its action, which is very similar to that of Bartolomeo Cristofori. Manuel's grandson, João Baptista Antunes (*fl* 1825–65), was also a maker and tuner of keyboard instruments.

JOHN KOSTER (with GERHARD DODERER)

Antunes, Jorge (de Freitas) (*b* Rio de Janeiro, 23 April 1942). Brazilian composer. He studied the violin, conducting and composition at the Federal University of Rio de Janeiro with Carlos de Almeida, Morelenbaum, Siqueira and de Carvalho (1958–68), as well as composition with Guerra-Peixe. He also took the BSc in physics (1965), stimulating him to construct electronic equipment and pursue research into the relationship between colour and sound; he founded a studio of 'chromo-musical' research and composed a series of works entitled *Cromoplastofonias*. In 1969–70 he was at the Di Tella Institute in Buenos Aires, working in the electronic music studio and studying further with Ginastera, de Pablo, Francisco Kröpfl, Umberto Eco and Gandini. He continued his electronic studies at the University of Utrecht in 1970, and in 1972–3 worked with the Groupe de Recherches Musicales in Paris with Schaeffer, Reibel and Bayle; concurrently he studied musical aesthetics with Daniel Charles at the Sorbonne, completing a doctoral degree in 1977. In 1973 he was appointed professor of composition and director of the electronic music studio at the University of Brasília. There he founded the GeMUnB (Group of Musical Experimentation), an ensemble working with contemporary music including live electronics, and directed various projects and ensembles in the 1980s and 90s.

By the late 1960s Antunes had established himself as one of the leaders of avant-garde music in Brazil. He pioneered the use of electronic means there, beginning with apparatus he built himself, and from about 1965 he cultivated what he called 'integral art', using sounds, colours and even odours and flavours, as in *Ambiente I*. His *Tartinía MCMLXX*, performed at the 1971 ISCM Festival, established him as an international figure with its subtle and remarkable handling of difference tones in the solo violin part and its tense, imaginative orchestration. In the 1980s, his cultural and political involvement in the return of democracy to Brazil and his stance against political violence and terrorism resulted in popularity for several of his works, such as *Elegia violeta para Monsenhor Romero* (1980), *Sinfonia das diretas* (1984) and *Hino à constituição cidadã* (or *Hino ao novo Brasil*, 1988). An ironic sense of humour is conveyed in many of his works; he has become one of the most celebrated Brazilian composers of his generation.

Among his many awards are the prizes of the Rio de Janeiro national composition contest (1972) and the national guitar composition contest (1976), the Funarte Prize (1983), the Vitae Prize (São Paulo, 1991), the UNESCO prize of the International Tribune of Composers (1993, 1996) and the Estancias Prize (Madrid, 1998). He became a member of the Academia Brasileira de Música in 1994.

GERARD BÉHAGUE

Antwerp (Flem. Antwerpen; Fr. Anvers). City in Belgium. For centuries it has been an important musical centre and has played a leading role in the music of the Low Countries. Around 1410 the choir school of the church of

Théâtre Royal, Antwerp: lithograph, c1834

Our Lady (Onze-Lieve-Vrouwekerk; later the cathedral) began to develop an active musical life. Up to the 17th century its choirmasters, organists and singers included such composers as Pullois, Ockeghem, Barbireau, Obrecht, Waelrant, Gérard de Turnhout, Séverin Cornet, Pevernage, Opitiis and John Bull; in addition Rore, Lassus and Monte all spent some time in the city. Secular music was promoted by the establishment of the town players (before 1430) and the formation of a musicians' guild (*c*1500). Musicians who either came from Antwerp or were active there outside the cathedral included the composers Faignient, Hèle, Canis, Verdonck, Luython and Messaus, and the lute virtuosos Adriaenssen, Huet and Hove. Music printing flourished after 1540 through the work of Cock, Susato, Waelrant & Laet, Phalèse & Bellère and Plantin. The Antwerp harpsichord builders of the 17th and 18th centuries were famous: the Ruckers family, Jan Couchet and J.D. Dulcken.

To benefit a fund for the poor, a Theatrum Musicale was founded in 1671 by the city almoners, where operas and later public concerts were given. The first opera performed there was Lully's *Proserpine*. The repertory was mainly French and Italian. Musicians performing on their own account or in other theatres had to pay a third of their income to the poor fund. The almoners listed the performers by name, preserving a precious record of 18th-century opera and concert life in Antwerp.

Following an economic crisis in the 17th century there was a decline in the city's musical life; in the 18th century, however, the musical life of the cathedral flourished once more with composers such as Eve, Fesch, J.-H. Fiocco, Croes, Blavier, Trazegnies, Raick and Bosch. The French Revolution put an end to the dominating position of the Church, and music education was thenceforth entrusted to civic foundations such as the Ecole de Musique de la Ville d'Anvers (1842). Musical taste was dictated by the Italian and French opera performed at the Théâtre Royal (1802–1933, see illustration). Brought up in this atmosphere, Albert Grisar devoted himself to the genre of comic opera, with which he later scored an unrivalled triumph at Paris. Through the auspices of Peter Benoit, champion of Flemish nationalism, the Vlaemsch Muziekschool (1867) was raised in status in 1898, becoming the Koninklijk Vlaemsch Conservatorium. Benoit's Romantic oratorios and cantatas, to Flemish texts, were intended to rouse national consciousness. With his enthusiastic support the Nederlandsch Lyrisch Tooneel was founded in 1890 with the aim of performing the Flemish and other Germanic repertory. In 1893, through the efforts of the bass Hendrik Fontaine and the composer Edward Keurvels, this became the Vlaamsche Opera. Its first production was Weber's *Freischütz*, sung in Flemish. Slavic and Scandinavian works were added to the repertory. In 1907 the company moved to its own building on the Frankrijklei. By 1914 it had given the premières of 16 new Flemish operas, among them *De Herbergprinses* ('The Princess of the Inn', 1896) by Jan Blockx. Renamed the Koninklijke Vlaamsche Opera in 1920, the company won international fame during the 1920s for its Wagner productions with the tenor Ernest van Dijck and ballets with Sonia Korty. The *Ring* has been given regularly and *Parsifal* annually at Easter. Works are now given in the original

language and there are also concert performances. In 1981 the Antwerp and Ghent opera houses were joined as Opera voor Vlaanderen, renamed Vlaamse Operastichting in 1988 under intendant Marc Clémeur, who raised the company to international recognition. One-act operas and works using smaller forces were given by the Vlaamse Kameropera (1958), replaced in 1987 by the touring company Transparant.

The directors of the conservatory who followed Benoit – Blockx, Emiel Wambach (1857–1924), Mortelmans, Flor Alpaerts, Hoof, Vocht and Peeters – adhered to a nationalist style in their compositions, as did Karel Candael and Renaat Veremans (1894–1969). Contemporary composers of more modern outlook included Jong, Baeyens, Karel Albert, Maes, Durme, Velden, Kersters and the avant-garde Goeyvaerts. Notable in the next generation are Luc Van Hove, Luc Brewaeys and Wim Henderickx. In 1970 the structure of the Belgian royal conservatories was fundamentally altered, and they became restricted to the domain of higher education, providing professional tuition of a high standard; the conditions of entry became a certificate of higher secondary education and proof of maturity, in addition to proof of artistic capability. In 1975 this new structuring was adopted at the Antwerp Conservatory. Beginners, amateurs and performers at the pre-professional stage are catered for in the Rijksmuziekacademie (1970), which covers primary and secondary music education. In 1972 the Kunsthumaniora, the music department of the Institute of Higher Secondary Artistic Education, was founded under the auspices of the conservatory. In 1995 the conservatory was incorporated into the University of Antwerp as a department of dramatic art, music and dance (director Michael Scheck). The Halewynstichting (1951) opened the first non-subsidized music schools for young people providing an elementary music education based on the methods of Orff and Kodály, directed towards the performance of music in the home and choral singing. The municipal music academies of the suburbs of Borgerhout, Hoboken, Berchem, Deurne, Wilrijk, Merksem and Mortsel provide primary and secondary music tuition and are held in high regard.

A number of concert organizations cater for an active and diverse concert season: symphony concerts with guest ensembles and soloists (the Cofena and deSingel concerts); early music at the Rubenshuis and Vleeshuis; recitals and chamber music at the conservatory, the Elzenveld concerts and the Middagconcerten; and organ recitals and choral concerts in churches. The Royal Flanders PO (Koninklijk Filharmonisch Orkest van Vlaanderen, 1955) gives subscription concerts, often featuring guest conductors and soloists. Other performing ensembles are Anima Eterna (directed by Jos Van Immerseel) and the clarinet choir (Walter Boeykens). The Antwerp section of Jeunesses Musicales, Jeugd en Muziek (1948), has a senior and a youth orchestra (1962). The regional station of Belgian Radio (Radio 2 Antwerpen) sponsors and organizes public concerts.

The tradition of concert masses with choir, soloists, organ and full orchestra in St Pauluskerk has existed since 1878. The Artiestenmis ('Artists' mass') in the St Carolus-Borromeuskerk, in which vocal and instrumental ensembles and soloists cooperate, was set up in 1943 to benefit needy Antwerp artists. Among the numerous choirs, the oldest surviving is Arti Vocali (1910). Also noteworthy are those of the cathedral (1928), under the direction of Jan Schrooten, and Audite Nova (1961), directed by Kamiel Cooremans. The Chorale and Capella Caecilia (1968), directed by Frans Dubois, is the successor to the Koninklijke Chorale Caecilia (1915–68), which under its founder and director Lodewijk de Vocht gave premières of vocal works of Milhaud, Honegger, Stravinsky, Kodály and others. Antwerp is also the headquarters and documentation centre of the Algemeen Nederlands Zangverbond, a choral federation with the aim of stimulating folksong and choral music through festivals, including the annual Vlaams Nationaal Zangfeest. The annual Festival van Vlaanderen/Antwerpen and Middelheim Jazz Festival (1969) are both broadcast.

Beiaardconcerten (carillon concerts), given by the city carillonneur Geert D'Hollander and by guest carillonneurs, have become a tourist attraction. Because of its pure tone the city carillon, acquired in 1540, is held to be one of the best in the Netherlands. It has 49 bells, the oldest dating from 1459, and a four-octave compass, and chimes mechanically every quarter-hour. The main part, consisting of 36 bells, was made between 1655 and 1658 by the Hemony brothers. The two deepest bass bells were acquired in 1990.

The conservatory library contains a rich music collection, while precious early music prints are also to be found in the Plantinmuseum and the Stadsbibliotheek. The notable music library of J.A. Stellfeld was sold by his heirs in 1952 to the University of Michigan. The Archief en Museum voor Vlaams Cultuurleven offers documentation on all aspects of the musical life of the city, in the form of press cuttings, letters, manuscripts, photographs etc. In addition Antwerp has a public record library and a collection of instruments in the Vleeshuismuseum. The museum is also the headquarters of the Ruckers Genootschap (1970), which promotes the study and restoration of Flemish harpsichords through colloquia and publications. The Koninklijke Antwerpse Vereniging voor Muziekgeschiedenis was founded in 1931 and publishes the important series Monumenta Musicae Belgicae. The Peter Benoit Fund was set up in 1902 with the intention of disseminating and publishing the work of Benoit; Jef van Hoof's work is promoted by De Crans (1917), which also offers a biennial composition prize and publishes the music of other Flemish composers. The Emmanuel Durlet fund (1976) organizes an international biennial piano competition and publishes Durlet's works. The oldest and most important firm of music publishers in Antwerp, Metropolis, publishes mostly instrumental music of contemporary Belgian composers, but also tutors and books on musical history.

GODELIEVE SPIESSENS

Anvers (Fr.). *See* ANTWERP.

Anvil (Fr. *enclume*; Ger. *Amboss*; It. *incudine*). In the orchestra, a percussion instrument of indefinite pitch; it is classified as a struck idiophone. It may consist of one or two metal bars mounted on a resonating frame, a small length of steel tube or scaffolding, or an actual blacksmith's anvil. The latter is used but rarely an account of its great weight, the substitutes providing a realistic sound. In each case, although definable notes are produced, they are not usually prescribed. Praetorius illustrated a blacksmith's anvil struck with a sledgehammer in his *Theatrum instrumentorum* (1620). An earlier reference to the instrument occurs in Agricola's *Musica instrumentalis deudsch* (1529). In the Anvil Chorus of Verdi's *Il trovatore* two anvils (*incudini*) are required. Wagner scored for one anvil in the forging song in *Siegfried*, and for 18 in *Das Rheingold*. Other notable instances of the use of the anvil in orchestral scores include Auber's *Le maçon*; Gounod's *Philémon et Baucis*; Berlioz's *Benvenuto Cellini*; Bax's Third Symphony; Walton's *Belshazzar's Feast*; Varèse's *Ionisation*; and Britten's church parable *The Burning Fiery Furnace*. George Benjamin used a set of 12 steel tubes in *Antara* (1985–7). Kolberg has produced a two-octave set of these tuned *c–c″*.

JAMES BLADES/JAMES HOLLAND

Anvilla, Adriano (*fl* 1566–8). Composer active in Italy. His known works comprise six madrigals in two anthologies edited by Giulio Bonagiunta: five for four voices (in RISM 1566[2]) and one for five voices (in 1568[16]). Though his name suggests Italian origin, it is possible that he can be identified with the Flemish musician Adriano Haville who occasionally served Guidubaldo II della Rovere, Duke of Urbino. Bonagiunta was himself a native of nearby S Ginesio, as was the poet Annibale Caro to whose memory one of the anthologies (1568[16]) was dedicated (see F. Piperno: 'Guidubaldo II della Rovere, la musica e il mondo', *Saggiatore musicale*, iv (1997), 249–70, esp. 258).

TIZIANA MORSANUTO

Anzalone [Ansalone, Anzelonus]. Italian family of musicians, teachers and composers. 14 members of this Neapolitan family over four generations were active in the late 16th century and up to the middle of the 17th, notably as wind players. Many of them were employed in the royal chapel at Naples, and several members of the third generation taught in the city's conservatories. The three members of this generation discussed below, of whom the first and third at least were cousins, were also composers; all three, together with at least one other member of the family, died as a result of the plague of 1656. Giacinto (*b* Naples, 13 March 1606; *d* Castelnuovo, 6 July 1656) was from 1630 until his death director of the Conservatorio della Pietà dei Turchini and also *maestro di cappella* of the chiesa di Monteoliveto. His only extant print is *Psalmi de vespere a quattro voci, con un Laudate pueri alla venetiana* op.3 (Naples, 1635), and a *canzona francese* for keyboard survives in the so-called Cemino manuscript (*I-Nc* Mus.str.73; transcr. in Oncley). Francesco (*b* Castelnuovo, 7 Oct 1607; *d* Castelnuovo, 1 Nov 1656) was a violinist in the royal chapel from at least 1640 until his death and *musico di camera* to the viceroy. He was also a *magister lyrae* (teacher of string instruments) at two conservatories: at the Poveri di Gesù Cristo in 1633 and at the Pietà dei Turchini from 1641 until his death. There are several manuscript motets by him (in *I-Nf*). Andrea (*d* Naples, 1656) was a musician at Castelnuovo; four dances by him are extant (in *RISM* 1620[14]; ed. in RRMBE, xxv, 1987).

ALEXANDER SILBIGER

Aoidos (Gk.: 'singer', 'bard'). A term used by Homer to describe performers of epics (e.g. Phemius and Demodocus in the *Odyssey*) who sang and accompanied themselves on the PHORMINX or kitharis (*see* KITHARA). The language, musical accompaniment and details of performing practice of the *aoidoi* were transmitted orally, and their formulaic practice is believed to underlie the hexameter poetry of the *Iliad* and *Odyssey* themselves. Modern studies have explored the similarities between the practice of the *aoidoi* and that of the modern southern Slav singers of heroic epic accompanied by the *gusli* (see Lord). (In these oral traditions, each telling of a story – even the same story by the same performer – is likely to differ in detail.) *Aoidoi* were presumably independent

artisans, although the *Odyssey* suggests that individuals could be linked to specific households.

The precise relationship between the early *aoidoi* and later performers of epic is not clear. There is evidence that the early kitharodes performed Homeric and other epic poetry (*see* KITHARODE). Pausanias (*Description of Greece*, x.7.2–8) records that Homer and Hesiod, among others, competed in kitharodic contests at Delphi. According to Pseudo-Plutarch (*On Music*, 1132c) Terpander set Homeric and other hexameter verses to music in the kitharodic *nomoi*. The later kitharodes, however, even though the subjects of their songs remained epic, worked within the lyric tradition. From the 6th century BC the recitation of epic became the preserve of the rhapsode, a professional declaimer of Homeric and other epic who performed without musical accompaniment. Changes in epic performance at this time may have been affected by the written transmission and consequent memorization of poetry and an increase in the size of audiences.

Apaches, Les. The nickname of an informal Parisian group of musicians, poets, painters, critics and music lovers. Members of the group, born mostly in the mid-1870s, included the composers Ravel, Delage, Séverac, Ladmirault, Florent Schmitt, Edouard Bénédictus and (after 1910) Igor Stravinsky, as well as the pianist Ricardo Viñes, the conductor and composer D.E. Inghelbrecht, the poets Léon-Paul Fargue and Tristan Klingsor and the critics Emile Vuillermoz and M.-D. Calvocoressi. In their independence, their creative freedom and their desire to revolutionize conventional norms, some thought they resembled American Indians, anarchists, or the similarly-named hoodlums from Belleville who roamed the *grands boulevards* at night.

It was music, especially Debussy's *Pelléas et Mélisande*, that first drew the group together. They attended each performance of the opera in spring 1902 as a kind of sacred battalion to assure a positive response. They then began to meet on Saturday nights at the Montmartre apartment of the set-designer Paul Sordes. From 1904 they made use of Delage's wigwam, a small detached dwelling near Auteuil which Stravinsky valued for being 'calm and intimate', 'far from the brouhaha' of the Ballets Russes. Here, as well as providing an audience for each other's new work, they discussed aesthetics, collaborated with one another, and, when necessary, rendered practical help such as with copying parts. In this context, Ravel wrote his song cycle *Shéhérazade* (1904) to poems by Klingsor, and to these friends he dedicated his *Miroirs* (1906) and Stravinsky his *Three Japanese Lyrics* (1913).

What linked Les Apaches was a common belief in Debussy as a musical prophet and in indigenous folksong as a source of artistic renewal, as well as an interest in Russian music, Asian music and art, symbolism and children's music. While the group was nominally opposed to the dogmatism of the Schola Cantorum, a number of its members (Séverac, Ladmirault and Calvocoressi) were closely associated with the Schola. Both groups considered themselves apostles with a mission and used various kinds of propaganda to promote their views. When in 1909 Vincent d'Indy, as president of the Société Nationale, refused to programme a work by Delage, Les Apaches rebelled and created a rival organization, the Société Musicale Indépendante.

JANN PASLER

Apēchēma. *See* ĒCHĒMA.

Apel, Willi (*b* Konitz, West Prussia [now Chojnice, Poland], 10 Oct 1893; *d* Bloomington, IN, 14 March 1988). American musicologist of German origin. He studied mathematics at the universities of Bonn and Munich (1912–14) and, after war service, at the University of Berlin (1918–22). Active as a pianist and music teacher, his interests turned to musicology while he was at the Freie Schulgemeinde at Wickersdorf (1922–8) and he was largely self-taught as a musicologist. He took the doctorate in Berlin in 1936, the year of his emigration to the USA, with a dissertation on 15th- and 16th-century tonality. He was a lecturer at Harvard University (1938–42) and professor of musicology at Indiana University, Bloomington (1950–70); he was made professor emeritus in 1963, though he continued to teach until 1970, and was awarded an honorary doctorate in 1972.

When Apel arrived in the USA he was just beginning his productive years and his career was thereafter essentially 'American'. His first large books in English, addressed to students in a newly expanding subject, were remarkable for their timeliness and durability. *The Notation of Polyphonic Music* (1942) has served since it was first published as an essential tool for young scholars. The *Harvard Dictionary of Music* (1944) was to many the key to an attitude of 'historical equality' in which earlier and exotic musics received as much attention as the familiar ground. The same attitude was reflected in the *Historical Anthology of Music* (1946), a well-chosen selection of music from ancient times to the 18th century. These three contributions from Apel as generalist and teacher were major agents in changing the climate of higher music education in the USA.

Apel then turned to his favourite studies: the transcription of 14th-century music, Latin chant and the history of keyboard music. The first of these arose out of his interest

in notation. The problems of transcribing late 14th-century music had received full and sympathetic attention in his *Notation of Polyphonic Music*, and a selection of 50 pieces had appeared, with some additional facsimiles, in the edition *French Secular Music of the Late Fourteenth Century* (1950). His work in this sphere culminated in the three-volume collection of 14th-century French secular compositions (1970–71) which, with the work of Schrade, Hoppin and Harder, makes available practically the whole repertory in good modern editions. In his *Gregorian Chant* (1958) Apel provided, for the first time in English, a reliable guide to the entire field of plainsong. Though leaning heavily on Peter Wagner's *Einführung*, the work makes its own substantial contribution and sheds light on the problems posed by tracing the sources of this repertory. In his *Geschichte der Orgel- und Klaviermusik* (1967), an English translation and revision of which appeared in 1972, Apel exhaustively reviewed the entire body of keyboard music to 1700 in what has become an indispensable reference work. He was also the general editor of the Corpus of Early Keyboard Music, to which he contributed ten volumes and his pupils many more. Apel's last major study (1983), a collection of essays originally written between 1973 and 1981, was on violin music and composers of 17th-century Italy. Apel was an important influence in modern musicology of Western music, particularly in the USA and Great Britain, despite his positivist approach and lack of interest in social context. His work on chant, notation and keyboard music, although constantly being revised, continues to serve as a basis for study. His essays have been collected into three volumes.

Apell [Capelli], **David August von** (*b* Kassel, 23 Feb 1754; *d* Kassel, 30 Jan 1832). German composer and author. The son of a tax official, Apell was employed in the treasury at Kassel; however he also had some musical instruction from local court musicians. Once settled in his profession, Apell concentrated on both composition (public performances date from 1780) and conducting;

he founded and directed a philharmonic society. He received many honours in the course of his career, including honorary membership of the Accademia Filarmonica di Bologna and the Swedish Royal Academy of Music in Stockholm. For the mass composed in 1800 for Pope Pius VII he received the Order of the Golden Spur. From 1815 he was vice-president of the Kassel Academy of Fine Arts. In 1792 Count Wilhelm IX (later Elector Wilhelm I) made him Intendant of the court theatre, and he remained at Kassel throughout the wars with France. Shortly after Elector Wilhelm II took office in 1821, however, Apell was relieved of all theatrical duties. He died alone and in poverty.

Apell's compositions were admired by his contemporaries, including Gerber, but he outlived their fame. His writings include *Gallerie der vorzüglichsten Tonkünstler und merkwürdigsten Musik-Dilettanten in Cassel* (Kassel, 1806), an account of the musicians of Kassel from the 16th century, which remains his principal achievement.

JEFFRY MARK/DAVID CHARLTON

Aperghis, Georges (*b* Athens, 23 Dec 1945). French composer of Greek birth. Since taking up residence in Paris in 1963, Aperghis has pursued an original and independent career, dividing his activity between composition in the traditional sense and music theatre based on improvisation. His explorations in the latter field date from 1971, when he composed *La tragique histoire du nécromancien Hiéronimo et de son miroir* for the Avignon Festival, which has regularly featured his work ever since.

He founded the Atelier Théâtre et Musique (ATEM) in 1976 at Bagnolet, moving to the Théâtre Nanterre-Amandiers, Nanterre, in 1991. In this connection, he has completely revised his practice as a composer. Calling equally on musicians and actors, his music theatre works are inspired by everyday life, by social realities transposed to a poetic world that is often also absurd and satirical and which develops as rehearsals progress. All the ingredients (vocal, instrumental, gestural, scenic) have equal status and contribute to the dramaturgy of these stage works, regardless of any pre-existing text. Between 1976 (*La bouteille à la mer*) and 1996, Aperghis created more than 20 such pieces.

He has composed chamber and orchestral music, for a great variety of ensembles, but he has also written a large number of pieces for instruments or for solo voices dedicated to performers close to him. These works often introduce theatrical elements, sometimes purely gestural in nature, which affirm his concern with representation outside the theatre as well as within it.

Opera, for Aperghis, can be regarded as a synthesis of these two poles, fused and determined by the text. He has seven operas to his name to date, drawing on Verne (*Pandoemonium*, 1973), Diderot (*Jacques le fataliste*, 1974), Freud (*Histoire de loups*, 1976), Poe (*Je vous dis que je suis mort*, 1978) and one of Bettina Brentano's letters to Goethe (*Liebestod*, 1981); *L'écharpe rouge* (1984) has a libretto by Alain Badiou and *Tristes tropiques* (1995) is after Lévi-Strauss.

Aperghis is a prolific composer, with over 100 works in his catalogue. With unflagging invention, he is constructing an output that defies classification: serious but stamped with humour, as mindful of tradition as he is free of institutional constraints, he opens horizons of vitality and opportunity to his interpreters and skilfully reconciles the sonorous and the visual.

WORKS
(*selective list*)

DRAMATIC

Théâtre musical:La tragique histoire du nécromancien Hiéronimo et de son miroir, op.13, female vv, lute, vc, 1971; Parcours, op.25, ens, 1974; La bouteille à la mer, op.32, 1976; L'aveugle de Bagnolet, op.41, 1977; Quai no.1, op.44, 1v, pf, 2 perc, 1978; Sans paroles, op.48, 1978; De la nature de la gravité, op.50, 2 actors, 7vv, 3 musicians, 1979; Pièce perdu, op.52, 1979; 7 crimes de l'amour, op.55, 1v, cl, perc, 1979; Self, op.65, 1981; Complainte, op.72, 1v, musical saw, 1982; Société adoucie, op.74, 1983; Conversations, op.79, 2 actors, perc, 1985; Faust et Rangda, op.85, 1987; Enumérations, op.87, 1988; Jojo, op.96, 1990; H, litanie musicale et égalitaire, op.102, 3 comedians, S, 3 perc, 1992; Sexuour, op.103, 5 female vv, vc, 1993; Commentaires, op.119, 2 comedians, 1v, va, vc, pf, perc, 1996
Ops: Pandoemonium (J. Verne), op.22, 1973; Jacques le fataliste (D. Diderot), op.26, 1974; Histoire de loups (S. Freud), op.35, 1976; Je vous dis que je suis mort (E.A. Poe), op.43, 1978; Liebestod (B. Brentano), op.64, 1981; L'écharpe rouge (A. Badiou), op.78, 1984; Tristes tropiques (C. Lévi-Strauss), op.118, 1995
Other dramatic: Phèdre (incid music), 1975; Oedipe et les oiseaux (incid music, Aristophanes), 1989; La fable des continents (film score), op.100, 1992; Woyzeck (incid music, G. Büchner), 1993

INSTRUMENTAL

Orch: Bis, op.4, 2 orchs, 1968; Symplexis, op.7, 22 jazz soloists, orch, 1969; Puzzle, op.12, chbr orch, 1971; Die Wände haben Ohren, op.16, orch, 1972; Conc. grosso, op.18, chbr orch, 1972; Déclamations, op.95, 1990

ANTOINE GINDT

Aperto (i) (It.: 'open', 'clear', 'frank', 'bold', 'plain'). (1) A direction for horn players to return to normal after playing stopped notes (*chiuso*).

(2) A direction in string music to play on the open string.

(3) A direction in piano music to play with the damper pedal down.

DAVID FALLOWS

Aperto (ii) (It.: 'open', 'clear', 'frank', 'bold', 'plain'). In medieval music, particularly in the ESTAMPIE but also in the DUCTIA and in many song forms, *aperto* and *chiuso* are used in the same sense as the modern words 'prima volta' and 'seconda volta'. Normally the open ending (*aperto*) was on a less final pitch than the closed ending.

DAVID FALLOWS

Aperto (iii) (It.: 'open', 'clear', 'frank', 'bold', 'plain'). A word used several times by Mozart in the tempo designation *allegro aperto*. Examples are the first movements of the Violin Concerto in A K219 and the Piano Concerto in B♭ K238, as well as two strikingly similar early arias: 'Per la gloria in questo seno' from *Ascanio in Alba* and 'D'ogni colpa la colpa maggiore' from *Betulia liberata*. Rudolf Steglich ('Mozarts Mailied: Allegro Aperto?', *MJb 1962–3*, 96–107) attempted to draw general conclusions about the meaning of *aperto*. The direction is found very rarely in the work of composers other than Mozart.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Apesō. Sign paired with the *exō* in Byzantine EKPHONETIC NOTATION.

Aphex Twin [James, Richard D.] (*b* Truro, 1971). English composer and DJ. Other pseudonyms include AFX, Caustic Window, Blue Calx, Dice Man, Power-Pill, Q-Chastic, Soit-P.P. and Polygon Window. He started experimenting with electronic hardware and sound in his early teens, releasing these recordings on his acclaimed début album, *Selected Ambient Works 85–92* (R&S, 1992). He next collaborated with Schizophrenia (Tom Middleton; later to record as Global Communication), on the LP *Analogue Bubblebath #1* (Rabbit City, 1991), which was promoted heavily by the club and radio DJ Colin Dale. *Analogue Bubblebath #2* (Rabbit City, 1991) is incessantly fast and, along with early high-speed tracks by Moby, pushed the idea of techno to its limits. He released *Surfing on Sine Waves* (Warp, 1992), then achieved minor success in the UK singles chart with *On* (Warp, 1993). *Selected Ambient Works Vol 2* (Warp, 1994) was entirely 'beat-less' and, despite taking a much darker and less melodic stance than others, was James's reaction to the ambient house boom. The album *I Care Because You Do* (Warp, 1995) coincided with the rise of trip hop and led to work on film soundtracks and TV adverts and a stream of innovative club DJ appearances (in which he has been known to substitute sandpaper for vinyl). A rare collaboration with Mike Paradinas produced *Expert Knob Twiddlers* (1996), released on James's own label, Rephlex. His work in the late 1990s (*Come to Daddy*, 1997, and *Windowlicker*, 1999) received commercial as well as critical recognition.

IAN PEEL

Ap Huw, Robert. *See* ROBERT AP HUW.

A piacere (It.: 'at pleasure'). An indication that the performer may use discretion as to the manner of performance of a passage so marked. It is generally prefixed to a cadenza, or cadenza-like passage, in vocal and instrumental solos, to indicate that the expressions and the alterations, whether of tempo or expression, are left to the will of the individual performer. Liszt, who used the direction more than most, tended to use *giusto* to denote a return to regularity.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

GEORGE GROVE/DAVID FALLOWS

Apiarius [Biener], **Mathias** (*b* Berching, nr Eichstätt, *c*1500; *d* Berne, aut. 1554). German music printer and publisher. He settled in Basle, where he worked as a bookbinder and was given citizenship on 3 April 1527, having been admitted to the Saffran Guild on 10 December 1525. He seems to have been associated with the Reformation at an early stage; he attended the religious debates held in Berne in 1528, and it was possibly at this time that he met the Berne precentor Cosmos Alder. In 1536 he published three four-part songs by Alder, in a book of songs produced jointly with Peter Schoeffer in Strasbourg; in 1553 he also published hymns by Alder. From the middle of 1533 to 1537 he printed numerous Reformation writings (e.g. by W.F. Capito and M. Bucer) in Strasbourg, and he and Schoeffer jointly published works on music theory and practice, their association probably stemming from Apiarius's thorough knowledge of music and his contact with composers. On 19 January 1537 he became a citizen of Berne and opened the first printing press there with music treatises by Listenius and Lampadius. Besides music he published historical, religious and literary works, and also many songsheets (usually without the melodies). Because of their political and religious content these song publications often led to disputes within the Swiss regions. For financial reasons Apiarius worked for many years as a bookbinder to the Berne government. The works published jointly with Schoeffer were printed from two

impressions, but those produced in Berne were single-impression; all were of good quality (see Bloesch for a complete bibliography of Apiarius's output). His son Samuel (*c*1530–90) took over the printing press after his father's death, but apart from a considerable number of songsheets he did not publish any new music. Mathias's second son, Sigfried, also worked as a bookbinder in Berne, where he became a *Stadtpfeifer* in 1553. Wannenmacher's *Bicinia* (RISM 1553[31]) were dedicated to Sigfried and two other *Stadpfeifer* (Michel Copp and Wendlin Schärer). This publication also contained two bicinia by Mathias (*Ach hulff mich leid* and *Es taget vor dem walde*).

JÜRG STENZL

ApIvor, Denis (*b* Collinstown, 14 April 1916). Irish composer of Welsh origin. He was a chorister at Christ Church, Oxford, and Hereford Cathedral. Parental opposition saw to it that he qualified in medicine before turning to music. Private instruction from Rawsthorne and Hadley as well as an astute awareness of contemporary English music helped to clarify his musical thinking, and he was influenced early on by Warlock and Van Dieren. (After the death of Van Dieren's son in 1975, ApIvor was responsible for arranging many of the composer's manuscripts for publication.) ApIvor's *Chaucer Songs* (1936), *Alas Parting* (1936–7) and 19 Songs (1936–40) all combine an assured technique with a discriminating taste for the finest poetry. Like so many composers of his generation, his career was severely set back by the war, but even during his six years of inactivity, he was able to begin the libretto to his opera *She Stoops to Conquer* and a striking arrangement of Busoni's *Fantasia contrappuntistica* for orchestra, first performed in 1952. Friendship with Lambert secured for him a commission to write the ballet *A Mirror for Witches* (1951) for Covent Garden; Lambert also conducted the première of *The Hollow Men* (1939), which sets well-known verse by Eliot for baritone, male voices and orchestra with stark realism. His settings of García Lorca (1945) sparked an enduring interest in writing for the guitar. Among his writings are articles on Van Dieren and Rawsthorne.

ApIvor's early works were typically English in character with their assured light tonal touches and technical fluency. Looking increasingly to continental models after 1947, he included serial elements in his Piano Concerto (1948). While works such as *Landscapes* (1950), the Violin Concerto (1950) and *A Mirror for Witches* retain tonal undertones, they are chromatically freer and form part of a transition towards a more radical style. He was a highly accomplished translator of Spanish verse, and his affinity with García Lorca surfaced in works such as *Thamar and Amnon* (1954) and the three-act opera *Yerma* (1956). *Yerma* was commissioned by the Sadler's Wells Opera Trust in 1954 and broadcast on radio in 1961; though it contains some of his finest music, it remains unstaged. In 1955 his music moved towards a more freely atonal and athematic serialism, and this remained his mode of composition until 1988. The Dylan Thomas settings (1960) display his continuing interest in lyricism and poetic declamation. In 1988 he returned to 'a tonal and textural simplicity, and a reinstallation of recognisable melodic values'. In his rich and varied output he has embraced both English and Second Viennese traditions, while his sincerity and dedication have remained throughout periods of wide-ranging stylistic change.

WORKS

LYN DAVIES

Apollo. Ancient Greek god. The origins of Apollo remain uncertain. In myth he is the child of Leto and Zeus. His worship may have come into Greece from Macedonia; or possibly it travelled westward from Asia Minor. Often he was termed 'Lykeios': if the epithet means 'wolf-god', he may originally have been a god of shepherds. This hypothesis would explain an active concern with music. It leaves unexplained the fact that he is constantly shown in art and literature with the kithara or lyra rather than the shepherd's panpipes (syrinx) or the aulos, although several Greek writers did associate him with reed-blown instruments (e.g. Euripides, *Alcestis*, 576–7).

The Homeric evidence indicates that Apollo's nature was complex. In the early passages of *Iliad*, book i, as the avenging archer-god, he angrily sends shafts of pestilence upon the Greek host, while at its close (603–4) he appears as the lyre-god accompanying the Muses' song; and in the *Odyssey* (xv.410–11) his arrows represent the painless cause of natural death. For Hesiod (*Theogony*, 94–5), writing perhaps during the later 8th century, as for the unknown authors of the *Homeric Hymn to Apollo* (iii, 131, 182–5 are typical) in the succeeding period, his instrument is always the lyre and his musical role that of accompanist, not singer. The *Homeric Hymn to Apollo* also refers to Apollo's feat of seizing Delphi for his abode by destroying its guardian dragon, an adventure memorialized in musical compositions such as the Pythic NOMOS (described by Strabo, *Geography*, ix.3.10) and a paean probably composed for the Pythian games of 138 BCE. The *Homeric Hymn to Hermes* (iv.502) contains the first known reference to his singing; Aeschylus (frag.350) continued the tradition.

During the 5th century Apollo came to be regarded as the most vivid and brilliant figure among the 12 Olympian gods. Pythagorean thought, which credited music with a cosmic significance, had already long embodied many attributes of his worship; there is evidence that these included catharsis and ecstasy. In general, however, the god's province was taken to be all that is serene, ordered and rational. PLATO's preference for 'the instruments of Apollo' (*Republic*, iii.399e1–3) comes out of a belief that precisely such qualities characterized the music of the kithara. Here the contrast is with the aulete MARSYAS; far more commonly, during much of the Hellenic period, it involved DIONYSUS instead.

Vase paintings of the early 5th century show Apollo with the massive kithara. During succeeding decades he was represented as playing the smaller and lighter lyra. Traditions connecting him with music were particularly strong at his cult centre, Delphi, where the Pythian games honouring him began as exclusively musical competitions. Two of the most important surviving fragments of ancient Greek music are the paeans composed for the Pythian games of 128 BCE (the precise dates are debated); the later of these, composed by LIMENIUS, preserves an extended narrative of several deeds of Apollo and a final prayer to the god (*see* GREECE, §I, and HYMN, §I). The earliest form of the paean was apparently a hymn of supplication addressed to him as healer (as in *Iliad*, i.473, and the *Homeric Hymn to Apollo*, iii.513–19). Symbolic references to the lyre by poets and philosophers helped to establish his special place in Greek thought. Later, for the Romans, Apollo embodied the supreme values of music as a performing art and provided an ideal model of the professional musician.

Apolloni [Apollonio, Appolloni], **Giovanni Filippo** (*b* Arezzo, *c*1635; *d* Arezzo, ?15 May 1688). Italian librettist. The name Apollonio Apolloni is spurious and refers to Giovanni Filippo (see Pirrotta). On the recommendation of Cardinal Giovanni Carlo de' Medici, he entered the service of Archduke Ferdinand Karl of Austria about September 1653, perhaps at the instigation of Cesti. During his service at Innsbruck he wrote the librettos for *Mars und Adonis*, *L'Argia* and *La Dori*. He returned to Italy by 1659 and entered the service of Cardinal Flavio Chigi at Rome in May 1660, remaining in that post until his death; at some point he was given an abbotship, and in April 1668 entered the 'family' of the cardinal. Like Cesti, he belonged to the circle of Salvator Rosa and G.B. Ricciardi. He set to verse *L'empio punito* of FILIPPO ACCIAIUOLI, a friend of Chigi, for the Teatro Tordinona, Rome, in 1669; he apparently did the same for Acciaiuoli's

Girello (Rome, 1668), for which he certainly wrote the prologue. In addition to the secular dramatic works, he wrote three oratorio texts.

Crescimbeni recognized Apolloni as 'one of the best followers' of G.A. Cicognini. The work that most clearly shows him in that tradition is *La Dori*, which rivalled *Il Giasone* and *L'Orontea* as one of the most widely performed Italian operas of the 17th century. *La Dori* relies heavily on mistaken identity and misunderstanding in its concentrated love plot, which makes little use of historical or pseudo-historical superstructure; it has in common with Cicognini's dramas much rapid dialogue, direct and lively language, strong but traditional comic elements and a 'surprise' resolution of the plot.

LIBRETTOS

SECULAR

L'Argia, A. Cesti, 1655; *Mars und Adonis*, ?Cesti, 1655; *La Dori*, Cesti, 1657; *La Circe* (operetta), A. Stradella, 1668; *La forza d'amore* (cant. scenica), P.P. Cappellini, n.d. (B. Pasquini, 1672, rev. as Con la forza d'amor si vince amor, 1679); *La sincerità con la sincerità, overo Il Tirinto* (favola drammatica per musica, with F. Acciainoli), Pasquini, 1672; *Gl'inganni innocenti, ovvero L'Adalinda* (with Acciaiuoli), P.S. Agostini, 1673; *L'Amor per vendetta, ovvero L'Alcasta*, Pasquini, 1673

THOMAS WALKER

Apolloni, Giuseppe (*b* Vicenza, 8 April 1822; *d* Vicenza, ?30 Dec 1889). Italian composer. He studied the piano (with F. Cannetti) and composition in Vicenza, where he lived until 1848, when his political involvement forced him to leave the city for Florence. He also lived for a time in Turin. Upon his return to Vicenza in 1852 his first opera, *Adelchi*, was staged there. His most widely produced work was *L'ebreo* (after Bulwer-Lytton's *Leila*), first performed at Venice in 1855, and then in Barcelona and Malta; it was given a different title in Rome and Bologna, *Lida [Leila] di Granata*, at the insistence of the censors. On the strength of its very successful production at La Fenice, the management there invited Apolloni to revise *Adelchi* for a revival. His other operas include *Pietro d'Abano* (1856, Venice), *Il conte di Königsmark* (1866, Florence) and *Gustavo Wasa* (1872, Trieste). Besides his operas, which follow Verdi's middle-period style at a distance, he composed an orchestral rhapsody, *I canti dell'Appennino*, using folk melodies, and a number of religious works.

WILLIAM ASHBROOK/R

Apolloni [Appoloni, Appolini], **Salvatore** [Salvadore] (*b* Venice, *c*1704). Italian composer. According to Caffi he was closely associated from childhood with Baldassare Galuppi. It is likely that they both received early musical training from Galuppi's father, a barber by trade and a part-time violinist. A libretto of 1727 names him as first violinist of the Teatro S Samuele in Venice, and it seems that Galuppi made a place for him in the orchestra of the ducal chapel of S Marco.

Apolloni is reputed to have had a lively, cheerful disposition, a trait according well with the lighthearted subjects of his music (of which none is known to survive). He gained an early local reputation as a composer of songs in the style of the Venetian gondoliers (barcarolles), serenatas and other occasional works. As a theatrical composer he worked almost exclusively for Giuseppe Imer's troupe of comedians (non-professional singers), suggesting that his musical style must have been relatively simple. His intermezzos and parodies of *opera seria* catered to a taste for musical satire which according to Dent was peculiarly Venetian. Such parodies are a curious mixture of the *opera seria* and *buffa* conventions then current in Venice: the characters are people of high social degree (but one of the kings speaks in Venetian dialect); da capo exit arias are regularly used, but so are ensemble finales and short arias to open scenes. The works are much shorter than normal operas, whether serious or comic, and they contain about half as many musical numbers. Although early historians spoke slightingly of Apolloni's talents as a composer, performance records attest to his popularity at home and even beyond the Alps.

His works, all for the Teatro S Samuele, are: *La fama dell'onore* (M. Miani, May 1727; revived in Vienna, 1730); *Le metamorfosi odiamorose* (A. Gorì, carn. 1732; revived in Dresden, 1747, as *La Contesa di Mestre e Malghera*); and possibly *La Pelerina* (C. Goldoni ?and Gorì, carn. 1734), and *Il pastor fido* (carn. 1739). Both Apolloni and Giacomo Maccari have been suggested as possible composers of settings of Goldoni intermezzos; although Maccari is the more likely, either composer's authorship is doubtful.

JAMES L. JACKMAN

Apollonicon. A large barrel-and-finger organ (*see* BARREL ORGAN) built by Flight & Robson. It took five years to build and was opened in 1817 at their premises in St Martin's Lane, London. It could be played by up to five organists at once, each from an individual keyboard, or it

could be played automatically using pinned wooden barrels. When played mechanically, the Apollonicon was said to replicate an entire orchestra. It had three barrels, each 61 cm in diameter, which rotated together. The main barrel was 2.44 metres long and occupied the centre front of the machine. A second barrel of the same size was situated at the rear of the instrument while the third, shorter barrel was to the right of the front barrel; this played the lowest two octaves plus two kettledrums. It was at first powered by a steam engine (then a relatively new source of power) but this proved unreliable and was replaced by manual power. The instrument stood 7.31 metres high, 6.1 metres wide and 5.5 metres deep. Stop-changing was automatic, using a toggle mechanism invented by Flight, each register being operated by one special key on the barrel keyframe. Contemporary accounts of the organ being played by six performers at once are based on an early description of the instrument as 'having the effect of six organists'. This effect was in part the result of the provision of a set of 'German pedals', a rarity on a British-made organ at that time. For almost a quarter of a century the Apollonicon was the only concert and public recital organ in London. By 1847 it had fallen into disrepair, was bought by William Hill and rebuilt at the Strand Music Hall, Lowther Arcade. Expanded to allow six players to perform on six manuals, the instrument was exhibited until about 1866 when the building was demolished and the organ disappeared.

The name Apollonicon was also used for a 'grand machine organ' built by Bevington of Greek Street, Soho, for the Cyclorama (a form of moving diorama) at the Colosseum in Regent's Park. That instrument had disappeared by 1855.

Aponte-Ledée, Rafael (*b* Guayama, 15 Oct 1938). Puerto Rican composer. After studying harmony, counterpoint, composition and the piano at the Madrid Conservatory with Cristóbal Halffter and others (1957–64), he attended the Latin American Centre for Higher Musical Studies at the Instituto Torcuato di Tella in Buenos Aires (diploma 1966). In 1966 he returned to Puerto Rico, where with the composer Francis Schwartz he was instrumental in promoting avant-garde music through the organization of the festivals, the Puerto Rico Biennials of 20th-Century Music I (1978), II (1980), III (1982), and IV (1984); he has also taught music theory and composition at the University of Puerto Rico (1968–73) and at the Puerto Rico Conservatory (from 1968). In his compositions Aponte-Ledée has explored many facets of modern expression ranging from electronic music (*Presagio de pájaros muertos, Estravagario*) to experiments in the playing techniques of traditional instruments such as percussive pizzicato and bowing below the bridge on string instruments, blowing through woodwind instruments in manners that create pitchless sounds, and striking the mouthpieces of brass instruments with the palm of the hand (*Elejía, Impulsos*).

DONALD THOMPSON

Apostel, Hans Erich (*b* Karlsruhe, 22 Jan 1901; *d* Vienna, 30 Nov 1972). Austrian composer of German birth. He studied the piano, theory and conducting with Alfred Lorenz at the Munz Conservatory in his home town of Karlsruhe (1915–19), where he was later appointed musical director and répétiteur at the Badische Landesbühne (1920). In 1921 he went to Vienna where he became a pupil of Schoenberg and, from 1925, of Berg. From 1922 Apostel himself took private pupils, initially in piano, and later also in general music theory and composition. One of his students, taken on at Berg's request, was Alma Mahler's daughter Manon Gropius, whose early death was later to inspire Berg's Violin Concerto. He was much affected by Berg's death in 1935 and, consequently, his creative ability was weakened for a short time.

At the outbreak of World War II Apostel, by then active as a pianist, accompanist and conductor of contemporary music at home and abroad, was in Geneva, but, not being a Jew, he had to leave Switzerland and go into internal exile. Since Apostel was considered part of the Schoenberg circle, his music was branded degenerate (*entartet*) during the war. Nevertheless the composer continued to pursue his own path without compromise: the only performance he received during this period was of *O sage, wo du bist* op.10 no.1, which was sung by the Vienna Boys' Choir under Ferdinand Grossmann in 1942. Directly after the end to the fighting in Vienna, Apostel was authorized by the Austrian resistance group 'o5' on 20 April 1945 to re-establish the Austrian section of the ISCM, of which he went on to become president (1946–8). He also worked as a reader for Universal Edition, revising the scores of, among other works, Berg's *Wozzeck* (in 1955) and *Lulu* (in 1963). In 1960 he became a member of the influential Austrian Art Senate, and in 1962 a corresponding member of the Vienna Secession. Among his friends were not only composers such as Berg and Webern, but also numerous painters, including Emil Nolde, Oskar Kokoschka and Alfred Kubin, whose work was a significant inspiration to Apostel. He received, among other awards, the Emil Hertzka Prize (1937, for

op.4), the Major Art Prize of the City of Vienna (1948), the Major Austrian State Prize (1957) and the Major Monaco Composition Prize (1968, for op.41). These honours, however, had very little effect on the number of performances his music received, which remained low after his death. Among his most important pupils were Rainer Bischof and Eugene Hartzell.

After beginning in the styles of late Romanticism and Expressionism, Apostel was a consistent follower of the techniques developed by Schoenberg and Berg. As is revealed in his sketches, his creative process was closely related to the formal conception and the rhythmic structure of his works. Motivic and thematic elements were bound to the series: contrary to the usual definition of the latter, Apostel tended to equate theme and series ('the series, so to speak the theme, is divided into motives' – see Kaufmann, 1965, p.20). The compositional credo he articulated in 1957 was 'one note – a sound; two notes – a relationship; three notes – a law' (ibid., 23). Despite his often constructivist compositional procedures, Apostel achieved highly elaborate melodic, harmonic and contrapuntal structures – even in strict dodecaphonic pieces – which influenced positively the reception of his work by a mainly conservative public (Apostel called himself a 'Hanslickianer', to whom 'musical beauty is an aesthetic law'). His style can be described as involving an extreme concentration (though not a reduction) of compositional means, which results in a terseness of musical organization and an economy of texture. Rhythmic and metric irregularities and parodies of familiar music (such as waltzes and marches) are likewise characteristic, as are traditional techniques of part-writing. Occasionally (as in op.22, op.26 and op.45) Apostel made use of *Zwölftonfelder*, unordered 12-note sets, in which note repetitions occur freely. Like the composers of the Second Viennese School, Apostel was ambivalent in his attitude towards programmatic descriptions which, once disclosed, were often quickly withdrawn. He also possessed a fine, if at times grotesque and uncontrolled, sense of humour and felt an affinity towards popular songs and the Wiener Lied (as is illustrated in *Der Zecher* of 1964). Much of Apostel's music testifies to the failure of his attempt to reconcile Schoenberg's rigour and Berg's freedom. This made him all the more resentful towards composers, for instance of aleatory and graphic scores, who gave performers an essential role in the creation of the work and thus, in his view, shirked the responsibilities of compositional craftsmanship. He did, however, respect composers, such as Berio, whose work entails an enrichment of sound resources. His uncompromising attitude as well as his oversensitivity caused conflicts which to a certain extent account for why, despite influential advocates, Apostel found himself in an artistic isolation which has continued after his death.

Apostrophe [strophicus] (Gk.). In Western chant notations, a neume added as an auxiliary to another neume. It was distinguished from the simple PUNCTUM probably by the manner of its performance, although there is no agreement as to what this might have entailed. Because it was practically always used on F, B♭ and C, and because later manuscripts differed in the way they placed it on the staff, Wagner believed its use implied intervals of less than a semitone; but the Dijon tonary (*F-MOf* H.159), which uses special signs possibly signifying quarter-tone steps, does not use them in contexts involving the *apostrophe*. For Cardine the *apostrophe* signified a note performed lightly. Modern Vatican books do not distinguish the *apostrophe* from the *punctum*, but the *Antiphonale monasticum* (Tournai, 1934) uses a special shape. (For illustration *see* NOTATION, Table 1.)

Apostrophos (Gk.). Sign used in pairs in Byzantine EKPHONETIC NOTATION.

Apothéose (Fr.). An instrumental musical form whose programmatic element honoured a dead musician, usually Lully. In an *apothéose* the favoured dead are welcomed by Apollo (representing Louis XIV) on to Mount Parnassus.

Surviving *apothéoses* are few, and the earliest survive as satirical scenarios. The anonymous *Le triomphe de Lulli aux Champs Elysées* (*F-Pn* 6542, no.173, f.260) dates from 1687, the year of Lully's death. In it Lully, defended by Polyhymnia, is subjected to a trial – examining musical and moral charges brought against him by French musicians – before being honoured by Apollo and the heroes of his operas. The following year François de Callières included an account of Lully's reception on Parnassus in his *Histoire poétique de la guerre nouvellement déclamée entre les anciens et les modernes* (1688), in which an Italian musician tries to thwart Lully's arrival by reporting Lully's sharp practices in the theatre to Orpheus (who can also be taken as representing the king); the ever-confident Lully brushes aside the charges and invites Orpheus to join him in creating 'an opera that will be worth money to us', a proposal Orpheus firmly rejects.

The two finest musical examples of *apothéoses* are both trio sonatas published by François Couperin, which make strong musical reference to the dead composers' styles: *Le Parnasse ou L'Apothéose de Corelli: Grande sonade en Trio* (1724, as part of *Les goûts réünis*) and *Concert instrumental sous le titre d'Apothéose, composé à la mémoire immortelle de l'incomparable Monsieur de Lully* (1725). The latter, the more substantial work, depicts both Lully and Corelli in Elysium. Their decision to agree that French and Italian musical styles are equally good leads to an *Essai en forme d'ouverture*, combining elements of both national styles, closed by a section entitled 'La paix du Parnasse'.

There is nothing sombre about these memorial compositions. Couperin obviously intended to entertain his audience: references to stylistic polarities between Italian and French music had direct relevance for his faction-ridden audience, as did the 'rumeur souteraine, causée par les auteurs contemporains de Lulli' and the subsequent 'plainte des mêmes', a reference to the unpopular control exercised by Lully over royal music. Couperin's preface to the Lully *apothéose* also gives detailed instructions for playing these trios (and many others) as pieces for two harpsichords, with each player taking a melody line and both playing the bass. Each movement is preceded by a

short description which, at least in modern performances, is read out by one of the musicians (or, occasionally, by a narrator). Corelli and Lully both appeared in another work in *apothéose* manner, also from 1725, *Le triomphe des Mélophilètes*, an 'idyll in music' with text by Pierre Bouret; it is not known who composed and arranged the music.

DAVITT MORONEY/JULIE ANNE SADIE

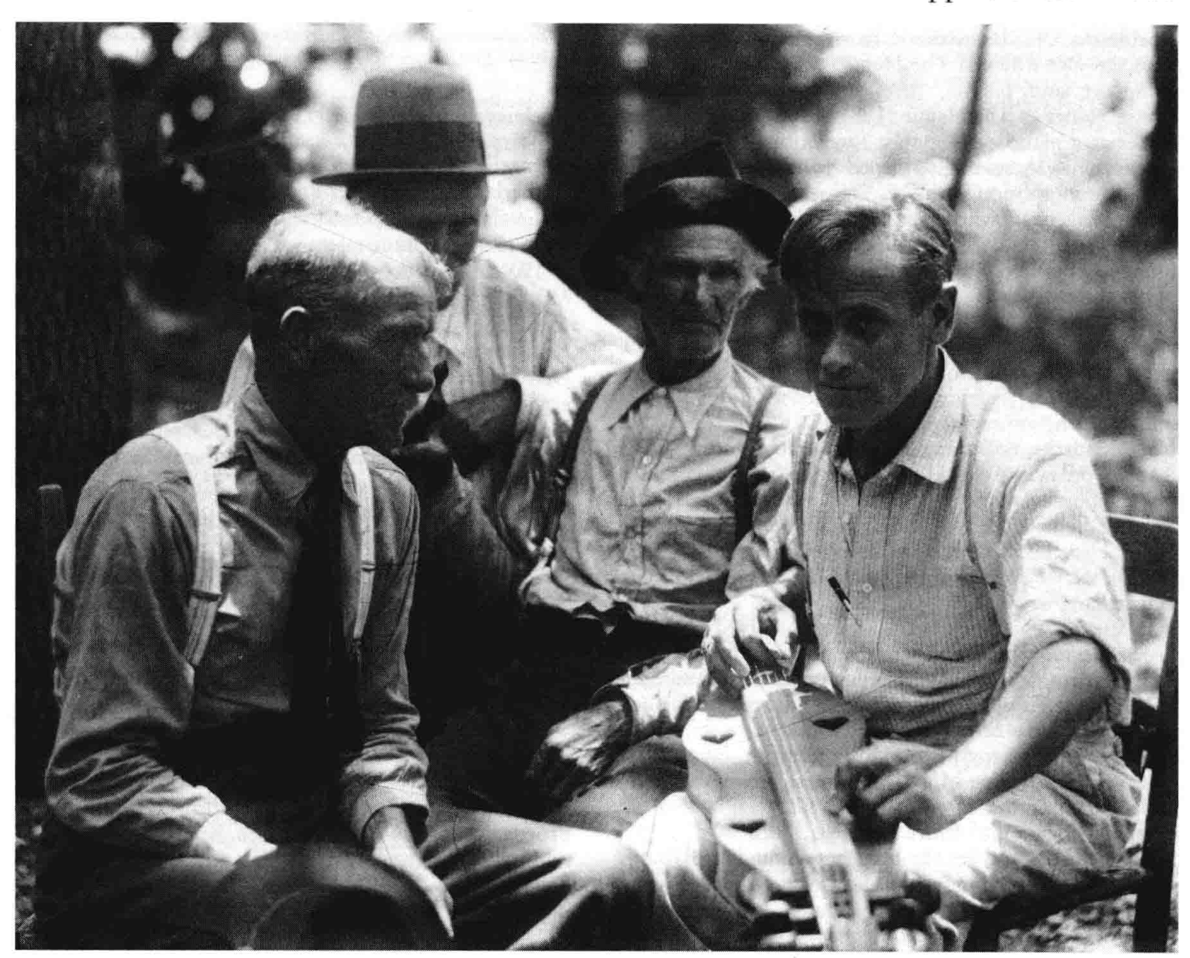
Apotomē (Gk.: 'segment'). A chromatic semitone in the Pythagorean system of intervals, equal to the difference between seven pure 5ths and four pure octaves, amounting to 113·7 cents and with a theoretical ratio of 2187:2048. According to the definition of Gaudentius (ed. K. von Jan in *Musici scriptores graeci*, Leipzig, 1895–9/*R*, pp.317–56, esp. 344), by subtracting the LIMMA from the whole tone, i.e. (9:8) – (256:244), the apotomē may be obtained. The difference between the two semitones – i.e. between the apotomē and limma – is equal to the difference between 12 pure 5ths and seven pure octaves, the Pythagorean comma.

JULIAN RUSHTON

Apoyamento (Sp.). *See* APPOGGIATURA. *See also* ORNAMENTS, §2.

Appalachian dulcimer [lap dulcimer, mountain dulcimer, Kentucky dulcimer, plucked dulcimer]. A fretted zither traditional to the southern Appalachian mountains of the eastern USA consisting of a narrow fingerboard attached to a larger soundbox underneath. Variant names include 'delcumer', 'dulcymore', 'harmonium', 'hog fiddle', 'music box' and 'harmony box'. Long found only in scattered pockets of tradition, the dulcimer has since the 1950s gained popularity outside the mountains; by the end of the 20th century it was being widely used by both amateur and professional musicians in folk-based repertories.

1. History. 2. Construction, technique and repertory.



1. HISTORY. The organological development of the Appalachian dulcimer divides into three periods: transitional (1700 to the mid-1800s), traditional (mid-1800s to 1940) and revival or contemporary (after 1940). During the transitional period the dulcimer developed in the Shenandoah River Valley region of southwestern Pennsylvania through the blending of British (predominantly Scottish) musical traditions with those of other immigrants, who brought with them the German *Scheitholt* and possibly the Swedish *hummel*, the Norwegian *langeleik* or the French *épinette des Vosges*. In the traditional period the dulcimer solidified into its present shape. Two makers were probably responsible for the dissemination of the instrument within Appalachia. J. Edward Thomas of Knott County, Kentucky, had connections with the Hindman Settlement School in eastern Kentucky and made dulcimers between 1871 and 1930, many of which he peddled from a mulecart. C.P. Pritchard of Huntington, West Virginia, manufactured what he termed an 'American dulcimer' and offered strings by mail order. Both made instruments in hourglass form with three strings.

Towards the end of the 19th century the Settlement School and crafts movements brought the dulcimer to the attention of outsiders, and the interpretation of Appalachia as the home of America's 'Elizabethan ancestors' encouraged a romanticized view of the instrument as emblematic of an imagined Appalachian culture. This attention encouraged mountain residents to preserve the dulcimer but also discouraged them from developing it any further. In the early 1900s it was taken up by scholars, notably I.G. Greer, and folk music enthusiasts, such as Andrew Rowan Sumner, Mellinger Henry, Maurice Matteson and John Jacob Niles (see illustration.).

Around the middle of the 20th century the dulcimer entered the urban northeast folk revival scene, largely due to the Kentucky-born musician Jean Ritchie, who performed and recorded extensively and published the first important instruction book (1963). The recordings and performances of revivalist (Richard Fariña, Paul Clayton, Howie Mitchell, Betty Smith, Ann Grimes) and traditional players (Frank Proffitt, Frank Proffitt jr, the Melton and Russell families of Galax, Virginia, the Presnell and Hicks families of Beech Mountain, North Carolina, the Ritchie family of eastern Kentucky) introduced the dulcimer to a wide audience and dulcimer making became a hobby and cottage industry thoughout the USA. Makers refined the instrument and developed new variants: a cardboard dulcimer, a 'backpacker's dulcimer' or dulcerine (a fretboard without soundbox) and a electric dulcimer. A magazine, *Dulcimer Players News*, was founded in 1975.

2. CONSTRUCTION, TECHNIQUE AND REPERTORY. The instrument is usually 75 to 90 cm long, its width varying according to the shape of the soundbox, commonly hourglass or teardrop, although oval, diamond, rectangular and other shapes are found. There are many variants, including a child-sized one and a larger one for concerts. The dulcimer has three strings, usually of metal, sometimes with one (the melody string) or more doubled. Contemporary dulcimers frequently add a fourth string, either doubling the melody string or equidistant between the melody and middle strings. The fingerboard is divided by metal frets into two and half to three octaves of the diatonic scale, rendering the dulcimer a modal instrument; the two most common modes seem to have been Ionian (the major scale) and Mixolydian. Two common Ionian tunings have melody and middle strings at the same pitch with the bass string a 5th or an octave below. Other tunings have melody and bass strings an octave apart with the middle string a 5th above the bass, or strings tuned to create a chord. Some contemporary instruments have extra, chromatic, frets, and players have devised more tunings and adopted the *capo tasto* to change key without retuning. On earlier dulcimers the frets were under the first two strings only, but on contemporary instruments they extend the full width of the fingerboard, allowing all strings to be used for the melody or chords.

The instrument was usually placed horizontally across a table or the player's lap. The right hand sounded the strings by plucking with the fingers or a plectrum made from wood or quill (or, occasionally, bowing) while the left hand played a melody by pressing on the fretboard with a noter (a wooden rod used as a slide) or the fingers. Melodies were usually played on the first string only, the others acting as drones. Techniques for using all the strings for melody, for playing chords and for finger-picking have been developed by both traditional and contemporary players. The traditional repertory included British ballads and hymns, dance tunes, play party songs,

Appalachian dulcimer played by John Jacob Niles

minstrel show tunes, sentimental popular songs, gospel, blues and commercial hillbilly music. The older British-derived repertory was emphasized by the romanticists of the instrument and the dulcimer was still associated with those styles at the end of the 20th century, although contemporary players had expanded the repertory enormously. Because of its soft volume, the dulcimer is thought to have been used to accompany singing or for instrumental solos, but it was also in string bands and instrumental duets, where it sometimes played the melody and sometimes provided harmony or a rhythmic accompaniment through the slapping of the pick against the strings. At the end of the century there were numerous clubs, and workshops for playing and making the instrument were common throughout the USA.

LUCY M. LONG

Appassionato (It.: 'impassioned', 'passionate'). A performance direction denoting an impassioned style. Although the title 'Sonata appassionata' for Beethoven's op.57 is not known any earlier than the 1838 four-hand arrangement published by Cranz of Hamburg, Beethoven did use the word several times. The slow movement of his Piano Sonata in A op.2 no.2 is marked *largo appassionato*; that of the String Quartet in F op.18 no.1 *adagio affettuoso ed appassionato*; that of the Piano Sonata in B♭ op.106 *adagio sostenuto: appassionato e con molto sentimento*; the main section of the first movement of his Piano Sonata in C minor op.111 is marked *allegro con brio ed appassionato*; and the finale of his String Quartet in A minor op.132 is marked *allegro appassionato*. The term was defined in Koch's *Musikalisches Lexikon* of 1802, and many later composers used it, primarily as an expression mark: Schubert marked the opening of his posthumous trio movement (D897) *adagio* with *pp appassionato*.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Appeldoorn, Dina [Christina Adriana Arendina] (*b* Rotterdam, 26 Dec 1884; *d* The Hague, 5 Dec 1938). Dutch composer and pianist. After studying at the Royal Conservatory in The Hague (1899–1906), she began her career as a piano accompanist for various choirs in The Hague, but increasingly turned to composition. She studied composition with F.E.A. Koeberg and later with Johan Wagenaar, whom she often consulted throughout her life. Together with the soprano Lena van Diggelen she founded a quintet, which gave first performances of many of her songs.

Appeldoorn's first major work, the symphonic poem *Pêcheurs d'Islande,* was first performed in 1912 by the Utrecht City Orchestra, as was her *Noordzee-symfonie* in 1925. In 1923 *Jubileum-lied,* written for Queen Wilhelmina's 25th anniversary, was awarded a prize by the Nederlandsche Volkszang-bond in Utrecht. In the 1920s Appeldoorn wrote choral works for the popular community singing evenings in The Hague of the Nederlandse Vereniging voor den Volkszang, conducted by Arnold Spoel. Her choral works, including *Het Zwervers' Lied* (1936), were also performed by the male-voice choir Die Haghe Sanghers.

In the 1930s Appeldoorn became involved with the Esperanto movement and wrote a large number of songs in Esperanto. In 1934 the conductor of the Rotterdam PO, Eduard Flipse, promoted her work and performed the *Blijspel-ouverture.* The suite *Woudsproke* shows her predilection for programme music, with its four movements entitled 'Forest Mood', 'Gnomes', 'Funeral Music', and 'Dance of the Satyrs'. In her energetic works for amateur singers and choruses Appeldoorn used simple tonal melodies and set the texts predominantly syllabically. Her accompaniments, however, show a spicy harmonic language filled with dissonances which illustrate the text, such as in *Frissche bloemen.* Appeldoorn wrote a number of patriotic works, such as the Hollandsche Overture and the *Loflied aan Nederland.*

HELEN METZELAAR

Appelmeyer, Franz. *See* ASPLMAYR, FRANZ.

Appenzeller, Benedictus (*b c*1480–88; *d* after 1558). South Netherlandish composer and singer. The earliest known archival documents mention him in 1518 as a singer and in 1519 as the choirmaster at St Jacob in Bruges. After 1519, contemporary publications by Attaingnant and Moderne are the only source of evidence of his activity until February 1536, when he became a singer in Mary of Hungary's chapel choir in Brussels. Soon afterwards, in October 1537, he succeeded Jehan Gossins (who had died earlier that year) as master of the choirboys. In this function, which was indistinguishable from that of *maître de la chapelle*, Appenzeller served more than 15 years, composing many works for the Brussels chapel. The composer is last mentioned in Mary of Hungary's service in December 1551 in a list of chapel members who accompanied Mary to Augsburg and Munich. It would seem, however, that he continued to serve her until she relinquished her position in October 1555.

By the time Mary of Hungary retired to Spain, Appenzeller had already found new employment as choirmaster of Ste Gudule, Brussels (from 28 December 1555 until December 1558). Appenzeller's last contact with his former patroness is a request dated 8 July 1558 for a tax exemption, in which he gave his age as over 70. According to the records of the Illustre Lieve Vrouwe Broederschap at 's-Hertogenbosch, Appenzeller was married to a woman named Liennaertken and performed a mass with the six choirboys of his chapel in that city in the summer of 1545.

With the exception of one chanson (in *GB-Lbl* Add.35087) and six motets (in 1554[8], 1555[9] and 1557[3]), Appenzeller's compositions are transmitted in the sources with the simple attribution 'Benedictus', which has caused confusion with the works of the contemporary German composer Benedictus Ducis and, to a lesser extent, with those of the Netherlandish organist Benedictus de Opitiis. However, as Bartha demonstrated, the works of these three composers can be distinguished without much difficulty. The earliest evidence of Appenzeller's compositional activity is the three-voice chanson *Buvons ma comere*, which is transmitted in a Flemish manuscript dating from about 1506 (*GB-Lbl* Add.35087). The most important source for his secular music is *Des chansons a quattre parties* (Antwerp, 1542), which is devoted exclusively to chansons by Appenzeller. In these works he used both polyphonic and homophonic textures to produce sensitive interpretations of the texts, while refrains and other repetition patterns show the continued influence of the lyric forms. The dense polyphonic texture of Appenzeller's sacred music is characterized by the use both of modern techniques such as pervading imitation, and of somewhat old-fashioned traits such as the use of *tempus perfectum*, cantus firmi, ostinatos and complicated canon structures.

MAGNIFICAT SETTINGS
in E-MO 769 and for 4 voices unless otherwise indicated

Magnificat primi toni [i]; Magnificat primi toni [ii], 2–3vv; Magnificat primi et sexti toni; Magnificat secundi toni [i], *NL-L* 1442; Magnificat secundi toni [ii]; Magnificat secundi toni [iii]; Magnificat tertii toni; Magnificat quarti toni, ed. in MMN, viii/2 (1971), no. 62; Magnificat quinti toni; Magnificat sexti toni; Magnificat septimi toni; Magnificat octavi toni, 2–7vv

MOTETS

Aperi Domine oculos tuos, 5vv, 1553[14] (attrib. Clemens non Papa in 1554[11]; ed. in CMM, iv/13, 1966, p.140)
Aspice domine, 5vv, ed. in SCMot, xviii (1997)
Ave maris stella, 6vv, 1555[4]
Ave maris stella, 4vv, *NL-L* 1439
Ave regina coelorum domina, 4vv, *L* 1441
Ave regina coelorum mater, 4vv, 1547[6]
Ave verum corpus, 5vv, ed. in SCMot, xviii (1997)
Beati omnes, 4vv, ed. in SCMot, ix (1998)
Benedic domine domum istam, 5vv, 1545[3]
Benedictus dominus deus meus, 4vv, 1539[11]
Christus passus est, 6vv, *E-MO 765*
Cor mundum crea in me, 5vv, ed. in SCMot, xviii (1997)
Corde et animo, 5vv, 1545[3]
Da pacem, 4vv, *F-CA* 125–8 (attrib. Verdelot in *H-Bn* Bártfa 23)
Doleo super te Jesu, 4vv, 1540[7]
Doleo super te Absalon, 4vv, 1559[2] [= Doleo super te Jesu]
Et nunc domine, 3vv, 1560[7]
Foelix es regno Francisce, 4vv, ed. in SCMot, ix (1998)
In illo tempore dixit Jesus, 4vv, 1554[8]
Inviolata integra et casta es, 4vv, *E-MO 765*
Jesu Christe verbum patris, 5vv, 1538[3]
Musae Jovis, 4vv, *F-CA* 125–8, ed. in *Werken van Josquin des Prés*, i: *Klaagliederen op den dood van Josquin* (1921), p.4
O decus nostrum, 5vv, 1542[5] (attrib. Gerardus in 1558[3])
Oramus te rex gloriae, 5vv, ed. in SCMot, xviii (1997)
Peccantem me quotidie [i], 4vv, 1545[2]
Peccantem me quotidie [ii], 4vv, *E-MO 765*
Plangite pierides, 5vv, 1538[2]
Quam pulchra es, 6vv, 1545[2] (attrib. Ducis in 1568[7])
Salve regina, 5vv, *NL-L* 1442
Sancta Maria succurre miseris, 4vv, linen tablecloth, 1548 (facs. in Schreurs), *D-Mbs* 156/5&10 (facs. in Jas, 1993)
Sancte Jesu Christe succurre miseris, 1567[1] (contrafactum of Sancta Maria succurre miseris; attrib. Ducis)
Super flumina Babilonis, 5vv, 1546[6]
Surge aquilo et veni, 5vv, 1554[4]
Veni sponsa Christi, 7vv, attrib. Ducis in *D-Mbs* Mus.ms.1536 and 1564[2], but by Appenzeller
Verbum caro factum est, 5vv, 1546[7] (attrib. Josquin in *D-Z* LXXIII, 1549[16]), ed. in *Werken van Josquin des Prés, Motetten*, v, afl.51, no.88

ERIC JAS

Appia, Adolphe (François) (*b* Geneva, 1 Sept 1862; *d* Nyon, 29 Feb 1928). Swiss theatrical theorist and stage designer. He studied at Geneva (1879–89), and at the conservatories of Leipzig and Dresden, at the same time acquainting himself with contemporary theatrical practice by attendance at the Bayreuth Festival (from 1882), and the court opera houses of Dresden (1889) and Vienna (1890). After 1890 he pursued his interests as a writer and artist and led a secluded existence in the vicinity of Lake Geneva.

Like many contemporary artists Appia reacted against the economic and social conditions of his day, registering a Romantic protest by aspiring to a theatrical art independent of reality and determined solely by the creative imagination of the artist. Wagner's music dramas were the focal point of his ideas. Whereas Wagner's music and text as a product of the 'first and primordial idea of creation' was to his mind free from the conventions of the real world, its stage representation had been taken over by the 'conventional influence of the milieu'. For Appia, the solution followed on from the insight that in Wagner the music constituted not only the time element but also that of space, taking on 'bodily form' in the staging itself. However, this could come about only if there were a hierarchical order of the factors of presentation to guarantee that the music, as the prime revelation of the artist's soul, would determine all the relationships on the stage. Appia's hierarchical synthesis – a departure from the equal participation of the arts in Wagner's *Gesamtkunstwerk* – gives the central role to the actor trained in dance and rhythm. His actions, pre-formed by the score, transfer the music on to the stage, whose 'arrangement' must match its physical properties: a 'scenic construction set up in an ad hoc manner, with its surfaces and their various angles extending unconcealed in space'; electrical lighting takes on the function of articulating the stage area, while painting and costumes are reduced to a colouring agent with the task of 'simplification'. His aesthetics, which appear to turn away from the conventions of the industrial era, are however subservient to them, because his stage art was not only dominated by the new technology of electricity, but (as a result of his negation of the producer's creativity) ultimately aimed at an automatic process, at an art of machines set in motion by the music. Appia had his first opportunity of trying out his theories at the theatre of the Comtesse de Béarn in Paris in 1903 with scenes from Schumann's *Manfred* and Bizet's *Carmen*, using a new lighting system developed by Mariano Fortuny. A decisive influence on his later work was his encounter (1906) with Emile Jaques-Dalcroze, in whose rhythmical gymnastics he saw the realization of the synthesis of music with the living body that was essential to his theatrical ideas – reflected in his 'espaces

Stage design by Adolphe Appia for Gluck's 'Orfeo ed Euridice', 1913 (Institut für Theaterwissenschaft, University of Cologne)

rythmiques' from 1909 onwards. They demonstrated the principles of 'living space', not formulated until *L'oeuvre d'art vivant* (1921). In order to correspond to the form and movements of the living actors, this space consists of freely adaptable, purpose-built stage structures formed of a limited number of linear elements, on which each transformation or each fresh combination happens in full view of the audience. The concept was demonstrated in Jaques-Dalcroze's *Echo und Narzissus* (1912) and Gluck's *Orfeo ed Euridice* (1913; see illustration) in the Jaques-Dalcroze educational institute in Dresden.

Appia is the father of non-illusionist musical theatre. All anti-realistic tendencies of the moderns can more or less be traced back to him. Like EDWARD GORDON CRAIG, who was comparable to him in many respects, his influence found a more effective medium in his theoretical writings than in his practical activities. Only after his ideas were already widespread and to some extent even superseded was he recalled to the public stage: in 1923 he designed *Tristan und Isolde* for La Scala and in 1924 and 1925 *Das Rheingold* and *Die Walküre* for the Stadttheater at Basle. In Bayreuth, Cosima Wagner, to whom his reforming projects were primarily addressed, rejected them; it was only with the 'new' Bayreuth of Wieland and Wolfgang Wagner that his ideas made a deep mark on stage design at the Festspielhaus.

MANFRED BOETZKES

Appia, Edmond (*b* Turin, 7 May 1894; *d* Geneva, 12 Feb 1961). Swiss conductor. He studied the violin with Marteau in Geneva, Rémy and Capet in Paris (1908–13) and César Thomson at the Brussels Conservatory (1920), gaining a *premier prix*. He became leader of the Geneva Opera House orchestra, and made his début as an international soloist. From 1928 to 1943 he held masterclasses at the conservatories of Lausanne and La Chaux-de-Fonds. While leader of the Orchestre de la Suisse Romande (1932–5) he also began, in 1935, to conduct. In 1938 Geneva radio engaged him as permanent conductor; in addition to contemporary music, he championed French and Italian music of the 17th and 18th centuries, particularly the operas of Lully and Rameau, of which he was considered a stylish and elegant interpreter. He also introduced the Jeunesses Musicales into Switzerland. In 1952 he was appointed Chevalier de la Légion d'Honneur. His writings include a number of essays on French Classical music (mainly in *SMz*, 1949–52); the most important appeared in *De Palestrina à Bartók: études musicologiques* (Paris, 1965).

JÜRG STENZL

Appignani, Adelaide Orsola [Aspri, Orsola] (*b* Rome, *c*1807; *d* Rome, 30 Sept 1884). Italian composer, singer and conductor. After her father's death, her mother married the violinist Andrea Aspri and Appignani adopted her stepfather's surname and used Orsola as her first name. She studied with Valentino Fioravanti. In 1833 she sang Smeton in a performance of Donizetti's *Anna Bolena*, given by the Roman Accademia Filarmonica at Palazzo Lancellotti; already a member of that academy, she was offered honorary membership of the Accademia di S Cecilia, Rome, in 1842. As a conductor she was active in Rome and Florence (1839). She was also a singing teacher and had among her pupils the tenor Settimio Malvezzi. She married Count Girolamo Cenci-Bolognetti. Her *melodrammi* include *Le avventure di una giornata* (1827), *I pirati* (1843) and *Clara di Clevers* (1876); she also wrote a Sinfonia, a cantata *La redenzione di Roma* and piano pieces.

MATTEO SANSONE

Applausus musicus (Lat.). A genre of 18th-century Austrian cloister theatre: a compact, Latin operetta or semi-dramatic cantata in one act or part, of a congratulatory character. It consisted of a series of solo ariosos or arias alternating with recitative, with at least one ensemble number (duet, trio or quartet), as well as a final chorus that usually functioned as an encomiastic *licenza* (*see* LICENZA (i)). The arias, ensembles and choruses were cast predominantly in da capo form, and the whole was introduced by an orchestral overture ('intrada', 'introduzione', 'sinfonia') that typically followed the Italian three-movement pattern. The weight of the concluding chorus and the elaborate scoring (a feature possibly derived from the Italian serenata) were characteristic. Joseph Haydn's *Applausus* HXXIVa:6, composed in 1768 for the Cistercian monastery at Zwettl, is in many respects representative.

The *applausus* was often performed scenically on a stage with costumes. It may have evolved out of the musical prologue and epilogue encasing the acts of the old Baroque cloister drama (*ludi caesarei*), the plots of which had increasingly become more independent. It had in common with the old prologue–epilogue the mythological and allegorical characters and the *licenza*-like function of the final chorus. After the imperial decree of 1765 banning Latin school dramas, the applausus lived on

briefly in the form of the *Singgedichte* ('sung poems'), in effect German-texted *applausus*. Important composers of the genre before Haydn were Donberger, Zechner and Albrechtsberger.

ROBERT N. FREEMAN

Applebaum, Louis (*b* Toronto, 3 April 1918, *d* Toronto, 20 April 2000). Canadian composer and arts administrator. He studied the piano with Boris Berlin, and theory and composition with Healey Willan, Ernest MacMillan and Leo Smith, before continuing composition studies with Roy Harris and Bernard Wagenaar in New York (1940–41). For the next eight years, Applebaum worked for the National Film Board of Canada, producing some 250 film scores. During this period he became increasingly concerned with improving the position of professional musicians in Canada. His combined interests in creative and socio-economic development led to a career that influenced every aspect of Canadian music. During the 1960s he served as consultant for CBC television and chair of the planning committee for the National Arts Centre, Ottawa. His 1965 *Proposal for the Musical Development of the Capital Region* led to the formation of the National Arts Centre Orchestra and the University of Ottawa music department. Throughout the 1970s he served as executive director of the Ontario Arts Council and in 1980 became co-chair of the Federal Cultural Review Committee.

Applebaum has composed incidental music for more than 50 productions of the Stratford (Ontario) Shakespearean Festival (1953–90) and written fanfares to announce performances at the Festival Theatre. In 1955, partly to supplement the work of theatre musicians, he founded the music wing of the festival, which consists of concerts, opera workshops and conferences. In addition to a steady stream of theatre music (including four ballets), film and television scores, he has written many instrumental and vocal works. His numerous honours include the Canadian Centennial Medal (1967) and appointment to the Order of Canada (1995). In 1998, in celebration of his 80th birthday, a concert of his works was performed in Toronto.

WORKS
(*selective list*)

Vocal: City of the Prophet (Bible: *Jeremiah*), Bar, pf, 1952; A Folio of Shakespearean Songs, medium v, pf, 1954–87; Cherry Tree Carol (trad.), SATB, 1958; King Herod, SATB, 1958; Algoma Central 'In the Tracks of the Black Bear', S, fl, hp, 1976; Inunit, 1v, orch, 1977; Of Love and High Times, S, SATB, opt. fl, opt. hn, opt. perc, 1979; The Last Words of David, cantor, SATB, 1980; Ode to a Birthday City: 1834/Toronto/1984 (L. Sinclair), spkr, solo vv, SATB, orch, 1984; 2 Nostalgic Yiddish Folk Songs (trad.), SATB, 1987; Play On, solo vv, SATB, vn, cl, 2 pf, orch, 1987

KENNETH WINTERS

Appleby, Thomas (*d* Lincoln, 1563/4). English church musician and composer. He was appointed organist and Master of the Choristers at Lincoln Cathedral in June 1537, but moved to Oxford in the autumn of 1538 to become *informator choristarum* at Magdalen College. Thomas Whythorne was then one of the choristers and, writing *c*1593, he loyally listed his three successive choirmasters – Appleby, Preston and John Sheppard – among the famous musicians of his time. Appleby returned to his former appointment at Lincoln in the autumn of 1541 and held it until 1550, and yet again from 1559 until succeeded by William Byrd in March 1563. His whereabouts between 1550 and 1559 are unknown; he died in 1563 or 1564.

His surviving compositions are both for the Latin rite. A five-part *Magnificat* setting for men's voices, now lacking the tenor, is in *GB-Cu* Peterhouse 471–4 (ed. N. Sandon, Newton Abbot, 1995); its part-writing is rough in places, but on occasions its resort to points of imitation can be quite deft. A setting of the mass, described as 'for a mene' and for four men's voices, is in *Lbl* Add.17802–5. It is in a more imitative style, and includes a Kyrie set for *alternatim* performance and a brief Alleluia, of which the tenor appears to be derived from the plainsong of the *Alleluia, Confitemini domino*. (D. Owen, ed.: *A History of Lincoln Minster* (Cambridge, 1994), 60–1)

ROGER BOWERS

Appleton, Jon (Howard) (*b* Los Angeles, 4 Jan 1939). American composer. Born into a family of musicians, he studied the piano and began composing as a child. He attended Reed College (BA 1961) and studied privately in Berkeley with Imbrie (1961–2). While at the University of Oregon (MA 1965), he worked with Homer Keller and began composing electronic music, an interest that led him to the Columbia-Princeton Electronic Music Center (1965–6), where his teachers included Ussachevsky. After teaching for a year at Oakland University (Rochester, Michigan), he joined the music department at Dartmouth College (1967), where he founded the Bregman Electronic Music Studio. In the 1970s he collaborated on the development of the Synclavier, a polyphonic digital synthesizer used in live performance. Based on the Dartmouth Digital Synthesizer designed for use at the Bregman Studio, the Synclavier was the first commercially manufactured instrument to use microcomputers. Appleton has also served as director of the Stiftelsen Elektronmusikstudion, Stockholm (1976) and taught at Keio University, Japan, the Theremin Center for Electronic Music, Moscow and MIT. In 1973 and 1979 he participated in projects to record and broadcast traditional Polynesian and Micronesian music. His honours include Guggenheim and Fulbright fellowships.

Appleton's electronic compositions are often tonally rooted and his compositional techniques remain those

traditional to Western music, but implemented with the aid of technological innovation. In some of his works of *musique concrète* he exploits the tension between the extra-musical allusions of recorded sounds and their potential for musical development. His later works are primarily tonal compositions for instrumental and electro-acoustic ensembles. His writings focus on the aesthetics, theory, technology and social role of music; these include *The Development and Practice of Electronic Music* (Englewood Cliffs, NJ, 1975) and *21st-Century Music Instruments: Hardware and Software* (Brooklyn, NY, 1989).

COLBY LEIDER

Appleton, Thomas (*b* Boston, 26 Dec 1785; *d* Reading, MA, 11 July 1872). American organ builder. Apprenticed as a young man to a Boston cabinet maker, Appleton entered the workshop of William Marcellus Goodrich in 1805. From 1810 to 1820 both men were associated with the Franklin Musical Warehouse, building church and chamber organs, pianos and claviorgans. During this period Appleton assisted Goodrich in building organs, but also made pianos in partnership with Lewis and Alpheus Babcock (Babcock, Appleton & Babcock, 1811–14) and Charles and Elna Hayt (Hayts, Babcock & Appleton, 1814–15). In 1821 Appleton became an independent organ builder, quickly gaining a reputation and securing important commissions. Between 1847 and 1850 Thomas D. WARREN was his partner, having served with him as an apprentice; in the latter year Appleton moved his workshop from Boston to Reading, Massachusetts, where he worked until his retirement in 1868. Appleton's most important work was carried out between 1825 and about 1850, and includes instruments made for the Bowdoin Street Church (1831), where Lowell Mason was organist; one for the Handel and Haydn Society in Boston (1832), for the Center Church, Hartford, Connecticut (1835), and for the Church of the Pilgrims, Brooklyn, New York (1846). His work is characterized by its meticulous craftsmanship, refined tone and, during his most active period, strikingly handsome casework, often executed in mahogany in the Greek revival style.

BARBARA OWEN

Application (Ger. *Applicatur*; Lat. *applicatio*). In violin playing, a term used mainly in the 18th century for position playing or position fingering. *Halb Applicatur* (literally, 'half position') meant either 2nd position or, collectively, 2nd, 4th and 6th positions. *Ganz Applicatur* (literally, 'whole position') meant 3rd, 5th and 7th positions. *Vermischte Applicatur* (mixed position) was a term employed when 'now the whole, now the half position is used' (Leopold Mozart, 1756).

See also POSITION.

DAVID D. BOYDEN

Applied dominant [secondary dominant] (Ger. *Zwischendominante*). The dominant of a degree other than the tonic, usually indicated by the symbol 'V/'. Thus in the key of C major, for instance, a D major triad may function as V/V, an E major triad as V/VI, an A major triad as V/II and a B major triad as V/III. Dominant 7th chords often function as applied dominants; again in C major, the

chord C–E–G–B♭ may function as the dominant 7th of IV, and A♭–C–E♭–G♭ as the dominant 7th of ♭II, the 'Neapolitan 6th chord'. For an illustration *see* CADENCE, ex.15.

JULIAN RUSHTON

Appo, William (*b* Philadelphia, *c*1808; *d* New York State, after 1871). American composer, horn player and conductor. One of the earliest black American composers, he worked in New York, as teacher and performer, and Philadelphia, where he played with the Walnut Street Theater Orchestra (1826) and was a member of the Frank Johnson band (1830s), with which he toured England. He conducted the first performance of instrumental music in the African Methodist Episcopal Church (1848) and was described by Bishop Alexander Payne as 'the most learned musician of the race'. His best-known compositions are an anthem, *Sing unto God*, and *John Tyler's Lamentation*, commissioned by the Utica (New York) Glee Club, probably with reference to the presidential election campaign of 1844.

DORIS EVANS McGINTY

Appoggiatura (It.; Fr. *appoggiature*; Ger. *Vorschlag*). A 'leaning-note'. As a melodic ornament, it usually implies a note one step above or below the 'main' note. It usually creates a dissonance with the prevailing harmony, and resolves by step on the following weak beat. It may be notated as an ornament or in normal notation. In the Baroque and Classical periods, and the early Romantic period, the appoggiatura, even when not notated, was taken for granted in certain contexts, particularly in recitative. *See* ORNAMENTS for a full discussion; *see also* NON-HARMONIC NOTE.

□

Appolloni, Gioseffo (*b* Arezzo; *fl* 1591–*c*1600). Italian composer. The appearance of his earliest known work, *Raggio di pura luce*, in Orazio Tigrini's *Secondo libro de madrigali a sei voci* (RISM 1591[24]) suggests that he may have been a pupil of Tigrini, who was at that time *maestro di cappella* at Arezzo Cathedral. Appolloni's *Primo libro de madrigali a quattro voci* (Venice, 1600), announced in its dedication as 'questi miei primi Madrigali', is dated from Arezzo on 22 November 1599, and dedicated to Girolamo Albergotti, a member of the Medici order of the Cavalieri di S Stefano. These pieces are not so much madrigals as *madrigaletti*; light in style and tone and heavily dependent upon syllabic writing, they are largely settings of unremarkable pastoral and amorous texts, though occasionally a more pathetic vein intrudes. The one sacred piece attributed to 'J. Appoloni' (in 1612[2]) is also probably by Gioseffo Appolloni rather than Giovanni Apolloni, noted by Fétis as the composer of *Il primo libro de' madrigali a cinque voci* (Venice, 1607) presumably on the basis of the copy (now lost) recorded in the catalogue of King João IV of Portugal and also known to Pitoni.

Appoloni [Appolini], **Salvatore.** *See* APOLLONI, SALVATORE.

Appunn, Anton (*b* Hanau, 20 June 1839; *d* Hanau, 13 Jan 1900). German acoustician, son of Georg Appunn. At the Leipzig Conservatory he continued the acoustical experiments of his father, especially the determination of vibration ratios of very high tones by optical means, and constructed fine acoustic apparatus. He devised a new shape for the glockenspiel, with right-angled metal rods in a circular arrangement and a metal half-sphere above as a resonator.

MARK HOFFMAN

Appunn, Georg August Ignatius (*b* Hanau, 1 Sept 1816; *d* Hanau, 14 Jan 1888). German musical theorist and acoustician. He studied theory with Anton André and Schnyder von Wartensee, the piano with Suppus and Alois Schmitt, the organ with Rinck and the cello with Mangold. He became a well-rounded musician who could play almost every instrument. Until 1860 he was a popular teacher of singing, theory and instruments in Hanau and Frankfurt. Later he worked exclusively on acoustical research (e.g. harmoniums tuned with 36 and 53 intervals to the octave). His research was acclaimed by such scholars as Helmholtz, Oettingen and Engel.

WRITINGS

Aprahamian, Felix (*b* London, 5 June 1914). English critic, writer and concert organizer. In 1931 he was appointed assistant secretary of the Organ Music Society; he became secretary in 1935 and invited Marchal, Tournemire, Messiaen and Duruflé to perform in the society's concerts. He was concert director of the LPO (1940–46) and from 1942 organizer of the Concerts de musique française for the Free French in London. Among the artists whom he invited to appear at these remarkable concerts were Teyte, Goodall, Pears, Britten and Tippett, and following the liberation of Paris many outstanding French musicians also performed in the series, including Poulenc, Bernac, Souzay, Neveu, Thibaud, Fournier, Gendron, Messiaen, Loriod and Dutilleux, several of whom established firm friendships with Aprahamian.

Aprahamian was deputy music critic of the *Sunday Times* (1948–89) and a regular contributor to *Gramophone*. Throughout his career he did much to foster French music in Britain; he was Messiaen's earliest British advocate (they corresponded from 1936), arranging the

composer's first visit to London in 1938. He wrote the entry on Messiaen for the fifth edition of *Grove's Dictionary of Music and Musicians*, an article which remains valuable for its documentation of Messiaen's early career. He has written prefaces to books on Bax, Delius, Szymanowski and Widor and has also published a translation of Claude Samuel's *Conversations with Olivier Messiaen* (London, 1976). He co-edited the 20th-century volume in the series Heritage of Music (1989) and during the 1990s wrote articles containing his reminiscences of Messiaen and Poulenc. He was made an honorary member of the Royal Philharmonic Society in 1994.

Aprile, Giuseppe [Scirolo, Sciroletto, Scirolino] (*b* Martina Franca, Taranto, 28 Oct 1732; *d* Martina Franca, 11 Jan 1813). Italian soprano castrato and composer. His early musical training from his father, Fortunato (a notary and church singer), was followed when he was 19 by study with Gregorio Sciroli in Naples (thus his nickname). He made his début in Sciroli's *Il barone deluso* (1752, Rome). Until 1757 he sang in Naples (in the royal chapel, 1752–6, though librettos continue to list him in the service of the court until 1758), Turin and Rome (where in 1754–5 he became primo uomo); during the next few years he travelled, visiting Venice, Madrid and Stuttgart. After returning briefly to Italy, he was appointed primo uomo in Stuttgart for the period 1762–9 (with one Italian interlude), appearing in Jommelli's *Didone abbandonata* (1763), *Demofoonte* (1764) and *Fetonte* (1768), among other works, and enjoying a salary comparable to Jommelli's own. His brother Raffaele, a violinist, was also engaged at court. The depletion of the duke's *cappella* provoked his departure; he left behind him considerable debts. In 1770 Burney heard him in Naples; Mozart heard him there, in Bologna and Milan, remarking that 'Aprile, first man, sings well and has a beautiful, even voice', which was 'unsurpassed'. In Naples Aprile again collaborated with Jommelli on several operas and in 1783 replaced Caffarelli as first soprano in the royal chapel. From 1774 to 1780 his operatic appearances were primarily in Florence, Turin and Rome. His last known performance was in 1785 in Naples, where he was pensioned in 1798. Aprile was well known as a teacher (his students included Michael Kelly, Cimarosa and the younger Manuel García). His 1791 vocal method – published in English, as *The Modern Italian Method of Singing* – reprints his 36 *solfeggi*, found in many other contemporary sources. Its prefatory rules and 'progressive examples' are copied from Tenducci's *Instruction ... to his Scholars* (1782), which in turn reflects ideas espoused early in the centry by Tosi. Aprile wrote a great deal of music (though no operas), as did many singers of his day, most very simple duets in thirds, possibly as pedagogical tools. He possessed an agile voice, with a wide range and diversity of expression, and he was a good actor. Schubart, writing in Stuttgart, praised his manner of varying arias and noted his great importance to Jommelli.

DALE E. MONSON

Apthorp, William Foster (*b* Boston, 24 Oct 1848; *d* Vevey, Switzerland, 19 Feb 1913). American critic and writer on music. In 1869 he graduated from Harvard College, where he studied music with J.K. Paine. He was the influencial music critic of the *Boston Evening Transcript* from 1881 to 1903 and also wrote programme annotations for the Boston SO. Apthorp sought to elevate standards of musical appreciation and performance. His criticism consisted essentially of enlightened opinion intended largely for the general public. Apthorp was a modernist who helped to disseminate information about new music and ideas to Americans in the later 19th century. He translated writings by, and wrote a biographical sketch of, Berlioz (New York, 1879/*R*), and compiled a catalogue of Wagner's published works which appeared in E.L. Burlingame, ed.: *Art Life and Theories of Richard Wagner* (New York, 1875). He published *Musicians and Music Lovers* (New York, 1894/*R*), *By the Way, being a Collection of Short Essays about Music and Art in General* (Boston, 1898), *The Opera, Past and Present* (New York, 1901/*R*). He was editor, with John Denison Champlin, of Scribner's *Cyclopaedia of Music and Musicians* (New York, 1888–90).

Aquanus, Thomas. *See* TZAMEN, THOMAS.

Aquila, Marco dall'. *See* DALL'AQUILA, MARCO.

Aquileia. Town in Italy. From early Christian times and during the Middle Ages it was an important city in the Friuli region of Northern Italy, giving its name to the patriarchate it governed. It is known to have been a major liturgical centre and probably developed a distinctive tradition of plainchant. The patriarchate of Aquileia was suppressed in the 18th century. The town is of Roman origin.

1. History. 2. Early rite. 3. Medieval chant.

1. HISTORY. According to tradition the episcopal see of Aquileia was founded by St Mark and from the 5th century was established as an archbishopric. The earliest known evidence for the use of the title of patriarch for the bishop of Aquileia dates from the reign of Pope Pelagius I (556–61) and the term 'ritus aquileiensis' or 'partiarchinus' for the Aquileian rite is documented from the 7th century. In 606 the patriarchate was divided and a double sequence of patriarchs instituted: one governed from the city of Aquileia and was subsequently controlled by the Lombards and Frankish Empire; the other from Grado and was ruled by Byzantium and, later, Venice. From about 737 the patriarch of Aquileia was based at Cividale del Friuli and from 1348 at Udine. Between the 11th and 13th centuries, from the reigns of Poppo (Wolfgang von Treffen, 1019–42) to Berthold von Andechs-Meran (1218–51), almost all the patriarchs of Aquileia were of German origin. Poppo reconstructed the basilica of Aquileia and consecrated it on 13 July 1031. However, as the support of the Holy Roman Emperors declined from the 13th century onwards, so too did the temporal power of the patriarchs and in 1420 Aquileia passed into the control of the Venetians. In 1751 Pope Benedict XIV dissolved the patriarchate and divided its ecclesiastical jurisdiction between the new archbishoprics of Udine and Gorizia.

2. EARLY RITE. Most of the evidence concerning the liturgical traditions of the Aquileian Church dates from the later Middle Ages; only a few sources survive that indicate the nature of the rite before the introduction of the Roman rite and Gregorian chant into the patriarchate during the 9th century. However, these early sources suggest that the city had already developed its own traditions, which may also have included a distinctive repertory of chant. Evidence for the early rite includes: a *capitulare evangeliorum* from the time of Bishop Fortunatianus (*c*342–after 360); a reference by St Jerome to a body of clerics known as the 'Chorus beatorum' that surrounded Bishop Valerianus (371–88); a collection of homilies compiled by Valerianus's successor, Cromatius (387–407); an anonymous 7th-century treatise on the origins of chant that contains a reference to Cromatius; a pamphlet, *Ad virginem lapsam* (possibly the work of the 5th-century bishop Niceta), that seems to confirm the importance of plainchant at Aquileia; Canon 13 of the Council of Cividale in 796 alluding to the Sabbath day of rest 'quod et nostri rustici observant' ('that our country folk observe'); and the treatise of Patriarch Massentius (811–33) and the *Ordo scrutinii* by Lupus I (*c*870), both of which mention the Aquileian baptismal rites. The possibility that there was also a distinctive chant tradition is supported by a fragment of music for a pre-Carolingian baptismal rite preserved in an 11th-century manuscript (*I-Ma* T27 suppl.) and notated in *campo aperto*. This melody is considered a 'liturgico-musical combination not belonging to any group so far identified and dating from a period before the establishment of Gregorian chant in Upper Italy' (Huglo, 1955).

3. MEDIEVAL CHANT. The Roman rite and Gregorian chant repertory were introduced into Aquileia by Paulinus II (787–802), who was appointed patriarch by Charlemagne and who had formerly served at the Frankish court. Some poetry by Paulinus has survived set to melodies in neumatic notation (see Norberg). Although from this time the Roman rite constituted the basis of the liturgy at Aquileia, certain directions in liturgical manuscripts indicate that some distinctive features were retained. Several 13th- and 14th-century manuscripts, for example, contain rubrics suggesting that in some respects that Church followed its own practices: 'secundum morem et consuetudinem aquilegensis ecclesiae' ('following the practice and custom of the church of Aquileia'; *I-GO* B and D), 'iuxta consuetudinem aquilegensis ecclesiae' ('according to the custom of the Church of Aquileia'; *UDcap* 7), 'in hoc non observamus romanum ordinem' ('in this [practice] we do not observe the Roman ordo'; *GO* B); 'sed aquilegiensis ecclesia hoc non utitur' ('but the Church of Aquileia does not use this [practice]'; *GO* B).

According to one manuscript (*GO* B) the feast of the Holy Innocents was celebrated with some solemnity in Aquileia by singing the *Ite missa est* and Gloria in excelsis, chants the Roman Church was accustomed to omit ('romano more solent amitti'). In this respect the Aquileian liturgy diverged from the general Italian tradition, which considered the feast of the Holy Innocents to be a day of mourning and therefore celebrated Mass without the Gloria and alleluia. There is also evidence that the rite celebrated in the city of Aquileia differed in some respects from that used in other cities in the patriarchate, notably CIVIDALE DEL FRIULI; the trope for the feast of the Holy Innocents, *Hodie pro Domino*, found in the Aquileian troper (*GO* I, 14th century) was not performed in Cividale. The Cividale sources also display considerable differences from the Aquileian manuscripts in the repertory of chant melodies.

The liturgical manuscripts also contain characteristic Aquileian recitatives, for example, the Announcement of Easter (*I-UDcap* 17, 13th century; *UD* 31, a 14th-century addition) and the Lamentations of Jeremiah can be counted among the particularly distinctive elements of the repertory; the Lamentations exist in both the Aquileian

(*Vsmc* Lit.4, 14th century; *UDcap* 21, 1243 with 14th-century addition) and Cividale versions (*CFm* 91, 93 and 98; 12th, 13th and 14th centuries). Some pieces of late medieval origin, particularly Offices and sequences dedicated to local saints, are probably local in origin. In 1245 Patriarch Berthold von Andechs had assigned to the Cividale chapter an annual sum for the celebration of the feast of the saints Ermagora and Fortunato and in 1282 Patriarch Raimondo della Torre extended the annual celebration to the entire diocese and province of Aquileia; the Office for these saints was probably composed for this occasion. In 1251 Berthold had also assigned a sum to the Aquileian chapter for the feast of his niece, St Elisabeth Landgrave of Thuringia; the sequence *Florem mundus protulit* (*GO* I and *CFm* 56, 58 and 79) was possibly written for this celebration.

The influence of the Holy Roman Empire can be seen in Aquileian rites, particularly those dating from the 11th to the 13th centuries. Certain Aquileian manuscripts of this period are notated *cum nota theutonica*, several Germanic saints were celebrated and the chant repertory itself was influenced by Germanic compositions. Many pieces from St Gallen found in Aquileian sources, especially tropes and sequences, may have been introduced during the reform of the Aquileian missal ordered perhaps by Patriarch Ulrich von Eppenstein (1086–1121), who had been abbot of St Gallen from 1077 (see Vale, 1933). The responsories for the Sundays in Advent display elements in common with those of transalpine dioceses and it is possible that some chants, for example, *Sanctus Georgius* for the Office of St George (*CFm* 41), originated in southern Germany.

Concurrent with the political events of the 13th century and the election of Gregorio di Montelongo (1251–69) and Raimondo della Torre (1273–99) as patriarchs, the repertory of liturgical music in Aquileia gradually grew closer to the Venetian tradition. One 14th-century manuscript (*CFm* 41) contains responsories matching those in sources from Venice, Verona and Padua that were added to the existing liturgy for the Sundays in Advent. The Mass tropes for the Christmas cycle sung in Aquileia during the 13th century (*Rvat* Ross.76 and *UD* 2; both 13th century), all originating from St Gallen, have additions in the 14th-century troper (*GO* I) in the form of other tropes for the Easter season and the saints' feast days. These additions are of Italian and Eastern derivation, the latter reaching Aquileia by way of Padua (see Haug, forthcoming). The liturgical dramas transmitted by the processionals of Cividale (see Young) and Aquileia (Cattin, 1994) belong to a tradition characteristic of the Veneto region. The examples of two-part polyphony preserved in liturgical manuscripts from Cividale also conform to the polyphonic traditions found in many other Italian cities.

In Aquileia the chant was sung by the *chorus* and *chorarii*, who are often indicated in the rubrics in liturgical manuscripts (for example, in *I-GO* A, B, D and K and *UDcap* 7; all 13th and 14th century). 12 prebends were established in 1245 for the same number of singers. In 1252, with papal approval, the cantor leading the singers was elevated to capitular rank; the first name to be recorded is that of 'Albericus cantor' in a patriarchal document of 1260. Some names of *maestri* and *cantori* are also known, particularly those from the mid-15th century (Pressacco, 1981). With the suppression of the chapter in 1751 the singers of the church at Aquileia were divided between the new archbishoprics of Udine and Gorizia. The basilica of Aquileia is known to have owned an organ by 1328, which was repaired in 1480. The Aquileian Processional (*UDcap* 7) provides interesting information on the city churches and on the altars and chapels of the basilica in the 14th century. The sepulchre within the basilica provided the setting for the *Elevatio crucis* and the *Visitatio sepulchri* (see Lipphardt; Cattin, 1994).

Aquilino Dano, Jacomo. *See* ØRN, JACOB.

Aquin, Louis-Claude d'. *See* DAQUIN, LOUIS-CLAUDE.

Aquinas, Thomas (*b* Roccasecca, 1226; *d* Fossanova, 7 March 1274). Italian Dominican priest and theologian.

He was described as 'Doctor Angelicus'. He led a life of intense study, lecturing and writing at Cologne, Paris and Naples. His works form the most profound, comprehensive and ordered scholastic synthesis of the scriptures, patristic teaching and philosophy; his philosophical work consists primarily of a judicious interpretation of Aristotle and his Greek and Arab commentators, integrated with an often neglected element of Platonist thought (mostly derived through St Augustine and neo-Platonist intermediaries). He was canonized in 1323.

Although Aquinas wrote no treatise specifically on music (the *Ars musica* is spurious), there are passages scattered throughout his works that suggest a musical aesthetic consistent with his whole system and predicated on his broader definitions of both the essence and the effects of beauty. This musical aesthetic, though, is austere in its Aristotelian terms of expression, but reveals nevertheless an awareness of the affective power of music. In devotional contexts this could manifest itself both positively and negatively. Thus he could approve of singing, so long as it was not done merely to provoke pleasure, since 'vocal praise arouses the interior affection of the one praising and prompts others to praise God' (*Summa theologica*, II/ii, question xci, article 1 ad 2). However he rejected the use of musical instruments in religious services because these 'usually move the soul to pleasure rather than create a good disposition in it' (ibid., article 2 ad 4). Here Aquinas's ambivalence towards liturgical music echoes that of Augustine of Hippo (*Confessions*, X, 33).

Aquinas's interpretation of the distinction Aristotle made between mathematical and acoustical harmony (*Analytica posteriora*, 79*a* 1–2) did not cause him, as Boethius's did, to pursue 'musica intelligibilis' as distinct from audible music, even though he believed that music must be studied within arithmetic, which is 'prior and more certain' (*In libros posteriorum analyticorum*, i, lesson 41), as part of the Quadrivium. His concern was not with the division between concrete sound and abstract pattern but with their factual union: music is concerned with 'numerical proportions applied to sound' (*In VIII libros physicorum*, ii, lesson 5). Following a number metaphysic from Aristotle, he insisted that a normative unit of sound (diesis) is as essential to melody as a normative unit of colour is to painting (*In XII libros metaphysicorum*, x, lesson 3).

As used by Aquinas the term 'harmony', with respect to physical things, includes the notion of 'absence of contrariety', and consequently of being more easily destructible: 'stones and metals are more durable because there is less harmony in them' (*Quaestio disputata de anima*, article 8 ad 11), and the harmony of the human body is disturbed by violent stimuli (*Summa contra Gentiles*, ii, chap.82). It is in this equivocal and physical sense that music of the spheres should be understood (*In libros de coelo et mundo*, ii, lesson 14). He maintained that as beauty is found in 'integritas sive perfectio, debita proportio sive consonantia' and 'claritas' (*Summa theologica*, I, question xxxix, article 8), so music moves in distinct notes and with harmony which is *consonantia sonorum* (*In libros de anima*, i, lesson 9) and, in both its simultaneous and consecutive aspects, involves numerical ratios. Moreover the ordering of all things by God gives them their *consonantia* (*Expositio in Dionysium De divinis nominibus*, iv, 5), and that in God the three persons are 'per consonantiam unum' (*Commentum in IV libros sententiarum magistri Petri Lombardi*, i, 31, question 3, article 2). Thus the divinity and all creation are seen together under a musical analogy according to which, at the highest level, all variety is gathered together in perfect unity of sound.

Aquinas deliberately rejected the Pythagorean-Platonic theory of the presence of numbers in the soul (*In libros de anima*, i, lesson 9) as having immediate connections with cosmic or purely intellectual and mathematical harmonies. For Aquinas musical education was not the awakening of dormant knowledge and capacities, but, as for Aristotle, the passing on of knowledge from someone competent in music, which he regarded more as a skill than as a fine art (*In XII libros metaphysicorum*, ix, lesson 7); nevertheless he maintained that subjective good taste is needed in order to find pleasure in music (*In X libros ethicorum*, x, lesson 4).

EDWARD BOOTH/SEAN GALLAGHER

Aquitaine. Region of south-west France with an important and distinctive repertory of both monophonic and polyphonic music in the Middle Ages. *See* ANTIPHONER, §3(iii); GALLICAN CHANT; GRADUAL (ii), §4(ii); NOTATION, §III, 1(iv)(g); ORGANUM, §7; REPROACHES; ST MARTIAL; SEQUENCE (i), §2; TONARY, esp. §§1–2, 6; TROPE (i).

Arabesque (Ger. *Arabeske*). A term, apparently introduced into Europe during the Moorish conquest of Spain, first applied to architecture and painting to describe an ornamental frieze or border, whose elaborations, foliate and curlicued, have their counterparts in music in ornamentation and complex figuration. In music the term has been implied in, if not applied to, three musical devices: (1) the contrapuntal decoration of a basic theme, e.g. the obbligato to the chorus 'Jesus bleibet meine Freude' in Bach's Cantata no.147, *Herz und Mund und Tat und Leben*; (2) an elaboration by *gruppetti*, scale figures and so on, of the theme itself which was to lead to the variation techniques of the 19th century – an excellent example is Schubert's Andante in A D604; (3) a rapidly changing series of harmonies that decorate, without

furthering, a point in the progress of a composition, such as is found in, for example, the nocturnes of Field and Chopin.

To the Romantics the concept of the arabesque was particularly attractive in the light of the idea, first popularized by F.W.J. Schelling (1802) and by Goethe, of architecture as 'frozen music'. The term was used for piano pieces by Stephen Heller (op.49) and Schumann, whose op.18 is in the form of a rondo with recurring episodes, which are in marked contrast to the main theme. Gade's op.27 is similarly entitled, but the most typical examples of the form are Debussy's *Deux arabesques* (1888–91), whose charm and delicacy reflect perfectly the conception of the arabesque as a piece in which the composer aims at a decorative rather than emotional effect.

MAURICE J.E. BROWN/KENNETH L. HAMILTON

Arabian Gulf. Region encompassing south-eastern IRAQ, Kuwait, the Hasa province of SAUDI ARABIA, Bahrain, Qatar, the United Arab Emirates (UAE) and the southern coast of IRAN. Since prehistoric times, the Arabian (or Persian) Gulf has been an important link on the trade routes between East Africa, the Mediterranean, India and East Asia. The population is predominantly Arab, except in Iran. Until the 20th century, Gulf Arabs were nomads, pearl-divers and – to some extent – fishermen, shipbuilders and merchants. Since World War II, wealth from the region's abundant oil resources has attracted many foreigners to the area, mostly from other Arab countries.

Since ancient times, many non-Arab minority groups have settled in the region. Some have roots in East Africa and eastern parts of Central Africa; they are often (but not always) descendants of freed slaves. A fairly large Persian group lives in Qatar and Bahrain, and many Baluchis may be found in the United Arab Emirates, where UAE citizens represent less than 20% of the population. In the Emirates and Bahrain, Indians and Pakistanis are doctors, tailors and bankers. This demographic diversity is reflected in the variety of the music in the Gulf area.

Classical Arab music is a rarity, mostly performed by Egyptians, who probably brought the short-necked lute (*'ūd*) to the Gulf in the 19th century. Classical *'ūd* music is performed by musicians from Bahrain and – to a lesser degree – Abu Dhabi. The lute is also played by singers of the traditional urban genre known as *ṣawt*, which is popular throughout the Arabian coast of the Gulf. Other classical musical instruments, such as the *nay* (flute) and *qānūn* (zither), have no traditional connections with the area.

Chorus singing plays a predominant role among musical genres in the Gulf area. The war dances called *'arḍa* (Bahrain) or *'ayyāla* (UAE) are accompanied by a double chorus. Like most dances of Bedouin origin that have become popular among the sedentary population, they are associated with festive occasions. The dances are accompanied by a percussion ensemble consisting of one or two double-headed barrel-shaped drums (*ṭabl*), which are carried on the shoulder and struck on one side with a stick, and on the other with the hand; several frame drums (*ṭār*), some with small bells or iron rings inside the frame (fig.1); and one pair of small cymbals (*ṭūs*). *Funūn al-ṭār* ('the arts of the frame drum') or simply *fann* ('art') is the generic term for those genres in Kuwait and southern Iraq. The vocal parts of the soloist and chorus are performed in a responsorial manner. Group handclapping (*ṣafqa*) is interspersed periodically in a style characteristic of the whole Arab Gulf area: regularly spaced clap beats of two performer groups interlock in a loud and rapid sequence of sounds.

A great variety of Bedouin song genres is found in the desert areas of the United Arab Emirates (*radḥa*, *sāmirī*, *mader*, *maqāl*, *mangūs*, *ghazal* etc.) and of Kuwait *(giṣīd*, *shirīya*, *mashūh*, *freisnī* etc.). These may be performed by two or more alternating male soloists or a single singer. Many sung texts follow the verse structure of the classical ode (*qaṣīda*). The solo poet-singer (*shā'ir*) provides his own accompaniment on a *rabāb* (spike fiddle with one or two strings). This type of performer is very common in the whole of eastern Arabia. A popular song style performed at wedding festivities by a double chorus

1. *Players of frame drum (ṭār), Qatar, 1998*

without instrumental accompaniment is called *razfa*. Shepherds in the desert sometimes play a small double clarinet, widely known in the Arab world, called *zummāra* or *jiftī* (a Turkish-derived word).

A variant of the Bedouin *rabāb* spike fiddle has a colourful oil canister as its soundbox. It is played in Gypsy (*kawlīyya*) ensembles which focus on a female singer and dancer. Together with a group of drummers, these ensembles roamed throughout Kuwait, southern Iraq and the north-western region of the Iranian Gulf coast until the late 1970s.

The most refined music-making of the area, that of the pearl-divers, is no longer performed in its original context. With growing competition from the East Asian pearl industry and the increasing importance of Gulf oil production, pearl-diving lost its economic basis. By 1950 the fleet of fishing boats at Bahrain – one of the traditional centres of pearl-diving – had dwindled from several hundred to a few dozen.

The pearl-divers were mostly of African or Indo-Iranian descent. They used to practise diving all over the Arab part of the Gulf, and to a minor extent on the Iranian coast. When leaving for the oyster-banks, where they stayed for a couple of months, they took one or two professional singers. For every stage of the work (such as rowing, setting sails etc.), there were corresponding work-songs (*fijrī*). Some of these were sung by the soloist (*nahhām*), while the chorus of divers and sailors produced a vocal drone in a very low register – two octaves below the fundamental singing tone of the *nahhām*. Other songs were performed only at night, accompanied by percussion instruments (fig.2): one or two *ṭabl* drums; four or five small double-headed cylindrical drums (*mirwas*, pl. *marāwīs*); three large open clay pots (*jaḥla, pl. jaḥlāt*), and cymbals (*ṭus*). The rhythms of the *fijrī* work-songs are cyclical and of remarkable length: in some subgenres (e.g. *baḥrī* and *'adsānī*) each cycle covers 32 beats. Nowadays the musical legacy of the old pearl-diving business is kept alive by singers and instrumentalists performing ashore in a special type of communal house (*dār*), where they gather regularly and also perform other kinds of music.

Ṣawt, the major genre of traditional urban music in the Gulf, is performed in communal houses belonging to a group of musicians, or at informal parties in private houses. The traditional performance of a *ṣawt* requires a singer, who accompanies his own voice on the *'ūd*, and four *marāwīs* players. Concerts may include cycles of several *ṣawts* (Arabic, pl. *aṣwāt*), which are differentiated according to their use of rhythmic patterns. *Ṣawt* is probably Yemeni in origin. 'Abdallah Muḥammad al-Faraj (1836–1903) is considered to have been the first outstanding performer who successfully promoted this new genre. Singers such as Muḥammad Fāris and Ḍahī bin Walīd, who made the first commercial recordings around 1930, are considered as outstanding.

The dance-song *basta* is of Iraqi derivation (*pesta* in Iraq). The *basta* ends a *ṣawt* cycle, but it is heard in other contexts as well. The traditional *basta* performance requires a singer playing the *'ūd* and two drummers with a single-headed vase-shaped drum (*darbukka*) and frame drum with cymbals (*duff*). *Ṣawt* and *basta* may also sometimes be played with *ṭabl* and *ṭār* drums.

In the Gulf, Baluchi people are considered good shawm (*surnāy*) players. As in many other Islamic-influenced areas, the *surnāy* is mainly used at festive occasions, particularly weddings. It is accompanied by two double-headed drums (*ṭabl*).

For the minority groups in the Arabian Gulf region, music is important in preserving social cohesion and group identity. But some of this music has had a wider social impact, particularly some African-derived genres. The *leiwah* is a cycle of short strophic dance-songs, a genre originating from Kenya and Tanzania. It is performed in the African quarters of large Gulf towns such as Basra (Iraq) and Manama (Bahrain) and may also feature as an entertainment at important Arab wedding festivities. The ensemble consists of shawm (*surnāy* or *mizmār*), four or five percussion instruments and a chorus of dancer-singers. In the Basra area, the shawm used in the *leiwah* ensembles has a quadruple reed made of two folded strips of date palm.

Other genres of African-derived music are self-contained within the black community. *Nūbān*, for example, is played on the bowl lyre *ṭunbūra (ṭambūra)*, a large six-string instrument originally from Sudan and Somalia, accompanied by four or five flat cylindrical drums and/or kettledrums beaten with the hand and a stick. Percussion

2. Pearl-divers' ensemble playing the water-pot, Bahrain, 1998

effects are achieved on the *manjur*, a belt with rattling goat-hooves strung around the player's hips. The *ṭunbūra* player also sings; his solos alternate with choral sections sung by the other members of the ensemble. *Ṭunbūra* music is a rare case of anhemitonic-pentatonic music from this area. A healing ceremony that uses *ṭunbūra* playing is derived from the East African *zār* cult, in which sickness is considered as a sign of spirit possession. As a 'spirited' object, the lyre functions as a tool for communication with the spirit world.

The *jirba* (bagpipe) is a common instrument in Bahrain and on the Kuwaiti island of Faylaka. It has no drone-pipe, and its chanter is a double clarinet of the *jiftī* type. It is generally accompanied by four or five cylindrical drums, whose rhythms are often very subtle and complicated. It is particularly popular with the Iranian minorities and is sometimes called the 'Persian bagpipe'.

POUL ROVSING OLSEN/ULRICH WEGNER

Arab music. Music traditions in the Arabic-speaking world. For discussions of the music of specific areas, see also individual country articles.

The art music/folk (or popular) music opposition is a blunt instrument at best, and at various times and places in the Arab world it would be unrealistic or unhelpful to seek to draw a clear dividing line. In Arabic the terminological distinction is a modern importation, and while the earlier textual tradition may recognize regional differences it is more frequently concerned with an ultimately ethical evaluation of the various purposes for which music may be used. However, these imply distinctions of function and social context, and as one major constant in Arab and Middle Eastern Islamic culture generally we may identify a form of entertainment music for which, in fact, the label 'art music' is quite apt. Nurtured at courts, patronized by urban élites, performed by professionals (and aristocratic amateurs) and described in explicitly theoretical terms, art music constituted an integral element of sophisticated high culture and, consequently, could be regarded as a suitable subject for scientific and philosophical enquiry.

The term 'folk', in contrast, is used here to cover a multiplicity of musical idioms and vocal and instrumental genres. These include several forms of religious chanting, work-songs, narrative pieces, didactic and lyric songs, and songs and dances that provide entertainment at weddings and other special occasions or social events. Performed by amateurs and professional or semi-professional specialists, these disparate genres reflect a wide range of human responses to varying social conditions – from nomad encampments in desolate arid zones to small villages and urban centres.

I. Art music

1. INTRODUCTION. Viewed historically, Arab art music needs to be related to a wider set of traditions in the MIDDLE EAST embracing also the art musics of Persia/Iran and Turkey. Although these various traditions are now quite clearly distinct, their development has been marked to an unusual extent by periods of reciprocal influence and convergence, and they still have much in common. Furthermore, they have all suffered (if in varying degrees) from the ambiguities and tensions resulting from the generally hostile attitude of Islam to entertainment music and its practitioners (*see* ISLAMIC RELIGIOUS MUSIC).

Within the Arab world, two major complexes may be distinguished, each with internal subdivisions: that of the eastern Arab world (principally Egypt, Lebanon, Syria and Iraq), and that of the western (principally Morocco, Algeria and Tunisia). Both may derive ultimately from the court music that evolved during the Umayyad and early Abbasid periods (7th to 9th centuries), but they probably began gradually to diverge not long thereafter. The western tradition, which is often considered by its modern practitioners to represent a direct descendant – or even a survival – of the Andalusian music of Moorish Spain, was certainly perceived to be distinct in certain respects from the eastern by the early 13th century, and it remained largely insulated from the effects of the process of interaction between Arab and Persian (and, subsequently, Turkish) elements that characterized developments in the eastern Arab world.

The precise contribution of each tradition is impossible to assess, but the eventual result was a musical *lingua franca*, tolerant of local variation but evolving in a fairly uniform fashion. From the 13th century (if not before) to the 17th it was propagated and appreciated at cultural

centres stretching across a vast area from Egypt through the Fertile Crescent to Anatolia, Persia and parts of Central Asia. At different stages in its development this composite idiom was patronized at, for example, the courts of the last Abbasids in 13th-century Baghdad, the Jalairids in 14th-century Tabriz, the Timurids in 15th-century Samarkand and Herat, the Ottomans in 16th-century Istanbul and the Moghuls in 16th-century Delhi. It is only from the 17th century that we encounter increasing evidence of regional differentiation.

For the most part patrons and practitioners of Arab art music have been concentrated in major cities, and there are large areas within the Arab world where it has made little impact. Beyond the boundaries of effective influence lie Mauritania, with its own separate *griot* tradition; Sudan, whose local traditions include strong Nilotic African elements; and Arabia, which has been peripheral to the development of art music during the last millennium, but nevertheless serves as the inevitable starting-point for any survey of its historical development.

2. THE EARLY PERIOD (TO 900 CE).

(i) The pre-Islamic period (before 622). However fragmentary, the earliest available sources for West Asia and the eastern Mediterranean offer a tantalizing variety of materials: textual references (e.g. Old Testament), iconography (e.g. ancient Egyptian representations of instruments, musicians and dancers), archaeological evidence (e.g. surviving Mesopotamian instruments) and fragments of notation (e.g. Ugaritic and Greek). But Arabia has yielded no such material remains, and even if Arabic contains a few instrument names for which there are cognates in other Semitic languages, such evidence indicates only that certain generic instrument types were widely diffused at an early date.

The fertile and relatively densely populated south-west of Arabia yields an extensive body of inscriptions that reveals aspects of the society and culture that flourished there from the 1st millennium BCE to the 6th century CE. But music, unfortunately, is not among them; and no comparable record can be found in the arid and inhospitable centre and north, thinly populated by nomadic pastoralists and settled oasis-dwelling agriculturalists. Yet the Arabs of this area were not culturally isolated: links both north and south were reinforced by population movements, kinship and by the maintenance of important trade routes. Contacts were cultivated not only with the south but also with the northern buffer kingdoms of al-Ḥīra and Ghassān through which, respectively, Persian and Byzantine influences could percolate.

Nevertheless, it is not until the 6th century CE that we can discern anything about Arab musical practices, and even then there is no contemporary evidence. The earliest testimony is exclusively textual and consists of a few incidental references in poetry, recorded later but reflecting pre-Islamic Bedouin values and mores, and of more substantial prose writings of no earlier than the 9th century which, given their date, need to be treated with considerable caution as repositories of information for the pre-Islamic period. Reflected in them is a general concern with origins: the origin of song is credited to the Old Testament ancestor Jubal, while the inventor of the most important of all art music instruments, the *ʿūd* (short-necked lute), is identified as Lamak (Lamech), who took as his model body parts of the dead son he mourned.

Early textual sources also supply brief and not very revealing references to what are supposed to be the earliest genres of music. The most ancient, for which is proposed the rather more prosaic origin of a cry of pain, is claimed to be the *ḥudāʾ* (caravan or cameleer's song), and together with the *naṣb*, of which no description is given, it was associated with male performers. The *naṣb* is subsumed under the wider heading of *ghināʾ* ('song', later sometimes used generically for musical practice), which is clearly differentiated from the *ḥudāʾ* (although, according to one account, derived from it).

Of the two other subcategories of *ghināʾ* mentioned, one is characterized as 'heavy' and ornate, the other as 'light' and gay. These two types were probably normally performed by the QAYNA ('singing slave-girl'), with whom may be associated the emergence of entertainment music in the nascent urban centres of the Hijaz, possibly under the influence of the court fashions of al-Ḥīra and Ghassān. In early poetry the *qayna* is sometimes depicted playing an instrument, and instrumental accompaniment to song may have provided a further contrast with the performing practice norms of the *ḥudāʾ*. Women also performed the *nawḥ* (funeral lament), although, again, there is no description of this genre. Its apparently separate status possibly reflected its special function and ritual context. The contrast between *ḥudāʾ* and *ghināʾ* might likewise encode a distinction between the categories of work-song and entertainment music. On the other hand, the 'heavy'–'light' opposition within the latter may be a projection back of a later stylistic discrimination: it can hardly be expected that the spasmodic transmission of information about an area of cultural expression that had undergone dramatic changes during the intervening centuries would have ensured an accurate record of pre-Islamic distinctions.

Unfortunately, very little can be added from other sources to supplement the meagre textual record. A degree of familiarity with certain forms of liturgical chant may be inferred from contact with scattered Jewish and Christian communities. But our knowledge of pagan pre-Islamic religious practices is scanty, and in the absence of iconographical evidence only the most obvious conclusions can be drawn, for example that chant and possibly also dance were probably integral to ritual occasions and worship at certain pagan shrines. The extent of overlap between chant and the other genres is impossible to assess, but the range of instrument names mentioned in relation to entertainment music is at least compatible with the equally obvious supposition that it was in this context that the highest levels of technical proficiency were required. The instruments played by the *qayna* included the frame drum (*duff*), the lute (*kirān*, *muwattar*; presumably types with a skin table) and reed instruments (*mizmār*). Other terms found in poetry – not all of which can be indentified with confidence – include the *miʿzafa* (?psaltery), *mizhar* (lute or frame drum), *quṣṣāba* (end-blown flute), *jalājil* (bells), *ṣanj* (cymbals) and *jank* (harp).

(ii) The early Islamic period and the Umayyad caliphate (622–750). By 650, less than 20 years after the death of the Prophet Muhammad, Muslim armies had swept aside Byzantine resistance in Syria and Palestine, conquered Egypt and destroyed Sassanian power, seizing Iraq and pressing on into the heartlands of Persia itself. The dramatic transformation of the political map soon instigated (or accelerated) musical developments.

These represent another major theme in 9th-century writings, which acknowledge change and, where the source was thought to be external, identify it. In fact, innovation was stressed, new techniques or practices being associated with particular named individuals; and whether or not the particular ascriptions are well founded the general emphasis is surely justified, both in relation to the introduction of novel elements and to changes in the social role and identity of the musician.

Early Persian influence is associated with Nashīṭ, who is said to have gained popularity in Medina with his Persian songs, but in order to maintain his reputation was obliged to add to them a repertory in Arabic. The same conjunction of change and cultural symbiosis is developed further and more subtly in the portrayal of two of the most famous singers of the next generation, Ibn Misjaḥ and Ibn Muḥriz (both *d c*715). They are described, albeit in suspiciously similar terms, as having travelled through former Byzantine and Persian territories, adopting the more readily acceptable features of the music they encountered. Such accounts ring true, at least in so far as they point to a period of transition during which the emerging art music idiom was characterized by the capacity to assimilate new elements without compromising what were perceived to be the essentials of the Arab tradition that lay at its core. At the same time, they imply that the differences between the Byzantine, Persian and Arab traditions were not so radical as to impede borrowings. (Indeed, a degree of familiarity with aspects of Byzantine and Persian practice may already have developed in the pre-Islamic buffer states of al-Ḥīra and Ghassān.)

With the establishment of the Umayyad dynasty in 661, the political centre of power shifted to Syria. Innovation in music, however, continued to be associated with the Hijaz, and especially the cities of Mecca and Medina. Here, patterns of social behaviour were affected by the new level of affluence, which had as one consequence an increased demand for (and appreciation of) entertainment music. Previously the preserve of the female entertainer (*qayna*), this gradually came to be dominated by male performers, being associated in the first stages of transfer with the effeminate *mukhannath*s, some of whom were as renowned for their immoral behaviour as for their artistic accomplishments.

For the pious, entertainment music could hardly fail to be tainted by such links. Reports identifying certain *qayna*s as conveyors in song of opposition to the Prophet articulate a negative image that would have been reinforced (if authentic) or provoked (if not) by later associations of the *qayna* and the *mukhannath* with increasingly unacceptable patterns of behaviour involving frivolity, licentiousness and wine-drinking. Ultimately, however, it was a social rather than a moral code that made music an unsuitable profession for a free-born Arab, and the important male singers who dominated the scene towards the end of the 7th century, supplanting the *mukhannath*s, were still generally non-Arabs of low social status. There is, however, another side to the coin: even if, again, the possibility of historiographical refraction cannot be excluded, it should be noted that certain female performers of the 7th century, notably ʻAzza al-Maylā' and Jamīla, were celebrated not only for their musical achievements but also for the propriety that characterized both their performances and the behaviour expected of their audiences.

Little is known about the technical qualities of the musicians. Among the innovations mentioned are cases of musical diffusion, as with the introduction of a Persian type of short-necked lute with a wooden table (*ʻūd fārisī*); aspects of performing practice, as in the shift towards a norm of singers accompanying themselves on a melody instrument (usually a lute); and technical features, such as the introduction of a particular rhythmic cycle.

The major source for this period, the monumental *Kitāb al-aghānī* ('Book of songs') by AL-IṢFAHĀNĪ (897–967), provides evidence of the evolution of an increasingly precise theoretical vocabulary. Song texts are accompanied by an identification of the rhythmic cycle and sometimes also the melodic mode. But no definitions are offered, and despite the evidence of a keen interest in assessing the characteristics and relative merits of various singers, the judgements made are generally lapidary.

The most extensive catalogue of discriminations comes in the form of a succinct list of the qualities needed in a good singer, which is ascribed to another major Umayyad figure, Ibn Surayj (*c*637–726). It begins, instructively, with accuracy of diction and grammar and then proceeds to binary oppositions that suggest a precise conceptualization both of vocal control and of a distinction between fundamental rhythmic and melodic structures and ways in which they can be embellished. Important to the singer-composer was not only rhythmic and formal fidelity to the text but also the ability to select from a wide range of poetry. Contemporary verse was frequently drawn upon, and several Umayyad singers had close contacts with poets: they may, indeed, have contributed to the creation of the new sensibility that Hijazi poetry reveals. There is no convincing evidence, however, to suggest that musicians influenced poets in the specific sense that certain rhythmic cycles or patterns inspired innovations in poetic metre.

(iii) The early Abbasids and Baghdad (750–900). Many of the anecdotes making up the biographical notices of great Umayyad musicians revolve around journeys, not just within the Hijaz but far beyond. Several were invited to Syria to perform before caliphs, but they do not appear to have been permanently attached to their courts, so that even if we can reasonably speak of an increasingly distinct form of art music (recognized in the phrase *ghinā' mutqan*: 'perfected song') it would be only partially true to call it a court tradition. But with the defeat of the Umayyads by the Abbasids in 750 and the subsequent founding of a new capital at Baghdad the pattern changed: prominent musicians were closely connected to the caliphal court, and the sources – again principally al-Iṣfahānī's *Kitāb al-aghānī* – concentrate overwhelmingly upon persons and events in the imperial capital. This perspective reflects, in addition to the crucial role of the caliph and other notables as patrons, the wider importance of Baghdad as the preeminent centre of an increasingly mature and self-confident culture. The early Abbasid period was one of immense activity, a coming of age when, as a result of rapid development involving both the acquisition of new knowledge through translation (e.g. in science and philosophy) and the elaboration of indigenous systems (e.g. in law and grammar), Islam established itself fully as a major intellectual as well as religious and political enterprise.

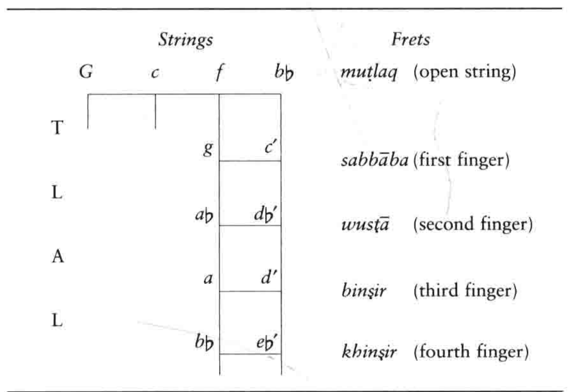
Something of this vitality and variety is evident in the surviving 9th-century textual corpus dealing with music. It contains historical and biographical material characterized by wide-ranging curiosity, psychological analysis and the elaboration of theory, and the earliest surviving treatise debating the legal position of music. This last, by Ibn Abī al-Dunyā (823–94), is unremittingly hostile, classing music not only with idle pastimes such as chess but also with unacceptable sexual practices. The link with sexuality was explored further, and far more subtly, by al-Jāḥiẓ (*d* 868–9) in his *Risālat al-qiyān* ('Epistle on singing slave girls'), which also illustrates the cultural sophistication of the *qayna* and the profits to be made from producing such a highly desirable commodity. A similar sophistication was expected from her teachers, prominent among whom was the eminent musician IBRĀHĪM AL-MAWṢILĪ (742–804). But it was his son, Isḥāq al-Mawṣilī (767–850), who was the supreme example of the cultivated musician-courtier: the foremost composer and performer of his day, he was also an accomplished poet and an expert in philology and jurisprudence.

In addition to information about the careers of such musicians, the events portrayed in Al-Iṣfahānī's *Kitāb al-aghānī* give us some insight into the relationship between patron and singer and the norms of performing practice. Often performers would be summoned at short notice to appear at court and to take part, usually with others, in a *majlis* ('assembly'). More prominent musicians may also have been assigned their *nawba* ('turn'), a particular day of the week on which to perform. But this term does not imply the existence of the cyclical form it later came to designate: at this stage there is no hint of songs being organized into sequences governed by modal, rhythmic or other structural criteria. In any case, a patron would frequently desire to hear a song repeated several times over, to the exclusion of others. Songs needed to fit a particular mood or occasion, but appropriateness was primarily textual; identity of mode or rhythmic cycle does not appear to have been a determining factor. The patron would also often demand a particular song or an extempore setting of a specific text, so the best performers needed to possess both an extensive repertory and the ability to improvise. Their reactions to such tests of expertise are the subject of several anecdotes, especially where competition was involved, with rivalry sharpened by the considerable material rewards that might be lavished on the successful. These stories thus offer comparative evaluations of style and technical competence.

Despite one or two intriguing references to the use of some form of notation, transmission was essentially oral, a song being repeated until mastered. However, the effectiveness of some musicians as teachers was reduced by their tendency to vary each repetition, while others deliberately practised variation as a means of preventing piracy.

But the extent to which variation might be either cultivated or avoided was also coloured by attitudes to tradition, and in parallel with the literary debate on the respective merits of the ancients and moderns, we find advocates of faithful musical transmission opposed to innovators. Chief among the latter was Isḥāq al-Mawṣilī's great rival, the princely amateur IBRĀHĪM IBN AL-MAHDĪ (779–839). Renowned for the quality and reputed four-octave range of his voice, he was portrayed as a champion of greater freedom of expression. The innovations espoused appear to have involved a further injection of Persian elements, but exactly what these might have been is by no means clear, for again we encounter curt indications of stylistic contrast rather than analysis. When used in relation to Umayyad musicians, the distinction between 'heavy' (*thaqīl*) and 'light' (*khafīf*) appears to have implied a contrast between a more complex and serious style and a simpler, gayer one, the former commanding more prestige, the latter greater popularity. In its Abbasid manifestation, however, it appears that the lighter, more Persianate style involved an association of freedom of interpretation with greater melodic elaboration, in contrast to the sobriety of the traditionalists. But whatever its nature further Persian influence was only to be expected: the Abbasid revolt had begun in Khorasan, and the shift of the capital eastwards from Syria to Iraq symbolized a new cultural as well as political balance, in which the Persian contribution would became more prominent. No trace, however, seems to have remained of the two different types of ensemble portrayed on the Sassanian reliefs (*c*600 CE) at Ṭāq-i Bustān, one an outdoor wind and percussion band (including, as a striking early example of the diffusion of instruments across the breadth of Asia, *sheng*-type mouth organs), the other a court ensemble dominated by harps (*see* IRAN, §I).

Although occasional references are made to a number of musicians singing or playing together (in unison), the norm for Abbasid court performances remained the solo singer, accompanying him- or herself, or with another accompanist. Despite the often-emphasized importance of rhythmic accuracy, accompaniment on percussion instruments appears to have been the exception rather than the rule. With the decline of the earlier use by some singers of a *qaḍīb* (percussion stick), it is the ubiquitous *duff* (frame drum) that tends to be mentioned, while the sporadic references to the *ṭabl* possibly refer in this context to a double-headed waisted drum. There are also occasional references to aerophones, *nāy* and *mizmār*, although it is not certain that at this period these terms are always to be identified with, respectively, the end-blown flute and the shawm: they may refer to single-reed instruments as well. But among melodic instruments plucked chordophones generally predominated, even if the open-stringed harp and psaltery remained marginal. By far the most common instrument was the *'ūd* (which, in the absence of percussion, may have played a rhythmic as well as melodic role in accompaniment). The only serious rival to its supremacy was the increasingly popular *ṭunbūr*, a long-necked lute, which was indentified particularly with certain Persian provinces and on which a number of *qayna*s excelled.



(iv) Early theory. While Persian influences seem to have had a significant impact on performance context and aspects of practice, references by Arab writers to the seven 'royal' Persian modes may merely reflect an antiquarian interest in Sassanian culture (*see* IRAN, §I, 5). The organization, or at least the classification, of the modal system of Umayyad and early Abbasid music seems, rather, to have been influenced by the recently formulated Byzantine OKTŌĒCHOS. Some features of the Arab system, which likewise consisted of eight modes, are described by AL-MUNAJJIM (856–912), who discussed them in terms of the diatonic fretting, to which their names relate, on the

two upper strings of the *'ūd*. Assuming a tuning in perfect 4ths, the fretting yields a series of intervals consisting of the Pythagorean whole tone (T) of 204 cents, the limma (L) of 90 cents and (by subtraction) the apotome (A) of 114 cents (Table 1).

The eight modes are divided into two sets (termed *majrā*: 'course') of four, distinguished by the occurrence in one set of the note produced by the second-finger fret, and in the other of that produced by the third-finger fret, these two being mutually exclusive. Each string thus supplies two pitch sets: 1 2 3♭ 4 and 1 2 3 4. The names of the modes (e.g. *muṭlaq fī majrā al-binṣir*: 'open string in the course of the third finger') are a descriptive shorthand, specification of the set being preceded by a term that presumably refers to a note of particular importance.

Although applied to some of the Umayyad repertory, the final formulation of this nomenclature may be rather later. It has been attributed to Isḥāq al-Mawṣilī, who was al-Munajjim's principal authority; it is certainly the case that where Isḥāq is not the source for the technical description of a song only the classification according to set may be given.

TABLE 1: Fretting for the two upper strings of the *'ūd* (al-Munajjim, 9th century); the choice of *G* to represent the lowest note is arbitrary

During the Umayyad period, therefore, the internal differentiation between the members of each set was possibly not very clear-cut. Even when the boundaries became more securely established, the fact that only eight modes were recognized, as against the far higher numbers recorded later, suggests that at this period the concept of mode was probably located nearer to the pitch set rather than the specific melody end of the spectrum. Modal distinctions could have served initially as a classificatory tool for segmenting a pre-existing repertory and may not yet have evolved into complexes of guidelines enabling and governing the production of new songs. On the other hand, accounts of virtually extempore composition suggest the extensive use of melodic formulae; and whereas seven diatonic modes can be distinguished on the basis of intervallic structure alone, eight cannot. It is plausible, therefore, to conjecture the presence of criteria of differentiation (for example authentic versus plagal, position of prominent notes, identity of *finalis*) or a contrastive emphasis on ascending versus descending melodic movement.

Al-Munajjim's neat 2 x 4 scheme probably also tidies up a more complex reality. One evident anomaly is that it takes no account of the neutral 3rd fret said to have been introduced by ZALZAL (*d* after 842), the *'ūd* teacher of Isḥāq al-Mawṣilī himself, and named after him (*wusṭā zalzal*) (see Table 4 below). Even if it was irrelevant to the codification of the Umayyad repertory one would not expect a precise description of 9th-century songs to ignore it. The adoption of Isḥāq al-Mawṣilī's terminology throughout the *Kitāb al-aghānī* also serves to conceal the existence of another set of mode names – one that later resurfaced and, in fact, proved more durable. But of greater significance is the fact that as a means of identification (or at least labelling), specifying the melodic mode of a song seems to have been less crucial than indicating the rhythmic cycle. In addition, there is some evidence that for musicians a melodic mode was not readily conceived of in abstraction from the particular rhythmic structures through which it was manifested. Nevertheless, as early as the Umayyad period analytical categories were clearly being developed, whether separately or together, for both melodic mode and rhythmic cycle, and on the modal side the formulations of Isḥāq al-Mawṣilī represent the culmination of this process.

Contemporary with his final formulations, however, was a new development: the emergence, during the 9th century, of a theoretical literature incorporating ideas disseminated through translation and derived in the main from Greek sources. Of particular importance are several short treatises of the philosopher AL-KINDĪ (*c*801–*c*866), the first major theorist whose works are extant. Eclectic in approach, they adumbrate two of the most significant areas of concern to the later theoretical literature: cosmological speculation and the analysis of intervals and scales.

Al-Kindī's cosmological interest focussed upon numerical correlations. He ordered chordophones according to the number of their strings, giving geographical and ethnic as well as cosmological associations for each instrument. He also initiated what became a major strand in later speculation by relating the (normal) four strings of the *'ūd* to, amongst others, the elements, seasons, points of the compass and the humours. He introduced, further, the frequently recurring notion of appropriate correspondences (e.g. relating a certain structural feature of music to the time of day supposedly best suited to it), although there is no evidence that this was of any relevance to contemporary practice.

Al-Kindī also provided a model that was followed by the later theoretical tradition in discussing intervals and scales, for even when Greek-derived concepts are used his form of presentation involved projecting scale structures onto the fingerboard of the *'ūd*. To the basic diatonic tuning, in terms of which the pitch sets of the early modal system were defined (Table 1), he added a notional 5th string, which extended the *'ūd*'s theoretical range to the two octaves of the ancient Greek Greater Perfect System (*see* GREECE, §§I, 6(iii)(a) and (b)), and a hypothetical fret supplying certain octave equivalences (and other notes lacking them; see Table 2).

It has been argued that the diatonic scale structures al-Kindī presented are relatable to the contemporary system of eight modes, even if he himself did not make the connection. He certainly referred to actual practice when noting possible variations in the tuning of the lowest string, an aspect ignored by many later theorists, who also frequently failed to follow his example by disregarding the physical reality of instruments, thus making his

description of the dimensions and construction of the *ʿūd* all the more valuable.

TABLE 2: Fretting for the *ʿūd* (al-Kindī, 9th century)

	Strings					*Frets*
	G	*c*	*f*	*b♭*	*e♭′*	*muṭlaq* (open string)
L	A♭	*d♭*	*g♭*	b^{-c}	$e^{-c'}$	
A	A	*d*	*g*	*c′*	*f′*	*sabbāba* (first finger)
L	B♭	*e♭*	*a♭*	*d♭′*	*g♭′*	*wusṭā* (second finger)
A	B	*e*	*a*	*d′*	*g′*	*binṣir* (third finger)
L	*c*	*f*	*b♭*	*e♭′*	*a♭′*	*khinṣir* (fourth finger)
					a′	

Al-Kindī was also the first theorist to illustrate (even if only fitfully) rhythm or, more precisely, the internal articulation of the various rhythmic cycles (*īqāʿāt*), which constituted the primary system of classification for the Umayyad repertory. The inclusion of the terms *thaqīl* ('heavy') and *khafīf* ('light') in the names of certain cycles suggests not only that they may have been divided, like the melodic modes, into two sets, but also that the identity of the cycle was possibly important in coding stylistic differences. The pioneering definitions supplied by al-Kindī, which presumably relate to early Abbasid practice, exhibit none of the later terminological indebtedness to prosody and are somewhat approximate, so that the version given in Table 3, showing relative durations only, must be considered tentative.

TABLE 3: Rhythmic cycles (8th–9th centuries)

'heavy'/slow		*'light'/fast*	
thaqīl awwal	O O O .	khafīf al-thaqīl	O O O .
thaqīl thānī	O O O . O	mākhūrī	O O . O .
ramal	O . O O .	khafīf al-ramal	O O O
		khafīf al-khafīf	O O .
		hazaj	O O . .

O – sounded beat; . – unsounded beat

3. The later Abbasids (900–1258).

(i) Political fragmentation. Towards the end of the 9th century the power of the Abbasid caliphs was much reduced. Unable to prevent the establishment of virtually independent dynasties in various provinces, they increasingly became puppets in the hands of their Turkish generals. Political fragmentation and cultural efflorescence, however, often go hand in hand. The break-up of the empire probably accelerated the diffusion of artistic norms established in Baghdad to the regional centres vying with it. Many of these centres lay outside the Arabic-speaking heartlands, and although those writers who had produced the early texts on music were mostly Arabs, the greatest theorists from the 10th century to the 13th were of Persian and Turkish origin. During this period, therefore, and especially with regard to the practitioners and theorists of the eastern tradition, the label 'Arab' becomes increasingly restrictive and misleading, even if Arabic remained the dominant language of religion, culture and science and was the preferred vehicle for articulating aspects of what was evolving into a more generalized Near and Middle Eastern court music tradition.

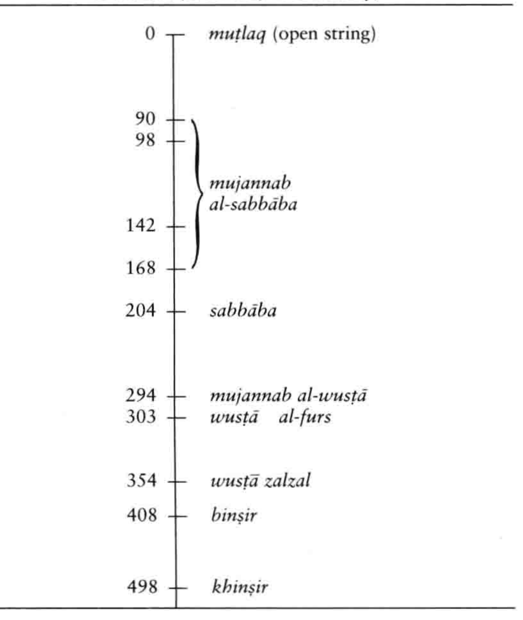
Abbasid control in the far western Arab world was equally tenuous, and Spain, which had been conquered under the Umayyads, served as a refuge for a surviving member of the Umayyad house who succeeded in founding a dynasty (756–1031) there. Although Córdoba, its capital, soon rivalled Baghdad in prosperity, the eastern Arab world was still regarded as culturally superior, and it is against this background that the mostly late and largely fragmentary materials on the early history of music in Muslim Spain need to be judged. They provide a narrative of beginnings according to which the legacy of the first important singers – *qayna*s coming or returning from the Hijaz – was eclipsed by that of Ziryāb (*d* 850), who arrived at the Umayyad court in Córdoba in 822.

Ziryāb is portrayed as a supremely dominant cultural figure, not only as a performer and teacher but also as an arbiter of taste, setting standards in, for example, fashion and cuisine. But to dismiss some of the material surrounding him as apocryphal is not to deny his historical importance; rather, it is to ask where his significance truly lies, and as a cultural icon he symbolized, ultimately, parity between Córdoba and its erstwhile model Baghdad. On a more mundane level, even if the details of his reported changes to the *ʿūd* are unreliable, he was possibly associated with improvements in both the construction and playing technique of the instrument. It is also tempting to ascribe his fame as a teacher not just to novel methods of vocal training, but also to the wider access he is reported as promoting.

In the century following Ziryāb's period of influence at Córdoba, North Africa became the testing ground for the Fatimid cause, a sectarian movement that rejected the legitimacy of the Abbasid caliphs, and was to pose one of the most serious threats to their position. Advancing eastwards from Tunisia, the Fatimids seized Egypt in 969, creating a new capital city, Cairo. For the greater part of the next two centuries they also held much of Palestine/Syria, until they were finally extinguished by Saladin in 1171.

Information on musical patronage in Fatimid Egypt is scanty, despite the substantial evidence of mercantile activity, a flourishing economy, and the large-scale production of luxury goods. Although the personal attitudes of rulers could have a significant effect on the standing of music at court, we should not conclude from this paucity of evidence that there was any marked diminution of patronage. The phrase 'golden age', used in relation to music in the early Abbasid era, reflects not so much a pinnacle of status or quality of performance and invention but rather a comparative wealth of documentation: thereafter the picture simply becomes much sketchier. The continuing importance of art music as integral to the opulent court life during the Fatimid period is certainly attested, but historical sources refer more frequently to spectacular public ceremonies and the wind and percussion ensembles that accompanied them.

Only one text that is specifically about music survives from the Fatimid period. By Ibn al-Ṭaḥḥān (*d* after 1057), a court musician and teacher, it is rather unrevealing as a historical source: it has more to say about Isḥāq



al-Mawṣilī than the author's own contemporaries, and the lists of musicians active in Fatimid Egypt and Syria, while useful, provide nothing beyond their names.

(ii) Theory: al-Fārābī to Ibn Sīnā. Despite the fascination of al-Kindī's wide-ranging and exploratory treatises, it is the works of the great philosophers who succeeded him that contain the most sustained and elaborate theoretical analyses. In fact, nothing in the preceding literature anticipates the scope and intellectual rigour of the *Kitāb al-mūsīqī al-kabīr* ('Great book on music') of AL-FĀRĀBĪ (*d* 950).

The introduction, which contains speculations on the origins of music and the nature of musical talent, sets an Aristotelian tone and is important for its general methodology. But despite its recognition of the priority of practice, the main body of the work is determinedly theoretical and much of its material, whether on intervals and their combinations or the elaboration of rhythmic and melodic structures, is at some remove from contemporary realities. Thus al-Fārābī went beyond al-Kindī's adoption of the framework of the Greater Perfect System to codify in detail the various tetrachord types that can be combined within it, providing a numerical analysis of their constituent intervals. Since many of these tetrachords were not in current use, the amount of attention paid to them points to a new concentration on theory for its own sake – a development of the purely speculative side of music viewed as one of the mathematical sciences (the Western medieval Quadrivium).

Compared with al-Kindī's diatonic fretting, al-Fārābī's seems extraordinarily complex (Table 4). But the complexity is not gratuitous: it results from the superimposition of different analytical strands. Thus to the diatonic values inherited from al-Kindī are added (at 98 and 303 cents) variant definitions of the semitone and minor 3rd, arrived at not by ratios but by an empirical technique of halving the distance between other frets. Of the remainder, 142 and 168 are again alternative approximations to a value one whole tone below the neutral 3rd at 354. The introduction of this last, the *wusṭā zalzal* ('Zalzal's second-finger fret'), is a clear reflection of current practice, and on a single string (e.g. tuned to *c*), the fretting as a whole corresponds to the following set of functional discriminations (the symbol 𝄳 representing a value roughly halfway between ♭ and ♮): *c* (*d*♭, *d*𝄳), *d*, *e*♭, *e*𝄳, *e*, *f*. The hesitation over the values to be assigned to *d*♭ and *d*𝄳 suggests that at this period performers were only just beginning to explore the area between open string and first-finger fret.

TABLE 4: Series of intervals, given in cents, for any string of the lute (al-Fārābī, 10th century)

Reference is again made to the modal distinction provided by the mutual exclusivity of the notes produced by the second and third fingers. However, aside from the suggestion that on any given string the pitch set 1 2 3𝄳 4 now enjoyed equal status with 1 2 3 4 and 1 2 3♭ 4, little insight is afforded into the development of the modal system since its codification by Isḥāq al-Mawṣilī a century earlier.

Matters are further complicated by the fact that the other main melody instruments are each described as having their own distinctive scales, even if, in most cases, these can be reconciled with structures derived from the *'ūd* scale norm. Those that differ most markedly are associated with two varieties of long-necked lute, the *ṭunbūr baghdādī* and *ṭunbūr khurāsānī* (of Baghdad and Khorasan). The former is said originally to have had a scale proceeding by approximate quarter-tone steps over a range of little more than a minor 3rd, while the scale of the latter, which may in reality have included neutral intervals, is analysed in terms of limma and comma (comma being the 24 cents difference between apotome and limma). Whereas al-Fārābī provided a composite fretting for the *'ūd*, he was content simply to juxtapose the varied scalar resources of the other instruments; and from this we might infer the coexistence of various regional traditions. But al-Fārābī is silent on this subject, as on practical organological matters. Indeed, his initial classification of instruments identifies only chordophones and aerophones. However, his recognition of the category of bowed strings is of particular historical significance, his account of the *rabāb* being the earliest attestation of a bowed instrument.

Also highly theoretical is the treatment of rhythm in the *Kitāb al-mūsīqī al-kabīr*. This makes an initial distinction between conjunct and disjunct cycles, the former equating essentially with a pulse set at various tempi. The latter, on the other hand, incorporate both variables and the concept of a disjunction relating to the analysis of a cycle as ending with the last marked time unit rather than with the one preceding the onset of the next cycle. The result is a generative framework, analogous in some respects to the variable schema of South Indian theory, from which a vast number of possible cycles can be derived (*see* INDIA, §III, 4(iii)).

Al-Fārābī turned more directly to existing cycles in two later works. His treatment suggests that variability was a marked feature of contemporary practice, involving not only the predictable addition of supplementary and timbrally differentiated percussions within a standard grid of marked time units, or the omission from certain time units of the percussions normally associated with them, but also, and far more radically, the repetition or suppression of segments of the cycle, thereby altering the total number of time units. This suggests that the early categorization of rhythm could represent a sophisticated

segmentation of spectra perceived as having common core elements, despite the markedly different surface structures produced by various transformational processes. However, although later writers may also have acknowledged the existence of variants, most of them reverted to the more straightforward type of definition offered by al-Kindī, having no apparent difficulty in deciding on the most representative form of any given cycle.

Al-Fārābī also treated melodic typology schematically, but not in relation to the general binary conceptualization of fundamental structure plus embellishment. Rather, he considered two aspects, on the one hand distinguishing between melismatic and syllabic styles of text setting, and on the other establishing various abstract series of pitch changes that offer an analytical parallel to the elaboration of possible rhythmic structures.

Somewhat closer to practice is his treatment of vocal quality. This aspect was further developed in treatises by AL-ḤASAN IBN AḤMAD (late 10th/early 11th century) and Ibn al-Ṭaḥḥān. The former, even if unoriginal and somewhat confused in his discussion of abstract topics, had much to say about such practical issues as appropriate behaviour. He also touched upon the interaction of performer and audience, and marshalled an extensive range of descriptive and evaluative terms relating to features of both vocal and instrumental technique. His treatise, therefore, points to a considerable subtlety of aesthetic discrimination among discerning listeners. His treatment of mode confirms the independence (on any given string) of the pitch sets 1 2 3 4, 1 2 3♭̶ 4 and 1 2 3♭ 4, but it also suggests that other neutral intervals functioned as variants of diatonic ones and did not yet serve to identify discrete structures.

Ibn al-Ṭaḥḥān covered much of the same ground, concentrating particularly on the character, technique and care of the voice (including diet). He followed al-Kindī in providing quite a full account of the dimensions and construction of the *'ūd* and in listing various other instruments, several of which are stated to be specific to the Byzantine Greeks (*rūm*). For the rhythmic cycles, he gave a symmetrical set of four 'heavy' and 'light' pairs, adding that each has two fourfold subdivisions. The vocabulary for these, however, is modal, which suggests that for practising musicians the parameters of pitch (mode) and rhythm (cycle) were still conceptually wedded. That the perception of a modal outline was habitually projected onto a particular rhythmic organization is also suggested by a Judaeo-Arabic fragment of this period (from the Cairo Geniza, a store in the synagogue), which contains an elementary *'ūd* exercise. Durations are not given in this fragment, but a particular rhythmic cycle is identified and the text spells out the physical pattern of plectrum strokes, as in ex.1, a representation of the *thānī thaqīl* cycle in its *muṭlaq* modal configuration.

Ex.1 Elementary modal/rhythmic outline (𝅘𝅥 = downstroke; ♩ = up stroke; the the second note in each slurred pair has no separate stroke)

The mode names in the Geniza fragment are the same as those of Ibn al-Ṭaḥḥān and al-Ḥasan ibn Aḥmad. They provide evidence for the survival in the eastern Arab world, at least until the early 11th century, of the terminology that continued in use thereafter in Spain. In the light of contemporary evidence for the emergence of a new modal nomenclature in Persia, it would thus appear that at this very early stage in the differentiation between the western and eastern art music traditions, the dividing line could well have corresponded to the geographical, ethnic and linguistic demarcations between Arabs and Persians.

The new Persian terminology first appeared in the chapter on music within the section on the mathematical sciences in the *Kitāb al-shifā'*, an encyclopedia by another great philosopher, IBN SĪNĀ (*d* 1037) – known in Europe as Avicenna. Inevitably more compressed than that of al-Fārābī, his treatment of the subject is nevertheless comparable in scope, and its organization is in some respects more logical. The introduction considers musical sound a means of aesthetic expression ultimately derived from a signalling device helping to preserve the species. It is followed by an exhaustive analysis of intervals and tetrachordal combinations thereof, then by a section on rhythm that models itself on the work of al-Fārābī in its application to a given base of variables that generate cycles of differing lengths. When dealing with instruments, Ibn Sīnā refined al-Fārābī's criteria in classifying both chordophones and aerophones, noting, for example, the presence or absence of a reed, but he followed his predecessor in ignoring membranophones.

Ibn Sīnā's chapter on music concludes with an *'ūd* fretting followed by outline sketches of a number of common modes, and it is here that the new terminology appears. Noteworthy is the first mention of one of the principal Middle Eastern modes, *rāst* ('straight'; *mustaqīm* in Ibn Sīnā's Arabic translation), here defined as a series of conjunct 1 2 3♭̶ 4 tetrachords. Despite the inclusion of some basic diatonic structures that presumably survive from the earlier system, the prevailing impression conveyed by Ibn Sīnā is of a somewhat heterogeneous stage of transition which is still some distance from the more complex system codified by theorists from the 13th century onwards.

The Neo-Platonic tradition was largely ignored by al-Fārābī and expressly rejected by Ibn Sīnā. Nevertheless it proved just as important as the Aristotelian, and cosmology and numerology reappear in another encyclopedic work, the *Rasā'il* ('Epistles') of the 10th-century IKHWĀN AL-ṢAFĀ' ('Brethren of Purity'), a group of scholars based in Basra. This covers much the same ground as al-Kindī's writings, touching on various aspects of practice and also propounding the theory of the spherical propagation of sound. Its most striking feature, however, is an overarching concept of cosmic harmony and balance. The earlier sets of associations for the four strings of the *'ūd* are further elaborated; Platonic numerical relationships invoke the music of the spheres; and a claim is made for the medical and moral efficacy of music. The cosmological views of the Ikhwān al-Ṣafā' remained significant in the culture for many centuries and were echoed in several subsequent works; and there is also a later literature on the therapeutic value of music.

(iii) Music and religion. Here we seem to have reached a position diametrically opposed to that of the 9th-century tract condemning music. Yet any notion of an ideological reversal would be illusory: for those who dominated religious discourse, such views were esoteric and, at best, marginal. As before, performance of art music normally involved patterns of behaviour that ran counter to orthodoxy. Such music could not fail to be seen as an

adjunct or incitement to immorality, being intimately linked with hedonism and wine-drinking, and intensifying the charge of the erotic verse it generally set (especially when performed by a *qayna*, who was expected to be physically attractive as well as accomplished). Consequently, entertainment music provoked continuing condemnation among Muslim legists.

Much of the literature on the permissability of music – still a live issue today – rehearses essentially the same arguments and often uses instruments as symbolic representations. The grudging acceptance normally afforded the music associated with important ceremonies integral to social life was articulated by declaring the frame drum licit, since it is central to, for example, marriage celebrations. Lutes and flutes, however, have particular associations with entertainment music, and the legists universally condemn them.

Not surprisingly, specifically religious usages provoked a conceptual rupture. The core phenomenon of the cantillation of the Qur'an was excluded from the domain of music and accorded a separate terminology. While the technical literature prescribes in great detail how the sacred text should be realized phonetically, there is no mention of pitch organization, despite the implications for intonation in the rules for pause and juncture. Yet the very fact that several authorities warn against the use of secular melodies for Qur'anic cantillation indicates that, in practice, such separation was not always rigorously maintained, and it later became quite common for male performers to excel in both secular and religious repertories.

The elaboration of a fundamentally negative ideology nevertheless had an important consequence: music theory became excluded from the citadel of religious scholarship. As the tradition of philosophical and scientific enquiry began to weaken, the intellectual territory of music shrank. Among its professional practitioners, who remained for the most part of low social status, with a significant number later coming from marginal or non-Muslim minority communities (e.g. *see* JEWISH MUSIC, §V, 1), theory increasingly became practical rather than speculative, and was transmitted orally. For its cultured patrons, the horizons of musical discussion gradually dwindled to a core set of literary *topoi*, ranging from entertaining anecdotes to philosophical dicta and cosmological lore, the materials in either case being fundamentally derivative.

That mainstream Islamic thought eschewed further engagement with the rationalist Aristotelian philosophical tradition is largely attributable to ABŪ ḤĀMID MUḤAMMAD AL-GHAZĀLĪ (1058–1111), whose major contribution was to integrate the spiritual and emotional core of Sufism within an orthodoxy tending towards the drily legalistic. His *Iḥyā' 'ulūm al-dīn* ('Revival of religious sciences') contains an extended defence of music which articulates a Sufi standpoint, essentially arguing that it is possible to use music in a morally positive way, despite its potential for erotic arousal. Al-Ghazālī drew a distinction with regard to the listener's reactions, stressing the possibility of a spiritual apprehension legitimizing music as an aid to progress on the Sufi path. (A parallel may be drawn with Islamic mystical literature, where the language of profane love became a recognized vehicle for the expression of religious and yearnings.)

See also ISLAMIC RELIGIOUS MUSIC, §I, 2.

(iv) The Arabs and Europe. The philosophical riposte to al-Ghazālī came from the Córdoban IBN RUSHD (also known by the Europeanized name Averroes; 1126–98), who influenced the development of medieval scholasticism in Europe. But it was his predecessor IBN BĀJJA (Avempace; *d c*1139) who provided an explicitly musical link with Europe. The western conterpart of al-Fārābī as a philosopher-musician, Ibn Bājja is credited as a composer with the creation of an influential new style representing a synthesis of 'Christian' and 'Eastern' song. Both he and Ibn Rushd illustrate facets of the relationship between Christian and Islamic (to which should also be added Jewish) culture during the medieval period. Though by no means exclusive to Spain, it was there that contact was most intense and prolonged, involving both the intellectual world of translators and, more importantly, social interchange over several centuries between the ethnically mixed populations of Christians, Muslims and Jews (with the Muslim population consisting more of converts and Berbers than Arabs).

Scholarship has tended to concentrate on the nature and extent of Arab musical influences on Europe, an area where paucity of evidence allows conflicting interpretations. But one thing is clear: European interest in the Arab intellectual heritage did not extend to music theory, and none of the major texts was translated.

Turning to practice, however, a very different picture emerges. There is abundant lexical and iconographic evidence for the European acquisition of a wide range of instruments, the lute (*'ūd*), rebec (*rabāb*) and nakers (*naqqāra*) being only the most obvious. Depictions of these and others are provided by the miniatures of the *Cantigas de Santa Maria*, which represent Christian and Moorish musicians at the court of Alfonso el Sabio (1252–84; *see* CANTIGA, fig.1). In parallel to the synthesis achieved by Ibn Bājja, it seems that their melodic, rhythmic and formal conventions were sufficiently similar to allow mutual comprehensibility and transfer. But despite the likelihood of a considerable degree of cross-fertilization it is impossible to tell what specific melodic, rhythmic and/or formal structures might have been involved: we have the *Cantigas de Santa Maria* and a number of surviving troubadour melodies, but no comparable record of a medieval Arab repertory. Many of the *Cantigas* are in the *zajal* form, and it is likely that the strophic Arabic MUWASHSHAḤ and ZAJAL were also normally sung, but the parallel may be variously interpreted. Within Arabic poetry, these forms are Spanish innovations: there is no evidence for the emergence of strophic forms in Umayyad and early Abbasid court music, and although other Arabic literary antecedents have been mooted it is legitimate to speculate that they may have originated in *contrafactum* songs based on Romance prototypes. In short, although the music of the Arab courts must have provided a cultural model to be emulated, musical influences were probably not unidirectional.

4. MONGOLS AND MAMLUKS (1258–1517). Within the Mongol empire, which stretched from Russia to China, the part that included Persia and Iraq was ruled for a century by Hulegu and his descendents, the Il-Khans (1256–1353). Hulegu sacked Baghdad in 1258, executed

the last Abbasid caliph, and then proceeded to invade Syria, but the westward advance of the Mongols was halted in 1260 by the Mamluks of Egypt, who dominated the eastern Arab world until the early 16th century. The Mamluk rulers were something of a caste apart, a military dynasty constantly replenished by slave recruits of Turkish (and later Circassian) origin. Little is known of their tastes in music, despite the occasional references of chroniclers to musicians at court.

Confrontation with the Mongols did not entail lack of contact: the Mamluks maintained diplomatic and artistic ties with the Il-Khans and musicians were invited from Iraq to Cairo. It is thus possible that rather than maintaining the tradition that had been fostered by the Fatimids, the Mamluks encouraged the further westward expansion of the eastern tradition, already dominant in Iraq by the beginning of the 13th century if not before.

Wherever the boundary between eastern and western art music traditions was situated, by the late 12th century they were clearly divergent. A major witness to the differences between them is AL-TĪFĀSHĪ (1184–1253), a North African who lived for some years in Egypt and Syria. Echoing earlier contrastive encapsulations, he characterized the eastern tradition as more innovative and more affected by Persian taste, and the western as more conservative and, by implication, more complex. He underlined this distinction by identifying an intermediate style in Tunisia that was lighter than the Spanish but more florid than the eastern. He also confirmed differences in modal nomenclature and norms of formal organization, but supplied no definitions – for these we have to turn to the more specifically theoretical literature.

(i) Eastern tradition: theory of the Systematist school. With the loss of the treatise by Ibn Bājja, virtually nothing of theoretical interest survives from the 200 year period between the works of Ibn Sīnā and his pupil IBN ZAYLA (*d* 1048) and the appearance in 1235–6 of the *Kitāb al-adwār* ('Book of cycles') by ṢAFĪ AL-DĪN (*d* 1294). If ultimately indebted to the earlier theoretical tradition, the immediate antecedents of this work are unknown, although the particular combination of rigour and clarity of presentation that characterizes it is probably original to the author. This treatise inaugurated the school of 'Systematist' theorists (as conventionally termed by Western scholars), providing a model that profoundly influenced analytical writing until the end of the 15th century (and even some 20th-century ideas; *see* IRAN, §II, 2).

The *Kitāb al-adwār* concentrates initially on the analysis of scale, and derives from al-Fārābī's first tetrachord division on the *ṭunbūr khurāsānī* (Khorasan long-necked lute) an octave division of 17 pitches arranged in three symmetrical layers of two identical larger elements followed by one smaller one:

octave = tetrachord + tetrachord + whole tone
tetrachord = whole tone + whole tone + limma
whole tone = limma + limma + comma.

Accordingly, the neutral intervals of practice, which were difficult to reconcile with the traditional analytical stress on the primacy of simple ratios, were now treated virtually as just intonation intervals. Ṣafī al-Dīn then elaborated combinatorial consonance rules generating in the first instance all and only those tetrachords occurring in practice. From these and a largely overlapping set of pentachords he produced a series of 84 possible octave scales, and it is largely in terms of these that the principal melodic modes are presented.

Ṣafī al-Dīn's analysis of rhythm was also innovative, at least in its clear and unambiguous use of a traditional prosodic terminology. It also set the fashion for displaying the structure of rhythmic cycles in circular format. Other areas are, however, ignored: there is nothing on melodic structure, form, vocal quality or technique, and instruments. The *Kitāb al-adwār* ends, nevertheless, with yet another innovation – the inclusion of a few fragments of notation.

After Ṣafī al-Dīn, theoretical writing is less original and tends to rework an existing body of material. But several later Systematist treatises are important in their own right, whether for the critical elaboration of ideas or for the additional information they include. Like those of Ṣafī al-Dīn, all such treatises relate specifically to the eastern art music tradition. Most are written in Persian, and in several the factual content corresponds in the first instance to musical practice at the 15th-century Timurid courts of Samarkand and, later, Herat, while the use in others of Arabic reflects its continuing importance as a language of scientific discourse rather than a geographical locus within the Arabic-speaking world. Of the major texts in Arabic, the*Risāla al-fatḥiyya* of AL-LĀDHIQĪ (*fl* late 15th century) was dedicated to an Ottoman sultan; the *Majalla* of AL-SHIRWĀNĪ (*d* *c*1453) was probably written in Anatolia; and the *Sharḥ mawlānā mubārak shāh* was dedicated, in 1375, to Shāh Shujā' of Kirman, in west Persia. (This last is an extensive commentary of the *Kitāb al-adwār*, and in its general coverage of the thoretical domain, to which it adds the anatomy of the larynx, perhaps stands second only to al-Fārābi's *Kitāb al-mūsīqī al-kabīr*.)

Given their origins and destinations, such texts do not relate directly to the norms of court music in Cairo and the major cultural centres of the Fertile Crescent. But in the eastern tradition a broad uniformity of idiom was maintained from the 13th century to the 16th, and much of the information in works such as those of the first great Timurid theorist 'ABD AL-QĀDIR AL-MARĀGHĪ (*d* 1435) is as valid for the eastern Arab world as that found in the treatises of Ṣafī al-Dīn, who had performed before the last Abbasid caliphs in Baghdad.

(ii) Eastern tradition: practice. The material contained in Systematist treatises, while selective, provides a more detailed picture than hitherto of the structural bases of the various modal, rhythmic and formal parameters of the eastern art music tradition in the course of their evolution from the beginning of the 13th century to the end of the 15th.

(a) Mode. Ṣafī al-Dīn cited 20 modes in all. Among these, two canonic groups predominate: the 12 *shudūd* (sing. *shadd*) and the six (later seven) *āwāzāt* (sing. *āwāz*). (The obvious association of the number 12 with the zodiac was, however, generally disregarded by Systematist writers, few of whom touched upon cosmology.) The names of the 12 *shudūd* are (in alphabetical order): *abūsalīk*, *buzurk*, *ḥijāzī*, *ḥusaynī*, *'irāq*, *iṣfahān*, *nawā*, *rahāwī*, *rāst*, *'ushshāq*, *zankūla* and *zīrafkand*. The six *āwāzāt* are *kardāniya*, *kawāsht*, *māya*, *nawrūz*, *salmak* and *shahnāz*. Wherever possible (distortions notwithstanding), Ṣafī al-Dīn described modes in terms of octave

scales, that is, as fixed combinations of tetrachord and pentachord species. From the chapter on music in an encyclopaedia by the next major Systematist theorist, the polymath QUTB AL-DĪN (1236–1311), it is also possible to discern the importance of certain non-tetrachordal species and non-octave structures.

The basic units from which more extended modal structures were formed in practice are shown in ex.2. (In both this example and those below the appropriate neutral values have been recuperated from the virtual just intonation equivalents of the theorists.) These structures were not combined at random: (Pythagorean) diatonic units, for example, were normally segregated from those containing neutral intervals. But the most important controlling factor was consonance: nearly all the recognized scalar combinations of these units are characterized by complete or partial parallelism (normally at the 4th, less frequently the 5th). Similarly, Quṭb al-Dīn described analogous combinations at the same pitch level, which are likewise characterized by minimum differentiation.

Ex.2 Basic units of the modal system (13th century)

Within this general framework, more specific features contributed to modal identity. A few modes were characterized by particular melodic movements, while a common convention concerned the identity of the initial and/or *finalis*, so that in some cases the order of occurrence of the constituent units was fixed. They might also be variably weighted, and the note linking the two units would frequently be prominent, as with the *g* in *rāst* (ex.3).

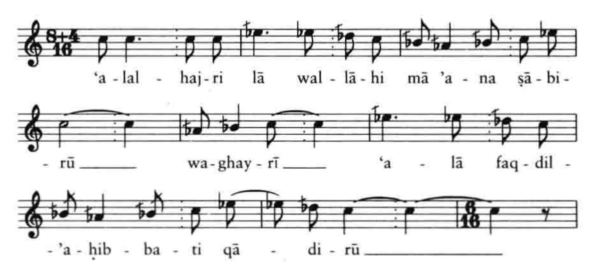
Ex3. The mode *rāst* (13th century). ‡ indicates an intonation approximately half way between ♮ and ♯.

The pivotal importance of this linking note was such that it led to the creation of a new mode, and *kardāniya* (ex.4) may well have evolved from *rāst* in this way.

Ex.4 The mode *kardāniya* (13th century)

A different form of derivation is represented by a set of modes that probably emerged during the 13th century. This was undoubtedly derived from *rāst* (now with an optional additional major 7th). The new modes were differentiated from *rāst* by a successive raising of the locus of prominence to the 2nd, 3rd, 4th and 5th degrees above the originally prominent 4th (ex.5). It is from these degrees that they take their names: *dugāh* ('second place'), *segāh* ('third place'), and so on.

Ex.5 The modes *dugāh*, *segāh*, *chargāh* and *panjgāh* (13th century)

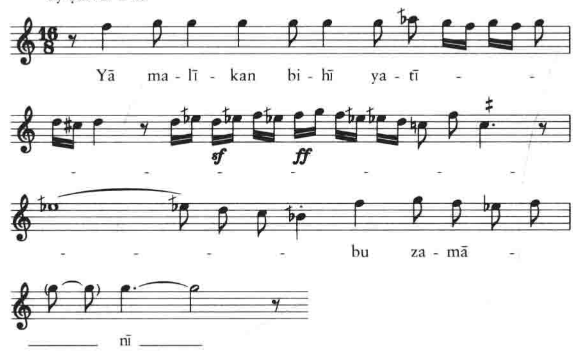


During the 14th and 15th centuries the system was further enlarged, partly because changes in its structural basis allowed slightly different patterns to develop. Two new sets, *shu'ab* (sing. *shu'ba*: 'branch') and *tarkībāt* (sing. *tarkīb*: 'combination') supplemented the canonical *shudūd* and *āwāzāt* sets. Some modes were identified with particular units, and melodies were probably articulated in terms of unit-based segments. One segment would be explored, at least to the extent of establishing its identity, before passing on to the next in a sequence that might also modulate through units not intrinsic to the mode in question.

(b) Notation. Some faint idea of such processes of composition can be gleaned from the surviving examples of notation, even if their primary (and essentially didactic) purpose was no more than to demonstrate how notation could be done. As in the analysis of scale, the examples provided by Ṣafī al-Dīn define pitch by single or paired letters of the alphabet arranged in a conventional sequence that assigns them numerical values. Relative duration is indicated by adding numerals below. The examples begin with a deliberately elementary descending sequence repeated in slightly varied form as a text-setting and continue with a further instrumental and vocal pair. They are followed by two instrumental fragments which unexpectedly have ancient mode designations otherwise preserved only in the western traditions. Recalling the Geniza outline (ex.1), they appear to preserve archaic and otherwise abandoned features in the context of a set of elementary *'ūd* exercises. Ex.6 is the second vocal piece, a song about love and the pain of separation. It shows a modal structure in which the melody is confined to a 5th and is dominated by the prominent central *c*, which is both initial and *finalis*.

For a more accurate reflection of 13th-century practice we must turn to the one example that transcends such limitations: the extraordinarily detailed, wholly unprecedented, and sadly unique example of notation – of a song

Ex.6 Second vocal example from *Kitāb al-adwār*



['No, by God, I am unable to bear separation patiently, even if others can withstand the loss of those they love']

ascribed to Ṣafī al-Dīn (*yā malīkan bihī yaṭību zamānī*, 'O sovereign, through whom fortune smiles on me') – which concludes Quṭb al-Dīn's chapter on music. He used a grid with vertical divisions for time units and five discrete horizontal layers for, respectively and in descending order: pitch (in Ṣafī al-Dīn's alphabetic-numerical represention); a percussion part differentiating two layers (presumably representing timbral contrast); changes of mode; indications of prolongations, pauses, expression and dynamics; and the song text.

Ex.7 gives the setting of the first hemistich, which displays a compositional technique that is presumably typical of the period. Thus the setting of the first seven syllables of the text, containing just the one initial pitch change, can be contrasted with the extended melismatic treatment of the next syllable. One may also note the segmentation signalled by breath pauses, the first phrase outlining a *g–d* tetrachord unit, the second filling it in but suggesting a shift of emphasis to *f–c* and the third beginning with a further shift to *e*♭, which the descent to *B*♭ then confirms as a modulation, only to end by restoring the original mode with a prominent *g*. The percussion part closely follows the two dimensions of syllabic versus melismatic and short versus long duration in the vocal part. The piece also contains an extended modulatory nonsense-syllable section, and the evidence of 15th- and 16th-century song text collections suggests that this was a typical feature.

Ex.7 Transcription of the setting of *yā malīkan bihī yaṭību zamānī* by Ṣafī al-Dīn

(c) Rhythm. Following Ṣafī al-Dīn, Systematist theorists normally defined rhythmic cycles in two ways. One was to divide a circle into the same number of segments as there are time units and add symbols indicating those normally sounded. The other, parallel to the standard presentation of poetic metres in prosody, was to employ the syllables *ta*, *na* (each equivalent to one time unit) and *tan*, *nan* (each equivalent to two time units) and to divide the rhythmic cycle into feet of two to four time units, *ta* and *tan* always being initial in a foot, *na* medial and *nan* final. A representation such as *tanan tanan tananan tan tananan* suggests, accordingly, an internal 3 + 3 + 4 + 2 + 4 division and an associated distribution of percussions, with the initial time unit in a foot always sounded, the final one almost always not and the sounding of any medial ones generally optional. Not indicated, however, is how such schema would be varied in performance, and it is only from Quṭb al-Dīn's notation that some insight can be gained into the ways in which percussions could be added (or suppressed) and contrasts of timbre employed. Table 5 gives Ṣafī al-Dīn's definitions of the eight rhythmic cycles listed in the *Kitāb al-adwār*. Several have variants, and the versions in his other treatise, the *Risāla al-sharafiyya*, are sometimes different again so that rather than definitive versions the list gives representative examples taken from sets of related forms.

The relationship between members of a set is sometimes obvious: another form of *ramal*, for example, is 2 + 2 + 2 + 2 + 4, and a variant of *thaqīl thānī* is 3 + 3 + 2. Other cases, however, recall transformational processes adumbrated by al-Fārābī, for it appears that there might have been considerable flexibility in the arrangement and even the identity of feet: there are cases of reordering (2 + 4 + 2 + 4 and 4 + 2 + 4 + 2 are listed as variants of *ramal*); substitution (2 + 4 + 2 + 4 is also listed as a variant of *khafīf al-ramal*, given in Table 5 as 2 + 3 + 2 + 3); elision (a variant of *hazaj* is 4 + 2); and extension (*fākhitī* has a reordered variant with two extra feet: 2 + 4 + 4 + 4 + 2 + 4 + 4 + 4).

After Ṣafī al-Dīn, writers generally presented a greater number of rhythmic cycles than his eight, but with fewer or no variations. Quṭb al-Dīn added a further five cycles, while towards the end of the 15th century al-Lādhiqī asserted that 18 cycles were in common use, and listed a further nine rarer ones. Several are extremely complex, involving an exceptionally large number of time units: *thaqīl*, 48; *ḍarb al-fatḥ*, 88; and *chahār ḍarb*, 96. The longer cycles are mostly duple (combinations of feet of 2, 4 and 8 time units), and *aksak* combinations of duple and triple occur mainly among the shorter cycles (e.g. *rawān* 2 + 3 + 4 and *samā'ī* 3 + 3 + 4). The incidence of the various cycles in the song-text collections reinforces al-Lādhiqī's perception that several were peripheral, but also suggests that the core cycles were not primarily the shorter ones: *thaqīl*, *ḍarb al-fatḥ* and *chahār ḍarb*, for example, all occur frequently.

Several modes (e.g. *iṣfahān*, *ḥijāzī* and *'irāq*) are named after cities and regions, but there is no suggestion that they were specific to them. The great majority was widely known throughout the domain of the eastern tradition. In rhythmic cycles, on the other hand, there were clear regional preferences, at least during the 13th century. Ṣafī al-Dīn stated explicitly that the Arabs used all the cycles here presented in Table 5, except the final one (*fākhitī*), while the Persians preferred the *thaqīl al-ramal* and also used *fākhitī* (if less frequently). Later, Quṭb al-Dīn introduced a cycle called *turkī* (which may indicate use by Turks). However, such regional distinctions probably became less marked: the cycle *ḍarb al-fatḥ*, created by

TABLE 5: Rhythmic cycles (Ṣafī al-Dīn, 13th century)

thaqīl awwal	Oo.Oo.Ooo.O.Ooo.	(3+3+4+2+4)
thaqīl thānī	Oo.Oo.O.Oo.Oo.O.	(3+3+2+3+3+2)
khafīf al thaqīl	O.OxO.OxO.OxO.Ox	(2+2+2+2+2+2+2+2)
thaqīl al-ramal	Ooo.Ooo.O.O.O.O.O.O.Ooo.	(4+4+2+2+2+2+2+2+4)
ramal	O.O.O.O.O.O.	(2+2+2+2+2+2)
khafīf al-ramal	O.Oo.O.Oo.	(2+3+2+3)
hazaj	Ooo.Oo.Oo.O.	(4+3+3+2)
fākhitī	O...O.O...O...O.O...	(4+2+4+4+2+4)

O = initial time unit of foot (always sounded); o = medial time unit (optionally sounded); . = final time unit (not sounded); x = final time unit (sounded)

'Abd al-Qādir al-Marāghī in Tabriz, was known both by Al-Lādhiqī and his contemporaries in Herat, and survived into the later Ottoman system.

(d) Form. The fullest account of forms provided by a Systematist theorist is that of 'Abd al-Qādir al-Marāghī. His definitions single out as significant whether the form or section in question is set to words or not and whether the language of the verse is Arabic or Persian. But they also refer to structural features: differences between various sections, their presence or absence in a given form, and whether or not a fixed rhythmic cycle is used. The initial analysis of section types is accompanied by simple notated examples that contrast declamatory with slightly more florid styles of text-settings in a manner reminiscent of the much fuller notation of Quṭb al-Dīn (ex.7).

The most common structural pattern seems to have been *AABA*, with *B* providing contrast through a shift to a higher register and/or modulation. As the song-text collections confirm, each of sections *A* and *B* might be characterized by internal contrast, both between styles of setting for different segments of the verse and between levels of textual specificity. Verse-setting subdivisions often ended with extraneous conventional phrases and contrasted with nonsense-syllable subdivisions, which were sometimes extensive.

'Abd al-Qādir also described forms designed to display technical skill. Presumably marginal, these could have been appreciated only by an audience of some sophistication and may have appealed more to the musicians themselves. In one form two rhythmic cycles were played simultaneously, and in another several rhythmic cycles were introduced successively. The latter form could be combined with a modal counterpart of two possible types, one introducing a large number of modes successively, the other introducing modes at different pitch levels, thereby including all the notes of the theoretical octave.

Among the more basic forms, he listed the *basīṭ*, a setting of Arabic verse with an instrumental prelude, and the *nashīd*, a setting of verse with sections in free rhythm alternating with others in a fixed rhythmic cycle. These terms had already been used in the 10th century, when the term *nashīd* designated an initial section setting one or two lines of verse in free rhythm, in contrast to the remainder of the song, called *basīṭ*. Lack of documentation, however, makes it impossible to trace the intermediate stages of development.

A similar obscurity surrounds the emergence and evolution of the most extended form, the *nawba*. In the 13th century, five constituent parts were reported, and in the 14th, three. However, it is clear that for most of the 14th and 15th centuries the eastern *nawba* consisted of a cycle of four songs, all in the same mode, and using a restricted range of rhythmic cycles. They were distinguished more by linguistic than structural features: the first song set Arabic verse, the second Persian, the third either Arabic or Persian, and the fourth again Arabic. For 'Abd al-Qādir, the *nawba* was clearly the most important form (and he attempted, unsuccessfully, to enlarge it by adding a complex fifth element). By the late 15th century, however, it was evidently in decline, and soon afterwards it disappeared.

(iii) Western tradition. Lack of documentation makes it impossible to give a comparable outline of the modal, rhythmic and formal structures underpinning the western tradition. No more than four mode names are mentioned by al-Tīfāshī; he makes no attempt at description and the rhythmic cycles are passed over in silence. The few later texts are equally uninformative, and although the philosopher-historian Ibn Khaldūn (1332–1406) integrated art music into his analysis of the cyclical rise and fall of dynasties, regarding it as the most delicate and vulnerable flower of luxurious court life, his interests concerned general laws of human society rather than specific musical phenomena.

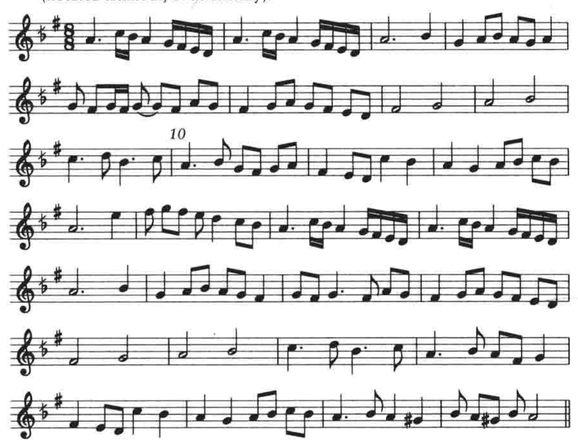
However, al-Tīfāshī does provide information about form, repertory and performance. His characterization of the Spanish style as heavy and complex probably related to material reserved for professional soloists, who might improvise at great length: he cited one singing girl who spent two hours over a single line of verse. He certainly viewed the serious solo forms as more prestigious than the *muwashshaḥ* and *zajal*.

Both types were included in the western *nawba*, which was quite distinct from the eastern. The introduction of a conventional sequence of song types is ascribed, along with so much else, to Ziryāb. But whatever its origin, it seems to have involved, much more than in the eastern Arab world, the notion of contrast: the first two forms, termed, interestingly, *nashīd* and *basīṭ*, were associated with slow (or 'heavy') rhythms. They were followed by *muḥarrakāt* and *ahzāj*, songs in faster (or 'lighter') rhythms. But by the beginning of the 13th century, as al-Tīfāshī reveals, the western *nawba* consisted of *nashīd* and *ṣawt* followed by *muwashshaḥ* and *zajal*. As the performance of the latter probably involved a choral element, the change points to a further development, soloistic performance of the more ornate slower pieces being now counterbalanced by group participation in the faster and more repetitive strophic forms. This contrasts with the eastern *nawba*, which was the preserve of professional musicians. The implied integration of popular and art music forms points forward to a strand of communal music-making that later proved particularly important in North Africa for the preservation of the traditional repertory.

Such communal performances frequently occurred as an informal appendage to Sufi gatherings. Many of the major Sufi orders were founded, diffused and integrated within society at large from the 12th century to the 15th. The importance attached to music as an integral part of the DHIKR ceremony varied between the orders, but membership often allowed exposure to a religious repertory that shared structural features with the secular. The institutionalization of the orders facilitated diffusion and probably narrowed the gap between popular and art music, and between sacred and secular, at least to the extent that some performers of secular art music were partially trained through participation in Sufi activities.

5. THE OTTOMAN AGE (1517–1918). Already long established in the Balkans and western Anatolia, the Ottoman Turks captured Constantinople in 1453 and in the following century expanded southwards. By 1517 they had defeated the Mamluks and taken control of Syria and Egypt. During the rest of the 16th century they made advances into North Africa, but in the east it was not until 1638 that Baghdad was definitively incorporated into the Ottoman domains. After this, their empire shrank, first in Europe, but the connection with Egypt

and the Fertile Crescent was not severed until the end of World War I. Thus for four centuries most of the Arabic-speaking world formed part of the Ottoman empire, with Istanbul as its principal cultural centre.



Frequently dismissed by Arab scholars as a time of political and cultural decline, the Ottoman period from the 16th century to the 18th has been insufficiently studied, and the texture of musical life in the major cities remains largely unknown, as does the nature and extent of Ottoman influence. It is, no doubt, legitimate to relate the gradual development of a quite separate Iraqi art music tradition to its peripheral position within the empire, but from this it does not follow that Ottoman models were imitated in, for example, Aleppo, Damascus and Cairo. Musicians from the provinces may have been attracted to Istanbul, but it is not known how many travelled in the opposite direction, although some were probably enticed by provincial Ottoman governors, the most striking example of such patronage being provided by Muḥammad al-Rashīd, the mid-18th-century ruler (*bey*) of Tunis to whom the introduction of Ottoman instrumental forms is credited. In general, however, the western tradition continued along a separate path, and in North Africa more than elsewhere there remains an ideological stress on the conservative nature of the art music repertory. But although certain song texts are demonstrably ancient, the songs themselves may not be: the local differences of repertory, style and structure between the various urban traditions reinforce the obvious assumption of continuing, if gradual, development and innovation.

Similar local variations no doubt occurred in the eastern Arab world, particularly from the 17th century onwards, when the consolidation of a distinctly Ottoman repertory based on Istanbul practice must have created or reinforced differences between it and the other regional inheritors of the earlier pan-eastern tradition. Ex.8 gives the beginning of an instrumental composition, notated in Istanbul *c*1650 by ʿALĪ UFḲĪ and ascribed to a certain Seyf el-Mıṣrī ('Sayf the Egyptian'). But this appears to be a typically Ottoman composition, and the extent to which it might also be representative of contemporary Egyptian style is unclear.

That practice in the Arab provinces remained largely independent is demonstrated by later Ottoman and Arabic song-text collections, which, in addition to the separation of repertories dictated by differences of language, are only partially congruent in modal and rhythmic nomenclature. Indeed, it may be that local styles retained with some tenacity elements that would be considered archaic by comparison with new Ottoman norms that had evolved by the early 17th century. Despite the possibly levelling effects resulting from the diffusion of the religious repertories of the more widespread Sufi orders, there is no need to assume that, say, either secular song or Qur'anic cantillation in Cairo imitated that in Istanbul. That there was still a clear separation at the beginning of the 19th century is suggested by the fact that although the *ṭunbūr*, a long-necked lute associated particularly with Turkish art music, had been introduced into Egypt, neither it nor its repertory had been assimilated. In effect, although Ottoman elements in 20th-century Arab art music are quite noticeable, particularly in the instrumental repertory and the mode stock, Ottoman influence appears to have been rather patchy and intermittent before the latter part of the 19th century, when visits to Istanbul by, for example, major Egyptian singers and composers point to a potential but also paradoxical fusion of Arab and Turkish traditions. Centrifugal strivings for cultural (as well as political) autonomy entailed centripetal competition, so that Ottoman musical influences became stronger as the power of the state ebbed away.

See also OTTOMAN MUSIC.

Ex.8 First (*hane*) of an instrumental composition (peşrev) by Seyf el-Mıṣrī (notated Istanbul, 17th century).

(i) Theory. Theoretical treatises of the 16th century to the 19th differ markedly from earlier Systematist models, containing none of their more rigorously analytical and mathematical elements. But rather than a new departure, they represent a continuation of other types of text produced alongside the Systematist writings. They consist of didactic expositions in verse usually categorizing the two canonic sets of melodic modes according to their cosmological affiliations; and prose works that either explore cosmological and affective ramifications or present the conceptualizations of practising musicians with no access to, or interest in, the more scientific theoretical tradition.

The first major representative of the latter tendency was Ibn Kurr (*d* 1341), who predated the Ottoman period. His nomenclature of scale degrees repeats the same set of terms on each string of the *ʿūd*, and he provided a type of modal definition found in several later works. Thus with the exception of al-Ṣaydāwī (*d* 1506), who gave a graphic, almost stave-like representation of modal outlines, later writers followed Ibn Kurr in eschewing notation. Instead, their works spell out the various pitch steps forming a modal nucleus which often takes the form of a rudimentary melodic contour akin to some of those provided by the 15th-century Systematist al-Lādhiqī. Ex.9 compares versions of three modes provided by Ibn Kurr, al-Lādhiqī and an anonymous work probably dating from the 17th century, the *Shajara dhāt al-akmām* ('Tree with calyxes').

The *Shajara* is one of a number of similar treatises that are difficult to date, but although its terminology is different, the basic conceptualization of scale in the *Shajara* is identical to that found in the Ottoman treatise of *c*1700 by DIMITRIE CANTEMIR (1673–1723): interval sizes are not defined, but two sets of pitches are distinguished, one principal (the notes of the *rāst* scale), the other secondary (those intermediate between them). However, no evidently Ottoman features can be detected

Ex.9 The modes *'irāq*, *iṣfahān* and *segāh* as defined by Ibn Kurr (14th century), al-Lādhiqī (15th century) and the *Shajara dhātal-akmām* (? 17th century)

in the *Shajara*, and the work is somewhat conservative in comparison with Cantemir's. It also, like several other texts, differs sharply from Cantemir's in its strong interest in cosmological affiliations, relating the modes to the humours, elements and the zodiac. (Similar conceptualizations appeared in the western Arab world, where, at least since the time of Ibn al-Khaṭīb (1313–75), the modes have been called generically *ṭubū'*: 'natures'; sing. *ṭab'*.)

In its account of rhythmic cycles, the *Shajara* draws directly on Ṣafī al-Dīn. It accords primacy to his set of eight (see Table 5 above) – even if some rather different definitions are offered – and considers more recent cycles to be derived from them. But if the names it mentions are not among those listed by, for example, al-Lādhiqī in the late 15th century, they are equally absent from Cantemir's account of late 17th-century Ottoman practice, and its explicit reference to the existence of many further cycles among non-Arabs is substantiated by other texts that distinguish between Arab and Turkish cycles. Their rich and varied nomenclature suggests that the gradual diffusion of Ottoman norms did not seriously erode the independence and creative vitality of local traditions.

The *Risāla al-shihābiyya* by the Lebanese MĪKHĀ'ĪL MUSHĀQA (1800–1880) points to a rather similar situation on the modal side, at least in Syria. Here modes are described in the traditional form of brief melodic matrices, but there are also innovations: the reintroduction of the mathematical definition of interval sizes and a new theoretical concept, the quarter-tone scale. But this innovation did not lead in an unbroken line to the arguments about intonation that later proved to be one of the dominant strands of 20th-century debate: when the quarter-tone concept surfaced in two 19th-century Egyptian works (by Shihāb al-Dīn al-Ḥijāzī (written *c*1840) and 'Uthmān ibn Muḥammad al-Jundī (1874 or later)), it did so in a distorted form indicating that it had not yet been naturalized.

(ii) Practice. The two large-scale 19th-century song text collections accompanying the works of Shihāb al-Dīn al-Ḥijāzī and 'Uthmān ibn Muḥammad al-Jundī are devoid of Ottoman material, and thus indicate a continued independence of repertory in Egypt. But they also suggest a shift in taste: they are rather colloquial in tone and show a predilection for strophic *muwashshaḥ* poetry.

The formal labels they exhibit are still in use today, but post-Systematist texts generally ignore any discussion of form, so the relationship between the major 19th- and 20th-century forms and earlier ones is obscure. The 15th-century vocal form *'amal* resurfaced as the Ottoman *kâr* (both words meaning 'work'). But in contrast to the instrumental forms *bashraf* (Turkish *peşrev*) and *samā'ī* (*semai*), the major Ottoman vocal forms have apparently had no impact on the Arab world. With differing degrees of complexity, they preserve the *AABA* form of earlier song types, and thus contrast with the ritornello *muwashshaḥ* type.

Both traditions recognized improvisation as a separate genre, whether instrumental (*taqsīm*, or vocal (*layālī*), but within composed forms there was greater fluidity on the Arab side, allowing the interjection of much improvised material. Sometimes improvisation predominated as, for example, in the *qaṣīda* and *mawwāl* (the difference in terminology relating to the nature of the text, classical in the *qaṣīda* and colloquial in the *mawwāl*). Even within the most extended vocal form, the *dawr* (possibly a 19th-century innovation), the composed frame expanded to allow the insertion of an increasing number of improvisation sections termed *hank*.

These Egyptian song text collections are organized into blocks containing material in the same or related modes (*maqāmāt*; sing. *maqām*). These are headed by the term *waṣla*, which also designates a large-scale cyclical form. How and when this evolved is not known. In the west it is tempting to assume a direct development from the 13th-century *nawba* as described by al-Tīfāshī to the more complex modern form. But the latter is, in evolutionary terms, a new species: an extended cyclical framework within which selections from the traditional repertory are performed; whereas its medieval forebear, to judge from the number of *nawba*s an expert performer needed to memorize, had to be, as in the east, a sequence of particular pieces. In the eastern tradition there is a similar contrast with, in addition, clear evidence of temporal discontinuity: the *nawba* disappeared long before the earliest references to the Ottoman *fasıl* – the first of the modern cyclical forms to be attested. The *fasıl* was made up of a particular sequence of improvisations and composed genres into which modally relevant selections from the repertory would be slotted.

The eastern Arab cyclical forms are similarly complex, but it would be facile to assume they simply derive from the *fasıl*: the sequence of events in the *waṣla* is rather different, and although lexically identical the Iraqi *faṣl* is at an even further remove. Less a framework for selection than the articulation of a repertory, it may be considered as intermediate between the Turkish structural model and that of the Persian *dastgāh* (*see* IRAN, §II, 3). However, it could also be said that in its greater emphasis on integrating a degree of vocal improvisation within a relatively fixed corpus of pre-composed material, the Iraqi *maqām* presents a type of modal practice that is closer to the melody end of the spectrum when compared with the early 19th-century modal definitions offered by Mushāqa, whose adherence to the earlier matrix type has affinities with Ottoman practice as represented by Cantemir (*see* MODE, §V, 2).

In the Ottoman, Syrian and Egyptian traditions, modal structure provided a flexible set of directives for progres-

sion through a given pitch set (or sequence of pitch sets), emphasizing certain nodal points and providing conventional ways of approaching and prolonging them, but allowing considerable freedom with regard to reordering, repeating or omitting them before reaching the invariable *finalis*. Equally, the 18th- and 19th-century Egyptian, Syrian and Turkish corpora of modes resemble each other in effacing previous internal hierarchies. Where they differ is that the potential for the creation of new modes was more fully exploited on the Turkish side than in Syria, and hardly at all in Egypt, where the late 19th-century additions to the mode stock are generally Turkish loans.

As already noted, there was evidently a higher degree of regional variation among rhythmic cycles than among modes. Continuities are difficult to trace, especially when later writers fail to define the total number of time units in the cycle (although some do specify the *dum* and *tak* strokes that outline the fundamental pattern of timbre distinctions (*see* TURKEY, §IV, 3)). Some new cycle names may distinguish entities previously lumped together as variations of a single cycle, while others point to innovation. This probably involved reshuffling conventional stroke sequences, but for all their variety and complexity, it is difficult to think of the cycles as a systematic exploitation of combinatorial possibilities.

The 19th century was a period of increasing exposure to (and subjugation by) the West. In reaction, there were efforts at political, educational and cultural renewal and reform. As far as music was concerned, conscious attempts at Westernization, the military band apart, still lay in the future. Despite the obvious symbolism of the Cairo Opera House, which opened in 1869 with a performance of *Rigoletto*, there was no adverse effect on indigenous art music. On the contrary, its status seems to have risen, and it may have benefitted from an increasing interest in the arts among the newly educated classes. In Egypt, the Khedives patronized major composers and singers whose social respectability was reinforced by their initial training in, and association with, the religious repertory.

If the first half of the 19th century remains poorly documented, the history of modern Arab music in the east does stretch back to include the major figures of the second half. Among them may be cited Aḥmad Zaydān (*d* 1912) in Iraq, and in Egypt ʻAbduh al-Ḥāmūlī (1843–1901), his wife Almaẓ (1860–96) (whom al-Ḥāmūlī prevented from performing after their marriage), and Yūsuf al-Manyalāwī (1847–1911). The Syrian Aḥmad Abū Khalīl al-Qabbānī (1841–1902) and the Egyptian Salāma Ḥijāzī (1852–1917) were pioneers of musical theatre. Through the recordings made by al-Manyalāwī and Salāma Ḥijāzī something has been preserved of late 19th-century Egyptian art music and the abundant creativity of its outstanding singers.

6. DEVELOPMENTS SINCE 1918.

(i) Introduction. Two main lines of thinking defined the aesthetic of Arab music throughout the 20th century: the terms applied to them are modernization or development (*taṭwīr* or *taṭawwur*) and tradition as conveyed by the word 'patrimony' (*turāth*), used instead of the term for 'tradition' itself (*taqlīd*), which arouses only a lukewarm response. While the first concept (*taṭwīr*) was dominant in the first part of the 20th century, the second (*turāth*) was more usual in the second half, although the defenders of *taṭwīr* were not entirely defeated.

After World War II, when a number of former colonies won independence, national forms of music as distinct from Arab music in general emerged. In these forms dialect song takes precedence over the language of the classical repertory (*klāsikī*). They employ local instruments, usually from country areas, and display local colour (*lawn*), which distinguishes them from one another: in Tunisia, for instance, the prominence of the *mizwid* bagpipe has made it almost a national symbol. In Syria and Lebanon, the long-necked lute known as *buzuq* is prominent, and in Morocco the *ginabri* lute has become popular. In Sudan, on the other hand, the *ṭanbūra* or *rabāba* lyre has given ground before the increasing popularity of the *ʻūd*. These national musical styles often draw on the general form of song, *ughniya*. Lebanon also has a form of sung drama, the 'sketch'.

The clear reversion to tradition in the second half of the 20th century was due partly to Western influences and the musical dominance of Egypt, all leading to a style condemned by many critics who would like to see a return to a 'purer' form of song, with poetic texts of high quality. Among other factors involved is the production of poor-quality, mass-market music for radio and television. The movement towards a return to tradition does not aim merely to revive whatever is most authentic. It is usually envisaged in terms of modern music, conveyed through the medium of the *firqa* orchestra or other technical means. However, many marginal forms of music are still not well known, such as the huge paraliturgical repertory. Another source of nourishment for the revival of traditional Arab music comes from the West, where much archival material is recorded on disc and recitals of traditional music are given. At the end of the 20th century the *takht* (a traditional chamber orchestra consisting of three to five instrumentalists and a singer) and certain vocal techniques were being revived, thanks to their preservation on old 78 r.p.m. records, which are valuable archives and sources of reference. In 1990, after the war in Lebanon, there was a new musical development with the rediscovery of the art of the *qaṣīda*, long set aside and almost forgotten while national Lebanese song attained prominence.

(ii) Theory. In 1905–06 the *Kitāb al-mūsīqā al-sharqī* ('The book of eastern music') by Kāmil al-Khulāʻī (1879–1938) established the equidistance of quarter-tones in the octave. This scale of 24 quarter-tones was the subject of fierce discussion at the Congress of Cairo in 1932, where the participants divided into two opposing camps: the Egyptians supported division of the octave into 24 equal quarters, while the Turks (represented by Yekta Bey) and the Syro-Lebanese (Sabra and Tawfīq al-Ṣabbāgh) rejected the system of equal division.

In 1959 and 1964 the Egyptians organized two symposia to settle the differences of opinion arising from the controversy at the 1932 Congress over the equidistance of quarter-tones. The aim of these symposia was to establish the principle of equal temperament on the basis of the quarter-tone and give official sanction to its teaching. However, theoretical thinking between 1949 and 1974 took a different direction in Syria, especially in the works of Mikhāʻīl Allawīrdī (1904–81) and in volume four of *al-Samāʻ ʻinda al-ʻArab* ('Music among the Arabs') by Majdī al-ʻAqīlī (1917–83), published in Damascus (1969–79). Both writers employed abstruse mathematics to reach conclusions contrary to those of their Egyptian

colleagues, theoretically reaffirming the existence of the natural scale in opposition to the artificial quarter-tone scale recommended in Egypt. In his theoretical research, Allawīrdī also proposed introducing the notion of the cent. In Egypt YOUSSEF SHAWKI (1925–87), one of the last theorists of the second half of the 20th century, suggested in his vast retrospective and theoretical survey of the state of musical research, *Qiyās al-sullam al-mūsīqī al-'arabī* ('Measuring the Arab musical scale'; Cairo, 1969), that it was time to turn to applications deriving from electronics. At this point interest in theoretical studies began to wane, and in the second half of the 20th century they were no longer considered a priority. Practical theory became more appealing than pure speculation, which gave way to a great many publications of all kinds on the rudiments of music and *solfeggio*, as well as teaching manuals offering a combination of theory and practice. These educational publications were innumerable. Two of them became bestsellers, the work by MAHMOUD AHMAD EL HEFNY (1896–1973), entitled *al-Mūsīqā al-naẓariyya* ('Theoretical music'; Cairo, 1938, 6/1972), and the later method by the Lebanese Salīm al-Ḥilū (1893–1980), *al-Mūsīqā al-naẓariyya* (Beirut, 1964).

The change from purely theoretical studies to a more practical approach also affected the nature of the quarter-tone itself. The quarter-tone, *nīm* (derived from dividing a tone into four equal parts), was later largely replaced by the concept of the three-quarter tone *tīk*. Introduced in the last quarter of the 20th century, this has been predominant ever since. Musical practice shows that intervals of three-quarters of a tone occur much more frequently than quarter-tone intervals, which determine the structure of only two rarely performed modes: *'awj* and *sāzkār* whose first intervals are quarter-tones. Contemporary discussions concerning the quarter-tone imply a return to purely theoretical considerations; practical usage conforms to the three-quarter-tone system.

(a) Mode and modality. The study of modes became the chief preoccupation of the 20th century among both Arab and Western scholars. The latter, following Baron d'Erlanger, applied their minds to the subject in meticulous detail while attributing great complexity to it. In Arab research, on the other hand, the concept of the mode has been simplified and tends to be reduced to an arrangement of intervals defining an abstract scale. Today, teaching of the subject is confined to the definition of a series of ascending or descending intervals, which the pupil must learn, and which no longer corresponds to the old modal concept, taught by means of melodic formulae. Western studies, however, see the mode (for which it retains the term *maqām*) as a developmental form and the supreme expression of musical thinking, in line with the use of the term in Iraq, where it also has the quite different connotations of a musical form *par excellence* in the name of the *al-maqām al-'irāqī* (the Iraqi *maqām*).

The term for 'mode' used by practising musicians in the Middle East is *naghm* (pl. *anghām*). However, the term *maqām*, retained by the Turks among others, was also used by theorists at the beginning of the 20th century. It asserted itself as standard terminology through the agency of Western musicology, which sanctioned it and devoted much attention to it. As a result, the Congress of Cairo in 1932 decided to use the term *maqām* rather than *naghm*, while retaining the term *ṭab'* ('nature') in North Africa, where it is commonly used instead of the other two terms, which are absent from the local musical vocabulary. *Ṭab'* also has semantic connotations: it expresses a close link between the mode and the medieval humours, being the four elements or the four natures (in Morocco), or the mode and the hours of the day (in Algeria).

The modal system was based on the seven degrees of the scale, each degree generating one or more of the principal modes and their derivatives. These ideas are clearly illustrated in two theoretical works written at the same time, one by Aḥmad al-Safarjalānī of Damascus (1818–93), who arrived at a total of 107 derivative modes (*furū'*) of the seven fundamental modes (*anghām*) in his book *al-Safīna al-adabiyya fī al-mūsīqā al-'arabiyya* ('The vessel of *belles-lettres* in Arab music'; Damascus, 1889), the other by his Egyptian contemporary Muḥammad Dhākir Bey (1836–1906), an essay entitled *Kitāb ḥayāt al-insān fī tardīd al-alḥān* ('The book of the life of man in the repetition of melodies'; Cairo, 1895). Its author adopts the same classification, also calls the mode the *maqām*, and relates it to the scale (of eight rather than seven degrees, called *barda*, singular of *bardāt*). This approach was retained in the 20th century as a whole, the modes being classified in terms of the seven degrees of the scale, with the difference that while the basic mode was *rāst* notated in the key of G until the Congress of Cairo in 1932; after that date *rāst* was transposed into the key of C and has become accepted throughout the Arab world in that form, although it should be added that musicians often tune their instruments in D. Another major difference, and one adopted by the Congress of Cairo on the basis of the work of the Lebanese Egyptian theorist Alexandre Chalfoun (1881–1934), is the idea that the mode goes further than the octave; defining a mode by relating it to either two octaves or the octave plus a 5th, the disposition of the degrees not always being the same in the lower and upper octaves.

The Congress of Cairo retained modes going beyond the octave in the Syro-Egyptian area. They employ a system of tetrachords (*jins*, pl. *ajnās*), suggesting that Arab music is essentially tetrachordal in origin. The mode is defined by the combination of two, three or four tetrachords, each pair of which may sometimes (but not systematically) be separated by a major degree (*fāṣil ṭanīnī*). These tetrachords may bear the same name or various other names. Thus *rāst* consists of four similar and successive tetrachords, each called *rāst* and extending over two octaves, while *bayyātī* consists of two similar tetrachords repeating in the octave, called *bayyātī* and *būsalīk*. *Ḥijāz* consists of the following tetrachords: the *ḥijāz*, *bayyātī*, *ḥusaynī*, *ḥijāz* and *būsalīk*. The modal signature, which enables the mode to be clearly recognized, does not stipulate development over two octaves; on the contrary, the nature of the mode is made evident by a trichord (in the case of *ṣabā*), a tetrachord (in the case of *ḥijāz*) or a pentachord (in the case of *nawā athar*). This system of the definition of the *maqām* by the addition of tetrachords is a feature of art music and is not found in popular or rural music, which remains within a narrow ambitus.

Modes within the octave, regarded as heptatonic, form the basis of the repertory of Arabo-Andalusian music and of the *nawba* genre, particularly in Morocco. In the resolutions of the Congress of Fez in 1969, they were definitively established and limited to a total of 26 named modes. They differ from the other modes of Arab music

in not using the three-quarter tone and depending on diatonic scales. They are not envisaged as a system of tetrachords but constitute melodic units within a narrow ambitus and can be identified by their signature.

Pentatonic scales had already been recorded by collectors in the Yemen, Sudan, Egypt, Morocco and Tunisia; the genre employing pentatonic scales is known as *rāst ʻabīdī* in Tunisia Its existence was not officially recognized in Arab music, under the name of *sullam al-khumāsī* (pentatonic scale), until the Congress of Khartoum in 1984.

Certain countries of the Arabian peninsula, such as the Yemen and the Gulf States, never had a technical vocabulary defining modality, but *sīkā* (or *segāh*), the mode *par excellence* of Arab music, is the basis of a great deal of Saudi music. A proposition was put forward in Yemen at the Congress of Sana'a in 1997 suggesting that the art music repertory of Sana'a, known as *ghinā ṣan ʻānī* (song of Sana'a), be provided with modal terminology borrowed from elsewhere. But support for the proposal was not unanimous, since it would have meant the introduction of foreign terms for such local traditional forms as *ḥusaynī ʻushayrān* (Sana'a's most widespread modal structure).

Between 1960 and 1970 political ideals envisaging the founding of a single Arab nation from the Atlantic to the Gulf prompted several attempts to identify similarities between associate modes with similar intervallic structures: 'The *rāst* known in Morocco by the name of *istihlāl* . . . corresponds in Tunisia to the second kind of *rāst al-dhīl* mode' (S. el Mahdi, *La musique arabe*, Paris, 1972, p.38). This approach encountered opposition in the late 20th century, on the grounds that if two modes set out from the same intervals, under different names, their commas and modal signatures will still vary, and they can be distinguished on that basis. Furthermore, the same degree may be felt as higher or lower in different modes making use of it. Practising musicians preferred modal degrees that were felt to be higher or lower than theoretical equalities. It has now been proved that the *rast* of the Middle East does not have anything to do with the Moroccan *raṣd*, the latter being pentatonic in concept.

Another idea ran through 20th-century theory: an obsession with transposition (*taṣwīr*). Once equal temperament has been introduced, nothing stands in the way of the transposition of a mode to different degrees of the scale. This has been a question of theory rather than practice. Although the idea of transposition may have been adopted in theory, and for some musicians transposition to various degrees of the scale of 24 quarter-tones represents a pure exercise in style and a technical tour de force, it has not won approval in the traditional repertory, and some transpositions have been condemned as contrary to the aesthetic of Arab music, although others are tolerated in practice.

(b) Rhythm. 20th-century theory was much concerned with rhythm, retaining the term *awzān* (sing. of *wazn*) or more usually *īqāʻāt* (sing. *īqāʻ*) and imposing these terms on contemporary practice. Lists of rhythms have been drawn up. Aḥmad Safarjalānī gives rhythm precedence over discussion of the intervals. However, this was reversed in the 20th century, whereby theoretical works open with the discussion of modes and follow it with the discussion of rhythm.

Muḥammad Dhākir Bey's *Kitāb rawḍat al-bahiyya fī al-awzān al-alḥān al-mūsīqiyya* ('The book of the garden of delights concerning the rhythms of musical melodies', Cairo, *c*1895) was the first book entirely devoted to rhythm as distinct from modality. The author distinguished three kinds in practical use in his time: Arab rhythms, Turkish rhythms and the Western metrics known as *afrank*. Western influence on rhythm in Arab music was already present when he was writing, and it increased throughout the 20th century.

The work of the Syrian ʻALĪ AL-DARWĪSH, a great expert on rhythm, enabled the Congress of Cairo to draw up an impressive, if not exhaustive list of the various rhythms known in the Arab world. They are not defined numerically, as in European metre, but by means of a combination of long and short values either with or without rests, the whole being articulated as a series of strong or weak beats determining the accentuation.

The concept of rhythmic cycles (*uṣūl, adwār*) in the art music of the Middle East has been increasingly abandoned. These cycles could be very extensive, for instance the cycle of 120 beats (known as the *zanjīr* or 'chain'), as recorded in Tawfīq al-Ṣabbāgh's *al-Dalīl al-mūsīqī al-ʻāmm* ('General guide to music', Aleppo, 1950), and a cycle of 176 beats (known as *fatḥ*) recorded at the Congress of Cairo. During the 20th century the structural concept of long cyclical time was relinquished in favour of short, metrical time, with a decline in standards of memorizing. This led to a need for written notation as an aid, although that need has not yet been generally felt in the area of rhythm, where the majority of percussion players still rely on oral tradition. In their interpretations, complex rhythmic cycles are reduced and resolved into small units, as in contemporary interpretations of the Syro-Egyptian *muwashshaḥ* verse form (where singers refuse to observe the rhythmic cycles literally). Thus a cycle in 24 or 16 beats is often reduced by performing musicians to simple cycles of three, four, six, eight beats and so on.

In the 1960s and 70s scholars discovered the polyrhythms practised in the Gulf States, particularly in the repertory of the pearl fishers on the seaboard of Bahrain, Kuwait and Qatar. This discovery has left its mark on Arab art music, which always used to be monorhythmically articulated. Polyrhythms have been exploited by composers such as the Egyptian Baligh Hamdī (1934–93), who introduced the principle into mass-market music.

There was a general tendency in the late 20th century to look back and use simple metres, a four-beat metre being increasingly popular, a phenomenon illustrated by the evolution of mass-market and 'light' music.

(c) Form. In previous centuries, the idea of form was linked to the idea of composition (*ta'līf*). This term, used in the past, was replaced at the end of the 20th century by the term *ibdā'*, a concept differing from its predecessor in indicating a concern with creativity and innovation, whereas the older term suggested conservation and deference to the past. In the second half of the 20th century, the concepts of *qālib* and *shakl* were adopted to define musical form, which was also determined by the emergence of the term *ughniya* (and its plural *ughniyāt* or *aghānī*), 'song'. It eclipsed all other terms and came into general use after World War II. Any discussion of form in the 20th or 21st century is implicitly understood to involve *ughniya*, a word probably coined in Egypt. It was preceded by the terms *al-ghinā' al-jadīd* ('new song';

Qastandī Rizq, 1946), or *al-aghānī al-hadītha* ('modern songs'; Mansī 1949), which occur in critical writings of their period and in themselves are evidence of a sense of conflict between the old and the new. In Egypt, the term *ughniya* very quickly replaced its predecessor, *ṭaqṭūqa*, which fell into disuse between 1930 and 1935. *Ṭaqṭūqa*, a simple couplet and refrain structure, served as the springboard for the successful emergence of the light popular song; it had been the province of the dancing women known as *almeh* in Egypt at the end of the 19th century, but on becoming fashionable it was adopted in the musical theatre (*al-masraḥ al-ghinā'ī*, hence *maghnā*, also designating the repertory of the musical theatre). Musical theatre became important in the revival of musical creativity in Egypt, the Middle East and North Africa (where the *café-chamta* of Tunisia is a distortion of the French *café-chantant*). The term *ughniya* also superseded the terms *mūnūlūj* (derived from French *monologue*), meaning a song for stage performance by a solo singer, and *alḥān* (melodies), which were still found in written Egyptian texts of the first quarter of the 20th century.

The *ughniya* is a useful and easy musical form based on the alternation of couplets and a refrain, performed by a solo voice to which a chorus usually responds, and accompanied by an instrumental ensemble that has grown steadily larger. Since 1960 the term *ughniya* has designated 'song' in a very wide sense, whatever its structure and organization: with or without a chorus responding to the soloist, with or without an instrumental prelude, and with or without free parts alternating with metrical sections. *Ughniya* is now a generic term embracing all contemporary composition appealing to a wide public, and sometimes, as in certain long songs performed by Umm Kulthum, has been substituted for the old term *qaṣīda*.

After 1960 various qualifying terms were introduced to define the concept of 'song' more precisely. They include *ughniya 'ātifiyya* (sentimental song, the most widespread genre in the Arab world), *ughniya siyāsiyya* (political song), *ughniya rīfiyya* (local song, country song), *ughniya sha'biyya* (popular or traditional song), *ughniya khafīfa* (light song), *ughniya badāwiyya* (Bedouin song), and finally, the latest coinage, *ughniya shabābiyya* (song of youth), the designation officially adopted at the Third Congress and Festival of Arab Music held in Cairo in 1994 for a genre known in Europe as *jil* or *gil*. The *ughniya shabābiyya* is distinguished from other kinds of song in reintroducing an element of dance, absent from the other genres. Around 1970 a number of other terms, linked to geography, came into use: including *ughniya khalījiyya* (song of the Gulf), *ughniya yamaniyya* (Yemeni song) and *ughniya sūdāniyya* (Sudanese song), which thanks to Sayyid Khalīfa made a considerable mark on the repertory of contemporary Arab song through the huge success of the *mambū al-sūdānī* (Sudanese mambo).

In the last decade of the 20th century there was a new move, principally on the part of Arab musicologists, to replace the term *ughniya* by *uhzūja*, another word for 'song', and to denote a type more closely attached to its roots.

Although the general term 'song' does tend to infiltrate North Africa, North Africans have remained resistant, and faithful to the idea of separate genres rather than a generalized formal concept. Algerian terminology, for instance, includes the genres of *sha'bī* (a popular urban song), *ḥawzī* (traditional urban song), and RAÏ, while in Morocco the term *malḥūn* denotes the traditional urban responsorial song structure of couplets alternating with the refrain. The term *ughniya* is not used for these specific genres.

The word *ughniya* is also seen as opposed to the classical repertory, which was revived by common consent, particularly in the second half of the 20th century, and retains many specific terms inherited from past centuries. There are two aspects to this traditional repertory. The first perpetuates a series of forms handed down from previous centuries and now in current practice. They are known to us from accounts in written texts and treatises. In the Middle East, the dominant forms are *bashraf* (instrumental overture), *samā'ī* (instrumental prelude or interlude), *lūngha* (instrumental piece with a bright, lively conclusion, a term probably derived from the Jewish *klezmer* repertory as *hongah*), *mūwashshaḥ* (composition for chorus, usually based on a rhythmic cycle in a semi-classical manner), *mawwāl* (sung and improvised dialect poem), *taqsīm* (instrumental improvisation) and *waṣla* (or suite). The *waṣla* survives in Aleppo, Syria; it has now disappeared from Egypt (*see* SYRIA, §2(iii)(a)). The *waṣla* unites several of the forms mentioned above in consecutive performance, with modal unity as the common denominator, and featuring a small ensemble and solo singer in whose part improvisation figures prominently. The other kind of suite is the *nūba* of North Africa, for chorus and instrumental ensemble, except in Algeria, where a solo voice is dominant and a chorus of members of the instrumental ensemble responds to the soloist (at Algiers and Constantine) The term *nūba* antedates *waṣla*, which does not appear in texts until the 19th century. A form with a different name is the *dawr*, a vocal piece for soloist and small chorus originating in 19th-century Egypt; it fell into decline and died out in Egypt in 1962 with the death of its last performer Ṣāliḥ 'Abd al-Hayy. The *dawr* was also maintained in Syria and was revived in the latter part of the 20th century, through the efforts of a movement outside the Middle East (particularly strong in Paris) promoting a return to the music of the earlier part of the century.

The second aspect consists of orally transmitted local forms within their original geographical regions. They comprise the Iraqi *maqām*, a suite of free and metrical pieces; the *ṣawt* of the Gulf States, a solo song performed to the accompaniment of the *'ūd* and the small double-headed drums, *mirwās*; and the *ghinā' ṣan'ānī* (song of Sanaa), another suite in several movements.

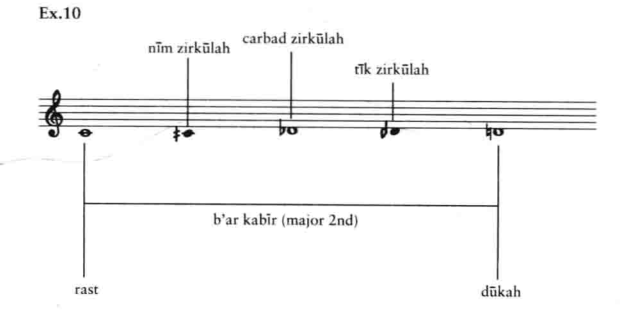
(iii) Ensembles and instrumental music. The *takht* still existed in the Middle East at the beginning of the 20th century, although the instruments of which it consisted were seldom the same: the *qānūn* and violin featured most prominently, sometimes with the *'ūd*. Although the *takht* did not die out, it retreated into the background in the second quarter of the 20th century as the *firqa* orchestra rose to prominence. The *firqa* consists of ten or more members, in essence a group of violins with a *qānūn* and other traditional instruments (*nay*, *'ūd*), together with cello, double bass and percussion; bongo drums have become standard. This kind of orchestra of variable composition, first found in Egypt and characterized by its increasing borrowing of Western instruments has conquered the Arab world, largely through the medium of

radio. The *firqa* was countered in the 1960s by the creation in Lebanon of an orchestra with the same number of players but different instruments, in which the accordion and European piano feature prominently. The Egyptian type of *firqa*, however, predominates and has spread to the Arabian Gulf since 1970.

In the second half of the 20th century three types of *firqa* developed: the strictly instrumental ensemble, whether accompanying a solo singer or not; the ensemble based on a large chorus accompanied by instruments; and finally the type known as the *firqat al-funūn al-sha'biyya* (ensemble of popular arts), combining instruments of art music with rural instruments such as the *zūrnā*. This last-named type of *firqa* has also reclaimed the genre of dance and given it prominence. The larger such ensembles became, the more usual has it been to find a conductor (*qā'id al-firqa*), who has now become the key element of the *firqa*, regulating the relationships between the various instruments which once used to break into free and spontaneous improvisation. Unison now reigns supreme, and the heterophony of the past has tended to disappear. Around 1986 a general reaction against the *firqa* in Baghdad led to the emergence of a specific kind of ensemble known as the *firqat al-bayāriq*, consisting solely of traditional instruments, but with the *'ūd*, *qānūn*, *ṣanṭūr* and *nay* grouped into instrumental desks, with support from a percussion quartet. The notable feature of the ensemble was its rejection of all Western instruments. A parallel development has been the emergence of permanent symphonic ensembles: the Cairo Radio Symphony Orchestra (1934), which in 1959 became the Cairo Symphony Orchestra; the Baghdad National Symphony Orchestra (1959); the Tunis Symphony Orchestra (1969); and the National Symphony Orchestra of Damascus (1992).

The importance of new and modernized instruments led in turn to the rise of a new phenomenon, the *tawzī'*, literally 'arrangement' or 'orchestration'. It is found principally in 'light' music, where the composer known as *mulaḥḥin* (melodist) is now associated with the instrumental arranger (*muwazzi'*).

Such developments generated the production of a good deal of instrumental music in the second half of the 20th century, often pieces that were originally songs and had been transposed for orchestral ensemble. The first transpositions of the sung *nūba* for orchestra were made in Algeria by Merzak Boudjemia (1933–85). The concept of descriptive music (*mūsīqā taṣwīriyya*) appeared in the 1930s with the emergence of the Egyptian film industry and is still evolving. The instrumental overture (*iftitāḥ*) became increasingly common; its purpose was to introduce the song (*ughniya*). In Egypt the philosopher Fu'ād Zakariyyā, in his *al-Ta'bīr al-mūsīqī* (Cairo, 1956), denounced vocal music, traditionally the basis of Arab music, for its lack of expressive potential. He argued for the development of a strictly instrumental and symphonic repertory which would allow new expressivity to develop.



(iv) Notation. Another development throughout the 20th century has been the adoption of European notation. This phenomenon was greatly encouraged by the proliferation of European military and brass bands in the Arab world, many with Turkish bandmasters with Western training. Musicians now had to accustom themselves to written notation, something that had also been introduced by European missionaries to the Middle East who transcribed eastern hymnology for use in worship by Arab Christians. 1867 saw the publication in Beirut of *Mazāmīr wa-tasābīḥ wa-aghānī rūḥiyya* ('Psalmody, chant and religious hymns') by the American missionary Edwin Louis. His work was followed in Lebanon by that of the Maronite monk Būluṣ al-Ashkar (Paul Achkar, 1881–1962), who transcribed the music of the Maronite religious office. The first publication uniting notated sacred and secular music was the work of the priest Jirjī Ibrāhīm al-Rāhiba al-Dimashqī (1875–1920), in a collection of 24 pages entitled *al-Rawḍ al-mustafīd* ('The garden of profits'), containing transcriptions of *adwār*.

In the first school of music in Cairo (founded by Manṣūr 'Awwād and Sāmī al-Shawwā in 1907) teaching concentrated mainly on Western notation (*'ilm al-nūta*, the 'science of notes'). Musical notation was soon faced with the problems of adaptation inherent in the quarter-tone and a symbol for an accidental to represent it. No one symbol has ever been generally adopted, but the symbols ♭̸, ♯̸, and + have come into use to designate a half flat (*nīm*) and half sharp (*tīk*) (see ex.10). Similarly, the question of whether music should be notated for reading from right to left in the Arab way or left to right in the Western way was considered in the first quarter of the 20th century, and the Western way was generally adopted.

While the use of notation was an obvious sign of emancipation and progress in the first half of the 20th century, its significance was to develop during the second half of the century, when an increasingly large body of works recording the heritage of Arab music was assembled and published. It included several encyclopedic works transcribing *muwashshaḥāt* (Aleppo, 1955), or *muwashshaḥāt* and *adwār* (Cairo, 1959–63); the Tunisian *nūba* genre appeared under the title of *al-Turāth al-mūsīqī al-tūnisī/Patrimoine musical tunisien* in nine instalments from 1963 and various attempts to notate the 11 Moroccan examples of the *nūba* have been made between 1931 and the present day. In general these transcriptions do not take account of any variants, but offer a standard version of the works concerned and expect performers to follow it. However, interesting variations have appeared in transcriptions of the same piece by different hands; at this level, the authority of whoever is transcribing the piece is not questioned.

At the same time, notation has extended to song, and almost all the members of the *firqa* ensembles read printed music. These notations represent a 'skeleton' to which the interpreter can add ornamentation and creative touches. In 1983 a new system of notation that addressed ornamentation was put forward by the Egyptian Al-Hītamī (see ex.11). The proliferation of notated versions for performance of both the traditional and the modern repertory still continues to present problems in the field

Ex.10

Ex.11

of interpretation, which is no longer determined by transmission of the style of a certain school or branch of a school.

7. Musical instruments.

(i) Pre-1918. Early acoustic recordings from the beginning of the 20th century, such as those of Yūsuf al-Manyalawī and Salāma Ḥijāzī (see §5(ii)) give some idea of the role of the accompanying instrumental ensemble, providing rhythmic support, ostinato and drone accompaniment to vocal improvisations, gap-filling echo repetitions or variations, pre-composed but heterophonically realized concertante passages with or without the vocalist and, on occasion, a solo *taqsīm* improvisation. The late 19th-century Egyptian *takht* ensemble would typically consist of a small frame drum (Riqq) and two or three melody instruments chosen from the *'ūd*, violin, *qānūn* and *nāy*. Ensembles of similar composition (with spike fiddle for violin) have supported the singer for several centuries, but the various traditions have tended to make different choices between pairs of functionally equivalent instruments. In Persia and Iraq we find the *santūr*; in Turkey and the rest of the Arab world the *qānūn*. In Persia and Turkey long-necked lutes (Setār, Ṭār and *ṭunbūr*) predominate; in the Arab world the short-necked *'ūd* (and its North African variant, the *kwītra*). The traditional Iraqi ensemble includes a spike fiddle (*jōza*) to which correspond in Egypt the violin and in North Africa variously the violin, viola and boat-shaped fiddle (*rabāb*).

Unfortunately, hardly any specimens survive from before the 19th century, and the evolution and pre-modern geographical distribution of such instruments cannot be established with precision. In the absence of detailed written descriptions, it is only with the onset of an extensive iconography (the principal media being painting, ceramics, metalwork and ivory) that variants can begin to be distinguished.

The most frequently represented instrument is that most often described, the short-necked lute (*'ūd*; fig.1). By the early Abbasid period its gut or silk strings, plucked with a plectrum, were arranged in four courses normally tuned in 4ths. Al-Kindī (*c*801–*c*866) provides details on materials, dimensions and construction, as does Ibn al-Taḥḥān (*d* after 1057). Although later writers generally withhold such information and do not discuss instrumental technique, it is clear that constant attempts were made to refine the instrument and improve its sonority. Its range was enlarged by the addition of a fifth and then later a sixth and seventh course, and thinner wood was introduced. In Timurid and Ottoman miniature paintings we encounter a variant (*shahrūd*) with an extremely large belly, but we do not know whether this was widely used in the Arab world.

With regard to other instruments, the rich variety of names indicates little more than the range available at various times and in various places. There is little description, and less to help pinpoint any technological changes that may have been introduced. Even al-Fārābī (*d* 950) was less concerned with the structure of instruments than with the scales that could be produced on them. Thus although membranophones and idiophones are mentioned in the introduction to his *Kitāb al-mūsīqī al-kabīr*, none is described in the section on instruments. The categories exemplified there are plucked chordophones (e.g. *'ūd*), aerophones (generically called *mizmār*, pl. *mazāmīr*) and bowed chordophones (Rabāb being the only example). A further classificatory distinction is maintained between instruments on which each note is produced by a separate open string (e.g. the harp, *jank*), and those on which the strings are stopped. Ibn Sīnā (Avicenna, *d* 1037) refined al-Fārābī's criteria in classifying both chordophones and aerophones (e.g. he notes the presence or absence of a reed). However, he too ignored membranophones. Ṣafī al-Dīn (*d* 1294) pays even less attention to instruments; it is symptomatic that his comments in an early draft of the *Kitāb al-adwār* on the tuning of the *jank* and Qānūn (plucked zither) are omitted from the final version.

The most informative later texts are Persian: the anonymous 14th-century *Kanz al-tuḥaf* and the *Jāmi' al-alḥān* ('Compendium of melodies') by 'Abd al-Qādir (*d* 1435). The *Kanz al-tuḥaf* lists only nine instruments but describes them in more than usual detail, mentioning materials as well as proportions and construction. The *Jāmi' al-alḥān* cites a large number of chordophones, but concentrates on defining the number of strings and the nature of the accordatura, aspects closely related to standard theoretical concerns. But 'Abd al-Qādir's list of instruments reflects the wide range of cultures he had encountered in Samarkand, and it is unclear how many of the entries in it were at all well-known in the Arab world. The summary that now follows is therefore tentative (and chronologically capricious).

Alongside the *'ūd*, plucked chordophones included the long-necked *ṭunbūr*, the popularity of which seems to have faded rapidly after its Abbasid heyday. It was first associated with Persia, and then with Anatolia, but its prominence in a later manifestation as a major instrument of Ottoman art music did not lead to its reintroduction in the Arab world (see §5 above): the long-necked *buzuq* of Syria/Lebanon is typologically different. Barbed lutes (Rabāb) seem to have flourished mainly in Persia and Central Asia, but might also have enjoyed brief favour in Iraq at least, as one is depicted on an Abbasid ceramic.

1. Bayāḍ sings and plays the 'ūd (lute) for Riyāḍ and her companions: miniature from a 13th-century MS, 'The Story of Bayad and Riyad', probably from Spain (I-Rvat arab 368, f.10r)

The *jank* is one of the earliest instruments to be mentioned and depicted, and in Timurid and Ottoman miniature paintings it frequently appears as an upper-chested harp with a compass of at least three octaves. By the 18th century, however, it was extinct, leaving the field among instruments with unstopped strings to the SANṬŪR and *qānūn*. Both of these are trapezium box zithers, but of different shapes, the *qānūn* having one rectangular side. They also differ in playing technique, the *sanṭūr* being hammered, the *qānūn* plucked with plectra inserted into a ring on each forefinger. By the 19th century the *qānūn* had some 24 triple courses of gut strings, but the flap bridges, which can be raised or lowered to effect changes of mode, are a more recent innovation. The *sanṭūr* has metal strings, and its bridges rest directly on the wooden table, whereas the *qānūn*'s single bridge has five feet resting on skin glued over an aperture in the table.

Bowed chordophones, previously termed *rabāb*, are of two quite distinct types. The more common was a spike fiddle called *kamanja* (*see* KAMĀNCHEH) (from the Persian for 'bow'), except in Iraq where it is currently called *jōza* ('coconut'). It has horse-hair strings and a skin table glued over the resonator. It is held vertically and bowed like a viol, movement from string to string being effected by turning the cylindrical neck on its axis (in Morocco this technique is currently employed on the vertically held viola). The European viola and violin entered the Arab world during the 19th century, and the latter rapidly displaced the indigenous spike fiddle, except in Iraq. In North Africa, however, the result was coexistence with the other form of bowed chordophone, a boat-shaped fiddle with two strings termed *rabāb*, which in Morocco retains the vital role of ensemble leader projecting the core melody line.

From early references to aerophones it is not always clear whether the instrument had a reed, and if so, whether the reed was single or double. Reed aerophones (generically called *mizmār*) are sometimes mentioned in court contexts, possibly in connection with dancing, but they were generally used in outdoor performances, the shawm in particular being central to the military and ceremonial band. The BŪQ, a form of horn pipe in three sections (comprising mouthpiece, central section with finger-holes, and bell), was for a time an essential adjunct to court music in Spain, possibly serving to link it to a more popular repertory. The eventual exclusion of reed instruments from art music ensembles has left as the sole possible aerophone the rim-blown obliquely held flute (*nāy*, from Persian NEY: 'bamboo'). It consists of a section of bamboo with three or four nodes into which are cut six finger-holes and one thumb-hole at the back. The *nāy* is important, both symbolically and in practice, for many Sufis, and became particularly associated with the Mevlevi order founded by JALĀL AL-DĪN RŪMĪ, but it is still only sporadically present in the art music domain.

Idiophones are rarely mentioned in writings. They essentially occur only in the form of castanets and finger cymbals used by dancers. Among membranophones the frame drum (*duff*) is the instrument most frequently cited and depicted. In Timurid and Ottoman miniature paintings of the 15th century to the 18th it is normally held vertically, face high, and is depicted with five sets of jingles inserted into the frame. The single-headed goblet drum DARABUKKA is a relative newcomer in art music contexts.

The distribution of instruments by gender has varied considerably over the centuries. During the Abbasid period we read of many female entertainers (*see* QAYNA) who were celebrated performers, especially on long- and short-necked lutes. In Timurid and Ottoman miniature paintings of the 15th to 18th centuries the drummer and the harpist are frequently female. But the harp became obsolete, and it is conceivable that the development of a slightly smaller form of frame drum with a new name, *riqq* (and often with rich mother-of-pearl inlay), was associated with its increasing use in the all-male 19th-century *takht* ensemble. Whereas women in the hareem might have been familiar with most of the main art music instruments, as public performers female instrumentalists have until recently had only a restricted range of percussion instruments available to them.

(ii) Post-1918. Classical instruments have undergone technical modernization. The replacement of gut strings by metal or nylon strings is becoming standard, and among other innovations are the adoption from the West of certain materials that are more durable than their predecessors, for instance the skins for certain drums: the *darbukka*, a goblet drum, and frame drums such as the *riqq* and *bandīr*, now have stronger heads, but as they are often in man-made materials the traditional sound is not the same. The QĀNŪN had a system of brass levers added, which liberated the left hand and allowed playing in octave, transforming the aesthetic of the instrument.

The *nay* reed flute of the Mevlevi dervishes is now in the public domain. The first musician unconnected with the dervishes to introduce this change was the Egyptian flute-player Amīn al-Būzarī (*c*1855–1935). The *nay* has also been introduced into countries where it was not previously established, such as Morocco and Tunisia, where it has been very successful since 1933, thanks to the Syrian player ʻAlī Darwīsh who taught the most famous Tunisian exponent, of the instrument, Ṣalāḥ al-Mahdī (*b* 1925), as well as his pupil Muḥammad Saada (*b* 1938). There have been attempts to modernize the reed flute by adding keys, but they were abandoned.

The last decades of the 20th century have seen the disappearance of some of the traditional instruments of art music, such as the *ʻūd ʻarbī* or Arab *ʻūd* with four double strings, previously known in Morocco as *ʻūd ramāl* Elsewhere it has been replaced by the Egyptian *ʻūd*, which has five double strings and is considered a more flexible and sophisticated instrument in performance. Finally, the electronic amplification of instruments is becoming increasingly common, and musicians are now often incapable of playing without amplified sound, producing multiple echoes that provide a kind of ornamentation.

The 20th century saw the invention of new instruments such as the eastern piano, on which work began in Egypt in 1914, spurred by moves to introduce harmonies into what had always been monodic or heterophonic music. Their construction aimed to solve the problems involved in the quarter-tone controversy of the time. However, they were abandoned because the instrument failed to resolve the technical problem of the transposition of Arab modes, and its tone colour did not really seem to suit the spirit of Arab music. An eastern trumpet (with an extra valve) was made by the Lebanese Nasīm Maalūf (*b* 1941) in 1982, but it was not widely adopted.

While the end of the 19th century saw the successful incursion of the violin into Arab music, replacing the tentative use of the viola d'amore in previous centuries, there was large-scale introduction of European instruments, including the cello and double bass, from the second quarter of the 20th century onwards. As important as the introduction of these was that of the accordion, a key instrument in Lebanese and Sudanese music since 1960. Other instruments such as bongo drums were introduced when Afro-Cuban music became fashionable. In the second half of the 20th century the saxophone was introduced into Sudan. Less frequently used is the oboe, for instance in the ensemble of the Lebanese Marcel Khalīfé (*b* 1951). The electric guitar and synthesizer are also played in light music ensembles. This introduction of Western instruments and the concept of the instrumental desk, also borrowed from the West, has led to the formation of the modern Arab *firqa* orchestra. Such instruments also increase the tessitura of the music, which was formerly confined to three octaves but can now extend to four or five. The idea of intensity and nuances has also been introduced, as well as that of recitals for solo instruments (the *ʻūd*, *buzuq*, *nay* and *qānūn*). In North Africa the European piano, the saxophone and less commonly the clarinet have become part of Arabo-Andalusian orchestras together with the violin and viola, that had already been adopted at the end of the 19th century. Under the name of *snitra* the mandolin has been introduced into the Andalusian-Algerian orchestra.

New instrumental tutors have been written, not simply in response to the perceived need for musical notation, but also as systematic teaching manuals based on exercises, a novel concept for Arab music. The first of these tutors, by Muḥammad Dhākir Bey, was for the *ʻūd* lute and was published in Cairo in 1903. Next came the first tutors for the *qānūn* board zither by Muṣṭafā Riḍā and Maḥmūd Aḥmad al-Ḥifnī (Mahmoud Ahmad El Hefny; Cairo, *c*1935), for violin by ʻAbdul Ḥalīm ʻAlī (Cairo, 1939) and for *nay* by Maḥmūd ʻIffat (Cairo, 1968). Several accordion tutors have come on the Arab market since 1980. Tutors have also been published for harp (Cairo), piano (Cairo), saxophone (Casablanca) and *darbukka* (Aix-en-Provence, France). Some of these tutors promote a clear distinction between teacher and pupil, whereas their close relationship was the basis of traditional teaching.

II. Folk music

1. Introduction. 2. History, theory and sources. 3. Vocal forms: (i) The *qaṣīda* (ii) Strophic forms (iii) Non-strophic forms. 4. Music and performance: (i) Music (ii) Melodic structure (iii) Song types and their social functions (iv) The poet-musician. 5. Musical instruments: (i) Idiophones (ii) Membranophones (iii) Aerophones (iv) Chordophones.

1. INTRODUCTION. Arab folk music presents a multiplicity of musical idioms and vocal and instrumental genres. They include several forms of religious chanting, work songs, narrative pieces, didactic and lyric songs, and songs and dances that provide entertainment at weddings and other special occasions or social events. Performed by amateurs and professionals or semi-professional specialists, these disparate genres reflect a wide range of human responses to varying conditions – from nomad encampments in desolate arid zones to small villages and urban centres.

Many factors contribute to this diversity. Arab folk music is an intricate mosaic involving peoples of different ethnic groups and sub-groups who speak and sing in numerous dialects of Arabic (and sometimes in languages other than Arabic). Although predominantly Muslim, peoples of the Arab world adhere to widely differing interpretations of religion, and their related concepts of music. Arab folk music and dance traditions also fulfil multiple functions on both the individual and community level.

These traditions exist alongside the urbanized art music which became established and widely accepted in the Abbasid era (750–1258; see §I above). The Islamic empire covered a vast expanse of territory stretching beyond the Arab world of today, from Central Asia to the Atlantic. Many genres which existed prior to the advent of Islam survived and preserved their own vitality, but the spread of Islam also had an important unifying impact. Through a long process of interaction between many diverse peoples, individual repertories within Arab music manifest

an overall kinship. This is expressed in linguistic and musical affinities which cut across political boundaries.

Without over-generalizing, it is possible to single out salient common traits and distinctive particularities. The great importance of poetry and a predominantly vocal conception of music is characteristic of both nomadic and sedentary Arab peoples. A rich palette of styles of vocal production has developed. The vocal conception of music also applies to dance genres, which are usually accompanied by singing and clapping. Even dances accompanied by instruments frequently include sung verses.

The numerous genres of folksong surpass classical songs in both quantity and fecundity. Poetry connected with folk music and dance is primarily an accompaniment to ceremonial and other events, not so much a mode of literary expression as such. The poetry is based on consistent forms and methods of composition and rendition. Responsorial forms are frequently used, and these highlight the importance of audience participation. The poet-musician has a distinguished position as a narrator and mediator of events, and as a spokesman for fellow members of the community.

The use of instruments varies within the traditions and, although names vary, often the shape and playing techniques are similar.

2. HISTORY, THEORY AND SOURCES. Arab art music has been systematically described, with its theory perpetuated in numerous scientific and literary works. Folk music, on the other hand, presents a different and problematic situation. A wealth of valuable information about folk music and dance exists, but it is scattered and generally unsystematic. Moreover, it is derived from various categories of sources which are often not directly concerned with folk music for its own sake.

The problem of sources relates to the history of basic concepts about music used by Islamic legists and by intellectuals. The Arabic word *ghinā'* ('singing') has been used in theory and practice as a general term assigned exclusively to the art music which developed after the advent of Islam. Consequently, folk and religious music were not considered as music *per se*: their various forms received names denoting and emphasizing their verbal character, as vehicles for sung texts. Purely instrumental music was categorized in relation to musical instruments and classed with forbidden amusements.

A noteworthy rare attempt to provide a scientific distinction between art music and folk and religious music was made by the eminent Arab historian and sociologist Ibn Khaldūn (*d* 1406). In his chapter on the 'craft of music (*ghinā'*)', he characterizes art music as based on well-established rules and conventions, concluding that long training is necessary to acquire skill. By contrast he sees folk music as simple and spontaneously created without special instruction: 'Many people are gifted to achieve it by nature . . . for we find people who are by nature gifted in the metres of poetry, the rhythms of dance and similar things (*Prolegomenes*, V, 31)'. Interestingly, his first illustration of this natural aptitude relates to Qur'anic recitation, which he distinguishes sharply from art music. As an example of folk music, he refers to pre-Islamic Arab nomads' chants and songs enhancing their social gatherings and pilgrimages to the shrine of the black stone, the Ka'ba at Mecca.

The term *samā'* refers to both the act of hearing music and to music that is heard (in a spiritual context). A rich and varied literature exists on this topic, dealing with the admissibility of music from legal, theological and mystical points of view. An interminable debate about the use of music in ritual dates from the early Islamic period onwards (see above, §I and ISLAMIC RELIGIOUS MUSIC, §I, 2 for further discussion). Quite aside from their central theme, these writings constitute a mine of information about different genres of singing, dances and typological details relating to musical instruments. Regardless of whether the writer wishes to defend or prohibit a particular instrument, the organological information is useful, and usually hard to find in theoretical treatises on music.

Jurists and theologians have used the term *malāhī* ('diversions') to designate musical instruments, assimilating them into the category of forbidden types of amusements. In the same spirit, another related term, *la'b* ('pastime, game'), has been used to designate the dance of the Sufis or dervishes to attain union with God. (The term still designates certain types of folk dances.) In their attack against the Sufi mystical dance, the Islamic jurists likened it to non-Islamic genres such as the 'Golden Calf' dance or Christian dances, thus rendering it heretical (*bid'a*).

Religious prohibitions extended to other types of popular entertainment, with or without dance. The legists condemned pre-Islamic rituals which were enlivened with impressive music, such as the celebration of *now-rūz* (the ancient Persian New Year) and the different Nile festivals in Egypt. At *now-rūz* and other festivals in Egypt and Syria, dolls decorated with beautiful clothes and jewellery were displayed, serenaded with music from oboe-type instruments and drums. However, descriptions of travel writers attest that many non-Islamic customs persisted, with their attendant music. In his travel memoirs, the 11th-century Persian writer Nasīr-ī Khusraw describes a ceremony for opening a dyke on the river Nile: an ensemble of long trumpets and drums playing appropriate melodies was followed by a procession of 10,000 horsemen and 10,000 others.

These huge popular open-air ceremonial performances and parades were occasions for itinerant actors, jesters, shadow puppeteers, storytellers, dancers, singers and instrumentalists to display their talents. They were typical of urban and semi-urban areas. Late 18th-century European travellers described these perfoming practices, and in Egypt systematic surveys of folk music and dances were carried out by Villoteau (1809) and Lane (1836).

3. VOCAL FORMS. Text and music are indissolubly linked in Arab folk music. There are many types of sung poetry which differ from each other in prosodic form, in mode of performance and in their social or musical functions.

(i) The qaṣīda. Sometimes translated as 'ode', this is one of the most ancient forms of sung poetry. It was originally created by Bedouin nomads in the Arabian desert, and its use now spans classical and popular traditions.

The classical *qaṣīda* consist of many lines, sometimes over 100. Each line is divided into two equal parts and subdivided into feet. Each *qaṣīda* has a single rhyme and uniform metre (any one of 16 traditional metres). In subject matter the *qaṣīda* follows a schematic development of themes and images. The basic compositional concept is that each line should be independent and contain a complete, self-sufficient idea. Hence the poet's originality is measured by his ability to reformulate conventional material and to invent additional lines. Natural variants

may occur through lapses of memory and the dependence on oral transmission, so the order of individual lines can seldom be established accurately. The poems are never sung in exactly the same way or in their entirety; original words and whole lines are often changed. Even when set to a standard tune, with the text only slightly changed or with lines rearranged, a *qaṣīda* is accepted as 'new' by singers and listeners.

In North Africa, the *qaṣīda* is considered a religious genre, usually performed by professional *qaṣṣādīn* at Muslim festivals. In Yemen, a poetic form akin to the *qaṣīda*, the *nashīd*, is performed by professional *nash-shādīn* in similar contexts.

The folk form is known as *qaṣīda*. It differs from the classical *qaṣīda* both in prosodic structure and in language, which may contain colloquialisms. Musical structure takes precedence over textual metre. The classical and folk forms have similar performing practices and social functions, and are always sung with gravity.

(ii) Strophic forms. Short strophic forms are prevalent in Arab folk music, particularly quatrains with or without refrains. Quatrains exist in differing forms, according to genre, rhyme scheme and number of syllables per line. Names vary regionally, e.g. *'atābā*, *ubudhiyya*, *majruda*, *murabba'*, *muthamman* and *'urūbi*.

The *'atābā*, found in Lebanon, Palestine, Jordan, Syria and Iraq, has an *AAAB* rhyme scheme, the final line ending with the syllable *-āb* or *-āba* (the last syllable of the word *'atābā*). Here is an example of an *'atābā* stanza:

Bani-l-Ḍabbah bid-deyr ḥamūlī
Idha bindāq bi-l-hayja ḥamūlī
Bnifsi fī mḥabbatkum ḥumūlī
Il-shruqi wa-l-m'anna wa-l-'atāb.

(Sons of Dabbah, you form a clan in Dayr al-Asad.
When I am in trouble in battle, they defend me.
My load becomes lighter because of your love.
[Let us sing] the *shruqi*, the *m'anna* and the *'atāb*.)

Akin to the *'atābā* is the Mesopotamian *ubudhiyya* (also *ubuthiyya*; *see* IRAQ, §III, 3). As with the *'atābā*, the last line of each stanza identifies the form, ending with *-iyya* or *-dhiyya*. Both the *'atābā* and *ubudhiyya* are soloistic improvised song types, often performed antiph-onally by two poet-musicians.

Another type of quatrain is known as *murabba'* in Lebanon, Syria, Jordan and Palestine; *majruda* in Libya. The lines usually have eight syllables; the rhyme scheme is *AAAB*, *CCCB*, etc. These songs are very rhythmic and always accompanied by hand-clapping. They include participation by members of the audience who repeat the final line of each stanza or sing a refrain. A related type, the *muthamman*, is found in Lebanon, Syria and Israel. It has eight seven-syllable lines to a stanza (rhyme scheme: *ABABABAC*, *DEDEDEDC*, etc.); the refrain does not rhyme with the stanzas (see above, ex.8).

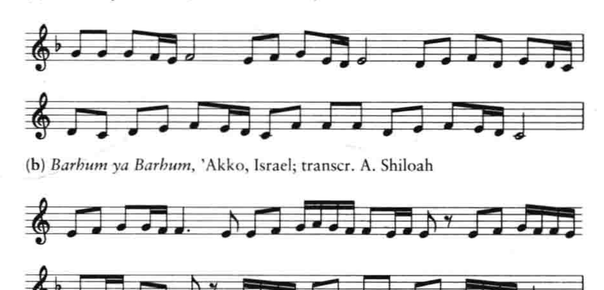
The *murabba'* and *muthamman* are used without the refrain in disputation songs known as *ḥiwār*, *mu'āraḍa*, *'urūbi* (North Africa) and *mani* (Turkey). In this largely improvisational genre two protagonists (men or women; sometimes a man and woman) compete, exchanging verses. In another quatrain form, the *m'anna*, the rhyme scheme is *AABA*. The audience sings a refrain consisting of the final line of each stanza. In contrast with the free and melismatic character of the soloist's material, it is set in a strict rhythm.

Arab folk music also has genres with stanzas of more than four lines. For instance, the Egyptian *mawwāl* has five lines (*aaaba* rhyme scheme); the short ZAJAL has six lines; the Baghdadi *mawwāl* has seven lines (*AAABBBA*). In these forms the first three lines end with homonyms.

Aspects of musical structure and performing practice also link these short poetic forms. These include the recurrence of certain vowel and consonant sounds, repetition of a line or part of a line, the addition of meaningless syllables and the use of refrains.

There are three main types of refrain. One reiterates the last line of each stanza (and consequently changes from one stanza to the next). Another type is the formulaic refrain, using a phrase (or phrases) unrelated to the song text, repeated exactly throughout the song, as in the *muthamman*. A third introductory type of refrain is recognizably derived from a pre-existing source (often an older non-strophic group song).

An example of formulaic refrain is *Ḥalālī ya mālī* ('the girl or the money'). Although this may have originally belonged to one particular song, it is now found in at least three genres, among them the *muthamman*. Some formulaic refrains use meaningless phrases, for example a genre known as *dana dana* from the Hadramawt region of Yemen. The soloist improvises stanzas and members of the audience sing the refrain *Dana dana ya dani/Ya dani dana dana* (sometimes preceded by a meaningful refrain line). Performances can last the whole night.



The introductory type of refrain consists of either an independent line or a formulaic opening line (or lines) taken from the first stanza. These lines identify a well-defined genre, such as *'alā dal 'ūnā*, *mijānā* and *rozānā*. The genre that has been most studied is *Barhum ya Barhum* (diminutive of 'Abraham, O Abraham'), well known in a wide area stretching from Egypt to Syria. In all versions the last two lines of the verse are repeated, preceded by exclamations such as *eh wallah* ('O God!'), *ya yumma* ('O mother!') or *ya weyli* ('woe is me!'). The song was created in the first two decades of the 20th century, and rapidly became popular. In its various versions it airs a great variety of topics and current social concerns, but the tune and consistent basic structure have remained relatively unchanged (ex.12). This pattern of stable tune and widely varying text seems characteristic of all the genres whose refrains come from pre-existing sources.

(iii) Non-strophic forms. This category comprises a repertory of social group songs consisting of simple exhortatory or exclamatory formulae which accompany dances. It is a type commonly used for weddings, work,

Ex.12

(a) *Barhum ya Barhum*, beduins of Sinai; transcr. A. Shiloah

(b) *Barhum ya Barhum*, 'Akko, Israel; transcr. A. Shiloah

processions etc., and includes many texts and few tunes. An example is the Yemeni harvest song, *mahjal*. The *far'awiyya* and *mḥorabe* are also typical. They begin with a phrase known as the *ṭal'a*, which is then repeated as a response after each solo verse. The solo verses are not related to each other or to the *ṭal'a*. Some *ṭal'a* phrases have religious connotations: 'God is the greatest, O my land, glorify him' (see below, ex.15). Others relate to a particular occasion or function: 'The fair one stepped out of the bath'; or 'Greet your guests, O Abū S'ud'.

These songs are usually accompanied by hand-clapping and sometimes by a kind of marching dance. In one such dance, the *raziḥ* of Sinai and Yemen, the *shallāl* (precentor) recites the first half-verse and the other participants sing one of the hundreds of traditional and very ancient refrains, such as 'Praise to him who passeth not away/and whose power never ceaseth'; or 'God give us good fortune'.

The same category includes the genres *tanṣūrah*, *hanhunnāt* and *zaghārīd*. These are sung by women during wedding festivals. They consist of improvised verses which start with the interjection *ayha* or *iyha* intoned at a high pitch, followed by verses sung in a fast parlando style and interrupted by the traditional *yuyu* (ululation). There are songs for the bridegroom (e.g. 'O our bridegroom, we are your guests today/Prepare the bed for us and leave your house for us'; or 'No one is like our bridegroom/The wedding is celebrated in his uncle's house') and others for the bride (e.g. 'Your anklet, O beautiful one, resounds/Your skirt, this one of pepper colour, has in it life and death'; or 'Walk gracefully, O beautiful one, O magnificent one/O rose which has bloomed in the garden').

This category also includes the *hōsa* (an Iraqi Bedouin genre) and various religious processional songs, such as songs of pilgrimage to Mecca or to the tombs of saints, and songs for the *mawlid* (birthday of the Prophet). For instance, in the *mawlid* procession in Libya the formula 'Pray, O worshipper, for the Magnificent (Prophet)' is continually repeated.

Epics also belong to this category. They are popular among all classes throughout the Arab world. They are associated with the *shā'ir* (bard or poet-musician), who sings them while accompanying himself on the *rabāb* (one-string fiddle).

In villages and towns there are also poet-musicians who function as entertainers, particularly during the evenings of religious festivals. They usually perform in coffee-houses, captivating the audience with their lively and dramatic manner of narration as well as with the story itself. Some poet-musicians specialize in particular epics: the 'Abū Zaydiyya', for example, perform the *Abū Zayd* romance about the life and adventures of the epic hero Abū Zayd al-Hilālī. This narrative is supposed to be based on events which took place in the 9th century. During a single evening of Ramadan the same epic, in various versions, can be heard in Libya, Yemen and Egypt. There are also epics about other famous heroes (such as Antar), which originated among the Bedouin and are performed in the same manner all over the region.

4. MUSIC AND PERFORMANCE.

(i) Music. For the singer, text and melody form an integral unit. Such cohesion implies that they are also conceived together and a folksinger often finds it impossible to recite the text separately from the melody. The length of the lines is often determined by the melodic or rhythmic texture, while in some instances the text may determine the nature of the melodic and rhythmic events. It is impossible to understand the relationship between text and tune, especially the role of poetic metre, without a knowledge of the music used. As a further complication, both text and tune undergo constant changes from performance to performance.

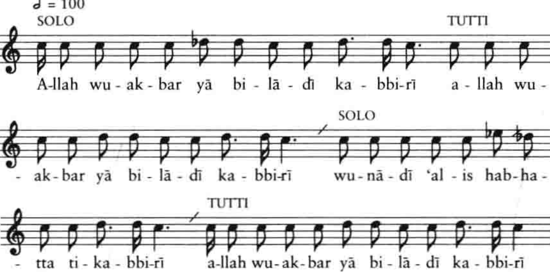
The song genres utilize various musical structures. Some are solo; others are responsorial or mixed. Some are syllabic with rigid rhythm while others are melismatic and consequently performed with a certain rhythmic freedom. Some genres are accompanied by hand-clapping, dances, or percussion or melodic instruments, whereas others are for voice alone.

While 'new' texts are constantly added to the total song repertory, the number of 'new' melodies is very limited. In a given genre one tune can be used for several texts. There are various ways of fitting text to tune: contraction of syllables, elision of letters or addition of meaningless syllables. The links between simpler tunes and particular social functions are very flexible: a certain number of simple tunes are used without differentiation both in work songs and in processional, religious and wedding songs. This music is seen as a vehicle for the text; its function is not necessarily to provide a distinct setting for the text.

Within the various traditions there is generally a conscious differentiation between two types of song: syllabic and melismatic. The syllabic songs are narrow in tonal range, cruder and simpler than the melismatic songs, and may be older and less subject to variation. They employ many kinds of responsorial form and are usually performed communally at social gatherings or group activities. The melismatic songs are soloistic, lyrical and more complex in texture. To a large extent they fulfil individual and personal functions.

In syllabic songs the regular musical beats are adjusted to the scansion of the syllables, coordinating musical and textual expression. The end of each melodic phrase (which may occur within the framework of a line or a whole stanza) is distinctly marked by a cadential formula. In the melismatic songs stresses within the melody coordinate with textual stresses, and highly ornamented and melismatic passages are placed so as not to disturb the meaning and general flow of the text. Cadences do not always coincide with the ends of textual lines, particularly in songs which are musically more elaborate and perhaps influenced by art music. At the end of a line or stanza a singer may add meaningless syllables or vowel sounds before reaching the melodic cadential formula. Within the more soloistic genres musicians may use elements of the classical *maqām* system, but as yet the connections between folksong genres and art music are poorly understood.

(ii) Melodic structure. We may generally observe that Arab vocal music ranges from simple melodies with short repeated formulae to more complex and soloistic melodies.



Songs closely associated with basic human physical and spiritual life tend to use only one or two scale-types and have narrow ranges, rarely more than a 4th (ex.13, ex.14 and ex.15). Some are performed on one note. This category of songs is usually performed antiphonally or responsorially. In some, formulae are exactly repeated throughout the song; in others, the repeated formulae use

Ex.13 Egyptian antiphonal song, transcr. A. Shiloah

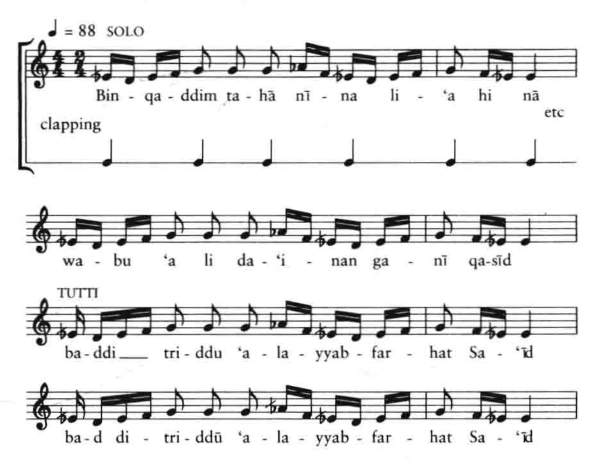
Ex.15 *Far'awiyya, maqām bayyāt*; transcr. A. Shiloah (Shiloah 1974)

the principle of open and closed phrases. Open phrases frequently end on the 2nd below the *finalis*, or sometimes on the 2nd above. They are sung in a very plain manner, although they are often marked by various types of intonation and glissandos. Their melodic plainness contrasts with their varied and complicated rhythms and the scansion of the text often results in certain asymmetrical rhythms. The rhythmical richness is always emphasized and enhanced by hand-clapping, which is often doubled with drumbeats to create a polyrhythmic pattern with the melody (see ex.14). In the Egyptian song (ex.13) percussive accompaniment is relatively important, competing with the melody and creating independent cadences.



In addition to this complex rhythmic accompaniment, simple melodic songs are frequently interrupted or marked by exhortatory shouts, or by women's ululations (*yuyu*). An example is the *zaghārīd*, widely performed by women at wedding celebrations. Body movements give a spatial dimension to the rhythms and hand-clapping. The participants form a long row, gradually augmenting their tiny steps and movements as they sing and clap, thus effecting an unbroken transition into dance.

The *dahhiyya* dance-song of the Bedouin in Sinai and Iraq is a prime example, with its plain melodic style and emphasis on repetition and rhythm. It takes place in complete darkness, at a festival or evening party. At a given moment the men get up and form a row, repeating *dahhiyya, dahhiyya* until they feel inspired. The poet-musician then faces the line and starts improvising verses, or two soloists may sing antiphonally. Members of the group sing responses accompanied by uniform rhythmic clapping as they take small steps backwards and forwards, keeping their feet close to the ground. This dance reaches its climax at the appearance of an unmarried woman, clad entirely in black, brandishing a sword in her right hand. She takes large steps and jumps while waving her sword, and the dancers alternately move towards her and retreat, repulsed by the sword's movement. The young woman is supposedly anonymous: all the participants know who she is, but they ignore her identity to protect her honour. The *marbū'a*, a variation of the *dahhiyya*, is musically almost identical but sung at a higher pitch to attract young girls and women. Another form of dance-song, the *radīh*, occurs in Yemen and other parts of the Arabian peninsula. The form is physically as well as musically antiphonal, for the line of participants divides into two sections while performing the verses. There are many other forms of dance-song, particularly in Yemen where both men and women show a strong predilection for dance. In these responsorial songs melodic overlapping occurs when the soloist or chorus begin a phrase before the previous one ends. Certain scholars view this as a type of rudimentary folk polyphony.

Songs with frequent use of simple repeated formulae and the same rhythmic patterns are accompanied by hand-clapping and drum-beating. However, their melodies are more complex in form, organization, range and tonality. They tend to have a melodic range of a 4th or a 5th and the series of notes which forms the scales appears to be distantly related to the *maqām* tradition.

The MUWASHSHAH (ex.16) illustrates some of these characteristics: the repeated melody is fairly melismatic, the range is a diminished 5th and the mode is possibly related to the *maqām segāh*. The refrain, musically identical with the soloist's part, is sung twice by the chorus, both at the beginning of the song and after each stanza. The Egyptian Ramadan 'lantern song' (ex.17)

Ex.16 *Muwashshah, maqam segah;* transcr. A. Shiloah (Shiloah, 1974)

shows another common pattern: the response, no longer identical with the soloist's part, progresses within the tetrachord below the *finalis* while the soloist's part

Ex.17 Ramadan Lantern Song, transcr. B. S. Rasheed (Rasheed, 1958)

Ex.18 *Muthamman, maqam bayyātī;* transcr. A. Shiloah (Shiloah, 1974)

undulates around the *finalis*. There is more complex organization in the *muthamman* (ex.18), which has a stanza of eight short lines followed by a refrain line. Each line is divided textually into seven syllables and musically into a duple metre of four beats. The fourth beat in each of the first six lines coincides with the *finalis* reached from the 3rd above, allowing the seven syllables to cover eight quaver beats. The melodic motif is exactly repeated six times. The seventh line and refrain constitute a developed cadence followed by the choral response, whose melody and text are unrelated to the main song.

More complex songs with a broader range and greater variety of pitches than songs of the other categories are marked by influences from art music and are essentially soloistic. The simplest have repeated melodic and rhythmic lines with slight variations, such as the Yemeni welcome song (ex.19). This has a systematic descent from

Ex.19 Welcome song, south Yemen, transcr. A. Shiloah

the 6th, to the *finalis* characterized by an undulating progression and syncopated rhythm, ending on a cadence occurring after the *finalis*. The melody is also enriched by inflecting the 3rd (*e*).

Most of the free rhythmical songs have a more complicated form (e.g. the *‘atābā*). They often begin with an introductory melismatic vocal improvisation (on meaningless words and syllables) to adjust everyone to the mode of the song. Short improvised passages of this kind sometimes precede each stanza. The musical lines are not repeated exactly; there are long musical periods which are highly melismatic and use frequently fluctuating intonations as an expressive device. The musical lines also have a wide range, often more than an octave. In this category improvisation and variability are much more evident in both music and text. Bartók described this phenomenon of variability as universal, but in Middle Eastern music it seems particularly marked.

Although most Arab tunes are sung or performed monophonically, rudimentary polyphony, both vocal and instrumental, is common. An interesting example is the *nahami* genre of Kuwait and Bahrain. The *naham* is a singer paid to accompany and entertain the pearl fishers during their long periods at sea. While he sings, the fishermen intone an extremely low note two octaves below the level of his melody. This may be a fixed drone, or the fishermen may attempt to follow the outline of the melody. This practice has similarities to the *isōn* in Byzantine chant and also occurs in other Arabian Gulf genres. Samaritans and Yemenite Jews still sing in various parallel intervals; heterophony and overlapping are also common in their music.

The striking style of singing at extremely low pitches also occurs in Egypt in the Laythi order's *dhikr* (a type of religious ceremony): while the *munshid* (precentor) performs melismatic tunes, the worshippers intone at an extremely low pitch an ostinato with the repeated sentence 'There is no other god but God'.

(iii) Song types and their social functions. Many types of song fall largely within the orbit of professional and semi-professional specialists. These include sung narratives, didactic songs, songs connected with various Muslim festivals (e.g. Ramadan; ex.17), and many social songs marking major events in the human life-cycle.

Several types of lyric songs are performed by male and female non-professionals, singing as individuals or (sometimes) collectively. Nostalgic lyric songs are some of the oldest of the Bedouin repertory, and there is a great variety of lyric songs about love, including lovers' complaint songs. The Moroccan *‘urūbī* is a sung dialogue between a man and woman, and the Yemeni *ḥumaynī*, a women's genre, exalts genteel love. Caravan songs also come within this lyric category, variously known as *hujaynī* (Egypt), *rakbānī* (Iraq), *ḥidā‘* (Yemen) and *barakah* (Libya).

Work songs present a variety of genres. Some relate to animals (hunting, herding, watering, etc.), some to sailing and fishing, and others to agricultural life, e.g. songs about fertilizing the date palm. In harvest songs such as the Yemeni *mahjal*, the rhythmic pattern stitmulates the work movements. Another Yemeni song, the women's *ḥādī*, is linked to the stripping of sorghum foliage. Work songs are among the most important within the Egyptian village repertory.

E.W. Lane, who lived in Egypt from 1825 to 1849, noted songs and chants of boatmen rowing, peasants raising water, porters carrying loads, sawyers, reapers and many other labourers. Most of these are still sung and also exist in other Middle Eastern countries. Some specific kinds of work have given rise to appropriate repertories (e.g. the flooding of fields and well-irrigation

Ex.20 *Yamania, zar* exorcism song, introduction, Red Sea area, played on *simsimiyya*, transcr. A. Shiloah

in Hadramawt, and the unique and beautiful repertory of the pearl fishers in the Arabian Gulf).

The *zār*, a song type of Egypt, Sudan and other places near the Red Sea, is connected with the practice of exorcism. It is part of a ceremony intended to expel evil spirits and mysterious diseases from people who are thought to be possessed. Specialized ensembles of singers, dancers and instrumentalists, particularly players of the *simsimiyya* (lyre), have an important role (ex.20).

(iv) The poet-musician. Like all regional bards, the poet-musician (*shā'ir*) has a uniquely important position as a spokesman who articulates the moods and aspirations of the community. In Bedouin tribal society he or she is a walking archive and interpreter of memorable events and nuances of custom. The poet-musician's artistic contribution and very presence in the community is crucial for the creation, transmission and revitalization of many vocal genres.

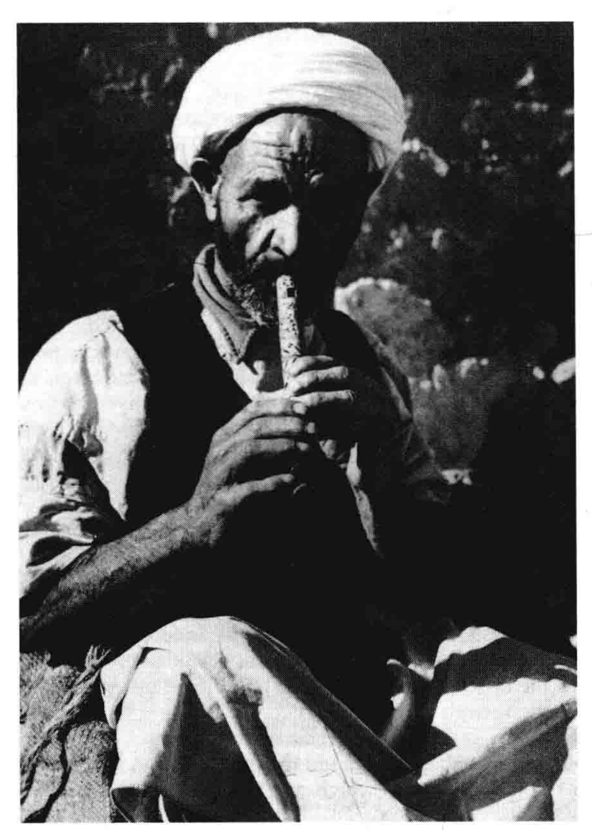
As poet, composer and performer, multiple and inseparable talents are brought into play. The poet-musician usually has a good or pleasing voice and exceptional memory. Much creativity lies in the ability to adapt existing material from the traditional store of motifs and formulae. Drawing on memorized material, the poet-singer often repeats certain verses in different contexts and vocal genres, but always in a way that fits the particular form or situation.

Often a second poet-musician takes part in the performance and alternates with the first. The resulting exchange of improvised verses and stanzas introduces an element of competition which stimulates their imagination, gives them time to rest and think, and greatly amuses the audience. Sometimes, when one has difficulty continuing, the second immediately intones a vocal improvisation followed by a new stanza. For the poet-musician the presence of a large audience is also a stimulus – indeed, it is a necessary condition for improvisation.

Poet-musicians who are invited to sing at ceremonies are considered professional, but their payment does not amount to a living wage. Some specialize in a particular genre such as epics; dirges are the province of female singers who excel as keeners. There is no formal teaching: a gifted individual with a natural predisposition for music listens to the recognized poet-musicians of his group, memorizes some material, and starts occasionally creating songs based on these models. Having acquired a certain degree of confidence, the novice is invited to give an example of his ability. At a later stage he attends a small gathering to try to perform for a whole evening, and in return receives token payment. Finally, once he becomes recognized as an able singer, he is considered professional.

Although oral transmission has always been an essential feature of this tradition, educated poets now frequently write down their poems in notebooks and classify them according to genres, and some collections have been published. The poets use their notebooks as memory aids, and do not refer to them in performance.

The social status of the poet-musician is ambivalent: he is highly appreciated for his talent and as an indispensable entertainer, but in everyday life and human relationships he is treated with a certain distrust and even contempt. In Arab cultures music and other creative activities have always tended to be considered superfluous occupations and the lowest of professions.



5. Musical instruments.

(i) Idiophones. There are only a few types of idiophone. Two varieties of concussion idiophone are common. *Kāsāt* (cymbals) are used mainly in religious processions, usually together with the cylindrical drum, and also in the course of the *dhikr* rituals of certain dervish orders. Tiny finger cymbals (*sunūj* or *ṣājāt*) attached to the thumb and middle finger of each hand are used by dancers. Percussion idiophones include the copper plate played by women in Yemen; oilcans (used as drums); the mortar and pestle, pounded in lively rhythmic patterns while grinding coffee (each sheik has his own rhythm); and empty jars which pearl fishers beat with the right hand.

(ii) Membranophones. This category is by far the most varied in type and function. In this region frame drums have usually been associated with women. The most common terms are *duff*, *bandīr* and *ṭār*. Frame drums are beaten with the fingers in the centre of the skin, near the edge, or in the area in between. Cylindrical drums, known variously as *ṭabl, dawul, ṭabl baladī, hajir* etc., are shallow wooden double-headed drums struck with flexible beaters. The player, who hangs the drum obliquely on his shoulder, can produce both muted and sharp sounds. In ensembles with cymbals or with a double-reed instrument, the cylindrical drum accompanies all kinds of processions and open-air ceremonies.

2. Bedouin nay (end-blown flute) player

3. *Shabbāba (end-blown flute) player in Marrakesh, Morocco*

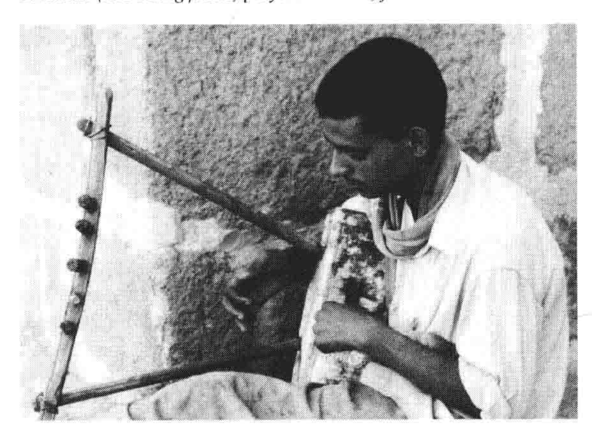
Sometimes drums play in ensemble, as in Iraq where the *dammāmāt*, a group of four or five players with polygonal drums of various sizes, performs special rhythmic compositions on certain occasions. Another Iraqi ensemble, the *daqqāqāt* ('beaters'), is composed of four female drummers and a female singer.

Kettledrums are generally known as *ṭāsāt* or *naqqārāt* (which occur in different sizes; for illustration *see* NAQQĀR). An ensemble of two shallow kettledrums of unequal dimensions is connected with pilgrimages: the player, riding a camel, strikes them with two sticks. In the early morning during the month of Ramadan an official called the *musaḥḥir* uses either a little *ṭabl* or a *bāz* (small kettledrum) to attract attention to his call marking the beginning of the fast. The widely used vase-shaped drum *darbukka* is played by men and women in villages and cities. Made of wood or clay, it is placed under the left hand or between the legs and beaten with both hands.

(iii) Aerophones. Flutes known as *nay* (fig.2) or *qaṣaba* ('reed') are usually 60–70 cm long with five or six finger-holes arranged in two groups. There is also a small type called *shabbāba* (fig.3). Although traditionally made of reed or cane, flutes are now often made of simple metal tubes or pieces of pipe. In the sedentary rural regions of Iraq, Syria, Lebanon, Palestine and Jordan, dances such as the *dabka* (a dynamic line-dance) are accompanied by a flute or by reed instruments. The *nay* is also used in some dervish orders to accompany the chant of the *munshid*.

Because of their similar functions there has always been terminological confusion between single-reed instruments (simple or double clarinet), and double-reed instruments (simple or double oboe). In ancient literature *mizmār* occurs variously as a generic term for all wind instruments and for all reed instruments, or just as a designation for the oboe. Common names for the simple double-reed instrument are *zūrnā*, *zamr*, *ghayṭa* and (rarely) *mizmār*.

4. *Zamr mijwiz (double clarinet) player in Ma'an, Jordan*



5. *Bagpipe player, Iraq*

The single-reed instrument composed of two pipes is called *mijwiz, zummāra* or *jifti* when the two pipes are equal in length and have the same number of finger-holes (fig.4), and *arghūl* or *mashūra* when one of the pipes is much longer and serves as the drone. The one-pipe clarinet is known as *'uffāta* and *'anfīta*. The bagpipe (fig.5), called *zummāra bi-soan, jirba* or *ḥibbān*, has a goatskin bag and two single-reed pipes. Though straight trumpets were formerly important in the Arab world they are now rare, except in North Africa. Fishermen in Yemen, however, use conch-shell trumpets.

(iv) Chordophones. This category includes the one-string fiddle, *rabāb* (fig.6), common throughout much of the Arab-influenced world. It usually has a quadrilateral frame covered on the front and (usually) back with skin; its string is of horsehair. This instrument is also known as *rabāb al-shā'ir* (*'rabāb* of the poet') because it is played by poet-musicians to accompany their epic songs. It doubles the voice in unison and is used to play improvisatory interludes which have more musical variation than the vocal part. One variety of *rabāb*, with two strings, called *rabāb al-mughannī* (*'rabāb* of the singer') is played by poor street singers and beggars.

6. *Rabāb (one-string fiddle) player in Ma'an, Jordan*

7. *Simsimiyya (five-string lyre), Sinai desert, 1967*

Another chordophone, the five-string lyre (*simsimiyya* or *ṭunbūr*; fig.7), is found in the Red Sea area. Its body was formerly made of wood shaped like a box or bowl, covered with a skin stretched round it and sewn together with wire (the shape resembles that of the Ethiopian *krar*). The soundbox now consists of a small oilcan; the five strings pass over a small movable wooden bridge and then straight up in a fan shape to the yoke, where they are wound round five pegs. The instrument is held horizontally against the left hip, one of its arms resting on the player's leg. The player uses his right hand to pluck the strings with a plectrum; the left-hand fingers rest on the strings, each finger being lifted only when the corresponding string is plucked. The playing is usually strongly rhythmical. The *simsimiyya* is used to accompany the songs and dances of fishermen in Bedouin encampments and coffee-houses. It is also connected with ceremonies of exorcism (used for long preludes to *zār* songs) and it is occasionally used for independent pieces and interludes. Its repertory forms a link between music of the Bedouin and of sedentary rural and urban society, being open to diverse influences including popular songs from the radio. It thus reflects the processes of change caused by urbanization and the impact of modern media of communication, which are affecting all the musical traditions of the Arab world.

OWEN WRIGHT (I, 1–5 and 7(i)), CHRISTIAN POCHÉ (I, 6 and 7(ii)), AMNON SHILOAH (II)

Aracil, Alfredo (*b* Madrid, 13 July 1954). Spanish composer. He studied the guitar with Salvador Gómez Tejado (1967–75) and composition with Tomás Marco, Carmelo Bernaola, Cristóbal Halffter and Luis de Pablo (1973–8); he also studied art history at the Universidad Complutense in Madrid (doctorate 1997). In 1974 a stipend enabled him to participate in the Darmstadt summer courses for new music, where he attended composition seminars given by Stockhausen, Xenakis, Kagel and Christian Wolff. After devoting himself chiefly to the performance of contemporary music (1975–6) with the Glosa and Koan ensembles and the Conjunto Instumental de Madrid, he turned to composition. He has served as editor and producer for Spanish National Radio (1977–94), organizer of the music programme for Madrid's year as European Capital of Culture (1992) and director of the Granada International Festival of Music and Dance (from 1994).

Aracil's compositions merge traditional and innovative elements and processes. A melancholic mood prevails in his works; his compositions play with memory, combining allusions to, glosses on and quotations of various periods and artistic fields with immediate temporal contexts. Although connections exist between some of his works (for example, through quotation, or the further development of an idea), he has endeavoured to create a new musical language for each piece. His main interest is in the strict formal control of macro-structures, particularly of two contrasting sections.

CHRISTIANE HEINE

Aragall (y Garriga), Giacomo [Jaume] (*b* Barcelona, 6 June 1939). Spanish tenor. He studied in Barcelona and Milan. In 1963 he won the Verdi Busseto competition, made his début at La Fenice as Gaston in *Jérusalem* and was offered a three-year contract at La Scala, making his first appearance in the title role of *L'amico Fritz*. He then sang in Barcelona, Munich, Vienna, Verona and Covent Garden, where he made his début (1966) as the Duke (*Rigoletto*), returning for Edgardo, Rodolfo, Cavaradossi, Werther and Riccardo (*Ballo in maschera*, 1988). The Duke was also his début role at the Metropolitan (1968) and at San Francisco (1972). A stylish singer, he had an open, keen-edged voice which he used with sensitivity, though some of the roles he undertook in the latter part of his career strained his naturally lyric timbre. His many recordings include Gennaro (*Lucrezia Borgia*), Roland (*Esclarmonde*), and Gabriele Adorno (*Simon Boccanegra*).

ALAN BLYTH

Aragüés, Juan Antonio de (*b* ?Salamanca, *c*1710; *d* Salamanca, 28 May 1793). Spanish composer, organist and harpist. From about 1735 (there is documentary evidence from 1738) he was a performer in the Capilla de S Jerónimo of the University of Salamanca. From January 1741 he occupied the chair of music at the university, following Antonio Yanguas's retirement in 1740. He was appointed professor of music in 1754, a post he held until 3 July 1771.

WORKS

MSS in E-SAu unless otherwise stated; other anonymous compositions in SAu may also be by Aragüés

Sacred: Requiem, 2 versions in *E-SAu*, varied copies in *SA*, *Mn*; 2 masses; 2 Salve regina; 3 Mag; 5 pss; 3 hymns; 1 grad, seq for Pentecost; 1 motet; 4 Passions, *SA*

Secular: 81 villancicos, 2 also in *SA*; 1 cant.

ÁLVARO TORRENTE

Araiza, Francisco (*b* Mexico City, 4 Oct 1950). Mexican tenor. He began singing with a university choir, and became a pupil of the Mexican soprano Irma Gonzalez at the Conservatorio Nacional de Música. His début as the First Prisoner in *Fidelio* (1970) was followed in 1973 by appearances as Des Grieux (Massenet) and Rodolfo. He went to Europe in 1974 and studied in Munich with Richard Holm and Erik Werba; he then took a two-year contract at Karlsruhe, where he made his European début as Ferrando in 1975 and sang other lyric roles in Mozart and Italian operas. He sang the Steersman in *Der fliegende Holländer* at Bayreuth (1978), and appeared at the Vienna Staatsoper as Tamino, a role he recorded with Karajan. His British début was as Ernesto (*Don Pasquale*) at Covent Garden in 1983; his American début the next year was at San Francisco in *La Cenerentola*, and he appeared as Belmonte at the Metropolitan Opera later the same year. He sang Gounod's Romeo at Zürich, Lohengrin in Venice (1990) and Titus at Salzburg (1991). A lyric tenor whose voice has developed with experience (though heavier roles have at times taken their toll), he now takes leading Verdi and Puccini roles and also sings Werther, Faust, Hoffmann, Lohengrin and Walther von Stolzing. He has made notable recordings of *Faust* (1987), Catalani's *La Wally* (1990), Spontini's *La vestale* (1991), Verdi's *Alzira* and Mozart and Rossini operas.

NOËL GOODWIN

Araja [Araia], **Francesco** (*b* Naples, 25 June 1709; *d* ?Bologna, ?1770). Italian composer. His first important engagement was on 29 October 1723, when he directed the music at a religious function in honour of S Gioseffo at S Maria la Nova, Naples. The *Avvisi di Napoli* for 2 November 1723, reporting the event, stated that the 14-year-old composer had performed 'to the amazement and acclamation of everybody'. As a composer he made his début with the comic opera *Lo matremmonejo pe' mennetta* (Naples, 1729), written at a time when dialect comedies were becoming increasingly popular in Naples. Araja, however, wrote only *opere serie* after this, and until his move to St Petersburg in 1735 he had the opportunity to work in the leading operatic centres of Italy: his *Ciro riconosciuto* and *Cleomene* were performed in Rome in 1731; his setting of Metastasio's *Semiramide riconosciuta*, a work not previously attributed to Araja, was presented at Naples in the same year; his *Forza dell'amore* was performed in Milan in 1734; and his *Berenice* and *Lucio Vero* were performed at Venice in 1734 and 1735 respectively.

It is in the libretto of *Lucio Vero* that Araja is called for the first time '*maestro* of Her Majesty, ruler of all the Russias'. The invitation to go to Russia was probably extended to him in Venice by the violinist Pietro Mira, who had come from St Petersburg with orders from the Tsarina Anna Ivanovna to collect an Italian opera troupe for her. His long service in St Petersburg is marked by numerous important events. On his arrival he was immediately given a financial reward and the protection of the tsarina, who, in 1740, gave him the responsibility of organizing the first music school in Russia. He earned respect and praise from Anna's successor, Elizaveta Petrovna, who, in 1742, appointed him head of a new company of Italian performers. In 1748 she asked him to manage the newly-established *Concerti di musica italiana* and towards the end of his time in Russia he organized weekly concerts for Pyotr III, who, from December 1761, appointed him *maestro di cappella* in place of H.F. Reupach.

For the Russian court Araja composed eight *opere serie* between 1738 and 1755, three cantatas, a *festa teatrale* and a serenade. The success of the first opera in Russian, *Tsefal i Prokris*, won him the title of adviser to Elizabeth, a sable coat and 500 silver roubles. The theatre at Oranienbaum (the residence of Pyotr II) was inaugurated on 16 June 1755 with his *Amor prigioniero*. After finally leaving Russia in 1762, Araja appears to have returned to Italy where he may have taught singing. The place and date of his death are not known for certain.

The Florentine librettist Giuseppe Bonecchi followed Araja's company to St Petersburg in 1742 and provided him with, among other things, five opera texts during their time in Russia. The librettos (all of which, except *Mitridate*, survive in Italian and in Russian translation) display verbal excess and expressive rhetoric, almost always with the goal of making a surprise effect. The music is largely limited to facilitating this verse plan with recitative dialogues among the characters and numerous contributions from the chorus; only rarely are the characters allowed prominent solo moments. Araja was able to adapt the Italian *opera seria* model to the culture and environment of the Russian court, displaying professional skill and appropriate theatrical mastery. His use of simple recitatives, da capo arias, act finales with a male or female solo and choral epilogues is derived, for the most part, from the work of Vinci, whose operas on the same Metastasian subjects (*Semiramide riconosciuta*, 1729, and *Artaserse*, 1730) provided Araja with a sound model of reference. In the aria 'Son fedele all'idol mio' for the pasticcio *Merope* (1746, Genoa), now lost, Araja took his inspiration from Vinci's most characteristic stylistic traits: a marked tendency to highlight the melody and extremely simple harmonic figurations (Vinci's 'Tu vedrai empia' preceded Araja's aria in the work).

The cantata *La Cimotoe* and the aria 'Felice ai dì sereni' (performed in the pasticcio *Orfeo* in London and published there in 1736) show all the hallmarks of Araja's style: fluid cantabile melodies, the use of chromaticism for the more dramatic elements of the text and, above all, a vocal virtuosity that is highly controlled so that the realism of the poetic expression is not compromised.

WORKS

OPERAS

Lo matremmonejo pe' mennetta (commedia per musica, T. Mariani), Naples, Fiorentini, aut. 1729, lib *I-Fm*
Berenice (os, A. Salvi), Pratolino, 1730
Ciro riconosciuto (os), Rome, Dame, carn. 1731
Il Cleomene (os, V. Cassani), Rome, Dame, spr. 1731
Semiramide riconosciuta (os, P. Metastasio), Naples, S Bartolomeo, Oct 1731; rev. F. Silvani, 1737 as Il Finto Nino, ovvero La Semiramide riconosciuta, St Petersburg, 29 Jan 1737, *D-Bsb*, *GB-Lbl*
La forza dell'amore e dell'odio (os), Milan, Ducale, Jan 1734; *A-Wn*
Demetrio, 1734
Lucio Vero (os, A. Zeno), Venice, S Angelo, carn. 1735
Artaserse (os, Metastasio), St Petersburg, 9 Jan/10 Feb 1738
Seleuco (os, G. Bonecchi), Moscow, 26 April/7 May 1744
Scipion (os, Bonecchi), St Petersburg, 25 Aug/6 Sept 1745
Mitridate (os, Bonecchi), St Petersburg, 26 April/7 May 1747
L'asilo della pace (festa teatrale, Bonecchi), St Petersburg, 26 April/7 May 1748
Bellerofonte (os, Bonecchi), St Petersburg, 28 Dec 1750/8 Jan 1751
Eudossia incoronata, o sia Teodosio II (os, Bonecchi), St Petersburg, 28 April/9 May 1751
Tsefal i Prokris (os, A.P. Soumarokov), St Petersburg, 27 Feb/10 March 1755
Amor prigioniero (dialogo per musica, Metastasio), Oranienbaum, 16/27 June 1755
Alessandro nell'Indie (os, Metastasio), St Petersburg, 18/29 Dec 1755

Recit and aria in Demetrio (os, Metastasio), Vicenza, Grazie, May 1734
Aria in The Favourite Songs in the Opera call'd Orpheus (London, 1736)
Aria in Merope (pasticcio op), Genoa, S Agostino, carn. 1746

OTHER WORKS

S Andrea Corsini (orat), Rome, 14 Feb 1731
La gara dell'amore e del zelo (cant.), 2vv, choir, St Petersburg, 28 April 1736
David umiliato (azione sacra, A. Zeno), 5vv, Brno, spr. 1738, lib *CZ-Bu*
?La corona d'Alessandro Magno (serenata, Bonecchi), St Petersburg, 1750
Urania vaticinante (cant., A. Denzi), Oranienbaum, 16 June 1755
Junon secourable Lucine (cant., Denzi), St Petersburg, 9 Dec 1757
La Cimotoe (cant.), 4vv, insts (for the marriage of Francesco Caracciolo, Prince of Avellino, and Maria Antonia Carafa), *I-MC*
Veggio il ciel (cant.), 1v, bc, *Nc*
Capricci, clvd, *D-Bsb*

MICHAEL F. ROBINSON/PIERO GARGIULO

Arakishvili, Dimitri (*b* Vladikavkaz, 11/23 Feb 1878; *d* Tbilisi, 13 Aug 1953). Georgian composer, musicologist and teacher. An academician of the Georgian Academy of Sciences and Laureate of the USSR State Prize (1950), Arakishvili is one of the founders of the Georgian School of composition. In the period 1894–1901 he attended the school of music and drama (attached to the Moscow Philharmonic Society) where he studied composition with A. Il'insky, and theory with S. Kruglikov (1894–1901), later improving his compositional technique with Grechaninov (1910–11). In 1917 he graduated from the Moscow Institute of Archaeology. In 1897 he had started writing for the Russian and the Georgian press on musical matters, in 1901 became a member of the musico-ethnological commission at Moscow University, and in 1907 a member of the Georgian Society for Literature and Art in Moscow. He was an associate of the foremost Russian composers of the day – such as Taneyev, Ippolitov-Ivanov, Arensky and Pyatnitsky – and was one of the organizers of the People's Conservatory in Moscow (1906); he was also the editor of the journal *Muzïka i zhizn'* (1908–12).

During these early years he travelled to Georgia more than once in order to note down folk music, gathering more than 500 songs which were subsequently published in three collections with extensive research and commentaries. Arakishvili's publications laid a scholarly basis for the study of Georgian musical folklore, and were the first to highlight and to substantiate the uniqueness of Georgian folk music. Whilst living in Moscow, Arakishvili combined his public, teaching and scientific work with intense creative activity: his finest romances (over 20 in number), the symphonic picture *Himni Ormuzds* ('A Hymn to Ormuzd', 1911), his opera *Tkmuleba o Shota Rustavelze* ('The Legend of Shota Rustaveli', 1914) – the staging of which at the opera house in Tbilisi in 1919 marked the beginning of Georgian national opera – and various choral works date from this period.

In 1918 he moved to Georgia and actively involved himself in teaching, composition and public life. On his initiative a second conservatory was established in Tbilisi in 1921 (this merged with the pre-existing one in 1923). He was subsequently a director, then head of the department, and finally dean of the composition faculty (1926–30), in addition to running various theoretical and practical courses (from 1929 as professor), and his appearances as the conductor of the symphony orchestra. Arakishvili was the first chairman of the Georgian Composers' Union (1932–4).

The most important and valuable of Arakishvili's compositions are his 80 or so romances in which he established a specifically Georgian tradition. In these (as with many of his other works), gentle lyricism and melodic expressiveness are combined with the sentimentality and oriental colouring of the urban folksong.

The predominantly *arioso* style of *The Legend of Shota Rustaveli* has much in common with that of the romances. This lyrical chamber opera is one of several based on folk legends concerning the Georgian poet Shota Rustaveli. Solo numbers from the opera such as 'Uzmuli' ('Song of the Cart Driver'), the arioso of Abdul-Arab, Queen Tamara's cavatina, as well as the overture and the dances, enjoy great popularity.

WORKS
(*selective list*)

Ops: Tkmuleba Shota Rustavelze [The legend of Shota Rustaveli] (2), 1914, Tbilisi, 1919; Tskhovreba sikharulia [Life is a Joy] (Dinara), 1926
Orch: Himni Ormuzds [Hymn to Ormuzd], sym. picture, 1911; Sym. no.1, 1932; Himn novogo vostoka [Hymn of the New East], 1933; Sym. no.2, 1942; Sym no.3, 1947
Over 80 romances for 1v, pf, incl. Varskvlaviansa gkhames [A Calm, Starry Night], 1906; Me shen geli [I am Waiting for You], 1907; Jveriis mtebze [On the Hills of Georgia], 1908; Shemogkhamdeba [Night will Begin to Fall], 1919; Gkhamea bneli [Midnight in a Remote Spot]
Incid music, choruses, folksong arrs.

GULBAT TORADZE

Arama, Isaac ben Moses (*b* Spain, *c*1420; *d* Naples, 1494). Rabbi and philosopher. Following the expulsion of the Jews from Spain in 1492, he settled in Naples. He referred to music under the heading *nigun 'olam* ('cosmic music') in chapter 12 of his *'Aqedat Yitsḥaq* ('Binding of Isaac'), a homiletic interpretation of the Pentateuch which survives in a manuscript source (*I-Ra* Or.58) and in a print from Salonika (now Thessaloníki), dated 1522. Expounding the theme of cosmic order, i.e. harmony, Arama established its existence on lower and higher levels, hence the relationship between the micro- and macrocosm, or music as made and performed by man and music as divine harmony. On both levels, music is governed by scriptural precepts; and he who observes them is in greater harmony with the 'greater instrument'. Arama saw the laws of music as enfolded in the laws of Torah; the study of Torah thus becomes a form of music-making. Failure to obey the scriptures leads to deficient harmony, or dissonance, which ends in destruction. Torah is powerful only if the soul of the believer is tuned to its ordinances. That the microcosm is subordinate to the macrocosm follows from Arama's general premise that divine truth is superior to human reasoning, i.e. philosophy, and that when the two are in conflict, or 'out of tune', philosophy yields to the Holy Writ. It is for man to redress the imbalance, restoring consonance through faith.

DON HARRÁN

Arámbarri (y Gárate), Jesús (*b* Bilbao, 13 April 1902; *d* Madrid, 11 July 1960). Spanish conductor and composer. He studied at the Vizcaíno Conservatory in Bilbao, and in Paris with Paul Le Flem and Dukas (composition), and with Vladimir Golschmann (conducting). He also worked with Weingartner at Basle in 1932. On his return to Spain in 1933 he took charge of the part-time Bilbao SO, which he steadily developed and improved and which, in 1938, became the first civic orchestra in Spain on a regular basis. Arámbarri helped to organize musical activities throughout Spain, and performed large-scale choral works with the vocally distinctive Basque choirs of northern Spain. He also introduced several works by Britten, Vaughan Williams and Walton. In 1953 he was appointed a professor at the Madrid Conservatory, and became conductor of the Madrid SO and president of the Spanish conductors' association. His compositions include *Viento del sur*, a zarzuela in two acts (1952); *Castilla* for soprano, chorus and orchestra (1941; text by Manuel Machado); Eight Basque Songs, for soprano and orchestra (1932); *Gabon-zar sorginak*, for soprano and orchestra; a string quartet; and piano pieces.

NOËL GOODWIN

Aranaz y Vides, Pedro (*b* Tudela, Navarre, bap. 2 May 1740; *d* Cuenca, 24 Sept 1820). Basque composer. After studying eight years with Luis Serra at the cathedral of Nuestra Señora del Pilar in Zaragoza, he competed for the music directorships of the cathedrals of Santo Domingo de la Calzada (1763), El Pilar (1765) and Zamora (1768), but was each time rejected, probably because he was not yet in holy orders. In 1765 he went to Madrid, where he made his name as a composer of tuneful, folkloric *tonadillas*. In 1769 he was appointed *maestro de capilla* at Cuenca Cathedral, where despite offers from better-paying cathedrals he remained until his death, composing much staid ecclesiastical music. He was ordained a priest in 1773 and retired from conducting in 1797. At Salamanca in 1791, Manuel Alonso Ortega rated him first among contemporary composers of expressive sacred music.

WORKS

16 tonadillas, *E-Mm*, incl. La maja limonera, 2vv, *c*1765, ed. in Subirá (1930); La satisfacción de los amantes, 2vv, 1765; Dos payos y dos soldados, 4vv, 1766; El Gallego, 1v, 1767; El chasco del perro, 3vv, 1769; El remedo de los locos, 1v, 1769; El chusco y la maja, 1772
*c*300 Lat. and Sp. sacred works in *CU*, *c*160 in *E*, incl. 14 masses, 4–8vv, with/without insts; *c*150 motets, 4–8vv, insts; 20 Salve; responsories; Lamentations; villancicos; Confitemini Domino, motet, 8vv, org obbl, ed. in Martínez Millán, 1974 and 1988

ROBERT STEVENSON

Aranda, Matheo de (*b* ?Aranda de Duero, *c*1495; *d* Coimbra, ?15 Feb 1548). Spanish theorist. He studied

music theory with Pedro Ciruelo at the University of Alcalá de Henares sometime before 1524; later he went to Italy for practical instruction. By 3 April 1528 he was *mestre de capela* at Évora Cathedral in Portugal, a post which he held until 26 August 1544, when he was appointed professor of music at Coimbra University. During most of this period the Portuguese court resided in Évora rather than in Lisbon, and Aranda earned praise from the administrator of the see, Cardinal Dom Afonso. At Coimbra, however, the native Portuguese professors proved so resentful towards the foreigner that according to a colleague, Juan Fernández, Aranda died of 'pure vexation'. His body was carried back to Évora for burial on 2 June 1549.

Aranda's two music treatises were the first to be printed in Portugal, although they are written in Spanish. In the *Tractado d'canto llano* (Lisbon, 1533/*R*1962 with introduction and notes by J.A. Alegria) he agreed with Juan de Espinosa and Martín de Rivafrecha in declaring the sung diatonic semitone (i.e. A to B♭) smaller than the chromatic (i.e. B♭ to B♮). He allowed the breaking of ligatures for the sake of 'correct' accentuation, and like most contemporary Spanish theorists, preferred liberal use of ficta in plainsong. The examples of species counterpoint in his second treatise, the *Tractado de canto mensurable* (Lisbon, 1535), were the first polyphony published in Portugal. A few surviving compositions are attributable to Aranda: the four-voice setting of the tract *Adjuva nos Deus* (in *P-EVp* CLI/1–9d) and two mass fragments, *Et incarnatus* and *Et vitam*, display his sensitivity in setting texts.

ROBERT STEVENSON

Arandia Navarro, Jorge (*b* Buenos Aires, 1 Jan 1929). Argentine composer. He studied the piano with Clara Chaplin and Roberto Locatelli and theory with Alejandro Szenkar and Roberto García Morillo; his instrumentation studies with Roberto Kinsky, from the Teatro Colón, were aided by a three-year grant from the Thomas J. Williams Foundation. In 1963 he won a scholarship to the Torcuato Di Tella Institute, where his teachers included Earle Brown, Ginastera, Messiaen and Xenakis, and attended an advanced piano course given by Yvonne Loriod; he was also treasurer of the Asociación de Música Viva de Buenos Aires, for which he was commissioned to write *Playas rítmicas no.1* (1964). He was a founding member of the Asociación de Jóvenes Compositores (now CUDA). His awards include the national board of culture's prize for his Piano Concerto and the Buenos Aires Municipal Prize for *Playas rítmicas no.1*. Among his works are concertos for piano, violin, harmonica and flute, ballets, chamber music, songs and many piano pieces. Some works have been published by Editorial Argentina.

VALDEMAR AXEL ROLDAN

Arañés [Arañiés], **Juan** (*b* Catalonia; *d* ?Seo de Urgel, in or after 1649). Spanish composer, active briefly in Italy. He studied at Alcalá de Henares and became a priest. In 1623 he accompanied to Rome the newly appointed Spanish ambassador to the Holy See, Ruy Gómez de Silva y Mendoza, Duke of Pastrana, and in 1624, when dedicating a volume of music to the duke, he described himself as his chaplain and musical director. From 1627 to 1634 he was *mestre de canto* at Seo de Urgel Cathedral. In 1649 he was recalled to this post for one year only. He published *Libro segundo de tonos y villancicos*, for one to four voices and guitar (Rome, 1624; one three-part piece and a four-part chacona ed. in MME, xxxii, 1970; one piece ed. in Cancionero musical de Lope de Vega, ii, Barcelona, 1987). It comprises 12 secular pieces, the concluding chacona being the first for voices by a Spanish composer to appear in print. The first book implied by this 'second book' is lost, but what are evidently six three-part pieces from it survive in the manuscript Cancionero Casanatense (in *I-Rc*). Arañés's fondness for sequences, overt dominant 7ths, fast dance rhythms and long quaver and dotted rhythm melismas, and his use of guitar letter notation proclaim him a thoroughly modern Baroque composer. Some anonymous three-part masses that he had tried to modernize with an added fourth voice were known (in *E-SU*) in 1921.

ROBERT STEVENSON

Arangi-Lombardi, Giannina (*b* Marigliano, Naples, 20 June 1891; *d* Milan, 9 July 1951). Italian soprano. She studied in Naples, making her début as a mezzo-soprano in 1920 at the Teatro Costanzi, Rome, as Lola (*Cavalleria rusticana*). After further study, she made a second début as a soprano in 1924 at La Scala as Helen (*Mefistofele*). Her other roles at La Scala included Santuzza, Aida, La Gioconda, Leonora (*Il trovatore*) and Donna Anna, which she also sang at Salzburg (1935). She appeared in Buenos Aires, notably as Asteria (*Nerone*), in 1926 and throughout Europe, including Turin, as Ariadne (1925) and Florence, as Lucrezia Borgia (1933). Her excellent technique, impeccable sense of style and emotional involvement in her roles are exemplified in her complete recording of *Aida*, made in 1928.

HAROLD ROSENTHAL/ALAN BLYTH

Aranovsky, Mark Genrikhovich (*b* Leningrad, 25 Aug 1928). Russian musicologist. He studied at the Leningrad Conservatory under the supervision of E.L. Frid, graduating in 1952, and subsequently undertook postgraduate studies at the Leningrad Institute of Theatre, Music and Cinematography under M.K. Mikhaylov, gaining the degree in 1966. From 1966 to 1980 he was a senior research officer at the Leningrad Institute. In 1980 he was appointed senior researcher at the All-Union Research Institute of the Arts, Moscow, where he later became chief researcher (1983–91), head of the music department

(1991–3) and professor in 1993. He was awarded the doctorate in 1982. He has organized a number of musicology conferences and is a member of the Russian Federation Union of Composers.

Aranovsky's areas of research include the theory of music and musical language, the psychology of musical creativity and the history of Russian classical and contemporary music. In his research on music theory he combines the ideas of Tyulin and Asaf'yev with methods from linguistics and semiotics, and considers the musical language as a symbolic, evolving semiotic system that is governed by a hierarchy of grammatical rules. His theory of melody proposes a melodic syntax of motif–syntagma–exposition; his theory of genre also introduces the notion of a structural semantic archetype. These ideas are continued in his investigations of the axiomatic logic of musical creativity, the interaction of the conscious and unconscious, the intellectual activity in musical thinking and the creative process, and the various types of artistic creativity of composers such as Glinka, Tchaikovsky and Rachmaninoff. His studies of the history of music, particularly the works of Prokofiev and Shostakovich and the evolution of the symphonic genre in 20th-century music, further expand these conceptions of music and lead to descriptions of the origins of intonation and the evolution of musical language, genre and style. His work also highlights for the first time the appearance of a Romantic aesthetic in the Russian classics of the 19th century. (*SKM*, i)

NINA YUR'YEVNA AFONINA

Arányi, Jelly d' [Arányi de Hunyadvar, Jelly Eva] (*b* Budapest, 30 May 1893; *d* Florence, 30 March 1966). British violinist of Hungarian birth. She was the younger sister of Adila Fachiri and great-niece of Joachim. She started to learn the piano, but in 1903 went to the Hungarian National Royal Academy in Budapest as a violinist, studying with Grunfeld and later Hubay. Her career began in 1908 with a series of joint recitals, in Vienna and elsewere, in partnership with her sister. In 1909 they played in England and settled there four years later, becoming well known for their performance of Bach's Double Violin Concerto, which they recorded. Jelly was a vivid personality and a born violinist, with fine technique and a good measure of gypsy fire. The warmth and freedom of her playing found full scope in a work such as the Brahms Concerto; but her rhapsodic style was equally suited to Bartók's two violin and piano sonatas and Ravel's *Tzigane*, which were written for and dedicated to her. Other works she inspired were a concerto by Röntgen, Ethel Smyth's Concerto for violin and horn, and Vaughan Williams's *Concerto accademico*; the Double Concerto of Holst was composed for both sisters. In 1938 she gave the first British performance of Schumann's Concerto, after much controversy (she claimed that the composer's spirit had appeared to her in a séance) and despite Joachim's wish. She formed a piano trio with Suggia and Fanny Davies in 1914; she played later with Felix Salmond and with Myra Hess, who was also her duo partner for over 20 years, and recorded with them Schubert's B flat Trio.

ROBERT ANDERSON

Arapov, Boris Alexandrovich (*b* St Petersburg, 30 Aug/12 Sept 1905; *d* St Petersburg, 27 Jan 1992). Russian composer and teacher. He received his first music lessons as a child from his mother in Poltava, and later with the pianist Zaytseva-Zhukovich. He began composing at the age of nine. In 1921 he moved to Petrograd, where he studied the piano with Mariya Yudina and Samara Savshinsky; because of an injury to his hand he gave up his career as a pianist and in 1923 entered the Petrograd Conservatory where he studied composition with Shcherbachyov and M.M. Chernov. He then taught music theory at the Central Music School (1927–32) and at the State Institute of Art History (1929–30). In 1930 he started

teaching at the Leningrad Conservatory, becoming professor in 1940, deputy director in 1945–6 and dean of the orchestral department in 1950. Among his students are B.I. Arkhimandritov, G.A. Armenian, Yu.A. Balkashin, G.I. Firtich, N.M. Shakhmatov, I.I. Schwartz, S.M. Slonimsky, D.A. Tolstoy and V.A. Uspensky.

Arapov began his official career as a signatory of a protest letter from a students' trade union which condemned light music, gypsy music, church composers, and, more personally, Nikolay Roslavets. Later, Arapov was among the leading officials of the Composers' Union: he led the composers' section, and was a board secretary of the Union and of its Leningrad department. His titles include Honoured Art Worker of the Uzbek SSR (1944), the Order of the Labour Red Banner (1953), Honoured Art Worker of the RSFSR (1957), National Artist of the USSR (1976) and the Lenin Order (1986).

Large-scale traditional genres predominate in Arapov's work; the solid orchestration, colouristic effects and programmatic inspiration all define him as a successor to the Petersburg nationalists. Folk themes and images also play an important role and attest to the considerable periods he spent engaged in field study in Armenia, Georgia, Uzbekistan, China and Korea.

MARINA LOBANOVA

Arãrãy. A category of melody in the music of the Ethiopian Orthodox Church. *See* ETHIOPIA, §I, 3.

Arascione, Giovanni (*b* Cairo Montenotte, nr Savona, 18 Oct 1546; *d* in or after 1600). Italian music editor. Fétis stated incorrectly that he was born at Novara. He was probably educated at Mondovì, but he spent most of his life in Rome, where he was a member of the Congregazione dell' Oratorio (founded by Filippo Neri) and a friend and colleague of Giovenale Ancina. His only extant publication, *Nuove laudi ariose della Beatissima Virgine scelte da diversi autori* (Rome, 1600[5]), for four voices, contains 70 *laudi* by 26 composers, including Animuccia, Dentice, Giovannelli, Ingegneri, Lassus and Vecchi. All the works are contrafacta of secular pieces for which Arascione provided the sacred texts. According to the four dedicatory letters by Ancina and several sonnets prefacing the volume, it was intended as the second part of Ancina's *Tempio armonico*, published the year before (RISM 1599[6]). Like Ancina's volume it was designed for the use of the Congregazione; the pieces are firmly in the religious tradition of the Philippine *laudi* repertory (see Alaleona), and they have tuneful melodic lines and show distinct features of the new monodic style.

Araujo, Francisco Correa de. *See* CORREA DE ARAUXO, FRANCISCO.

Araújo, João Gomes de (*b* Pindamonhangaba, 3 Aug 1846; *d* São Paulo, 8 Sept 1943). Brazilian composer. His son, João Gomes, was also a composer. After initial studies in his home town with his father, Benedicto Gomes de Araújo, and (from 1856) his uncle, the violinist João Baptista de Oliveira, he enrolled in 1861 at the Rio de Janeiro Conservatory, where Francisco Manuel da Silva was his composition teacher. He transcribed scenes from current opera successes for military band. Returning home in 1863, he joined the clarinettist José Maria Leite to establish a conservatory, organize a band and found an orchestra. From 1870 to 1884 he and his first wife Marianna Marcondes Teixeira (*d* 18 Aug 1891) directed the local Collegio Conceição. In 1884 the favourable reception of his orchestral *Missa de São Benedicto*, sung at the consecration of a church in Lorena, São Paulo, caused Emperor Pedro II to send him with his family to Milan, where he studied with Dominiceti.

Edméia (1886), his first opera, did not reach the stage, but *Carmosina* (1888) was given with great success in the emperor's presence at the Teatro Dal Verme, Milan, and repeated on 29 January 1891 at the Teatro São José in São Paulo. With the exception of the years 1903 to 1904, he resided in São Paulo from late 1888 until his death. He

composed his finest opera, *Maria Petrowna*, the story of a conspiracy to depose Catherine II of Russia, in Milan in 1903, but its première, at the Teatro Municipal, São Paulo, did not take place until January 1929. *Helena* (1908), dealing with events on a coffee plantation, was likewise staged some years after its composition, in 1916. Araújo, meanwhile, had founded the São Paulo Conservatory with Pedro Augusto Gomes Cardim in 1906.

ROBERT STEVENSON

Araujo, Juan de (*b* Villafranca de los Barros, Extremadura, 1646; *d* La Plata [now Sucre], Bolivia, 1712). Composer of Spanish birth, active in South America. He went to Lima at an early age with his father, a civil official, and there attended the University of S Marcos during the late 1660s. He may have been a pupil of Torrejón y Velasco. After being involved in student disruption he was banished from Lima by the viceroy of Peru, the Count of Lemos. There is documentary evidence that he moved to Panamá, where he worked as choirmaster, and by 1672, when he returned to Lima, he had been ordained a priest. He was then appointed choirmaster of Lima Cathedral and held the post until 1676. He is not heard of again until 1680: from then until his death he was choirmaster of the cathedral at La Plata, Bolivia. He may have spent some time at Cuzco, Peru, since several of his works survive in the library of the S Antonio Abad Seminary there, but there is no evidence to support this suggestion.

Araujo's career at La Plata coincided with the wealthiest period of the Audiencia de Charcas region, of which it was the capital. The number of his works copied there and their performing forces (from eight to ten voices) indicate that he must have had the benefit of a flourishing musical establishment. Stevenson (1960, p.189) observed that his 'unusual success in training choirboys assured him throughout his career of an abundant stream of high *tiples*. This good supply could indeed be inferred from his compositions themselves. One of the choruses almost invariably calls for boys' voices supported by only a tenor'. He was a prolific composer; some 158 pieces by him are known, 142 of which are of the villancico type, the remaining 16 being religious compositions. While he followed the traditional form of the villancico, he was quite innovatory in his search for unusual effects, whether through word-painting or unexpected rhythmic drive by systematic crotchet and quaver syncopation in 6/8 time. Many of his settings are *jácaras* which exude vivid spirits and good humour. 12 works are found in copies made as late as 1929.

GERARD BÉHAGUE

Araújo [Arauxo, Arraujo], **Pedro de** (*fl* 1662–1705). Portuguese organist and composer. He was a leading figure among secular and monastic organists in the archdiocese of Braga during the last quarter of the 18th century. He taught music at St Peter's Seminary in Braga (1662–8) and in 1665 gave up the post of second organist at Braga Cathedral when he was granted a benefice at St Salvador in nearby Joane (now Famalicão), where he was active until at least 1704. He is known to have composed 13 keyboard works and another six can be attributed to him on stylistic grounds (*P-Pm* 1607, *BRp* 964; ed in PM xi (1967), xxv (1974), and G. Doderer, *Organa hispanica*, ix, 1984). They bring together Aragonese and Italian, as well as Portuguese, elements, and demonstrate Araújo's sensitivity to the character of the Portuguese-Galician organ of his time.

Arauxo, Francisco Correa de. *See* CORREA DE ARAUXO, FRANCISCO.

Araya (y Andía), Simón de (*b* Peralta, Navarra, bap. 21 Jan 1676; *d* León, 17 Dec 1738). Spanish composer. Between 1700 and 1714 he was *maestro de capilla* of the collegiate church of S Antolín, Medina del Campo. He competed for the post of *maestro* at the cathedrals of Calahorra and Zamora in 1703 and 1710 respectively. From 1714 until his death he was *maestro de capilla* of León Cathedral, where lapses in fulfilling his obligations led to problems with the chapter. In 1732, for instance, he was cautioned for neither producing new compositions nor introducing any from Madrid. From an aesthetic viewpoint, he expressed a negative opinion regarding the dissonance used by Francisco Valls in the 'Qui tollis' of his *Missa 'Scala aretina'*. Araya y Andía died debt-ridden, leaving his scores (of which very few have survived) to León Cathedral.

The style of his music is typical for a Spanish composer at the turn of the 18th century, with a clear distinction between works in Latin and those in the vernacular. In the latter, characteristics of the 17th-century villancico are combined with those of the Italian recitative and aria.

PABLO L. RODRÍGUEZ

Arazova [Arazian], **Izabella Konstantinovna** (*b* Rostov-na-Donu, 25 Sept 1936). Armenian composer. She has lived in Yerevan since 1942. She trained at the Melikyan Music College (1955–8), the Leningrad Conservatory (1961–3, composition with Yevlakhov) and at the Yerevan Conservatory (1964–7, composition with Mirzoyan). In 1967 she joined the Armenian Composers' Union. She taught orchestration, composition, harmony and solfeggio in music schools and at the Pedagogical Institute in Yerevan (1967–90). Arazova's works were performed for the first time in 1966 at the Festival of Young Composers in Yerevan and subsequently in Armenia, Russia, Estonia, Ukraine, USA, Japan, France and Switzerland.

Her early works developed under the banner of vitalist tendencies, as confirmed by the *Concerto for Orchestra*. In this latter-day *concerto grosso* Arazova heightened the significance of timbre contrasts. For the next three decades she evolved a system of oppositions, whilst achieving resourcefulness in melody and especially rhythm. While a particularly expressive utterance defines the scale of her chamber works, the lyrical concentration of her vocal works also permeates large-scale works. Her mixed technique is based on the use of classical polyphony and contemporary heterophonic, *ostinato* and aleatory devices; she employs various chord structures, including tone clusters, in a system of free tonality. In the orchestral *Prayer*, through complex harmonic procedures, the asceticism of continuous psalmody arrives at a culmination point in the image of a cross symbolized in sound as: C♯–D–B♭–B. Improvisation plays an important role in Arazova's music, defining a characteristically logical spontaneity and an extension of variation technique.

SVETLANA SARKISYAN

Arban, (Joseph) Jean-Baptiste (Laurent) (*b* Lyons, 28 Feb 1825; *d* Paris, 9 April 1889). French cornet player and conductor. He studied the trumpet with Dauverné at the Paris Conservatoire from 1841 to 1845. He acquired renown for conducting salon orchestras, an activity that he took up in 1856, and later conducted at the Opéra. In 1857 he became professor of saxhorn at the Ecole Militaire, and in 1869, after an unsuccessful attempt seven years earlier, established a cornet class at the Conservatoire. He and Cerclier, who taught the trumpet, both succeeded Dauverné, thus originating a separation of the trumpet class into sections for cornet and for trumpet, a practice that has continued. In the summer seasons from 1873 to 1875 and in 1876, he conducted a French orchestra in St Petersburg and Pavlovsk, respectively, the reason for which he resigned his Conservatoire post in 1874. When the position became vacant again in 1880, he forsook his international career to return to the Conservatoire, devoting the rest of his life to teaching. From then until the end of his life he was also preoccupied with improving the intonation of brass instruments, collaborating on at least five different systems of compensating cornets in C with four or three valves with the makers Mille and Halary (Daniel-Sudre system) and the engineer Bouvet (*see* VALVE (i)). Already in April 1848 he had demonstrated a *cornet compensateur* built by Adolphe Sax.

Arban was arguably the first complete technician on the cornet; his setting of *The Carnival of Venice*, with variations, was the cornettist's solo piece *par excellence* during his and the next two or three generations. His *Grande méthode complète pour cornet à pistons et de saxhorn* (Paris, 1864) is still the standard instruction work, largely because of its thorough, systematic approach.

EDWARD H. TARR

Arbeau, Thoinot [Tabourot, Jehan] (*b* Dijon, 17 March 1520; *d* Langres, 23 July 1595). French cleric and author. The pen name Thoinot Arbeau is an anagram of his real name. He studied at Dijon and Poitiers and possibly also at Paris, receiving a Licentiate of Laws. A churchman, in 1542 he became treasurer of the chapter at Langres; in 1547 he became canon of the cathedral, and in 1565 he was canon-treasurer at Bar-sur-Aube. Succeeding appointments include that of *official* (ecclesiastical judge), *chantre scoliarque* (inspector of the diocesan schools), director of cathedral restoration after its damage by lightning in

1562, and finally vicar-general of his diocese. His most famous work is *Orchesographie* (1588, 2/1589), the only dance manual published in France in the second half of the 16th century. It was reprinted with a new title-page in 1596.

Arbeau's positive attitude towards dancing, both for health reasons and as part of the pleasurable search for a mate, his references in the text to his own youthful skill in dancing, and his neo-Platonic view that earthly dance is harmonious with the dance of the universe, all place him in the tradition of those robust Renaissance ecclesiastics so vividly portrayed by Rabelais. The significance of his work is manifold. His text, in the form of a dialogue, explains most of the French social dance types of the period with the aid of an explicit dance tablature apparently devised by him. This correlates dance steps with music more precisely than any other source of the time, and is invaluable for modern reconstructions of the dances; it also provides important clues to the performance of the substantial body of dance music – and dance-inspired music – from the period. Illustrations in the text, though seemingly crude, assist quite specifically in the interpretation of the step descriptions. Furthermore, Arbeau made it clearer than do other sources (e.g. Fabritio Caroso and Cesare Negri) that the manly arts included dancing as well as fencing, by 'recounting both ... martial and recreative dances'. He framed the book with the warlike arts; a lengthy introduction justifies the importance of dancing for men and describes marching techniques while the final portion of the book is devoted to six passages of *Les bouffons* (also known as *matassins* or *mattaccino*), a popular, athletic sword dance for four, six or eight mentioned only in passing elsewhere (for illustration of Arbeau's tablature *see* MATACHIN). Arbeau amplified his instructions with some delightful reflections on contemporary *mores* ('spit and blow your nose sparingly'; '[after dancing the dancers] are permitted to kiss their mistresses ... to ascertain if they are shapely or emit an unpleasant odour as of bad meat').

Dances described by Arbeau in varying detail include the basse danse and its accompanying *tordion* (both 'out of date some 50 years', he claimed), the pavan, 15 galliard variations, 25 different types of branles, the courante, allemande, volte, a *morisque*, a canary and a *Pavane d'Espagne*, as well as *Les bouffons*. Some descriptions are so cursory as merely to pique the curiosity (e.g. the *morisque* and *Pavane d'Espagne*); others are obviously incomplete (e.g. the *Branle de guerre*, which lacks any warlike gestures); still others are in duple metre (courante and canary) instead of the usual triple metre, thus presenting unsolved riddles to modern performers. In general, Arbeau's dances are simpler than those in the books by Caroso and Negri: he omitted the kinds of complicated ballettos and the large figure dances found in those sources, as well as the complex and highly specific variations they give for the pavan, passamezzo or canary. Yet Arbeau gave the only extant descriptions of the vigorous volte and *matassins*, and he included the largest number of branles. Despite the differences among them, the fundamental correlation of the steps in these sources, and other internal evidence, support the view that there was a basic international step vocabulary at that time, with regional stylistic differences or preferences for different dance types.

Arbeau's manual is a rich source of information on dance music. It is the only known source to illustrate tabor rhythms of the Renaissance as well as the unique source of music specifically designated for extemporizing on the fife, with significant details of tonguing techniques. In addition *Orchésographie* contains many valuable clues to musical performing practice for dancing, including appropriate northern European instrumentation, details of instrumental construction, singing-dances and sources of additional dance music, all the while underscoring the strength of improvisational traditions. It is clear that he fully expected dance musicians to supply a bass and inner or descant parts to the tunes he supplied. He gave important tempo indications for dancers and musicians, both when comparing dance types (e.g. 'The tordion is danced close to the ground to a light, lively beat and the galliard is danced higher off the ground to a slower, stronger beat'), and when giving a tempo range for a single dance type (e.g. 'The galliard needs must be slower for a man of large stature than for a small man inasmuch as the tall one takes longer to execute his steps').

The application of Arbeau's treatise must be treated with caution. While it is undoubtedly valid for northern European dance in the last half of the 16th century, it is unclear how far into the 17th century it remains a representative source; de Lauze, publishing in 1623, presented a markedly changed style. Even for Arbeau's own time, we cannot be sure whether his style or his dances truly represent practices at the French court (there is no evidence that he was ever there), especially in view of the influence of contemporary Italian dancing masters at major courts all over Europe, including France. Nevertheless, *Orchésographie* remains a rich source of dance and music history.

JULIA SUTTON

Arbell, Lucy [Wallace, Georgette] (*b* Paris, Sept 1882; *d* Paris, 1947). French mezzo-soprano. She made her début in 1903 at the Paris Opéra as Delilah, then sang Amneris, Maddalena (*Rigoletto*), Uta (*Sigurd*) and Fricka (*Walküre*). In 1906 she sang Persephone in *Ariane*, the first of six roles that she created in operas by JULES MASSENET. The others were the title role of *Thérèse* (1907, Monte Carlo), Queen Amahelli in *Bacchus* (1909, Opéra), Dulcinée in *Don Quichotte* (1910, Monte Carlo), Postumia in *Roma* (1912, Monte Carlo) and Colombe in *Panurge* (1913, Gaîté, Paris). She also sang Charlotte (*Werther*) at the Opéra-Comique, where in 1924 she appeared as Dulcinée for the last time. Her warm, clear voice and sparkling personality inspired Massenet to continue composing operas in the last years of his life.

ELIZABETH FORBES

Arbós, Enrique Fernández (*b* Madrid, 24 Dec 1863; *d* San Sebastián, 2 June 1939). Spanish violinist, conductor and composer. He studied the violin with Jesús Monasterio at the Madrid Conservatory, with Vieuxtemps at the Brussels Conservatory and with Joachim in Berlin. He travelled extensively both as a soloist and, together with Albéniz and Augustín Rubio, as a member of a celebrated piano trio, for which he composed three works. He appeared in London in 1891, playing works for violin and piano with Albéniz, and Bach's Double Concerto with Joachim, and from 1894 to 1915 served with distinction as a professor of the violin and viola at the RCM.

In 1904 Arbós was appointed conductor of the Madrid SO and he was a leading influence in Spanish musical life until he resigned the conductorship on the outbreak of the Civil War in 1936. He was a guest conductor with the Boston SO and other American orchestras from 1928 to 1931, and also conducted in London, Paris, Rome, Prague, Budapest and elsewhere. With the Madrid orchestra he gave the première of Falla's *Noches en los jardines de España* in 1916 and made a number of recordings of Spanish works during the 1930s. Falla wrote a Fanfare for brass and percussion (later part of his set of orchestral *Homenajes*) in honour of the conductor's 70th birthday in 1933.

Active in modern music, Arbós conducted the first performance in Spain of Stravinsky's *The Rite of Spring* (1932), and he was president of the Spanish section of the ISCM; through his influence the 1936 festival was held in Barcelona. His orchestral version of *Triana* from Albéniz's *Iberia*, first performed during this fesival, won considerable success in the concert hall, as did eight other arrangements from the same work, but his own original compositions, including the piano trios and an opera *El centro de la tierra* (1895, Madrid), have not remained in the repertory.

ARTHUR JACOBS/TULLY POTTER

Arcà, Paolo (*b* Rome, 12 May 1953). Italian composer. He studied the piano, composition and conducting at the S Cecilia Conservatory in Rome. He then undertook further studies in composition with Donatoni at the Accademia di S Cecilia and the Accademia Chigiana in Siena. In 1982 he was awarded first prize in the France Culture-Musique contemporaine composing competition in Avignon and this marked the start of a concentrated period of creative work which, over the years, has run parallel with his activities as an organizer of musical events and lecturer. He served as artistic advisor to the Istituzione Universitaria dei Concerti di Roma (1984–91), artistic director of the Accademia Filarmonica Romana (1991–4), and in 1997 was appointed artistic director of La Scala in Milan. He also was appointed to teach composition at the Milan Conservatory. His music appears to aim to restore communication and dialogue with the audience through a subjective form of direct expression. This is why the voice and the theatre have a central position in his work; through song, taken as an essentially melodic mode of expression, these genres convey the imaginative content of a poetic text to the listener and spectator. This communicative approach is demonstrated in *Angelica e la luna* (1985) and *Il carillon del gesuita* (1989), with both stage works fairy-tale and imaginary historical settings; it can also be seen other compositions such as *Esercizi di stile* (1988) and *Il canto di Orlando* (1990) on text by Ariosto. The position which Arcà takes as a composer is arguably neo-romantic. This postmodern reaction to the avant garde is evident in the narrative and atmospheric nature of many of his instrumental works, such as *Fiesta* (1992) for band and orchestra, or the evocative *Trio notturno* (1998).

WORKS
(*selective list*)

Stage: Angelica e la luna (op, 1, G. Carli Ballola), 1985, Ferrara, Aterforum, 3 June 1985; Il carillon del gesuita (op, 1, Carli Ballola), 1989, Fermo, Festival, 28 July 1989; Lucius, asinus aureus (marionette op, after L. Apuleius), 1989, Munich, Biennale, 29 April 1990; Gattabianca (fairytale op, 2, M. Ravasini, after M.-C. d'Aulnoy: *La chatte blanche*), Verona, Teatro Filarmonico, 27 Feb 1993; Valium (ballet, 6 scenes, choreog. L. Cannito), 1993, Milan, Teatro Nuovo, 21 May 1993

Vocal: A Splendid Tear (A.L. Tennyson), S, orch, 1985; Esercizi di stile (R. Queneau, trans. U. Eco), T, 10 insts, 1988; Il canto di Orlando (L. Ariosto), chorus, orch, 1990; An Die Musik II (F. Schober), S/fl, 8 wind, 1991; Amore, amor fecondo (aria, C. Goldoni), S, orch, 1993; Cantata in lingua napoletana, 3 vv, baroque inst ens, 1994; Morte, non esser fiera (J. Donne), female chorus, str, 1995

Inst: Neon, 8 insts, 1984; Flos, va, 9 insts, 1986; Flash, gui, 1987; Wide, 2 pf, perc, 1987; Triplo concerto, vn, vc, pf, orch, 1988; Concertino, ob, small orch, 1989; Feux d'artifice, str, 1991; Fiesta, small wind band, orch, 1992; Scherzo, orch, 1994; Skool, pf, wind, 1994; Trio notturno, cl, vc, pf, 1998; Blitz, orch, 1999

Principal publisher: Suvini Zerboni

RAFFAELE POZZI

Arcadelt [Archadelt, Arcadet], **Jacques** (*b* ?nr Namur, ?1507; *d* 14 Oct 1568). Franco-Flemish composer. His output includes both sacred and, especially, secular music, and he was famed above all as a madrigalist.

1. Life. 2. Sacred music. 3. Secular music.

1. LIFE. Nothing is known of Arcadelt's early life. His surname is suggestive of Flemish origin (as noted by Burney), a suggestion that would be confirmed if he could be identified with certainty as the 'Jacobus flandrus' admitted to the Cappella Giulia in 1539. But Arcadelt seems to have been French in upbringing if not by birth; the spelling 'Arcadet' consistently used by French publishers of his music looks like an attempt to gallicize his name. He seems to have been in Italy by the late 1520s; his earliest known compositions include six motets in the Vallicelliana manuscript (*I-Rv* S[1] 35-40), a Roman-Florentine anthology of around 1530–32, and ten madrigals in a Florentine manuscript of the same period (*I-Fn* Magl. xix. 122–5). Correspondence (1534) mentioning his activity as a madrigalist and a document listing him as in the private service of Duke Alessandro de' Medici in 1535 both testify to his residence in Florence during the 1530s. The rather tentative nature of the motets and some of the madrigals in these early sources suggests that he was still inexperienced as a composer in 1530; his entry into Florentine society might be explained by the connection of the Vallicelliana manuscript with Roberto Pucci, a Medicean supporter who was a protégé of Duke Alessandro, alternating residence in Florence and Rome, and permanently in Rome as a Cardinal after 1537. It is possible that Arcadelt was in Rome before going to Florence; a number of French musicians went there in 1528 to join papal service.

Arcadelt was said by the Florentine diplomat-scholar Cosimo Bartoli (*d* 1572) to have 'followed in the footsteps of Verdelot'. It might be possible to read this literally as meaning that the younger composer was brought to Florence to take Verdelot's place (assuming the latter to have died *c*1530) as madrigalist if not as church musician. Clearly modelling his style on that of Verdelot, he matured rapidly and, responding to commissions from Florentine *literati* in and outside the Medicean court, produced a large body of madrigals during the mid-1530s, perhaps the bulk of his output in that genre.

Arcadelt was certainly in the circle around Duke Alessandro, and must have known his kinsman Lorenzino de' Medici, who murdered the duke in 1537 (he set Lorenzino's madrigal *Ver inferno è'l mio petto*). After this date Arcadelt moved to Rome; he seems to have been there by 1538, when he wrote a madrigal, *Ecco d'oro l'età*, for the Roman wedding of Margaret of Austria (widow of Duke Alessandro) to Ottavio Farnese. He may have been the 'Jacobus flandrus' who joined the Cappella Giulia in 1539; at the end of the following year he was admitted, without examination and thus clearly as a protégé of the Farnese pope Paul III, to the Cappella Sistina. Here he remained, except for a year's leave to visit 'Gallia', until the summer of 1551.

Sometime in 1538 the Venetian printer Antonio Gardano issued a *Primo libro* of Arcadelt's madrigals; this book is lost, but it was reprinted in 1539, the year books two to four (plus a *Secondo libro* published by the Scotto firm) appeared. A fifth book was published in 1544, and additional madrigals appeared in anthologies and books bearing other composers' names from 1540 onwards. The music of the 'divino Arcadelte' (Gardano's words) was obviously well known in Venice in the 1530s, perhaps through the medium of Florentine exiles such as Ruberto Strozzi and Neri Capponi, then resident in Venice.

After the death of Paul III in 1549 Arcadelt must have been looking for a new position. He returned to France in 1551 and entered, perhaps by 1552, the service of the Cardinal of Lorraine, brother of the Duke of Guise and an influential member of the French court. He remained in the Cardinal's service until his death in 1568. Termed a 'regius musicus' in a Parisian print of his masses in 1557, Arcadelt must have served Henri II and Charles IX in various capacities; he received canonicates in Paris as signs of royal favour. The Parisian printers Le Roy and Ballard issued masses, motets and large numbers of chansons from his pen.

2. SACRED MUSIC. Arcadelt's religious music shows the clear influence of Mouton: more evidence of his French background, even though most of it appears to have been written during his Italian years. Two of his three masses are parodies of motets by Mouton and de Silva; the third is a multi-modal Marian mass in the tradition of Josquin's *Missa de Beata Virgine*. With the exception of the early manuscript works, his motets, some two dozen in number, along with a *Magnificat* and a set of Lamentations, show sure technical command along with the clear texture and steady declamatory patterns evident in all his music. Their relatively small number would seem to indicate that Arcadelt, who was often ill during his period of service in the papal chapel, was only moderately active as a composer during these years; but surviving copies in Cappella Sistina manuscripts show that this music was used there.

3. SECULAR MUSIC. After the 'Parisian' chanson composers published by Pierre Attaingnant, Arcadelt was perhaps the best-known composer of chansons until the rise to prominence of Lassus in the 1550s. His 125 chansons, unlike his sacred music and his madrigals, span the whole of his career. The early chansons are virtually indistinguishable in musical style from many of the madrigals (see *Voulant amour sans parler*, or *Est-il advis qu'on doibve*, published by Attaingnant in 1537 and 1538); it is clear that the madrigals of both Verdelot and Arcadelt were written in response to a Florentine taste strongly moulded by the chanson. A simple, mostly syllabic style, with much internal repetition, is to be seen throughout Arcadelt's chanson output. Later works show a good deal of variety in melodic line and bursts of interesting contrapuntal elaboration, but simplicity and clarity nearly always reassert themselves. A number of chansons, many written to texts by Mellin de Saint-Gelais, a poet obviously favoured by the composer, used the lilting rhythm characteristic of the frottola, a musical gesture not to be seen in Arcadelt's madrigals but rather identified with the poet's own musical tastes. Occasionally one finds in the chansons aspects of the *note nere* madrigal (cultivated by Arcadelt in the years around 1540) such as declamatory patter on the semiminim (instead of the usual minim) and syncopated staggering of voices. One such piece, *Quand je me trouve*, published by Attaingnant in 1549, is a contrafactum of a madrigal, *I vaghi fiori e l'amorose fronde*, published by Scotto in the same year; a second version of the chanson, issued by Le Roy and Ballard in 1554, adjusts the music to provide a better fit for the French text. Some of Arcadelt's later chansons are works of individuality and distinction; but he never approached the motet-like texture of some mid-century chansons by Lassus and others.

Arcadelt's French employers wanted chansons from him, and he seems to have been glad to oblige. But it was as a composer of madrigals that he had established his reputation early in his career, and as a madrigalist that he is best known today. About 250 madrigals are ascribed to him in printed sources; some of these are wrongly attributed (notably a group by Jacquet de Berchem) but at least as many probably by him survive anonymously in manuscript sources. Florentine manuscripts of the 1530s (*I-Fn* Magl. xix. 99–102, *Fn* Magl. xix. 122–5, *Fc* Basevi 2495 and *B-Bc* 27.731) contain large numbers of his madrigals, in some instances almost to the exclusion of Festa, Verdelot, and other Florentines such as Layolle and Corteccia. The four books published by Gardano in 1539 consist of music written over the whole decade of the 1530s; the fifth (1544) has a mix of older music with madrigals written after his move to Rome.

In his madrigal output are a small number of three-voice works (a genre for which Costanzo Festa is better known) and a few five- and six-voice pieces, among them the splendid *Chiare fresch' e dolce acque* (published in 1555 but written much earlier), a five-section setting of a complete Petrarch canzone which helped create the vogue for madrigal cycles. Arcadelt was, however, above all the master of the four-voice madrigal, in which he refined and expanded upon Verdelot's work to create a flexible, graceful, eminently singable genre that achieved immediate and lasting success, influencing the course of the madrigal through nearly the whole of the later 16th century. The simplicity of many of the madrigals is deceptive; they are carefully worked out and sensitive, in an undemonstrative way, to their texts. Familiar patterns (frequent use of basic melodic types; many repeated-note anacrusis phrase openings; love of pedal-point codettas) abound, but they are combined in fresh and artful ways.

Things of interest may be found in all of the five madrigal books, as well as in individual madrigals published in anthologies such as the *note nere* volumes of the later 1540s and the madrigal book of Claudio Veggio (RISM 1540[19]). In the *Libro terzo*, for example, there are several pieces, including *Dai dolci camp' Elisi*, in which text and music suggest use in a theatrical intermedio; this book also contains a number of madrigals scored *a voci pari* or *mudate*, for all-male performance. The order of publication of the madrigals does not reflect their compositional history; early and later pieces are frequently mixed (for an effort to show elements of development and change in the madrigals see Haar, 1987).

The fame of Arcadelt's *Primo libro* was so great that for many in the 16th century this book represented the composer almost completely. It had an extraordinarily long life in print, with 58 editions (containing a central core of pieces varied by omission of old and entry of newer pieces by other composers) appearing between the (lost) first one of *c*1538 and the last in 1654; no other madrigal volume by any composer approaches its success. Through much of this period it was popular on its own terms; later it was used primarily for didactic purposes, its clarity and simplicity making it appear suitable for learners. The beginnings of the book's printed history are a bit mysterious. Sometime in 1538 Antonio Gardano issued it as a collection of 50 madrigals; no copy of this edition is known to survive. A pirated edition (also lost) was printed in Milan; then in May, 1539 Gardano reprinted the book, adding an additional ten pieces. No ascriptions appeared in this or other early editions; but in one of 1546 ten of the 56 pieces, all found in the 1539 volume, are given to other composers,among them Berchem (four) and Corteccia (three). Layolle, given one piece in 1546, probably wrote two others as well. Thus something approaching one quarter of the 1539 volume's contents was by composers other than Arcadelt. This situation is not uncommon in early madrigal prints; the high degree of stylistic uniformity in the volume may show either cultivation of a common (Verdelot-derived) idiom or imitation of Arcadelt by musicians acquainted with his work before it appeared in print (this last seems particularly true of Berchem's madrigals).

Of Arcadelt's compositions in the *Primo libro* there are settings of poems by Petrarch, Sannazaro, Bembo, and the Florentines Benedetto Varchi, Filippo Strozzi and Lorenzino de' Medici (one each). Michelangelo wrote the madrigals *Deh dimm' Amor se l'alma* and *Io dico che fra voi*, which appeared in succession in both the 1539 *Primo libro* and a manuscript of the period (*I-Fc* Basevi 2495). There is no evidence that the two knew each other, but in two letters the artist mentions Arcadelt as having set some of his poetry. The rest of the poetry is so far anonymous: occasional verse probably of Florentine origin, cast in the form of madrigals with elements of the ballata and canzone evident in them; the sonnet was as yet not a favoured poetic form among madrigalists.

Several of the madrigals in the *Primo libro* achieved individual popularity, being reset by other composers who referred to Arcadelt's music, compressed into duos (as in the often-reprinted set of Lupacchino and Tasso, RISM 1559[24]), and used as basis for parody compositions. Text as well as music may be important here; a piece such as *Non ch'io non voglio mai altro pensiero*, which is very close in style and in musical material to *Il bianco e dolce cigno*, enjoyed none of the latter's fame. Intabulations of lute and guitar transcriptions and arrangements of madrigals made much use of Arcadelt's music; more than a third of the madrigals of the *Primo libro* were published in intabulated form. Of particular note are the ricercares for viol by Diego Ortiz (*Trattado de glosas*, 1553), on *O felici occhi miei*. Final proof of Arcadelt's general fame is use of his music in several 16th-century paintings depicting musical activities.

WORKS

Edition: *Johannes Arcadelt: Opera omnia*, ed. A. Seay, CMM, xxxi/1–10 (1965–71) [S]

MASSES, MAGNIFICATS, LAMENTATIONS

Missa tres (Paris, 1557): Missa 'Ave regina caelorum', 5vv, S i (on de Silva's motet); Missa de beata virgine, 4vv, S i; Missa 'Noe Noe', 6vv, S i (on Mouton's motet)

Magnificat primi toni, 4–6vv, 1557[8], S x

Lamentationes Jeremiae (i; Zain. Recordata est; Nun. Prophetae tui, Jerusalem), 4vv, 1557[7], S x

Lamentationes Jeremiae (ii; Caph. Defecerunt; Lamed. O vos omnes; Jerusalem), 5vv, 1557[7], S x

Lamentationes Jeremiae (iii; Res. Sordes eius; Zain. Vidisti Domine; Convertere), 4vv, 1557[7], S x

MOTETS AND SACRED CHANSONS
all edited in S x

Benedixit Deus Noe, 4vv, 1532[11]; Candida virginitas, 6vv, *I-Rvat* CS 24; Congregati sunt, 5vv, 1538[2]; Corona aurea, 5vv, *Rvat* CS 24; Domine Deus omnipotens, 4vv, 1538[5]; Domine exaltetur manus tua, 4vv, 1539[13]; Domine non secundum peccata nostra, 3–5vv, *Rvat* CS 13; Dum complerentur dies Pentecostes, 5vv, 1538[2]; Estote fortes in bello, 6vv, *Rv* S[1] 35–40; Filiae Jerusalem, 4vv, 1532[11]; Gaudent in caelis, 5vv, 1538[2]; Gloriosae Virginis Mariae, 5vv, *Rvat* CS 24

Haec dies, 4vv, 1532[11]; Hodie Beata Virgo Maria, 4vv, 1539[10]; Istorum est enim, 7vv, 1564[2], Memento salutis auctor, 4vv, *Rvat* CS 24; Michael archangele, 5vv, 1538[2]; O gloriosa domina, 4vv, 1538[5]; O pulcherrima mulierum, 5vv, 1539[5]; O sacrum convivium, 5vv, 1539[7] (also attrib. Jacquet); Pater noster, 8vv, 1545[2]; Recordare Domine, 5vv, 1540[7]; Regina caeli, 5vv, *Rvat* CS 13; Salve regina, 5vv, *Rvat* CS 24

Dont vient l'esjouissance, 4vv, 1553[19]; Il faut que de tous mes esprits, 4vv, 1555[16]

CHANSONS

Most of the chansons in the volumes devoted mainly to Arcadelt, listed immediately below, had already appeared in earlier anthologies. The earliest source is cited in the list of individual pieces. All are for 4 voices unless otherwise stated.

Quatorsiesme livre de chansons, 4–6vv (Paris, 1561[6])
Tiers livres de chansons, 4vv (Paris, 1567[4])
Quatrième livre de chansons, 4vv (Paris, 1567[5])
Cinquième livre de chansons, 4vv (Paris, 1567[6])
Sisième livre de chansons, 4–5vv (Paris, 1569[13])
Neuvième livre de chansons, 4–6vv (Paris, 1569[14])

Amour a pouvoir sur les dieux, 3vv, 1554[27], S viii; Amour en moy (i), 1557[15], S viii; Amour en moy (ii), 1559[10], S ix; Amour est un grand maistre, 1557[13], S viii; Amoureux suis mais (also attrib. Certon), 1556[15], S viii; Amour me sçauriez vous apprendre, (Saint-Gelais), 1554[27], S viii; Amour se plaint de ton forfait, 1559[12], S ix; Amour, tu le sçais bien, 1565[5], S ix; Après le fait la repentence vient, 1569[13], S ix; Au temps heureux que ma jeune (? Saint-Gelais), 1539[15], S viii; Avec les plus beaux yeulx, 1552[4], S viii; Ayant fuy pour aymer, 1561[4], S ix

JAMES HAAR (work-list with LETITIA GLOZER)

Arcadian Academy. Association founded in Rome in 1690 for the reform and 'purification' of Italian poetry, in particular the opera libretto. It emerged, like many such Roman gatherings, from the circles of specific patrons, in this case Cardinal Pietro Ottoboni, whose vast wealth and artistic interests both protected and nurtured poets and musicians admitted to the group. Although its members assumed fanciful academic names (Ottoboni's was 'Crateo Pradelini'), it should not be thought of as a formally constituted academy. However, its influence spread widely through Italy and abroad for several decades, in part by way of letters and tracts but also by virtue of the general commerce in opera at this period: many cities had gatherings of *letterati* variously allied to the Arcadian cause.

As the name implies, the Arcadians sought a return to classical simplicity (in part, via French models) in reaction to the abuses of contemporary poetry. Their spokesmen, Giovanni Maria Crescimbeni and Ludovico Muratori, ranged widely in their attacks on 17th-century *concettismo*: Giacinto Andrea Cicognini's libretto *Giasone* (set by Cavalli) comes under particularly harsh criticism in Crescimbeni's *La bellezza della volgar poesia* (Rome, 1700) for its mixing of genres and characters and 'the complete ruin of the rules of poetry'. Librettists associated with the Arcadian movement, including Ottoboni himself, Apostolo Zeno, Gian Vincenzo Gravina, Silvio Stampiglia and Pietro Metastasio (Ottoboni's godson and Gravina's pupil), sought to restore order to the genre by regularizing its structures, themes and affective content. Composers particularly associated with the Arcadians included Alessandro Scarlatti, Giovanni Bononcini and Leonardo Vinci. These texts and music did much to formulize the conventions of late-Baroque *opera seria*.

The various artistic and other ideals of the Arcadians are not so consistent as to be reduced to easy labels. That reflects differences of personality and geography; the common threads (*pace* the notion of reform) with earlier Italian traditions; and the repeated difficulties found by scholars from Francesco De Sanctis onwards in giving a reasoned account of Italian literature of the 17th and 18th centuries.

Archaeomusicology (Ger. *Musikarchäologie*). The application of the methods of archaeology to the study of music. Setting out from the analysis of archaeological findings, however acquired, archaeomusicology reconstructs the music and musical life of early cultures and ethnic groups that can often be dated very far back in time (Buckley, 1989). It then tries to discover features or traces of that ancient musical culture still extant in the more recent musical life of the society living in the same geographical area.

Such archaeologists as Childe (1957) and D.L. Clarke (1968) set out, if not uniformly, from the premise that the analysis of findings, that is, archaeological finds in context, was more important than the recovery and interpretation of isolated finds. Their studies concentrated on problems rather than objects (Ziegert, 1980), attempting to focus on the questions about mankind and human culture behind the actual finds. Accordingly, 'reconstruction of the historical development of human cultures [is based] primarily on the study of their surviving artefacts, buildings and biological materials'; consequently, it is 'essential to derive as much information as possible from this material, using all the methods at our disposal. In the last resort, however, all the steps in archaeological fieldwork relate to a reconstruction of past life deriving from an interpretative approach that links the finds with their context' (Maier, 1980, p.345). A similar approach may be adopted for the study and description of music and musical life in the distant past, for the archaeomusicologist deals with subjects and materials resembling or identical to those studied by the archaeologist. Both employ the same or very similar research methods.

1. OBJECTS OF RESEARCH. The objects of research are items that have been excavated, from whatever cultural period they may derive (for instance, the Palaeolithic

period in Europe, a Metal Age period of China, present-day industrial archaeology in North America). Archaeomusicological artefacts consist primarily of musical instruments or parts of instruments; scenes of music-making in cave paintings, reliefs, frescoes and mosaics; more rarely, written sources such as inscriptions or descriptions of music; and, even more rarely, specimens of musical notation. The objects may be made of various kinds of material – stone, metal, pottery, bone, wood, skin, leather, bark, reeds and recently also plastic. The importance of music in ancient cultures is attested by the recovery of evidence of music-making from all kinds of archaeological finds, including those from tombs, hoards and excavations of settlements. This however varies according to the particular culture under consideration; and it is important to remember that it is not always possible to be certain of the significance of the evidence since the remains of the past do not lie undisturbed in the ground indefinitely. Archaeomusicologists, however, seldom acquire their objects of research straight from excavations in which they take part. Such items come from inventories of archaeological collections, from the study of specialist archaeological and musicological literature and from information provided by archaeologists and the general public (Lund, 1980, p.5).

2. Classification and analysis. One of the aims of archaeomusicology is to classify its finds. The classification system developed in musicology and archaeology has been outlined as follows (Lund, 1980, p.7): (1) objects whose primary purpose was to produce sound, that is, musical instruments, such as bronze lurs, bone flutes, bells and jingles; (2) objects whose primary purpose was probably to produce sound, such as pig-bone bullroarers; (3) objects which, judging by analogous items, were made to fulfil more than one function (see Hickmann, 'Anthropomorphe, Pfeifen' and 'Das, heilige Signal', 1997; Koch, 1992), including that of producing sound (such as items of personal adornment made of snail-shells or bronze plaques); (4) objects probably not made with the intention of producing sound but whose construction enabled them to do so as well as fulfilling their primary function, for instance, silver or iron bracelets; and (5) items whose function is unknown but which produce sound as a result of their structure and could therefore have been used as musical instruments, for example, items of bone with carved grooves that were possibly used as scrapers (they are classified on the basis of analogy, the context of the find, the archaeomusicologist's or others' interpretation, and/or in the light of other circumstances).

This system aims to provide both specialists and amateur collectors and archaeologists with a guide to assist them in the classification and especially the assessment of finds, for the real nature of sound-producing instruments, in the widest sense of the term, often goes unrecognized in ethnomusicological and organological studies. Organological classification (such as that of Hornbostel and Sachs), and the concept of music it conveys, is not always generally understood even among archaeological experts. This preliminary system of archaeomusicological classification, however, enables a find to be further assessed, geographically, chorologically, chronologically and typologically, with the aim of locating it in a specific culture and as far as possible excluding the possibility of its belonging to others (Hickmann, 1983–4). In all cases, the study and analysis of the materials of a find follow the measurement of its component parts. Archaeomusicology thus largely consists of the preservation, description and analysis of a music-related object in all its aspects. When the object is an instrument that can still be played, acoustic and musical investigations are carried out and the tonal repertory, range, frequency of vibrations and sound spectrum will be recorded. If the instrument is damaged, or if only rudimentary parts of it have been preserved, a replica may be made and used for these investigations. There is a growing trend to use a copy even where an instrument is well preserved. Comparison of the resulting data with those from the analysis of similar instruments may lead to more precise dating and cultural identification. Conclusions may be drawn about performing practice and the instrument's socio-cultural significance. Archaeomusicology cannot work effectively in the analysis of material or in chronological classification without drawing on other sciences; interdisciplinary work is essential (see *ICTM Study Group on Music Archaeology II*, 1984; *III*, 1986; *IV*, 1990; *V*, 1992; *VI*, 1993; *VII*, 1994–5; *VIII*, 1996; *International Study Group on Music Archaeology, I: Blakenburg, Harz, 1998*; *II*, 2000).

3. Archaeomusicology and history. The division of pre-history and protohistory into the tripartite system of the Stone Age, the Bronze Age and the Iron Age has been and remains of considerable importance in investigating many geographical regions and cultures, and it can be used with modifications for musical materials and their dating. In Europe it has been applied to finds from the area between the Danube and the Adriatic and to the north and east of that area, covering present-day Bavaria, east Germany, Poland, Bohemia, Moravia, Slovakia and Hungary (Zagiba, 1976, p.10). Following a sequence from the Stone Age (the Early Palaeolithic, the Mesolithic and the Late Palaeolithic) through the Pottery Age (the Neolithic) to the Metal Age (the Bronze Age and Iron Age), a classification system can be produced for prehistoric musical instruments (Zagiba, p.13) which not only follows this chronology but also draws on the theory of culture circles (*Kulturkreislehre*): certain instruments do not occur in the three epochs of the tripartite system forming the 'cycles' since they are linked with particular cultural developments, and there is thus a clearly demarcated distribution area (Seewald, 1934). This classification sets up three criteria: the assignment of finds (1) to their place in the course of early historic cultural cycles, and their incorporation into a system according to (2) the material of which they are made and (3) their idiophony (p.12). No 'historical picture' from prehistory can be constructed in this way; it is therefore useful for the archaeomusicologist to ask the critical questions that a historian would ask about both the evidential validity of sources and the historical picture he aims to produce. The difficulties of presenting a broad-based historical concept, in the light of the selective survival of evidence and the need for its careful processing and interpretation by people who fully understand its potentialities, has been discussed by Dymond (1964, pp.75–7). Besides a precise knowledge of the scientifically ascertained facts, whether they concern archaeological artefacts or historical circumstances, 'imagination', a certain inspirational factor, is necessary if the loose ends are to be tied up (Hodder, Isaac and Hammond, 1981; Assmann, 1996, 1997).

Ethnology and ethnomusicology are thus also involved in archaeomusicological research.

4. ETHNOGRAPHIC ANALOGY. To call on the lifestyle of a recent non-European and preferably 'primitive' culture to illustrate how a prehistoric community or people might have lived constitutes the method of 'ethnographic analogy' (or 'actualized comparison'). Common in archaeological studies from about the mid-19th century, and used to popularize archaeology, it was initially firmly rejected by musicologists. Continuous connections between an old musical culture and a more recent one in the same geographical area, did not become the subject of detailed musicological research until the end of the 19th century. Villoteau (1846), for instance, wrote comprehensively on the music of Egypt but did not mention documentary records of ancient Egyptian music. Reference back to ancient periods was also rigorously avoided in earlier studies of other cultures, as in Kiesewetter's of the Greeks (1858); according to Wilamowitz-Moellendorff (1921), comparison with the music of the modern Greeks and their system showed that it could not be derived from or in any way related to the world of the ancient Greeks (Becker, 1966, p.84).

Only recently has research been undertaken into historical dimensions in the cultures of peoples said to 'have no history' (Vansina, 1965, 1985; Geertz, 1973; Wolf, 1982); archaeological methods have seldom been applied. In the early 20th century the familiar historical approach whereby factors of another culture are compared with and assessed according to phenomenologically similar ones in our own still dominated the new discipline of ethnomusicology (or 'comparative musicology'); it owed much to the theory of evolution. The cultural-historical methods of culture-circle theory began to be applied around 1910, by Schmidt, who soon modified the culture-circle concept, distinguishing between the culture circle as a methodical means for establishing as objectively as possible complex genetic and historical cultural circumstances and their sequence, and the culture circle in its order of being, as a former tribal culture. Its elements should go back to a uniform origin, a primitive culture that was dispersed by migration over large areas. All that could be grasped in concrete terms was the culture circle in its order of being, following a schematic pattern (see Schneider, 1976, pp.44–5). Comparative musicology soon adopted this theory.

The outstanding work of the time when it was in use was Curt Sachs's *Geist und Werden der Musikinstrumente* (1929), in which Sachs sought to describe the entire known range of musical instruments from all over the world. He set out from what he took to be an established fact: 'that all the instruments of primitive and developing cultures, including the high cultures of the American continent and east and south-east Asia, were derived from a few centres, the most important and productive of which are to be sought in central Asia' (p.5). The further away a musical instrument is found in use, the older it must be, for the representatives of such far-flung cultures must have been among the first migrants and their cultural assets among the earliest exports. Ethnologists saw similar forms and functions as the correlates of objects to be observed in distant ethnic units. Observation, comparison and the study of distribution should enable us 'to draw conclusions about the structural stratification of human culture and so about its history' (p.4). The hypothetical relative chronology that Sachs developed, however, kept conflicting with his historical awareness.

Even before Sachs wrote *Geist und Werden*, methods of ethnographic analogy had been employed in comparative musicology, for instance in d'Harcourt's *La musique des Incas et ses survivances* (1925). Only later generations, however, saw a broad-based opportunity, in the form of actualized comparison, to trace connections between traditions and construct a historical picture of pre- and protohistorical European and non-European music on the basis of archaeomusicological finds (for instance H. Hickmann and C. Grégoire de Mecklembourg, 1958; C.-H. Mahling and S. Wiesmann, in *IMSCR*, 1981; Schneider, 1984; E. Hickmann, 1985; and Olsen, in *ICTM Study Group on Music Archaeology III*, 1986; and May, O'Dwyer, Purser and Schumacher in *International Study Group on Music Archaeology I: Blankenburg, Harz, 1998*).

5. TYPOLOGY. It is often difficult, if not impossible, to date musical objects precisely. In the past, archaeologists in charge of excavations frequently failed to keep detailed records; sites were often damaged and objects destroyed. Typology, 'the process of determining the location of a find within a developmental sequence from its form, decoration and style, and thus assigning it a relative date' (Maier, 1980, p.269), which today is no longer a new approach and indeed has largely fallen out of favour, used to be among the methods employed for placing finds within a relative chronology and thereby studying historical dimensions in depth, even in the absence of written records. However, typology 'regarded as the sole infallible method was soon misused, and was thus discredited' (p.271), and in any case there were many finds to which it could not be applied. Few conclusions could be drawn about musical instruments and other music-related archaeological evidence from this strictly formalistic method; there were too many other parameters. In 1949, however, Broholm, Larsen and Skjerne successfuly used typology to establish a relative chronology for northern European lurs (see also *ICTM Study Group*, 1986, ii). Although the method could be used to some extent to establish a chronology for Neolithic pottery drums or Metal Age rattling ornaments, it failed to provide chronological information on such items as bone flutes or string instruments.

6. RECONSTRUCTION. Besides using analogy in the shape of actualized comparison, and setting out from that point, archaeomusicology employs methods of the retrogressive study (reduction) and retrospective projection of music-related evidence to reconstruct aspects of musical life and practice.

Retrogressive study with reduction entails establishing as closely as possible the location in past centuries of an instrument or a musical practice. Present-day musical instruments and practices are the point of departure, not the aim (Becker, 1966; May in *International Study Group on Music Archaeology, I: Blankenburg, Harz, 1998*). This approach has not yet often been used because methodological problems arise in the tracing of musical practices back in time. Scholars may study modern instruments in detail, but when embarking on a historical account they usually begin with the earliest known records

from the region concerned (Lawergren in *International Study Group on Music Archaeology, I: Blankenburg, Harz, 1998*). Quotations and analyses of evidence between these extremes derive from literature, not the archaeomusicologist's own analysis, for the objects themselves are usually unavailable. In later history, moreover, archaeologically documented instruments whose function is difficult to determine have usually been folk instruments, and few specimens are preserved (*Studia instrumentorum*, 1973); an example is the rattle, for which there is archaeological evidence from many parts of the world although it has not passed into written records or iconography (Hickmann and Jänichen, *MGG2*). Museum collections illustrating traditional cultures were not generally built up before the mid-19th century. An impressive example of the reduction method is Alexandru's study of Romanian panpipes (1984): Gheorghiu Zamfir's playing of the panpipes provides his point of departure, and he mentions the virtuoso playing of Romanian performers in the earlier 20th century and their performances in Russia in the 19th, detects their influence in scores by 19th-century Russian composers, traces the panpipes back to the 15th century in Romania through terminological and iconographic studies and so comes to the earliest archaeological evidence, from Roman times. Weis Bentzon used a similar approach in his study of the Sardinian triple clarinet, the launeddas (1969), tracing it back to the double clarinets of Pharaonic Egypt (pp.28–9).

Retrospective projection provides fewer opportunities for error: it consists of relating a modern musical instrument or practice to what are sometimes very early archaeological artefacts without involving relevant sources (generally yet to be found) in the great spans of time between the two objects. The aim is less to discover what a musical practice was like than to ascertain that it took place, and did so in a way similar to modern practice. Alice Moyle (1981) has compared the Australian didjeridu with cave paintings from Arnhem in northern Australia which are about 1000 years old and show several typologically different players. Terminological investigations, studies of the material of which modern instruments are made, of regional distribution, of the player's handling of the instrument and the way it was held as compared with modern practice, led to the conclusion that other customary musical elements have been preserved along with performance on the didjeridu, for instance the use of certain idiophones as they feature in the words of songs. The author drew these deductions from early wax cylinder recordings, and shows how points relevant to historical development can be made by retrospective projection. Given further chronological data, the length of time occupied by the sequence might also be determined, and another step would have been taken in the writing of musical history.

7. Written and oral sources. Depending on the approach to archaeomusicological facts of past or present, four groups of sources can be distinguished.

(i) Complementary accounts. These arise when a writer is personally acquainted with the object he is describing and deliberately makes it the subject of his account. The object may be contemporary with him or already in the archaeological past. The writer provides a complementary account which adds to our idea of the find. Examples are Hero of Alexandria and Vitruvius in Rome, who give detailed descriptions of the hydraulis or water organ in the 1st century BCE. The instrument was later depicted in mosaics, on coins and in frescoes of various periods; archaeological evidence in Aquincum has been dated to 228 CE (several instruments were reconstructed from the fragments). There is further archaeological evidence for the hydraulis in Switzerland (3rd century CE) and in Dion (1st century BCE; see Jakob, *MGG2*); the instrument was still in use in the 3rd century. The writers mentioned credit the Alexandrian engineer Ctesibius (*fl* 283–246 BCE) with its invention and the Roman historian Ammianus Marcellinus confirms that it was played in the circus in the 3rd century CE (Fleischhauer, 1964; Wille, 1967). In the 8th and 9th centuries Arab scholars translated the writings of classical antiquity, especially those of the Greeks. Muristus gives an account of the organ accompanied by a drawing showing its construction (Farmer, 1931), but we have no archaeological evidence indicating whether it still existed. The depiction in the 9th-century Utrecht Psalter may not be organologically accurate. Another instrument known as the organ or *organum* may have existed in Europe. In the case of the hydraulis, given references and descriptions in Hellenistic and Roman sources indicating its use in performance along with other instruments, it has been possible to reconstruct musical practices connected with it in a way that must come very close to the real facts.

A good example of the primacy of archaeological objects and the way in which archaeology and written information interlock comes from the cultures of East Asia. China, for instance, still has the *qin* (zither), which seems to be first mentioned in writing (if not by name) in the *Liji*, a compilation of philosophical, religious and ethical ideas from the time of Confucius (although the work itself was probably written much later, in the 1st century BCE). The first pictorial depiction of the instrument is probably in a relief on the tomb of Emperor Chien in the western province of Szechuan (early 10th century). As Chinese archaeologists point out, it is their own practice to date archaeological periods well into historical times, so that in many parts of China archaeological finds can be said to provide a picture of real life at certain periods of regional Chinese history (K.-C. Chang, 1977). The classification of instruments in the *Liji* can be applied to a range of instruments still preserved intact and in use. This Chinese system classifies instruments according to the materials of which they are made: (1) metal (bells): *bo, zhong*; (2) stone (lithophones): *qing*; (3) earth – pottery, clay (globular six-hole flute): *xun*; (4) leather (drums); (5) silk (zithers): *qin, se*; (6) wood (mortar for grinding rice, beaten on the insides at the beginning of cult ceremonies): *zhu*; (7) gourd (mouth organ): *sheng*; (8) bamboo (flutes): *guan, xiao, paixiao* (panpipes). In this case, as the old system of classification by materials indicates, archaeology can be directly visualized.

(ii) Imaginative descriptions by contemporaries. In this case the author does not know the object he is describing, or does not know it well. The archaeological findings are already part of the past. Accordingly, one must expect to find mistakes that can no longer be corrected because they were made by authors of same period as the artefacts: for instance, accounts from missionaries ignorant of music and impeded by a variety of prejudices (see Hickmann, 1990). Archaeomusicological material and descriptions of music from late antiquity have also been preserved. The geographical and cultural environment of Hellenistic

Alexandria, where a wide variety of cultural elements met, at a later date mingling and becoming superimposed on each other (especially in the case of syncretist religions), contributes to the confusing quantity and typological variety of objects that have been preserved (Hickmann, 1987). Travellers, traders, priests of oriental cultures and the early Christian church and scholars (including philosophers, lexicographers and historians), all of whom wrote their impressions, were of origins as diverse as their educational standards, and their classification and interpretation of many contradictory processes and phenomena eludes comprehension. It is difficult, then, to match archaeomusicological artefacts to written sources, since one cannot tell which instruments are meant. The written sources themselves are imprecise and imaginative. This group includes Jewish and late Babylonian references to music in ancient Palestine, often handed down to the present day, although their accounts are distorted (Hammerstein, 1959; Avenary, 1961; Wohlenberg, 1967). Finds of musical instruments and depictions of musical scenes in Palestine are rare and attempts to identify them by comparison with biblical allusions have had little success (Bayer, 1963; Braun, *MGG2*; Braun, 1999; *see* BIBLICAL INSTRUMENTS).

(iii) Myths and legends. These accumulate around an instrument of the archaeomusicological past. It is not clear whether the authors, usually anonymous, knew the musical object themselves. Myths and legends may be regarded as end-products of oral tradition. They are most productive of historical content when the prehistory of the culture that produced them continues far enough into historical times for outsiders to record them, so that they can be checked as written versions of an extant oral tradition. The process sometimes still continues in areas of the Andean cultures of South America (Hickmann, in *GfMKB*, 1981). An example is the Colombian legend of El Dorado in which the cacique of the Muisca tribe takes presents to his wife, sunk beneath the waters of Lake Guatavita, a ceremony accompanied by music. The scene of the cacique navigating the lake with his subjects on a large raft has been depicted many times in pure gold and in greatly reduced format. Two of his companions carry rattles and some depictions also show wind instruments. Pipes, flutes and trumpets, as mentioned in the legend, are among the archaeological finds of Colombia, and numerous accounts by missionaries and European conquerors relate how the instruments were played. Even when their accounts of the instruments are wide of the mark, and they condemn the dances as heathen magic, these descriptions, together with the legends, provide ample confirmation of the way in which archaeomusicological finds were used and their significance in musical life. The El Dorado legend is thus an ideal example of this way of investigating the sources. Another instance concerns the many legends constructed around the sounds and functions of early Christian handbells in the mission to Ireland (Hickmann, 'Das heilige Signal', 1997; Purser, in *International Study Group on Music Archaeology, I: Blankenburg, Harz, 1998*).

(iv) The oral tradition. It is not clear from the transmission process whether the person passing on the information was actually acquainted with the archaeological object. Sources of error in this group are inadequacy of concept and erroneous or misinterpreted information. From criticism of the sources, and the results of comparison with archaeological and written sources, it can be concluded that the information value of written sources through oral transmission, as systematically and traditionally practised by ethnologists, is probably not inferior to the oral tradition itself in reliability. In fact, in both written and oral transmission, the composition of individual impressions and the equally individual selection and interpretation of facts is the material of which history is made. The crucial difference lies in the concept of historical retrospection: oral tradition, experiments have shown, cannot be traced back for more than three generations. In his diagram illustrating both its potential and its limitations in east African societies, Wachsmann sets out from the researcher's own typical behaviour patterns and methods of inquiry, and assumes that a researcher will be interested in the following subjects and circumstances, in this order: (1) tendencies and requirements arising from the immediate environment; (2) biographical data; (3) stylistic musical evidence; and (4) terminological questions: the researcher will acquire the necessary information on the basis of the answers and on planes of investigation aiming at the following observations: (*a*) the direct observation of processes in musical history, increasingly related to the past; (*b*) the informant's personal memory; (*c*) the informant's report, comprising hearsay and legends; (*d*) historical examination of accounts by travellers and others, datable archaeological evidence; and, following on from the last point, (*e*) working hypotheses and speculation on longterm developments (Wachsmann, 1971, p.96). The archaeological record itself is thus called upon only when all other means of investigating traditions and historicity in a society which has no written language are exhausted. It seems that all historical evidence should be interpreted before going back (or forward) to the archaeological artefact or findings. Bearing in mind modern archaeological techniques of excavation and analysis, and the wealth of objects in museum collections, it may be that a three-dimensional picture of the music and musical life of a series of cultures could be reconstructed solely and unilaterally from archaeological working methods, and that such a picture could supplement the written information. Changes in attitude and experience mean, among other things, that archaeological finds are now interpreted as evidence of human life in the past and are not studied solely for their value as artistic or utilitarian objects.

8. THE DISCIPLINE. Archaeomusicology has existed as long as music history, that is, ever since anyone began writing about the musical instruments and performing practices of the past. Chroniclers of cultures, however, make only passing references to instruments in the distant past; moreover, few authors have themselves seen the evidence preserved *in situ* or even in collections. As far as Europe is concerned, it is not known whether or how closely those who wrote about proto-historic and classical Mediterranean civilizations were familiar with the instruments of their past and present (Hickmann, 1987; and see §8(ii) above). But the early Church fathers of the eastern Mediterranean area knew exactly what they were condemning when they fulminated against the cult music of their environment. Through them and their interest in the musical customs of their time a good deal of knowledge has come down to modern archaeomusicologists, as it also has from Greek and Roman authors of the centuries around the time of the birth of Christ, writing from their

own points of view. However, even if it is assumed that religions with their musical instruments and musical practice lasted longer in the Roman provinces than in Rome itself or in Alexandria, by the 6th and 7th centuries, when Isidore of Seville (*d* 636) was writing his encyclopaedic work, the *Etymologiae*, Roman culture had died out. Many misunderstandings of an organological or terminological nature, some of them connected with tradition, come from the writings of this period. Pseudo-Jerome's famous letter, from the mid-9th century (*Epistola ad Dardanum*), describes a purely speculative range of instruments with no archaeological equivalents, and the account it gives of their sounds is wholly imaginary (Hickmann, forthcoming). Meanwhile, plainchant had developed throughout the Western Churches. Nothing is known from the period about instruments that might now be regarded as archaeomusicological evidence, and in the area around Alexandria (by then long since destroyed) and ancient Egypt in general an independent musical life was obviously in existence, using instruments entirely different from those known to classical antiquity (Hickmann, 1987). In part this style of music was developed by the earliest Christian Coptic communities (Eichmann, 1994).

Very few European instruments are extant from the period of the migrations of nations and the early Middle Ages. Generally, only fragments have been preserved as archaeological artefacts; they are being studied and reconstructed by archaeomusicologists (*see* EUROPE, PRE- AND PROTO-HISTORIC). The Middle Ages often provided their own descriptions and interpretations of musical instruments and practices mentioned in the Bible. The educational canon of classical antiquity, still being passed on until the 17th century, also imported into the textbooks some knowledge of ancient music, the names of instruments and their religious and cult connections. However, this was dead knowledge that failed to take account of archaeological findings, and it seems to have been unusual for writers (such as Kircher) to have known about them. The 18th century brought a great many treatises on 'antiquities', including musical ones. An interest in the ancient world became fashionable, especially after the publication of the writings of Winckelmann, in particular his *Geschichte und Kunst dės Altertums* (1764), and the development of Egyptology that followed Napoleon's campaigns. Outstanding works on musical instruments of antiquity and biblical times include Blanchinus's treatise (1742) and Ugolino's collection of 40 tracts on biblical and ancient musical instruments (1767). Many of these accounts, more particularly their illustrations, belong to the realm of fantasy (Hickmann, forthcoming), an approach corrected only towards the end of the 19th century by scholarly editions of texts and confrontation with the archaeomusicological facts. Still in the 19th century, Fétis came close to an archaeomusicological approach when he remarked that 'les recherches archéologiques' could contribute to extending knowledge of the instruments of antiquity (*Histoire de la musique,* 1869, p.9). The first to use the term 'archaeomusicology' was Estreicher in his review (1947) of Sachs's *The Rise of Music in the Ancient World East and West* (1943), describing it as 'a considerable contribution to archaeomusicology' (or *Musikarchäologie*). At this point the term tentatively entered musicological discussion, as it already had in Sweden where the musical materials in any case consisted largely of archaeological items (see de Geer, 1985; Lund, 1987).

As a discipline partaking of both musicology and archaeology, and focussing on the study and evaluation of archaeological objects, archaeomusicology is thus a relatively new discipline. It was not until the 20th century that scholars recognized the need for precise investigation, interpretation and description of the objects themselves, for making replicas where possible, and for the use of whatever iconographic and written sources were available to supplement illustration of the various connections. It was however some time before such an approach was described as archaeomusicological research, although the conditions for its acceptance were present (see for instance the publications of Hans Hickmann, esp. 1949, 1956 and 1961, and many monographs, such as those by Zagiba, 1976, and Broholm, Larsen and Skjerne, 1949). At the 1977 International Musicological Society congress in Berkeley there was some reluctance to give a Round Table the title 'Music and Archaeology'. A Study Group on Archaeomusicology was formed at the ICTM congress in 1981 to promote international archaeomusicological research, and this group was recognized in 1983 by the executive committee of the Council as the Study Group on Music Archaeology, from 1997 independent of the ICTM as International Study Group on Music Archaeology (see conference proceedings of 1984–96 and 1998–). A Music Archaeological Bulletin appeared in 1984–6, succeeded until 1990 by *Archaeologia musicalis*. Archaeomusicology is now recognized as a scientific field in many parts of the world.

ELLEN HICKMANN

Arched viall. *See* SOSTENENTE PIANO, §1.

Archer, Frederick [Frederic] (*b* Oxford, 16 June 1838; *d* Pittsburgh, 22 Oct 1901). Anglo-American organist, conductor and composer. He became organist of Merton

College, Oxford, and in 1873 was appointed to Alexandra Palace in London, where he afterwards became conductor, a post he held until 1880. In 1881 he visited the USA, giving organ recitals in several cities, and later the same year returned to become organist first at Henry Ward Beecher's church in Brooklyn and then at the Church of the Incarnation in New York. In 1883 he founded the illustrated weekly *The Keynote*, which he edited for a year. He moved to Boston in 1887 to become conductor of the Boston Oratorio Society, and subsequently to Chicago where he was organist of St James's Church.

When Andrew Carnegie established the Carnegie Institute and Library in Pittsburgh, he instituted weekly free organ recitals there; Archer was engaged as organist and inaugurated the series on 7 November 1895. The institute's music hall also served the new Pittsburgh Orchestra, which Archer conducted from its first concert on 27 February 1896 until 28 January 1898, when he was succeeded by Victor Herbert. He continued as organist until his death, however, and also worked as organist of the Church of the Ascension. Archer composed many works for the organ, piano pieces, songs and a cantata, *King Witlaf's Drinking-Horn*. He wrote several instructional manuals and also compiled anthologies of organ pieces.

ALEXIS CHITTY/BRUCE CARR

Archer, Violet (Balestreri) (*b* Montreal, 24 April 1913; *d* Ottawa, 21 Feb 2000). Canadian composer. The daughter of Italian immigrants, she legally adopted the anglicized name Archer with her family in 1940, keeping Balestreri as her middle name. She studied the piano and the organ at the McGill Conservatorium and composition at McGill University (BMus 1936), where her teachers included Claude Champagne and Douglas Clarke. During the period 1940–47 she played percussion in the Montreal Women's SO, taught theory and piano, and worked as an accompanist. Her career as a composer was launched with the performance of her *Scherzo sinfonico* (1940) by the Montreal SO. In 1942 she gained additional recognition when Adrian Boult selected her *Britannia, a Joyful Overture* (1941) for performance on the BBC. That work was later recorded and broadcast to the armed forces in Europe. She undertook further study with Bartók in New York (1942) and with Hindemith at Yale University (BMus 1948, MMus 1949), where she was awarded the Woods-Chandler prize for her composition *The Bell* (1949). The influence of these two composers is clearly evident in her musical style, particularly in her orientation toward *Gebrauchsmusik* and in her use of folk melodies, harmonies and rhythms.

After serving as composer-in-residence at North Texas State College (1950–53) and teaching at the University of Oklahoma (1953–61), Archer was invited to join the faculty at the University of Alberta (1962), where she remained until her retirement in 1978. As professsor emeritus she continued teaching part-time and maintained commitments as an adjudicator for keyboard and composition competitions. She was awarded the Queen's Silver Jubilee Medal for long and distinguished service in music in 1978, became a lifetime academic member of the Accademia Tiberina (Rome) in 1979 and was recognized as Composer of the Year by the Canada Music Council in 1984. In 1987 the Canadian Music Centre Library at the University of Calgary was dedicated in her honour. Many of Archer's works have been recorded on Radio Canada International's *Anthology of Canadian Music*.

LINDA BISHOP HARTIG

Archet (Fr.). *See* Bow.

Archicembalo. *See* Arcicembalo.

Archilei [Vimercati], **Antonio** ['Antonio di S Fiore'] (*b* Albano, late 1541 or 1542; *d* Florence, bur. 14 Nov 1612). Italian singer, lutenist and ?composer, husband of Vittoria Archilei. He was in the service in Rome of Cardinal Alessandro Sforza dei Conti di S Fiora, who died on 16 May 1581, after which he entered the service of Cardinal Ferdinando de' Medici. The latter became Grand Duke of Tuscany in 1587, and Archilei, with his wife, followed him to Florence, where he became a musician at court, with a salary of 18 scudi a month from 1 September 1588; his salary was reduced to 11 scudi on 30 November 1589 (though he continued to receive a monthly pension of 12 scudi granted for life by Cardinal Ferdinando in 1582). He participated in the spectacular *intermedi* marking Ferdinando's wedding in 1589: he is known to have played one of two chitarroni accompanying his wife's singing of the florid solo song 'Dalle più alte sfere' (ed. D.P. Walker, *Musique des intermèdes de 'La pellegrina'*, Les fêtes du mariage de Ferdinand de Médicis et de Christine de Lorraine, Florence, 1589, i, Paris, 1963; original text 'Dalle celesti sfere') at the beginning of the first *intermedio*. In the publication of the music (1591) he is named as the composer of this song, but the official description of the event by Bastiano de' Rossi (Florence, 1589, p.19) attributes it to Cavalieri. Archilei was paid up to and including August 1612 (there are no records for the following months). The Ferdinando Archilei who saw through the press Pomponio Nenna's eighth book of five-part madrigals (1618) was one of his sons.

NIGEL FORTUNE/TIM CARTER

Archilei [née Concarini], **Vittoria** ['La Romanina'] (*fl* 1582–1620). Italian soprano, lutenist and dancer, wife of Antonio Archilei. Probably a pupil of her husband, whom she married most likely in 1582, she was a protégée of Emilio de' Cavalieri in Rome and was with him in the service of Cardinal Ferdinando de' Medici before he became Grand Duke of Tuscany in 1587. She participated in the festivities for the wedding of Eleonora de' Medici and Vincenzo Gonzaga in 1584. When Cavalieri was made artistic superintendent at the Medici court in 1588, she went with her husband to Florence, where she became one of the most famous singers of her time. She apparently remained in the service of the Medici until her death.

She had a major part, as soprano soloist and lutenist, in the spectacular 'intermedii et concerti' for the comedy *La pellegrina* during the festivities for the marriage of Ferdinando de' Medici and Christine of Lorraine in 1589. Her performance in Cavalieri's *Disperazione di Fileno* (Carnival 1590–91) was said, by the editor of his *Rappresentatione di Anima, e di Corpo*, to have moved the audience to tears. She made two extended visits to Rome: in winter 1593–4, when she sang before Filippo Neri, and in 1601–2, when she stayed with Cardinal Montalto; it was probably during the first of these visits that the Spanish composer Sebastian Raval wrote 'many' madrigals for her, later published in his *Madrigali a tre voci* (1595). She also performed in the festivities for the wedding of Prince Cosimo de' Medici and Maria Magdalena of Austria in Florence in October 1608. Subsequent references to her in Medici court records mainly concern performances of sacred music in Florence and Pisa, usually together with Caccini's daughters (Caccini's second wife Margherita may have been her pupil).

Her date of death is unknown: a Vittoria Archilei was buried in SS Annunziata on 3 February 1645, and court salary records note payments under her name through 1643, but her last known letter is dated 28 September 1619 and the last record of a performance at court seems to be from 1620. In 1614 Giambattista Marino published a poem 'In morte di Vittoria cantatrice famosa' and Vincenzo Giustiniani spoke of her in the past tense in his *Discorso* (*c*1628). Whether or not she lived until the early 1640s, her career seems to have ended by 1620.

The opening piece in the first of the 1589 *intermedi*, 'Dalle più alte sfere', composed by her husband or Cavalieri, was a solo for her to the accompaniment of her own 'leuto grosso' and two other chitarroni; it was published in 1591 (along with the other music of the *intermedi*; ed. D.P. Walker, *Les fêtes du mariage ... Florence, 1589*, Paris, 1963/*R*) with the treble part in both its original form and a highly elaborated one, much as she must have sung it, suggesting her extraordinary virtuosity in improvisatory passage-work and ornamentation. She was in close touch with modern tendencies in Florentine music and obviously sympathetic to them; both Giulio Caccini and Jacopo Peri cited her, by way of buttressing their respective claims to primacy in the new monodic style, as having performed their music. Caccini (preface to *Euridice*, 1600) wrote that she had 'long ago' adopted the new manner of passage-work 'invented' by him. Peri (preface to *Euridice*, 1600/01) called her the 'Euterpe of our time' and said that she adorned his music

not only with brilliant *passaggi* but with graces too subtle to write out. Another, perhaps more impartial, musician, Sigismondo d'India, lauded her (preface to *Le musiche ... da cantar solo*, 1609) as being 'above any other' an excellent singer, spoke of her as 'most intelligent' and emphasized the sweetness and tenderness of her voice. Her talents were also praised in a madrigal by Marenzio (*Cedan l'antiche tue chiare vittorie* in his *Secondo libro de madrigali a sei voci*, 1584), in verse by Ottavio Rinuccini and Battista Guarini, and also by Vincenzo Giustiniani, Pietro della Valle and Severo Bonini.

H. WILEY HITCHCOCK/TIM CARTER

Archilochus (*fl* ?650 BCE). Greek iambic and elegiac poet. He was a native of the Ionian island of Paros. 'I am the squire of lord Ares', he sang, 'and skilled in the lovely gift of the Muses' (Edmonds, frag.1). More artist than military man, he expressed both the external world and his responses to it in a remarkably personal tone.

His surviving poems contain no certain references to string instruments. The first word (*tēnella*) of his victory hymn, however, supposedly imitates the twang of a lyre string (Scholiast on Pindar, *Olympian*, ix.1–4); and one heavily restored fragment (Edmonds, frag.114, xiv) may refer to lyre playing accompanying the dance. He did clearly mention the aulos as a feature of religious or convivial occasions (frags.76; 32); possibly, though not certainly, he associated it with the performance of elegiac verse (frag.123) – a likely combination in this early period of elegy. According to a late source (Pseudo-Plutarch, *On Music*, 1140f–1141a), Archilochus abolished the strict rule which had ordained only one note for each syllable of text and introduced new styles of rhythmic composition such as the trimeter and combinations of different rhythmic genera, as well as the practice of allowing the text to be spoken as well as sung. This same source also attributes to him the discovery of independent instrumental accompaniments, that is, accompaniments not in unison with the song. While the use of recitative relates most naturally to iambic verse (which he developed with particular skill), elegy may have been involved as well. He not infrequently combined different metrical patterns; his use of iambs and trochees, moreover, shows several kinds of substitution. Possibly his metrical subtlety was paralleled by a characteristic imputed to Archilochus, the refined handling of varied and intermingled musical rhythms.

Archiluth (Fr.). *See* ARCHLUTE.

Archipoeta [Archpoet] (*b* ?Cologne, *c*1130; *d* shortly after 1165). Latin lyric poet. His real name is unknown. He was a German or French clerk of knightly birth whose patronage by Reinald of Dassel, Archbishop of Cologne and Archchancellor to Emperor Friedrich Barbarossa may have given rise to his pseudonym. He travelled throughout Germany and to Austria and Italy, where he was desperately ill in 1165. He must have written many Latin poems, but only ten survive; additions to his corpus present problems of ascription, since his name was sometimes conferred honorarily on later poets. His poetic technique follows that of his older contemporary Hugh Primas, but with less spite and more wit. The *Confessio*, written at Pavia, is his greatest achievement and illustrates his best characteristics: a keen knowledge of biblical and classical authors, ingenious rhythm and supreme rhyming skill, great wit and genial humour, cunning word-play and melodious cadence. No melodies are known for his poems. His poetic style is mirrored in a number of Notre Dame conductus texts.

Archives and music. Archival documents contain accurate and detailed information relevant to many aspects of musical scholarship: to biography, chronology, history of institutions and societies, the place and function of musicians in society, performing practice (in the fullest sense of that phrase) and many others. They yield the

kind of information that primarily musical manuscripts and printed sources cannot provide.

The term 'archive' is here used as defined under §1 below. It is also widely used in a second sense, to denote what bibliographers would classify as a 'collection' or even 'library': the Deutsches Musikgeschichtliches Archiv in Kassel, for example, is a library of photographic materials relating to sources of German music. Many collections fall halfway between an archive in the strict sense, consisting of the surviving papers of a historical person, and a collection, which may include material added by subsequent collectors. Such a case is the collection in the Library of Congress known as the 'Rachmaninoff Archives'. *See also* LIBRARIES; COLLECTIONS, PRIVATE; and SOUND ARCHIVES.

1. Types of archive. 2. Preservation; location. 3. Archival research. 4. Application to music history. 5. Skills; aids.

1. TYPES OF ARCHIVE. Archives are the totality of documents produced or received by a person or an organization in the course of administrative activity and the transaction of affairs. Most archives are now kept as an organized body of records in an authorized repository and are maintained in their original chronological order. Both the source of the documents and their method of classification thus differ from those of an ordinary collection or group of manuscripts in a library, where the documents are normally classified by other criteria, such as date of acquisition, subject or original bibliographic order.

Archive collections differ greatly according to their institution of origin. Public archives are produced by the many and various organs of government, including both national and local government, the legislature and the judiciary. They comprise archives of national scope, including the records of all central government departments, of parliament and of the higher courts of law, as well as archives of local governmental and judicial activity, at provincial, county and municipal level. Private archives arise from the activity of private businesses and organizations, institutions both ecclesiastical and lay, and individuals. They include the archives of all religious institutions, especially those of parish, collegiate, cathedral and monastic churches; the records of notarial and business organizations of all kinds; and archives accumulated by individuals, especially by landowners in the creation and administration of extensive households and landed estates. In free societies the principle that public archives should be accessible to the public is generally accepted. Private archives remain the property of their owners, and special permission must be sought before they can be consulted.

2. PRESERVATION; LOCATION. Since the late 18th century it has become acknowledged that the state is responsible for the preservation of its documentary heritage, and throughout Europe public archives are readily accessible in record offices maintained by the state. In general a central repository is provided for central government archives, and in the larger countries there are also provincial repositories. Since this movement began, with the establishment of the French Archives Nationales in 1789 and Archives Départementales in 1796, efforts have been made in every country to centralize dispersed materials and create a unified administration for national and local archives. A comprehensive annotated list of the major archives of the world prepared by the International Council on Archives is found in the *International Directory of Archives* (1992).

In western Europe there exist the following national public archives: the Staatsarchiv in Vienna; the Archives Générales du Royaume in Brussels; the Public Record Office in London; the Archives Nationales in Paris; the Bundesarchiv in Koblenz; the Archivio Centrale dello Stato in Rome; the Algemeen Rijksarchief in The Hague; the Archivo Histórico Nacional in Madrid; and the Bundesarchiv in Berne. Then come the archives of the counties in Britain; of the provinces in Austria, Belgium, Italy and the Netherlands; of the départements in France; of the Länder in Germany; and of the cantons in Switzerland. Next come the district, municipal, episcopal and parish archives in these countries. An exception are the archives of the Vatican, which are extraordinarily rich in history for almost every country, and which have a distinct and unique organization.

In the USA, because of its federal constitution, there are two levels of governmental administration and legal process. The federal archives are held in Washington DC by the National Archives and Records Services, a unit of the General Services Administration, or (in the case of material primarily of regional interest) in regional branch archives; state and municipal archives are held locally.

Obviously each national archive collection reflects the history of its country of origin. Where the state has been relatively recently centralized, as in Italy, it is necessary to search the archives of all the provinces that made up the nation as well as the more recently established central archive in Rome; but where centralization came early, as in England and France, the archives have been grouped together in the capital from an early date. In many countries, administration of both national and local archives has been vexed by changes in national boundaries, particularly in Germany where a regrouping of the archives was begun in 1815. A national Reichsarchiv was established in Potsdam in 1919, but the partition of Germany in 1945–9 resulted in its division into an archive for the Federal Republic in Koblenz and another in Potsdam for the Democratic Republic. Since the reunification of Germany the archive in Koblenz serves the entire country, and that of the former Democratic Republic is now under its direction. As a result of transfers of territory, there have been several exchanges of archive collections between nations; for example, in 1861 France gave Italy the Piedmont archives, and in return received from Italy those of Savoy.

Archive centralization has not always happened, however. Archival material relating to certain provinces of northern Italy remains in Austria, for instance; indeed, it was only by virtue of a special clause in the Treaty of Versailles (1919) that the volumes of 15th-century music known as the Trent Codices were transferred to Italy at the same time as the city of Trent was ceded by Austria. Further, many archives have been destroyed, such as those of the city of Paris in 1870, and of the state of Naples in 1943. The archives of the Irish Free State (now the Republic of Ireland) were severely damaged by fire in 1922, and those of the city of Florence by flood in 1966.

European countries show great differences in the way they maintain certain classes of archive. In France, for example, ecclesiastical archives, of special value for the history of sacred music, have been kept in the public

repositories since the Revolution and its attendant separation of church from state. In other Western countries, especially in Italy and Spain, they remain at their institution of origin. Similarly, it is usual in France and Italy for notaries' archives to be kept in official vaults, whereas elsewhere they remain in their place of origin.

Records of birth, death and marriage are of great importance in biographical work. For many centuries such records were produced and retained by the church, but in some countries a system of civil registration was introduced. Such registration began in England, for example, in 1837, and since 1858 all wills (previously proved in the church courts) have been proved in civil probate courts. As a result, the scholar can consult one central repository (the Public Record Office, Kew) for such information since those dates. Where earlier records survive they can often be found in local archival repositories such as county record offices. Many countries have taken population censuses since the methods of demography became known in the 19th century; the results, with a wealth of personal information, are often available for consultation, as are registers of electors. The largest repository of genealogical records, however, is the Family History Library of the Church of Jesus Christ of Latter-Day Saints in Salt Lake City, where millions of microfilms of American and European parish archives are kept. Copies can be consulted there and at regional Family History Centers.

Since respect for historical material is relatively recent, there are numerous exceptions in the distinction between libraries and archive repositories. Occasionally, for example, whole music manuscripts are found in archive collections, not to mention the many fragments discovered bound in as flyleaves to non-musical volumes. A few examples may be cited: there is a music manuscript dating from the end of the 15th century in the archives of the city of Heilbronn; an entire collection of printed 18th-century music in the departmental archives of Agen; and censored or forbidden operas and songs in the national archives of France. Conversely, many libraries hold important archival material. A whole series of account books of the French royal household, originating in dispersed collections and important for music history, is in the manuscript department of the Bibliothèque Nationale, as well as in stray ecclesiastical archives (notably the chapter registers of Parisian churches) and among the considerable quantity of scattered pieces gathered by private collectors and genealogists. Archives of defunct organizations may surface in a variety of places; in Britain, for instance, extensive archive collections of extinct landed families and of religious houses dissolved in the 16th century are in the Public Record Office and the manuscript department of the British Library.

3. Archival research. In western Europe general appreciation of the importance of preserving archival records, for purely practical legal and administrative purposes, is of long standing; their use by historians, however, is much more recent. During the 19th century the study and writing of history ceased to be merely a branch of literature and evolved into an exact science with techniques for seeking accurate information. By supplying a wholly untapped reserve of data that appeared to be completely free of bias and subjective distortion, archives began to be appreciated as an important source of historical information. Before long, historians of the arts discovered that archival research could do much to illuminate the history of architecture, of painting, of the theatre, and in due course also of music.

Even before the centralization of national archives was far advanced, national series began to be published containing editions of important chronicles (the Monumenta Germaniae Historica for Germany, The Rolls Series for England); and from the mid-19th century several countries issued transcripts and calendars of archival documents together with lists, indexes and catalogues. Local and regional history societies began similar publications, as did private organizations and societies. There is now a massive literature, diffuse and highly complex yet immensely rich. (*See also* Musicology, §II, 4.)

4. Application to music history. Archival research can be profitable in many ways to a musicologist. It can produce biographical material about a composer or performer; the date of composition of a particular piece; references to lost music or music manuscripts; the history of a musical institution (royal chapel, church school, liturgical choir, orchestra, conservatory); the music history of a town, a concert society or a lyric theatre; insight into the practices of instrument making and music publishing. In fact, it can produce information relating to all the external aspects of music-making. In broader terms, it can give insight into the place of the musician in society in past ages, and into the place of music among the aesthetic values of the time. Further, archival sources can be of use in the reconstruction of performing practice in music of the pre-Classical era. In the case of sacred music for choir, details of performing method can best be obtained from the archives of the churches maintaining the choirs. The most valuable sources are codes of statutes; accounts and hall books; registers and volumes of chapter decisions; obituaries and cartularies; indentures of choirmasters, singers and organists; inventories of music books; and visitation records. From these it is possible to reconstruct certain features of performance, such as the number of singers, the number of voices to a part, the deployment of solo voices and chorus, the availability and participation of instruments, and by inference even such matters as approximate pitch of performance. Similarly the archives of royal and aristocratic households frequently reveal the exact composition of bands of household musicians and minstrels, and list the instruments available to them.

European scholars first felt the need to use the contents of archives during the 19th century. Italy (Baini, Caffi, Bertolotti, Valdrighi, Radiciotti, Solerti), France (La Fage, Campardon, Jullien), England (Lafontaine), Ireland (Flood) and Germany (Haberl) were the first countries to show an example. These pioneers were often amateurs, spurred on by the growth of learned societies. Succeeding generations were more predominantly made up of professional musicologists (such as La Laurencie, Ecorcheville, Michel Brenet, Prunières) and organ specialists (Dufourcq and many others), of whom the latter were the most active. However, few were willing to publish coherent and complete editions of the texts, with the intention of providing a base for future research. Exceptions were the *Note d'archivio* by Casimiri, the records of the Confraternity of Our Lady of 's-Hertogenbosch published by Smijers, and more recently the 'documentary biographies' of Schubert, Handel and Mozart by Deutsch. There

remains a vast amount of editing (of accounts, archives of churches, chapels and schools, diplomatic correspondence, theatre archives and particularly notaries' archives), for which the musicologist will have to acquire the skills of the administrative historian.

5. Skills; aids. Archival research can add a new dimension to the study of certain aspects of musical history; but to be successful the researcher must have mastered a number of skills not normally related to serious musical study. It is essential to be acquainted with the rigorous standards of scholarship set by professional historians for the acquisition, collation, evaluation and interpretation of archival information. A sound knowledge of palaeography (the decipherment of handwriting and of abbreviations) and diplomatic (the study of the forms of documents) is no less essential. Awareness of onomastics (the study of proper names), of toponymy (the study of place names) and the history of economics and of the calendar can also prevent erroneous interpretation. The techniques of full diplomatic transcription (making clear exactly what is in the original document and what has been supplied by the transcriber), of calendaring (producing a summary of the essential information-giving section of a document) and abstracting (taking and tabulating the vital facts from a document, particularly a will) are essential. For this the scholar needs to understand how, administratively, the document concerned was produced. Existing guides and inventories, printed and handwritten, should be consulted and the wide range of categories of archival material that may be relevant to his or her inquiry borne in mind. Thus royal household accounts may have to be consulted for a musician's career in courtly circles, university archives for his years of study, judicial archives in the case of a lawsuit, notary's and civil records for his private and family life, diplomatic correspondence for his journeys abroad, parish archives for references to his participation in some local event, his marriage and his death, possibly police records, copyright records for publication dates, and so on. For modern times, private archives still in the possession of those who produced them are sources that must not be overlooked, and that usually have no inventory; these include, for instance, the archives of music and record publishers, radio stations, music schools and others.

FRANÇOIS LESURE, ROGER BOWERS/BARBARA H. HAGGH (with ANDRÉ VANRIE)

Archivolti, Samuel (*b* Cesena, 1515; *d* Padua, 1611). Italian grammarian, poet and rabbi. He refers to music in his treatise on Hebrew grammar, *'Arugat ha-bosem'* ('Bed of spices'), which survives in both a manuscript (*GB-Lbl* Add.27011) and a printed source (Venice, 1602). Subjects of special relevance to music include accentuation, metres and poetical forms. Under accentuation, Archivolti describes the biblical accents (*ta'amei ha-miqra*), or melodic formulae used in cantillating the scriptures for marking the syntax and word stresses. Their purpose is to elucidate and embellish the text, thus increasing its hold on the soul. Referring to poetry, Archivolti draws a sharp distinction between the biblical (prose or psalmodic) texts for cantillation and the metric poetry for singing *piyyutim*, or post-biblical sacred hymns. His preference is for cantillation, which he calls 'excellent music' (*ha-nigun ha-meshubah*), for it is adapted to the words in their structure and content. By comparison, the music for *piyyutim* is 'common' (*ha-nigun ha-hamoni*): it appeals not to the mind, but to the senses; moreover, it sometimes employs secular melodies transmuted as contrafacta to meet sacred purposes. In this context Archivolti refers to the street tunes *En toda la tramontaña* and *El vaquero de Moraña*. Archivolti composed numerous *piyyutim*, several of which have been incorporated into prayer books of the Italian rite.

DON HARRÁN

Archlute (Fr. *archiluth*; Ger. *Erzlaute*; It. *arciliuto*, *arcileuto*). A generic term for lutes with fretted courses tuned like the Renaissance lute, and with extended, unfretted bass courses (diapasons). The archlute differs from the Theorbo mainly in that the body is smaller and the first and second courses are at lute pitch rather than an octave lower (this was possible because the string length was shorter). The term 'arciliuto' was in use in Italy before 1590; it is not known precisely what form of instrument the term then implied, but the prefix 'arci-' indicates some form of enhanced lute, the extension of the bass courses (for greater volume as much as for additional notes) being the most probable enhancement. The various early archlutes preserved the tuning, double stringing, octave bass courses, and musical role of the Renaissance lute; consequently they were often simply called 'liuto'. Contemporary paintings show some lutes with a short neck extension bearing a second bent-back pegbox, and some with extended diapasons attached to the bass side of a single, straight pegbox. By the second decade of the 17th

century some archlutes bore a short form of theorbo-like extension with its characteristic shepherd's-crook head carrying double-strung, octaved diapasons about one-and-a-half times the length of the fretted courses. This development coincides with the first appearance of the term 'liuto attiorbato' (theorboed lute) which is the normal modern term for archlutes of this kind, following Spencer's classification (1976). Both the term and this form of the instrument gradually disappeared in Italy around the mid-17th century.

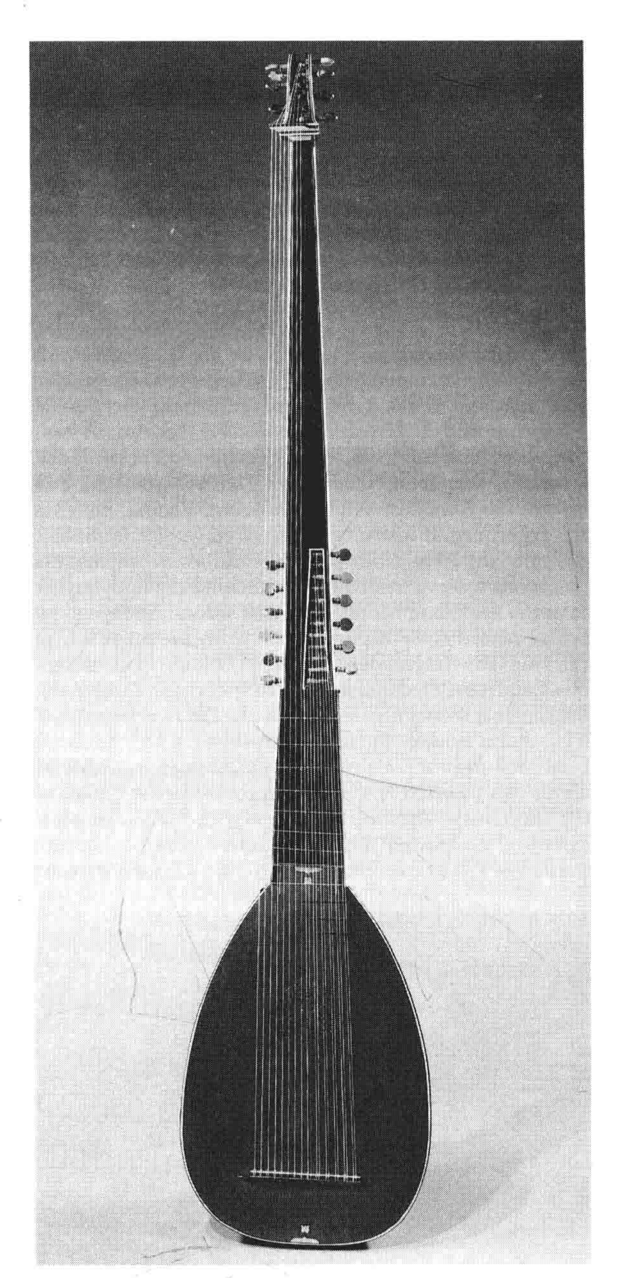
1. Types. 2. Repertory.

1. TYPES. Alessandro Piccinini, in his *Intavolatura di liuto* of 1623, claimed to be the inventor of the *arciliuto*, and objected to the term 'liuto attiorbato' because it falsely implied a derivation from the theorbo. A ten-course archlute of 1595, by Wendelio Venere of Padua (probably Wendelin Heberle; *see* TIEFFENBRUCKER), and now in the Kunsthistorisches Museum, Vienna, matches the experimental instrument described by Piccinini. It is radically different from the *liuto attiorbato* in that its diapasons were extended by lengthening the body rather than the neck, and fitting them to a second, independent bridge placed some distance back from the main bridge carrying the fingerboard strings. Finding this design unsatisfactory, Piccinini and his luthier made subsequent instruments with a neck extension; he did not describe its form, but it is likely to have incorporated either a second bent-back pegbox or a modified single pegbox, either of which can be fitted without compromising the design of the lute's body. The *liuto attiorbato* with its theorbo-style extension co-existed with alternative types of archlute during the 1620s and 30s, but gradually became dominant as the number of courses increased, because the alternative designs could not accommodate extra courses so readily.

1. Archlute player: painting by Francesco Trevisani, 1715 (private collection)

Until the 1620s archlutes usually had up to 11 double courses, six or seven of which were fretted. Further diapasons were added between 1610 and 1615 but were not widely adopted until a generation later. By the 1630s *liuti attiorbati* with seven stopped courses plus six or seven diapasons were usual, although P.F. Valentini, writing in the 1640s (*Il leuto anatomizzato*, MS, *I-Rvat*), still mentioned the 11-course type. Surviving *liuti attiorbati* range in size from alto to large tenor. Typical stopped string lengths are 58–9 cm (alto), and 66–7 cm (average tenor), with diapasons of approximately 85 cm and 95 cm respectively. The lower neck is relatively long, joining the body at the tenth fret or higher, and the body is short, and also wide to accommodate the long bridge. The resulting round, squat body is characteristic, especially of the alto size, making it possible to identify specimens that have been rebuilt into other forms. Most surviving examples were made by Matteo Sellas in Venice between 1637 and 1649; these may owe their survival to their atypically elaborate decoration.

Archlutes were known outside Italy, but were never common. Mersenne (*Harmonie universelle*, 1636–7) illustrated an 11-course *luth à double manche* or *arci liuto*, erroneously labelling it *tuorbe* in the main text, and correcting himself in the errata. The terms 'luth en tuorbe' or 'luth en théorbe' are found in several 17th-century French inventories, some of which specify the instruments' Italian provenance. Evidence from luthiers' inventories shows that many Italian lutes were rebuilt in Paris in the French fashion (with a backward-curving upper head, chantarelle rider, and long, open-backed lower pegbox). These were long in use; a manuscript (*Suonate di celebri auttori*; *I-Bc* EE.155.I) compiled by Filippo Dalla Casa in 1757 illustrated one and included music for 'arcileuto francese'. Mersenne suggested a single re-entrant course on very large archlutes, and such instruments were influential in the development of the French theorbo in France. In Germany, Praetorius (*Theatrum instrumentorum*, 1620) illustrated a ten-course *Laute mit Abzugen: oder Testudo Theorbata* with six stopped courses and four diapasons, all double; the strings pass over the bridge and are anchored at the base of the body, suggesting metal stringing. Although many surviving *liuti attiorbati* have been converted to this by shortening the neck and sometimes canting the soundboard, none appear to have been purpose-built.



Another form of archlute, developed by adding a longer, single-strung extension to a tenor lute, had proportions similar to the Italian theorbo but was smaller overall. This development is impossible to date accurately; most, perhaps all, surviving specimens are conversions from earlier lute forms. They have six rather than seven double stopped courses; their diapasons are approximately twice the length of the stopped strings and are always single (their length precludes the use of octave strings and renders them unnecessary because of the longer strings' powerful sound). This type corresponds most closely to the modern archlute, many of which are copied from an example dated 1610 (the extension may be later) by Magno Tieffenbrucker (iii), now in the Kunsthistorisches Museum, Vienna. This has six double courses at 67 cm, and eight single bass courses at 145 cm, and is tenor-sized with a ten-fret neck. A final type of

archlute was developed in Rome in the late 17th century, characterized by a larger body, relatively shorter lower neck and longer extension than the types described above. The few surviving examples, clearly in original form, are as large as the tuning permits, solidly built with relatively thick soundboards and often hardwood backs, to produce a powerful, penetrating sound. A fine, late specimen is that by David Tecchler (Rome, 1725), now in the Metropolitan Museum of Art, New York (fig.2). Purpose-built and converted archlutes with long single diapasons were predominantly used for playing bass lines and continuo.

All archlutes shared the same relative tuning of the stopped courses as the Renaissance lute (unlike the theorbo which had a re-entrant tuning), and were used for solo music and, to a lesser extent, for bass lines and continuo. A tenor-sized 14-course instrument was tuned *F′–G′–A′–B′–C–D–E–F–G–c–f–a–d′–g′*. A 13-course instrument lacked the lowest note. Sometimes the bottom courses would be re-tuned to supply missing chromatic notes to suit individual pieces. Alto-sized instruments were tuned a tone higher overall (*G′–A′–B′–C–D–E–F–G–A–d–g–b–e′–a′*).

2. REPERTORY. In the first half of the 17th century, solo music for the archlute was printed in tablature by GIOVANNI GIROLAMO KAPSPERGER, PIETRO PAULO MELLI, CLAUDIO SARACINI, ALESSANDRO PICCININI and Bernardo Gianoncelli (*Il liuto*, 1650/*R*). Archlutes were intensely cultivated in Rome, fulfilling a wider range of musical roles there than elsewhere in Italy. Payment records from many Roman institutions, especially churches, frequently mention *arcileuto*, *liuto*, *leuto*, *liuto attiorbato* throughout the 17th century and for at least the first decade of the 18th. Archlutes accompanied voices in conjunction with an organ and violone, and were also used as solo instruments or in ensembles, to provide short instrumental interludes during church services. In Rome, references to the archlute outnumber those to the theorbo, although both were sometimes used simultaneously to support different choirs of a polychoral work. Not surprisingly much of the archlute's repertory is linked to Rome; the instrument was used for bass parts and continuo in cantatas, operas, oratorios and various instrumental genres, by Marazzoli, Virgilio Mazzocchi, Colista, Stradella, Corelli, A. Scarlatti, Handel and others. Its ability to play full chords in a high tessitura was exploited in continuo arias with a high bass line, e.g. A. Scarlatti's *Tigrane* (1715). Obbligato parts occur in Handel's aria 'Cor fedele' (*Clori, Tirsi e Fileno*; 1707) and in oratorios by the Roman archlutenist and composer Nicola Francesco Haym. A small repertory of concertante works with archlute parts includes two trios and a concerto by Vivaldi. An anonymous Italian manuscript of about 1720 in the Robert Spencer Collection contains a *Sinfonia a solo di arciliuto* and two *Concertini per cammera con arciliuto obligato, violini e basso*, in which the archlute part is written in staff notation, use treble clef for solo passages (written an octave higher than sounding pitch) and figured bass for tutti sections (fig.3). Giovanni Zamboni's collection of *Sonate d'intavolatura di leuto* (1718), written in tablature, is the last published solo music for the instrument.

Outside Rome, references to the archlute as a continuo instrument are uncommon until the 1680s, when the rise of the trio sonata boosted the instrument's popularity.

2. *Archlute by David Tecchler, Rome, 1725 (Metropolitan Museum of Art, New York)*

Corelli's collections of *Sonate da chiesa* (opp.1 and 3) specified 'arcileuto' for the bass part (not the continuo); his many imitators copied this detail. Non-Roman reprints often substituted the theorbo, and foreign reprints sometimes blurred the distinction between bass and continuo

3. *Archlute part, showing figured bass changing to solo line, from the anonymous MS 'Concertini per cammera con arciliuto obligato, violini e basso', c1720 (GB-Lspencer)*

instrumentation. Borgir argued that Corelli's instrumentation is evidence for the archlute being primarily a single-line instrument rather than a chordal one. This is true of many obbligato parts, but trio sonata bass parts are figured as comprehensively as the continuo. Contemporary descriptions and surviving archlute parts suggests that the bass line, like the top part, would have been embellished, either chordally or melodically. Although the archlute was frequently specified in trio sonatas and related genres of instrumental chamber music during the 1680s and 90s, it is rarely mentioned in print outside this repertory. Contrary to some authorities, it never supplanted the theorbo, which was more widespread geographically and chronologically, and had a broader repertory. Corelli's works were partly responsible for assisting the archlute's spread across Europe. References to it appear in France and the Low Countries in the wake of Corellian fashions, and it acquired a short-lived popularity in England around 1700.

LYNDA SAYCE

Archpoet. *See* ARCHIPOETA.

Archytas of Tarentum (*fl* first half of the 4th century BCE). Greek mathematician, music theorist and inventor. A friend of Plato, he may have been taught by Philolaus, the first man known to have publicized Pythagorean discoveries widely. Although no extended writing by Archytas survives, fragments attributed to him are contained or summarized in the works of others. He may have been the first author to establish the subjects of the Quadrivium (geometry, arithmetic, astronomy and music). He also expounded a theory of acoustics that associated pitch with the speed of sound as it passed through the air, noting that sounds arriving swiftly and strongly appear high-pitched, whereas those arriving slowly and weakly appear low-pitched (Diels, 47b1).

Archytas presents the three mathematical means of music (Diels, 47b2): arithmetic [$(a+b)\div 2$], geometric [$\sqrt{ab}$] and subcontrary or harmonic [$2ab\div(a+b)$]. The geometric mean divides a musical interval exactly in half. Accordingly, Pythagorean music theory uses it to characterize the octave as the mean interval between the double octave and the unison. The arithmetic and harmonic means, since they always produce rational numbers provided that the original terms are rational, have the potential for wider application in music theory. Within an octave, the arithmetic mean determines the frequency ratio of the ascending 5th and the harmonic mean determines that of the ascending 4th.

Boethius (*De institutione musica*, iii.11) attributes to Archytas a proof that no mean falls proportionately between the terms of a superparticular ratio. This fundamental precept of Pythagorean music theory is also demonstrated in the third proposition of the Euclidean *Division of the Canon*. Both proofs rely on propositions established in the numerical books of Euclid's *Elements of Geometry*. Ptolemy (*Harmonics*, i.13) reports and discusses Archytas's divisions of the tetrachord into three genera. Descending from *mesē* to *hypatē*, the intervals are enharmonic (5:4, 36:35, 28:27), chromatic (32:27, 243:224, 28:27) and diatonic (9:8, 8:7, 28:27).

Archytas's other achievements included, apparently, a solution to the Delian problem of doubling the cube, and the construction of both a mechanical wooden dove that could fly and a child's rattle.

ANDRÉ BARBERA

Arcicembalo [archicembalo] (It.). A term used by NICOLA VICENTINO (*L'antica musica ridotta alla moderna prattica*, 1555) to designate a harpsichord equipped with many divided keys, or even a second manual, in order to permit playing in his reconstructions of the diatonic, chromatic and enharmonic genera of the ancient Greeks. Later writers have also applied the term to harpsichords having many divided keys for the simpler purpose of playing in good intonation in remote tonalities. Vicentino also built an *arciorgano* for the same purpose (*Descrizione dell'arciorgano*, 1561; for illustration *see* NICOLA VICENTINO, fig.2. An arcicembalo with eight keyboards, dividing the octave into 17 parts, was invented by FABIO COLONNA. *See also* ENHARMONIC KEYBOARD.

EDWIN M. RIPIN

Arciliuto [arcileuto] (It.). *See* ARCHLUTE.

Arciorgano. An organ with divided keys. *See* ARCICEMBALO.

Arcipreste de Hita [Ruiz, Juan] (*b* ?Alcalá de Henares, *c*1283; *d c*1350). Spanish poet and ecclesiastic. His *Libro de buen amor* (1330, enlarged 1343; ed. J. Corominas, Madrid, 1967/*R*; Eng. trans., 1970), written during an unjust imprisonment of 13 years, gives him a place in medieval Spanish literature comparable to that of Chaucer in English literature. He mentioned at least 37 instruments in his long poem (6912 lines), often with characterizations: the *mandurría* (bandurría) is alluded to as silly and whining, the *rabé* (rebec) as sufficiently noisy for a traditional Arab tune such as *Calvi garabi* (*E-Mn* V^{a}-6-1, f/9), and the *tamborete* (side drum) as the indispensable time-beater for instrumental ensembles. According to the Arcipreste, the Moors preferred plucked instruments or percussion to the sweet sounds of the *vihuela de arco* (bowed fiddle); instrumental accompaniments were given even to processional motets and *chanzonetas* sung at Compline in 14th-century Castile.

ROBERT STEVENSON

Arciviolata [arciviolatalira, arcivioladaslyras]. *See* LIRONE.

Arc musical (Fr.). *See* MUSICAL BOW.

Arco (It.: 'bow'). The term refers to the bow used in playing string instruments such as rebecs, fiddles, viols and members of the violin family. As a musical term in Western music 'arco' is generally used after the word PIZZICATO to indicate to the player that he or she should resume playing with the bow.

Lanfranco, in *Scintille di musica* (1533), referred to 'violoni da tasti e da Arco' (fretted and bowed viols) and 'violette da arco senza tasti' (small bowed violas without frets). The term also appears in a number of Italian treatises on the art of bowing and most notably in the set of variations attributed to Tartini, *L'arte del arco* (1758).

Perhaps the first use of 'arco' to indicate resumed playing with the bow occurs in Monteverdi's *Combattimento di Tancredi e Clorinda* (1624). His instructions are: 'here one puts aside the bow and plucks the strings with two fingers', followed by 'here one retakes the bow [l'arco]'. J.J. Walther at the beginning of the tenth Capriccio in *Hortulus chelicus* (1688) wrote 'senza arco' to indicate that the piece should be plucked throughout. In his *Violinschule* (1756), Leopold Mozart wrote 'Col arco: means with the bow… This is to remind you that the bow is to be used again'. From the time of Paganini to the present there are innumerable examples of the pizzicato-arco combination.

SONYA MONOSOFF

Arco, Annie d' (*b* Marseilles, 28 Oct 1920; *d* Paris, 5 March 1998). French pianist. She studied the piano first in her native city and then with Marguerite Long at the Paris Conservatoire, where she received a *premier prix* in 1938. She then served as pianist for the Conservatoire's classes in violin, voice and wind instruments for several years, and in 1946 won second prize at the Geneva Competition. Although she often played as a soloist in the major cities of Europe, she is perhaps best remembered for her activities as chamber musician. She performed frequently with Henryk Szeryng, Jean-Pierre Rampal and especially with the cellist André Navarra, with whom she recorded sonatas by Schubert, Chopin and Saint-Saëns. Her outstanding recordings as a soloist include Mendelssohn's complete *Lieder ohne Worte* and the major works of Chabrier. She taught at the Paris Conservatoire and the Ecole Normale de Musique.

CHARLES TIMBRELL

Arcoleo, Antonio (*b* Venice; *fl* 1685–90). Italian librettist. He lived at Candia (now Iraklion), Crete. He wrote the librettos for Domenico Gabrielli's *Il Clearco in Negroponte* (1685) and G.A. Perti's *La Rosaura* (1689) and *Brenno in Efeso* (1690). The works were performed and printed in Venice. They treat historical subjects in a heroic-comic manner; each, by concealing the true identity of a principal character, arrives at a happy ending. They contain many da capo arias and exit arias. There are sometimes ballets between the acts.

KARL LEICH

Arco musical (Sp.; It. *arco sonore*; Fr. *arc sonore*). *See* MUSICAL BOW.

Arct, Michał (*b* Lublin, 31 Dec 1840; *d* Warsaw, 15 Feb 1916). Polish bookseller and music publisher. He served his apprenticeship in the bookshop of his uncle Stanisław Arct in Warsaw, then at Behr & Bock in Berlin. In 1862 he took over the management of Stanisław Arct's bookshop, becoming its proprietor in 1881. In 1900 he founded his own printing house, and devoted himself almost completely to publishing, especially dictionaries, encyclopedias, school and children's literature, and music. As a distinguished authority on music publishing he developed considerably the retailing of scores, as well as introducing a system of lending music for the students of the Warsaw Conservatory. He increased his number of publications to 100 titles yearly, mainly for teaching purposes. The publishing firm M. Arct existed until 1939 and, as the firm S. Arct, from 1946 to 1949.

Music series published by M. Arct include *Etudes et exercises, Sonates et sonatines*, *Musique moderne*, *Młody muzyk* ('Young musician'), *Przyjaciółki* ('The friends'; for four hands) and *Podręcznik dla miłośników oper* ('A manual for opera lovers'). Catalogues published include *Katalog książek i nut* (Warsaw, 1892), *Wydawnictwa muzyczne Księgarni i składu nut* (1895), *Wydawnictwa pedagogiczno-muzyczne M. Arcta* (1916), *Katalog utworów muzycznych* (1929) and *Książki i nuty wydane od 1946 roku* (1949).

KORNEL MICHAŁOWSKI

Ardanaz, Pedro (*b* Tafalla, Navarra, bap. 22 Sept 1638; *d* Toledo, 11 Oct 1706). Spanish composer. He was admitted to Toledo Cathedral as a choirboy on 17 September 1647, where he studied composition with Tomás Micieres. From 1658 to 1674 he was *maestro de capilla* of Pamplona Cathedral. He succeeded Juan de Padilla as *maestro de capilla* of Toledo Cathedral on 15 July 1674 and held the post for the 32 years up to his death – longer than any *maestro* there before or since. Between 1675 and 1702, 18 booklets of villancico texts were published at Toledo, and he was named as composer of the music for them. He joined the Cofradía de S Acacio (a musicians' guild) on 23 June 1687 and on 24 July 1688 was responsible for commissioning a new organ for the guild. At Toledo Cathedral Ardanaz's most notable musician was the harpist Diego Fernández de Huete, who arrived in 1682 and for whose *Compendio numeroso de*

zifras armonicas (1702) he wrote a commendation. His music survives in several church archives (*E-BUa*, *SA*, *SE*, *Tc*, *V*, *VAc VAcp*) and the library at El Escorial preserves a requiem mass and an invitatory for 12 voices, a *Magnificat* and four vesper psalms for eight voices, and five sacrament villancicos for seven to 11 voices. An Easter carol by Ardanaz, *Ven aurora ven*, for solo soprano and harp, and two sacrament villancicos, the three-part *Arroyeulo misterioso* (analysed by Francisco Valls in his *Mapa armónico*) and the four-part *Oigan al embozado* are extant (all are in *E-Bc*). The contrapuntal mastery, rhythmic vitality and harmonic chiaroscuro of his villancicos show that he is worthy to rank with Sebastián Durón, Cristóbal Galán and Juan del Vado.

ROBERT STEVENSON

Ardel. *See* HARDEL family.

Ardemanio, Giulio Cesare (*b c*1580; *d* 1650). Italian composer. All that is known of his life is that he was organist at S Maria della Scala and S Fedele, Milan, and at the ducal court there. He is known to have composed only church music: two published volumes – of motets (1616) and *falsobordone* settings (1618) – are known about but have not survived; a third, *Musica a più voci* (Milan, 1628), which does survive, was, according to its title-page, connected with a particular dramatic pastoral presentation about the life of St Charles (possibly S Carlo Borromeo). Some motets, canzonas and a madrigal by Ardemanio appear in anthologies edited in Milan between 1608 and 1626 by Francesco Lucino (RISM 1605^{6}, 1608^{13}, 1610^{1}, 1612^{9}, 1617^{2}, 1626^{5}). The comparative provincial obscurity of Ardemanio's musical activity may be due to the Spanish domination which somewhat isolated Milan from the mainstream developments which were centred on Venice.

JEROME ROCHE

Ardesi, Carlo (*b* Cremona, ?1550–60; *d* ?Prague, after 1611). Italian composer and instrumentalist, active in Bohemia. From 1582 until 1612 he served at the imperial court at Prague, where there were other instrumentalists with the same surname, of whom the older Alberto Ardesi may have been his father. He published *Il primo libro de madrigali* (Venice, 1597^{19}), for four voices, which includes 13 pieces by him as well as four by Giovanni Paolo Ardesi (*b* Cremona, after ?1550–60; *d* ?Prague, after 1611), who served at the imperial court at Prague from 1580 until 1612 and was probably his brother. An ode by Carlo Ardesi was published in an anthology (RISM *c*1610^{18}).

Ardesi, Giovanni Paolo. Italian composer. *See under* CARLO ARDESI.

Ardespin [Ardespine], **Melchior d'** [Dardespin, Melchior] (*b c*1643; *d* Munich, 1717). German composer and instrumentalist, ? of French birth. On 9 October 1669 he was employed as a cornettist at the Bavarian electoral court at Munich with an annual salary of 250 florins, increased on 27 October 1670 to 400 florins. In a decree of 2 September 1683 he received the title of *Kammerdiener*, and thenceforth he received 600 florins annually. In 1687 he was appointed director of the court orchestra and in 1690 electoral councillor; he held both positions until his death. In 1688 his salary increased by 300 florins, to which certain payments in kind were added, and it reached an annual total of 1073 florins in 1699; this was, however, reduced to 400 florins on 20 March 1700 as a result of Austria's taking possession of Bavaria. His output, much of which is lost, consisted mainly of ballet music. Apart from a few isolated pieces and a ballet composed in 1690 for the Bishop of Freising (now lost), he wrote the ballet music for a number of operas by Steffani and G.A. Bernabei.

GERHARD CROLL, ERNST HINTERMAIER

Ardévol (Gimbernat), José (*b* Barcelona, 13 March 1911; *d* Havana, 9 Jan 1981). Cuban composer and conductor of Spanish origin. He studied the piano, conducting and composition with his father, and when only 12 he composed the *Sonatina* and *Capricho* for piano. He graduated from the Instituto Musical de Barcelona in 1929, and the following year studied orchestral conducting with Scherchen in Paris. In 1930 he completed the degree in humanities at Barcelona University, and formed the Beethoven Trio, which was short-lived as he moved to Havana the same year. In Cuba he became the friend and colleague of Amadeo Roldán and Alejandro García Caturla, and quickly involved himself in musical life. He founded and conducted the Orquesta de Cámara de La Habana (1934–52) with whom he performed a wide range of music, from 17th- and 18th-century works to contemporary compositions, including a number by Cuban composers. He was musical director of the Ballet de la Sociedad Pro-Arte Musical (1941–3), whose orchestra he also conducted; among other pieces he conducted the Cuban premières of Stravinsky's ballets *Petrushka* and *Apollon musagète*, *Icaro* by Harold Gramatges, *Antes del Alba* by Hilario González and his own *Forma*.

From 1936 he was professor of music history and aesthetics at the Conservatorio Municipal de La Habana, and two years later he replaced Amadeo Roldán as professor of harmony and composition. Ardévol's composition class at the conservatory gave birth to the Grupo de Renovación Musical (1942–8), whose members included Gramatges, Martín, Gisela Hernández, Pró, Argeliers León, Hilario González, Orbón and Virginia Fleites. Atonality (though not dodecaphony), polytonality, polyrhythm, the superimposition of different

harmonies, modalism and above all neo-classicism constituted the basis of Ardévol's strict teaching regime. He warned his students against the limitations of nationalism, although he did not completely ignore the possibilities afforded by folk music. He worked as a music critic for various newspapers and journals, sometimes writing also on theatre and cinema. Some of his reviews and other essays appear in his book *Música y revolución* (1966).

After the victory of the Cuban Revolution in 1959, he took part in cultural reorganization and management and in the planning of music education at different levels. He was the national director for music, a delegate of the Ministro de Educación to the Instituto Cubano de Derechos Musicales (1960–65) and in 1965 resumed his professional activity at the conservatory. From 1968 onwards he worked for the establishment of advanced musical studies, subsequently organizing the first advanced courses, at the Escuela Nacional de Arte. On the foundation of the Instituto Superior de Arte in 1976 he was named dean of the music faculty and took on the chair in composition. He was professor of the summer schools at the universities of Havana and Oriente and gave lectures on Cuban music at a number of universities, including Harvard, Columbia and Rochester, and to composers' unions in various countries. He belonged to various international institutions, such as the Instituto Interamericano de Musicología, and was a permanent member of the Pan American Association of Composers; he presided for more than eight years over the Comité Nacional Cubano de la Música. In 1971 he was elected president of the music section of the Unión de Escritores y Artistas de Cuba (UNEAC). He received various national and international prizes for his music.

Ardévol wrote over 130 works, covering all genres except opera. His early pieces (1924–30) show the influence of Debussy, Stravinsky and the keyboard writing of Scarlatti. From 1930 his music assumed an expressionist atonality, and became at once more experimental and more systematic in a quasi-serialist manner. His *Tres ricercari* (1936) mark to an extent a turning-point between this period and a move towards a neo-classical style with nationalist tendencies that incorporated both Spanish and Cuban elements. It was a style which prevailed uninterrupted until the 1960s. After 1965, Ardévol incorporated techniques of the postwar period, although not electro-acoustics; in, for example, *Noneto*, the cantata *Che comandante* and *Ninfra*, he took up atonality again and touched on serialism and post-serialism.

In general, Ardévol's work is rigorous in its construction, austere and occasionally rather arid. He creates tension through the repeated use of dissonant seconds and his consistent use of counterpoint, and often superimposes classical forms on contemporary material. He was an avid defender of what he considered to be the objectivity of music.

VICTORIA ELI RODRÍGUEZ

Arditi, Luigi (*b* Crescentino, Piedmont, 22 July 1822; *d* Hove, Sussex, 1 May 1903). Italian conductor and composer. He studied the violin and composition at Milan Conservatory with Bernardo Ferrara for violin and Nicola Vaccai for composition. From this period come many of his chamber and orchestral works today found at the Milan Conservatory. His first opera, *I briganti*, was given there in 1841. Arditi began to work as first violin-conductor in Vercelli and in Milan, 1842–46, in minor opera houses like Teatro Re and Teatro Carcano. After working in Vercelli and Milan, 1842–6, he went with Bottesini to Havana, where he worked at the Teatro Imperial and directed a one-act opera, *Il corsaro*, at the Teatro de Tacón in 1847. He later conducted in Canada (1853) and the USA (1854–6), and his opera *La spia* was produced in New York in 1856. His later compositions were mostly occasional orchestral pieces and songs, notably the famous vocal waltz, *Il bacio*.

After European tours Arditi settled in London as conductor at Her Majesty's Theatre in 1858. He remained there for 11 years, conducting Italian operas and taking the company on tours, especially to Dublin. He made many tours to Europe, chiefly with Italian opera companies. In 1869 he succeeded Costa at Covent Garden for one year and followed this with seasons at the St Petersburg Italian Opera (1871 and 1873). From 1870 he conducted annually in Vienna, and from 1874 to 1877 directed the promenade concerts at Covent Garden. Between 1878 and 1894 Arditi was largely concerned with Mapleson's annual opera tours of the USA, but he also worked at London theatres and toured with the Carl Rosa company (1894). His *Reminiscences* were published in London in 1896. Shaw wrote of him: 'He can conduct anything, and come off without defeat'. Arditi's considerable contribution to London musical life included the introduction of 23 important operas; these included new works, among them Verdi's *Un ballo in maschera* (1861) and *La forza del destino* (1867), Gounod's *Faust* (1863), Thomas' *Hamlet* and *Mignon* and Wagner's *Der fliegende Holländer* (1870), Boito's *Mefistofele* (1880) and Mascagni's *Cavalleria rusticana* (1891); and also works of historical significance such as Cherubini's *Médée* (1865) and Gluck's *Iphigénie en Tauride* (1866).

NIGEL BURTON, KEITH HORNER

Arditti Quartet. British-based string quartet. It was founded in London in 1974 by students at the RAM: Irvine Arditti, Lennox Mackenzie, Levine Andrade and John Senter. From the beginning the group has specialized (although not exclusively) in contemporary and 20th-century music. It has had a number of personnel changes. Mackenzie was replaced in turn by Alexander Balanescu (1983–5), David Alberman (1985–94) and Graeme Jennings. Andrade was succeeded by Garth Knox (1990–97) and Dov Scheindlin. Senter gave way in 1985 to Rohan de Saram. The quartet's excellence and Irvine Arditti's enthusiasm for new music have led many composers to write for it and, along with the Kronos Quartet, it influenced the revival of the string quartet in the latter part of the 20th century. In Munich in 1999 it was awarded the Siemens Prize for lifetime achievement. The group works closely with composers on the interpretation of their music. Its members are renowned for their sight-reading and analytical skills; and their performances are marked by excellent tonal qualities as well as precision of rhythm and ensemble. All have solo careers outside the quartet. They have given the premières of works by, among others, Berio, Birtwistle, Britten, Gavin Bryars, Bussotti, Cage, Carter, Aldo Clementi, Maxwell Davies, Denisov, Peter Eotvös, Feldman, Ferneyhough, Michael Finnissy, Glass, Goehr, Gubaydulina, Haas, Jonathan Harvey, Hindemith, Kagel, Kurtág, Ligeti, Maderna, Nancarrow, Nono, Ohana, Pousseur, Rihm, Bent Sørensen and Xenakis. Their most spectacular innovation was the première of Stockhausen's *Helikopter Quartett* at the 1995 Holland Festival. Each player was in a different helicopter and the audience in the concert hall received the four strands of sound and vision via TV monitors and loudspeakers. In addition they have championed such neglected composers as Roslavets. Since the early 1980s they have been recording much of their contemporary repertory and by 2000 more than 100 performances had been issued. They have also made praiseworthy recordings of all the string music of the Second Viennese School, as well as pieces by such composers as Schnittke, Henze and Lutosławski and crucial early 20th-century works such as the quartet by Crawford Seeger. Their instruments are violins by Carlo Ferdinando Landolfi (*c*1760) and Annibale Fagnola (1902), a viola by Francesco Bissolotti (1975) and a cello by Andrea Guarneri (1692).

Arel, Bülent (*b* Istanbul, 23 April 1919; *d* Stony Brook, NY, 24 Nov 1990). American composer of Turkish birth. He graduated from the Ankara State Conservatory with a diploma in composition, conducting and piano performance (1947). In 1951 he studied sound engineering in Ankara with Joze Bernard and Willfried Garret of Radio Diffusion Française. He co-founded the Helikon Society of Contemporary Arts and was the first music director of Radio Ankara's Western music programmes (1951–9). With his 1957 work, *Music for String Quartet and Tape*, Arel became a pioneer in the world of electro-acoustic composition. A grant from the Rockefeller Foundation (1959) enabled him to work at the Columbia-Princeton Electronic Music Center, New York, where his compositions and teachings greatly influenced the development of electronic music. In 1965, after establishing Yale University's first electronic music studio (1962), he became a professor at Yale. He went on to found the Electronic Music Studio at SUNY, Stony Brook (1971), where he taught until 1988. Also a painter and sculptor, his artwork is in the permanent collection of the National Gallery.

DARIA SEMEGEN

Arellano, Juan Salvador Bautista de (*b* Seville; *fl* 1628–33). Spanish writer. He was a member of the Trinitarian order in Seville. Between 1628 and 1633 he wrote several pseudo-historical works on local and religious topics as well as one pertaining to music: *El psalterio de David: exortación, y virtudes de la música, y canto, para todo género de gentes, en particular para los eclesiásticos, y obligación que tienen de cantar, o rezar las divinas alabanzas con toda atención, y devoción* (Jerez de la Frontera, 1632). This is a curious mixture of legend and history. The first part traces music from classical and biblical times up to and including the medieval period, the second treats of its various uses, not only religious but also military, social, educational and recreational. Arellano mingled ancient fable with contemporary anecdote and drew fanciful analogies between the realms of music and religion. His book is of particular interest as a compendium of the kind of material used in the traditional 'praise of music' (*loor de musica*) that prefaces so many Spanish treatises and music collections of the period.

ALMONTE HOWELL

Arena, Antonius de [Arènes, Antoine des; De la Sable, Antoine; Du Sablon, Antoine] (*b* Solliès, [now Solliès-Pont, Var], late 15th century; *d* Saint Rémy, Bouches du Rhône, or Solliès, after 1543). French dance theorist and man of letters. In 1519 he began to study law at the

University of Avignon, after completing his studies he joined the French troops that invaded Italy. Late in 1528 he returned to Provence and spent several years in Aix until he was named *juge ordinaire* of Saint Rémy in 1536.

The most widely read of Arena's writings is the dance instruction manual *Ad suos compagnones studiantes qui sunt de persona friantes bassas danzas de nova bragarditer* (Avignon, ?1519), which also includes an account of his experiences in the Italian campaign. Its 32 editions published between 1519 and 1770 testify to its popularity. The sections on dance date from Arena's student days in Avignon; the main subject is the basse danse as it was practised in the south of France. 58 basses danses 'qui ne sont pas communes' are given with their choreography in the traditional French-Burgundian letter tablature, the only difference being that the letter 'b' (*branle*) of the older sources has been replaced by the letter 'c' (*congé*). The high-spirited, humorous text, intended to improve not only the dance technique but ballroom manners in general, contains much valuable information concerning measure, tempo and step sequences of the dances. Particularly important is Arena's full description of the *reverence*, a movement so common to the courtiers of 15th-century Burgundy and Italy that no earlier writer had thought it necessary to describe it in detail.

Arena published two books on legal matters, and is also well known for his *Meygra entrepriza* (Avignon, 1537; ed. N. Bonafous, Aix, 1860), in which he condemned the ravages afflicted on Provence by Charles V's armies. He wrote in macaronic language, a mixture of classical Latin, French, Italian and Provençal. His verse is supple, his gifts of observation and characterization keen, and his humour irrepressible.

INGRID BRAINARD

Arena, Giuseppe (*b* Malta, 1713; *d* Naples, 6 Nov 1784). Italian organist and composer. In 1725 he entered the Conservatorio dei Poveri di Gesù Cristo, Naples, where he remained for ten years; among his teachers were Gaetano Greco and Francesco Durante, and Pergolesi was a fellow student. Arena composed operas for Rome, Turin, Venice and Naples, and some of his music was included in *Alessandro in Persia*, a pasticcio performed in London on 31 October 1741. According to the libretto of *Il vecchio deluso* (1746), Arena served the Prince of Bisignano; he is also reported to have been organist of the church of S Filippo Neri, Naples. Arena's treatise *Principij di musica con intavolature di cembalo e partimenti* (autograph in *I-Nc*) is described by Fétis as 'un ouvrage élémentaire'.

GORDANA LAZAREVICH

Arènes, Antoine des. *See* ARENA, ANTONIUS DE.

Arensky, Anton [Antony] **Stepanovich** (*b* Novgorod, 30 June/12 July 1861; *d* nr Terioki, Finland [now Zelenogorsk, Russia], 12/25 Feb 1906). Russian composer, pianist and conductor. His father, a doctor, was a keen cellist, and his mother an excellent pianist who gave him his first music lessons. By the age of nine he had already composed some songs and piano pieces. When the family moved to St Petersburg, Arensky took lessons with Zikke before entering the St Petersburg Conservatory (1879), where he studied composition with Rimsky-Korsakov and counterpoint and fugue with Johannsen. He graduated with a gold medal in 1882. Even before this Rimsky-Korsakov had been sufficiently impressed by Arensky's talent to entrust him with a share in preparing the vocal score of *The Snow Maiden*. After graduating Arensky went straight to the Moscow Conservatory as a professor of harmony and counterpoint; among his pupils were to be Rachmaninoff, Skryabin and Glière. The move to Moscow brought him into close contact with Tchaikovsky, who gave him much practical encouragement, and Taneyev. From 1888 to 1895 he directed the concerts of the Russian Choral Society and also appeared as a conductor at symphony concerts. In 1889 he was appointed to the council of the Synodal School of Church Music in Moscow, remaining until 1893. One of Arensky's greatest personal successes was with his opera *Son na Volge* (A Dream on the Volga), based on the same Ostrovsky play as Tchaikovsky's opera *Voyevoda*, and produced in Moscow in 1891. Parts of the opera had been composed under Rimsky-Korsakov's supervision when Arensky was still a conservatory student.

In 1894 Balakirev recommended Arensky as his successor to the directorship of the imperial chapel in St Petersburg, and in 1895 Arensky moved to that city, resigning from his professorship at the Moscow Conservatory. A second opera, *Rafaèl'* (Raphael), composed in 1894 on the occasion of the First Congress of Russian Artists, was less successful than its predecessor. In 1901 Arensky left the imperial chapel with a pension of 6000 rubles. The rest of his life was devoted to composition and to very successful appearances both as pianist and

conductor at concerts in Russia and abroad. From his early years he had been addicted to drinking and gambling and, according to Rimsky-Korsakov, his life became more disordered still in his last years. His health was quickly undermined, and he succumbed to tuberculosis.

Arensky was one of the most eclectic Russian composers of his generation. The early Piano Concerto (1882) reveals the overwhelming influence of Chopin in its first two movements, which are filled with delicately ornamented cantabile melodies often linked by sparkling passage-work after the fashion of Chopin's own two piano concertos. The finale shows a generalized Russianness, the most unusual feature of the piece being its five-beat bars; Arensky was to show a particular liking for such unusual metres (and was reproached for the habit by Tchaikovsky). In his best-known extended work, the Piano Trio no.1 in D minor, the presence of Mendelssohn (and especially of that composer's own D minor piano trio) is clearly apparent. The trio is one of Arensky's most successful large-scale pieces, displaying his melodic facility and fluent compositional technique. It was composed in memory of the cellist Davïdov, and its commemorative purpose is particularly apparent in the third movement. Such an elegiac vein was characteristic of Arensky; it is significant that, despite being Rimsky-Korsakov's pupil, he seems to have responded far more to the influence of Tchaikovsky.

In general, Arensky's short works are his most satisfactory pieces. His ready flow of lyrical, often sentimental melody, and his easy command of keyboard textures equipped him splendidly to be a composer of songs in the *romance* manner that dominated Russian song in the 19th century. Similarly, he could produce beautifully turned keyboard miniatures. As in the finale of the Piano Concerto, his use of unusual rhythms is evident in his set of piano pieces *Essais sur les rythmes oubliés* op.28, based on the unorthodox metres of certain archaic poetic forms; the results are curious rather than convincing. While being in no way original, Arensky could produce distinctive music, and despite Rimsky-Korsakov's prediction that he would be 'soon forgotten', some of his pieces, notably the waltz from suite no.1 for two pianos and the variations for string orchestra on Tchaikovsky's famous *Legend*, have continued to occupy a corner of the modern repertory.

VOCAL

for 1 voice and piano unless otherwise stated

6 Four Songs: Vstrechu l' ya yarkuyu v nebe zaryu? [Shall I Meet a Clear Dawn in Heaven?]; Tï ne sprashivay [Do not Ask]; Kak dorozhu ya prekrasnïm mgnoven'yem [How I Value the Beautiful Moment]; Ya ne skazal tebe [I did not Tell you]
10 Six Songs: Ya prishol k tebe s privetom [I Came to you with a Greeting] (A. Fet); V dïmke [In the Mist]; Ya boyus' rasskazat' [I Fear to Tell] (N. Minsky); Kogda ya bïl lyubim [When I was Beloved]; Zhelaniye [Desire] (A. Khomyakov); Na nivï zhyoltïye [Into the Yellow Cornfields] (A.K. Tolstoy)
17 Four Romances: Menestrel' [The Minstrel] (A. Maykov); Vesnoy [In Spring]; Snovideniye [The Dream] (A.S. Pushkin, after Voltaire); Noch' [Night]
21 Two Romances: Razbitaya vaza [The Broken Vase] (A. Apukhtin); Ona bïla tvoya [She was Yours] (Apukhtin)
27 Six Romances: Pesn' rïbki [Song of the Fish] (M.Y. Lermontov); Osen' [Autumn] (Fet); Pevets [The Singer] (Khomyakov); Stariy rïtsar' [The Old Knight] (V. Zhukovsky); Dve pesni [Two Songs] (Khomyakov); Ya videl smert' [I Beheld Death] (Pushkin)
29 Three Duets: Minutï schast'ya [Minutes of Happiness]; Vcherashnyaya noch' [Last Night]; Fialka [The Violet]
38 Six Romances: V tishi i mrake tainstvennoy nochi [In the Quiet and Gloom of the Mysterious Night] (Fet), pf, vc obbl; Landïsh [The Lily of the Valley] (P. Tchaikovsky); Ne zazhigay ognya [Do not Kindle the Fires] (O. Rathaus); Ne plach', moy drug [Do not Cry, my Friend] (H.W. Longfellow, trans.); O chyom mechtayesh tï? [What are you Dreaming about?] (D. Rathaus); Ya videl inogda [Sometimes I Beheld] (Lermontov)
44 Six Romances (A. Golenishchev-Kutuzov) (1899): Oryol [The Eagle]; Letnyaya noch' [Summer Night]; Odin zvuk imeni [One Sound of the Name]; Den' otoshol [The Day has Gone]; Nad ozerom [Over the Lake]; Yest' v serdtse u menya [There is in my Heart]
45 Two Duets: Tikho vsyo sred charuyushchey nochi [All is Quiet in the Bewitching Night]; Dve rozï [Two Roses]
49 Five Romances: Ugasnul den' [The Day has Died]; Poslushay, bït' mozhet [Listen, perhaps] (Lermontov); Kogda poèt skorbit [When the Poet Mourns] (S. Andreyevsky); V al'bome [In the Album] (Lermontov); Davno-li pod volshebnïye zvuki [Long since beneath Enchanted Sounds] (Fet)
58 Volki [The Wolves] (A.K. Tolstoy), ballad, B, orch
59 Six Children's Songs: Ptichka letayet [The Bird Flies]; Krugovaya poruka [Mutual Responsibility]; Tam vdali, za rekoy [There in the Distance, Beyond the River]; Rasskazhi, motïlyok [Tell me, Moth]; Spi, ditya moyo, usni [Sleep, my Child]; Pod solntsem v'yutsya zhavoronki [Beneath the Sun the Larks Climb Upwards]
60 Eight Romances: Znakomïye zvuki [Familiar Sounds] (A. Pleshcheyev); Ya zhdal tebya [I Waited for You] (Apukhtin); V polusne [Half-Waking] (Munstein); Vchera uvenchala dushistïmi tsvetami [Yesterday I Crowned with Fragrant Flowers] (Fet); Net, dazhe i togda [No, even then] (Fet); Stranitsï milïye [Dear Pages] (Fet); Sad ves' v tsvetu [The Garden is all in Bloom] (Fet); Odna zvezda nad vsemi dïshit [One Star Breathes over All] (Fet)
64 Five Romances: Lebedinaya pesnya [Swan Song] (Golenishchev-Kutuzov); V sadakh Italii [In the Gardens of Italy] (Golenishchev-Kutuzov); Gornïmi tikho letala dusha nebesami [Softly the Spirit Flew up to Heaven] (A.K. Tolstoy); Ya ne lyublyu tebya [I do not Love you] (Lermontov); Zmey [The Serpent] (Fet)
68 Three Declamations (Turgenev), 1v, orch, 1903: Kak khoroshi, kak svezhi bïli rozï [How Fine and Fresh were the Roses]; Lazurnoye tsarstvo [The Azure Kingdom]; Nimfï [The Nymphs]
70 Five Songs (T. Shchepkina-Kupernik): Schast'ye [Happiness]; Osen' [Autumn]; Vsyo tikho vokrug [All Around is Quiet]; Nebosklon oslepitel'no siniy [The Dazzlingly Blue Horizon]; Ya na tebya glyazhu s ulïbkoy [I Look at You with a Smile]
71 Vospominaniya [Memories] (K.D. Bal'mont, after P.B. Shelley), suite, 1v, pf: Iz divnïkh dney [From Wonderful Days]; Nad morem [Over the Sea]; Drug s drugom sosnï obnyalis' [The Pines Embraced One Another]; Kak tikho vsyo [How Still all is]; I dolgo mï, sklonivshi vzor [And a Long While We, having Inclined our Gaze]
— Five Romances: Poèziya [Poetry] (S. Nadson); Gyot zabveniya [The Weight of Oblivion] (Rathaus); Mne snilos' vecherneye nebo [I Dreamed of the Evening Sky] (Nadson); Ya lask tvoikh strashus' [I Fear your Caresses] (Bal'mont, after Shelley); Zvezda blestyashchaya sorvalasya s nebes [The Brilliant Star Shot from the Heavens] (Rathaus)

DAVID BROWN

Arenzana, Manuel (*fl* Puebla, 1791–1821). Mexican composer. His numerous dated compositions in Puebla Cathedral name him as *maestro de capilla* from 1792 to 1821 (one is labelled 1843, probably a copying date). He was recommended for this position in 1791 by Martín de

Cruzealegui, organist and composer in Mexico City and colleague of Junipero Serra. His successor was probably José Manuel Plata (*fl* 1843–55). The splendour of musical performances in the cathedral may be gauged from Arenzana's compositions, all of which have orchestral accompaniment. His liturgical works are in large forms, usually with several movements and characterized by lyrical melodies, elaborate instrumental figurations, strong contrasts of tempo and dynamics and the figured continuo still normal in Spanish cathedral music. Two masses and three offices for matins, listed in a Mexico City Cathedral catalogue of 1875, have apparently disappeared.

Arenzana was also listed by the *Diario de México* among the 'outstanding composers' of musical *comedias* and zarzuelas produced for Mexico City's Coliseo Nuevo between 1800 and 1810. The 1805 season that produced Cimarosa's *El filósofo burlado*, for example, included Arenzana's two-act comedy *El extrangero* and his 'new duo' *Los dos ribales en amore*.

ALICE RAY CATALYNE

Aresti, Floriano. *See* ARRESTI, FLORIANO.

Aretino, Paolo [Paolo Antonio del Bivi] (*b* Arezzo, bap. 1 March 1508; *d* Arezzo, 19 July 1584). Italian composer and priest. Although there is no evidence for the frequent assertion that he studied in Florence with Francesco Corteccia, his cordial relations with the Tuscan court (revealed in two extant letters and in the dedication to Francesco de' Medici of his 1558 madrigal book) suggest that he was acquainted with leading Florentine composers and aware of current developments in music there. He spent most of his life in the service of two churches in Arezzo: in 1530 he was appointed teacher of chant at S Maria, a position he held until he became canon at the cathedral in 1533; from 1538 to 1544 he was teacher of chant and *maestro di cappella* there too. He was *maestro di cappella* at S Pietro, Faenza from 1545 to 1548. He returned to S Maria as a canon in 1545 and remained there until his death.

Most of Aretino's sacred music is harmonically conservative and contrapuntally simple, yet often effective in its careful accentuation of the text and occasional heightening of descriptive passages with appropriate vocal ranges and harmonies. The *Passio Jesu Christi secundum Johannem* is set polyphonically throughout, and uses various combinations of voices to depict the words of individual characters and of the turba (crowd). Aretino introduced characterization by using the same chord at the beginning or end of each piece sung by the same character. His first madrigal book comprises four-voice madrigals in common time ('madrigali cromati'); the second contains settings of a carnival song, verse by Petrarch and courtly poetry, some of which refers to the nobility of Florence or Arezzo. Einstein characterized Aretino's madrigals as representing a provincial art, and in them found traces of the earlier style of Bernardo Pisano and Corteccia.

FRANK A. D'ACCONE

Aretz (de Ramón y Rivera), Isabel (*b* Buenos Aires, 13 April 1913). Venezuelan-Argentine ethnomusicologist, folklorist and composer, wife of LUIS FELIPE RAMÓN Y RIVERA. She studied the piano under Rafael González (1923–31) and composition with Athos Palma (1928–33) at the Buenos Aires National Conservatory of Music, instrumentation with Villa-Lobos in Brazil (1937), anthropology (1938–40) and, with Carlos Vega, folklore and musicology (1938–44) at the Museo de Ciencias Naturales de Buenos Aires. She took the doctorate in musicology in 1967 at the Argentine Catholic University with a dissertation on Argentine folk music. She was an associate member of the Instituto Argentino de Musicología from 1938 to 1950. After working as the first professor of ethnomusicology at the Escuela Nacional de Danzas de Argentina (1950–52) she moved to Caracas, Venezuela, where she has held appointments as research fellow in folklore and ethnomusicology at the Instituto Nacional de Folklore de Venezuela (1953–65), head of the folklore department of the Instituto Nacional de Cultura y Bellas Artes (1965–70) and founder-director of the Instituto Interamericano de Etnomusicología y Folklore

(1971–85). In 1986 she became the president of the Fundación Internacional de Etnomusicología y Folklore (FINIDEF) and in 1989 the director of the Centro para las Culturas Populares y Tradicionales (CCPYT), both in Caracas. She also presided over the newly established Fundacíon de Etnomusicologiá y Folklore (FUNDEF), from 1991 to 1995. In 1996 she returned to Argentina and took over as the director of the Fundación Internacional de Etnomusicología y Folklore de Argentina in Buenos Aires.

Isabel Aretz is a leading authority on South American folk music. With her husband she has travelled extensively throughout Hispanic America, collecting the folk music of Venezuela, Argentina, Chile, Bolivia, Peru, Uruguay, Paraguay, Colombia, Ecuador, Panama and Mexico, and has published numerous important analytical and descriptive accounts of their research. Her many awards and fellowships, for both scholarly work and composition, include a scholarship from the Argentine National Commission of Culture (1941–3), a Guggenheim Foundation fellowship (1966–7), the Polifonía prize of Buenos Aires (1952) and the first prize in Caracas (1972) for *Yekuana* (*Yanoama*), a work for orchestra, voices and tape. She won the Robert Stevenson Prize (1990–91) for her book *Música de los aborígenes de Venezuela*, which also received an Honor Diploma (1993) from the Organization of American States (OAS) and the Inter-American Music Council (CIDEM), and the prestigious international grand prize Gabriel Mistral of the OAS (1992). She has been an active member of many national and international organizations, a board member and delegate of the IFMC and ICTM and a council member of the Society for Ethnomusicology. As a composer Aretz has cultivated a highly personal nationalist style, based on a combination of indigenous or Afro-Hispanic folk traditions with avant-garde European elements, including electronic techniques.

GERARD BÉHAGUE

Arezzo, Guido of. *See* GUIDO OF AREZZO.

Argenta (Maza), Ataulfo (*b* Castro Urdiales, Santander, 19 Nov 1913; *d* Madrid, 21 Jan 1958). Spanish conductor. He studied the piano with distinction at the Madrid Conservatory and proceeded for further study to Belgium and to Germany, where he was a pupil for conducting of Carl Schuricht. He had obtained a conservatory teaching post at Kassel when the outbreak of war in 1939 obliged him to return to Spain, where among other duties he played the piano and celesta with the Spanish National Orchestra in Madrid. He made his conducting début with his country's radio orchestra, then in 1945 became conductor of the National Orchestra. He first appeared in Britain as José Iturbi's conductor (with the LSO) at the Harringay Arena, London, in 1948. His early death cut off what promised to be a highly successful career. He made a number of recordings, including Granados's opera *Goyescas* with the National Orchestra and Turina's *Danzas fantásticas*, with the Paris Conservatoire Orchestra.

ARTHUR JACOBS

Argenta, Nancy (Maureen Herbison) (*b* Nelson, BC, 17 Jan 1957). Canadian soprano. She studied at the University of Western Ontario (1978–80), then privately in Düsseldorf and London. Her teachers included Peter Pears, Gérard Souzay and Vera Rozsa. As a concert singer she rapidly gained recognition throughout Europe and America, her light, clear voice making her much sought after in a wide variety of Baroque and Classical repertory. She made her operatic début in Rameau's *Hippolyte et Aricie* (doubling as the High Priestess and Huntress) at the 1983 Aix-en-Provence Festival, and returned to the festival in 1990 in Purcell's *The Fairy-Queen*. Argenta

has recorded extensively music by Bach, Handel, Haydn and Mozart, including a notable Zerlina in Norrington's *Don Giovanni*. A recital of solo music by Purcell won her particular acclaim for its vocal refinement and naturalness of expression – qualities that inform all her work.

ALAN BLYTH

Argenti [Argentio], **Bonaventura** [Bonaventura Perugino] (*b* Cascia Spolentina, Perugia, 1620/21; *d* Rome, 7 Feb 1697). Italian soprano castrato. One of the most celebrated singers of his day, he was active in Rome and sang oratorios by Carissimi at the Collegio Germanico Ungarico between 27 March 1638 and 13 December 1646. On 15 August 1645 he entered the choir of the Cappella Sistina without competition, and was successively *puntatore* (1665), chamberlain (1660), *maestro di cappella* (1661), pensioner (1670) and dean (1694). He also performed cantatas, serenades and music dramas at the courts of the Roman aristocracy, and from June 1645 to December 1647 he was in the service of Prince Camillo Pamphili and his wife Olimpia Aldobrandini. In Rome he sang in solemn ceremonies at S Luigi dei Francesi (1645 and 1648), S Maria del Popolo (1657–8 and 1660) and S Maria Maggiore (1661). On 31 January 1656 he took the title role of Vita in Marazzoli's *La vita humana*, performed in the Palazzo Barberini, in honour of Queen Christina of Sweden; he may also have sung in Marazzoli and Abbatini's *Dal male il bene*. Athanasius Kircher praised his voice as one that could move his hearers to tears. Pier Leone Ghezzi made a caricature portrait of him (*I-Rvat*, Ott.Lat. 3113, c.127).

GALLIANO CILIBERTI

Argentil, Ciarles. *See* CHARLES D'ARGENTILLE.

Argentina (Sp. República Argentina). Country in South America. It has an area of 2,780,400 sq. km and a population of 37·03 million (2000 estimate). Named Argentina ('land of silver') because of the gold and silver that now was thought to be concealed along its two great rivers in the north-east (the Paraná and the Uruguay), it was settled in the early 16th century by Spanish conquistadors. Juan Díaz de Solís was the first to arrive, in 1515, but he was killed by the indigenous Amerindian peoples. Sebastian Cabot followed in 1526. A decade later the present capital, BUENOS AIRES, was founded by Pedro de Mendoza. Little evidence remains of the indigenous population, which probably numbered some 30,000 at the time of the Spaniards' arrival. In 1810 the population rose against Spanish rule, and in 1816 Argentina proclaimed its independence. The 20th century was characterized by a series of military coups, the first of which took place in 1930. In 1983 the country returned to civilian rule.

The mild and fertile Pampa region in the centre of the country accounts for Argentina's wealth; the Andes in the west range from dry, hot, northern peaks to sub-Antartic Patagonia; the arid north-west is rich in mineral reserves. The north is covered by sub-tropical forest, known as the Chaco. Mesopotamia, to the north-east, is so called because it is enclosed by the Paraná and Uruguay rivers.

A third of the population lives in Buenos Aires or the surrounding province. Most Argentines are of European, particularly Spanish and Italian, origin, though there are also communities of East Asian immigrants. The population of African descent introduced through slavery during colonial rule has all but disappeared, not least as a result of an epidemic of yellow fever in 1871.

I. Art music

1. COLONIAL PERIOD (1536–1809). There is scant evidence of musical life during this period. As in most Latin American countries, the earliest efforts to establish a regular musical life in the European sense were made by missionaries, especially the Jesuits whose missions covered the Paraná river area and the La Plata region (Paraguay and Argentina). Music was important in the catechization of the indigenous Amerindian population, but the absence of conventual historians and the disappearance of the music archives of the Jesuits (see Lange) restrict any assessment of music-making during the 16th and 17th centuries. The first missionaries were Father Alonso Barzana, a Jesuit, and Francisco Solano, a Franciscan who was eventually canonized.

The first reference to an organ in the church of Santiago del Estero dates from 1585; the first school of music was founded by Father Pedro Comental (1595–1665). The music taught was mainly plainchant and polyphonic song, and Amerindians and African slaves soon became skilful musicians and instrument makers: there is documentary evidence of locally made European instruments before 1600. Among the best-known music teachers active in the Jesuit missions were the Belgian Juan Vasseau or Vaisseau (1584–1623), the Frenchman Luis Berger (1588–1639), the Austrian Antonio Sepp (1655–1733), the Swiss Martin Schmid (1694–1773), the Spaniard Juan Fecha (1727–1812) and the German Florian Paucke (1719–80). Berger's activities and influence extended to Paraguay and Chile; Sepp made the mission of Yapeyú one of the most flourishing music centres of the area. The repertory of the missions consisted mainly of sacred music, but secular music was not excluded.

The Jesuits had a remarkable impact during almost two centuries of missionary and musical activities in Uruguay, northern Argentina and Paraguay (Paraná and Gran Chaco), and Chiquitos and Mojos (present-day Bolivia). They taught the indigenous communities the Catholic gospel and its corresponding liturgical music and also encouraged new compositions. At the time of the expulsion of the Jesuits in 1767, a preliminary inventory of European instruments in the missions numbered more than 1000. Since the 1980s, musicologists and ethnomusicologists of the 'Carlos Vega' National Musicological Institute in Buenos Aires have joined forces in the study of mission archives (especially Chiquitos and Mojos), revealing the extent of music-making under the Jesuits. In fact, numerous Amerindian musicians and composers trained by the Jesuits contributed substantially to the musical life of Buenos Aires in the 18th century.

The early 18th century was dominated by the presence of the distinguished Italian organist and composer Domenico Zipoli (1688–1726) who arrived in Argentina in

1717. He was assigned to Córdoba, then the country's most important cultural centre. None of his works presumably written in the New World has been found, with the exception of a mass for four voices and continuo, of which the manuscript was copied at Potosí (Bolivia) in 1784. With the expulsion of the Jesuits, such musical activities in the area were much curtailed. Studies in the archives of various churches and convents (Humahuaca, Jujuy, Tucumán, Santiago del Estero, La Rioja, Córdoba, Santa Fé etc.) have revealed very few manuscripts of original works.

There was substantial development of theatre pieces with music during the 18th century, partly because almost all official festivities in the viceroyalty required theatrical representations with music. Mission Amerindians are said to have performed an opera on the occasion of the proclamation of King Fernando VI (1746–7). The repertory of the Teatro de Operas y Comedias, in Buenos Aires (1757–61), consisted mainly of *tonadillas*, a genre fashionable in Spain at the time. A regular orchestra (four violins, a bassoon, two oboes and two horns) was maintained at the Teatro de la Ranchería from 1783 to 1792. The Teatro Porteño (later Teatro Argentino), founded in 1804, presented *sainetes*, *tiranas* and similar forms of lyric theatre; Blas Parera (1765–1817), composer of the Argentine national anthem, had several of his works performed there.

With a population of some 24,000, Buenos Aires became the capital of the Viceroyalty of the La Plata river in 1776, and, thereafter, the most important musical centre, activity being concentrated on the church and opera houses. Of the musicians associated with Buenos Aires Cathedral, the *maestro de capilla*, Father José Antonio Picasarri (1769–1843), was influential in the whole musical life of the city.

2. 1810–1930. The predominant forms of 19th-century Argentine music included opera (directly influenced by Italian models, beginning with Rossini and Bellini), zarzuelas and other stage genres, piano and salon music and, by the end of the century, symphonic music. Most of the indigenous composers of this period were amateur musicians who had to compete with European professional immigrants, primarily Italians; the most distinguished Argentine composers were Amancio Alcorta (1805–62), Juan Pedro Esnaola (1808–78) and Juan Bautista Alberdi (1810–84). Alcorta's works (piano pieces, solo songs and some church music) reveal the strong influence of Rossini. Esnaola studied at the Paris and Madrid conservatories, and his style was heterogeneous; he wrote church music and orchestral and piano pieces, many based on local dance forms. Alberdi wrote mostly salon pieces and songs.

A large number of salon pieces and operas appeared, mostly in Buenos Aires, during the latter part of the 19th century. The leading composers were Francisco A. Hargreaves (1849–1900), who had his opera *La Gata Blanca* produced in 1877 and who wrote some of the first piano pieces (*Aires nacionales*) inspired by traditional and popular music, and Juan Gutiérrez (1840–1906), who founded the Conservatorio Nacional de Música (1880). Both professional and semi-professional musicians of the next generation had closer connections with European music centres. Opera, operetta, the symphonic poem, ballet and solo song were the preferred genres of such composers as Eduardo García Mansilla (1871–1930), who studied with Rimsky-Korsakov in St Petersburg, and Justino Clérice (1863–1908), who wrote successful comic operas for the Parisian theatres.

Concurrently, nationalist feeling was apparent in the works of Alberto Williams (1862–1952), the most prolific and influential composer of his generation, and of Arturo Berutti (1862–1938), who treated Argentine national themes in his successful operas (*Pampa* and *Yupanki*). Although an academic composer, Williams tried to create a national style in many of his works, such as the album of *Aires de la Pampa* for piano, a stylization of gaucho traditional songs and dances. The champion of the indigenous composer, he founded the conservatory of Buenos Aires and edited an important anthology of Argentine composers. His immediate followers included Aguirre and Gilardi. The 'gauchesca' tradition became one of the essential elements of Argentine nationalism, embodied in the famous epic poem *Martín Fierro* (1872) by José Hernández.

Most of the first half of the 20th century was dominated by the nationalist movement, with notable exceptions. Composers drew on various national folk traditions (see §II below), and most of the considerable amount of music produced for all media at this time reveals varying degrees of national concern, from the direct use of traditional and popular sources to a more subjective assimilation of folk material. Some composers, such as Juan Bautista Massa (1885–1938), active in the city of Rosario, and Carlos López Buchardo, used national sources directly. Ugarte, Ficher, the brothers Juan José, José María and Washington Castro, and Gianneo achieved a more cosmopolitan expression through the adoption of some contemporary European techniques but at the same time maintained a subjective Argentine character.

The inauguration in 1908 of the new Teatro Colón, Buenos Aires (cap. 2487), provided a strong incentive for the continuation of opera production. Early 20th-century Argentine opera composers, who found in Italian *verismo* a suitable expression for their nationalist attitude, included Pascual de Rogatis, a student of Williams, Enrique M. Casella (1891–1948), active mainly in Tucumán, Arnaldo D'Espósito (1907–45) and Felipe Boero. Boero's opera *El matrero* (1929), to a libretto based on the gaucho folk tradition, utilizes some folksong themes and an effective *pericón*, a typical gaucho dance, and is considered by many to be the quintessential Argentine opera.

3. After 1930. During the 1930s the nationalist movement waned. Juan Carlos Paz, a founder of the Grupo Renovación (1929) and the Agrupación Nueva Música (1944), denied musical nationalism any value and favoured expressionism instead; by the 1930s he had already become a strong supporter and practitioner of dodecaphonic and serial techniques. Several of his works of the 1950s (e.g. *Continuidad*, 1953) are applications of total serialism. He wrote an important book, *Introducción a la música de nuestro tiempo* (1952), which provides insight into Argentine music of the period; his influence as a composer and a theorist in Argentina has been considerable.

A notable nationalist composer writing in a neo-romantic style is Carlos Guastavino (*b* 1912), whose works include numerous solo songs and choral pieces (26 *Canciones populares argentinas*) that have reached an international audience, chamber and symphonic works (such as the *Sinfonía argentina* and *Tres romances*

argentinos) and a series of popular piano pieces. In *Jeromita Linares* (part of a series called *Presencias*) for guitar and string quartet (1965), Guastavino drew, albeit in a subtle manner, on national folk sources.

The stylistic development of Alberto Ginastera (1916–83), one of the leading Latin American composers, was exceptional. His style evolved from an obviously nationalist orientation in the 1930s and 40s (in such works as *Impresiones de la Puna*, the ballets *Panambí* and *Estancia*, the series of *Pampeanas*) to a neo-classical idiom in the 1950s (Piano Sonata, *Variaciones concertantes* etc.). In the 1960s he turned to a highly personal manipulation of atonal and serial techniques and developed a meticulous preoccupation with timbres (*Cantata para América mágica*, Piano Concerto, Violin Concerto, the operas *Don Rodrigo*, *Bomarzo* and *Beatrix Cenci*). In some works, such as *Estudios sinfónicos* op.35 (1967), he combined serial and microtonal textures with fixed and aleatory structures. His activity as director of the Latin American Centre for Advanced Musical Studies at the Buenos Aires Instituto Torcuato di Tella (1963–71) greatly benefited many young Latin American composers.

In opposition to the prevailing nationalist current, a number of composers active in the 1940s and 50s sought an abstract style through neo-classical and post-Webern serialist idioms, for example Roberto García Morillo (*b* 1911) and Roberto Caamaño. In such works by Morillo as *Tres pinturas de Paul Klee* (1944) or Music for Oboe and Chamber Orchestra (1965), there is no trace of nationalist implication. Caamaño, professor of Gregorian chant at the Institute of Sacred Music, Buenos Aires, has cultivated a dissonant neo-classical style and a serialist style, in both instrumental and sacred choral works.

A group of talented avant-garde musicians, with varied aims and means, appeared during the 1960s. It included Tauriello, Alcides Lanza (a resident of Canada), Davidovsky (a resident of the USA), Kagel (a resident of Germany, particularly active in electronic and aleatory music), Armando Krieger and Gandini. In works of the 1960s such as *Música III* (1965) for piano and orchestra, Tauriello adhered to several procedures of new music, including electronics, aleatory and sonic collages. For several years he directed the permanent orchestra at the Teatro Colón, and he has written two operas, one of which, *Les guerres picrocholines*, to a libretto based on Rabelais' *Gargantua*, was commissioned for the Fifth Inter-American Music Festival, held in Washington, DC, in May 1971, though it was not produced then. Lanza has held many fellowships and awards since 1957 (he was Guggenheim Fellow, 1965). He became interested in electronic music at the Columbia-Princeton Electronic Music Center and has also been successful in dealing with contemporary orchestral and vocal techniques. Gandini, also an accomplished pianist, has employed a post-Webern serialism, microtonalism and aleatory forms. His *Fantasía impromptu* for piano and orchestra (1971), an 'imaginary portrait of Chopin', is a novel 'study of fragmentation and superimposition' based on Chopin's characteristic stylistic elements. Krieger, who has made a career as a pianist and conductor, has also cultivated a post-Webern serialist style, together with aleatory techniques. All these composers were at various times fellows of the Centre for Advanced Musical Studies in Buenos Aires, and many of them have gained an international reputation.

Another significant composer of the 1930s generation has been Alicia Terzian (*b* 1934). Since the 1970s talented musicians have appeared in various cities, although many Argentine composers, performers and conductors have taken up residence abroad because of their conviction that their country could not offer a suitable musical environment. However, throughout the 20th century several associations were formed to support Argentine music. Particularly significant were the Asociación Argentina de Compositores (1915, first known as Sociedad Nacional de Música); the Associación de Jóvenes Compositores de la Argentina (1957), allied with the publishers Editorial Argentina de Música and Ricordi Americana; the Agrupación Euphonia (1959, later renamed Agrupación Música Viva), the Consejo Argentino de la Música, and the Unión de Compositores de la Argentina (1964). The Fundación Encuentros Internacionales de Música Contemporánea (founded and, since 1968, directed by Alicia Terzián) has greatly contributed to the dissemination of contemporary Argentine music throughout the world.

Among the great Latin American capitals, Buenos Aires now enjoys a musical life of unique importance by virtue of its many theatres, orchestras and choral associations, and its good educational institutions. In addition, frequent contact with visiting foreign composers, musicologists or performers has afforded local musicians a comprehensive view of the contemporary musical world.

II. Traditional music

Distinctions within traditional Argentine music are based on both musical and non-musical historical criteria and arise according to whether the music is that of a pre-Hispanic indigenous group (for further discussion of the music of Amerindians in Argentina *see* LATIN AMERICA, §I) or is Creole, that is of Spanish language and musical heritage, occasionally with some indigenous features. The main differences lie in the presence or absence of European influences in the music and texts of songs and the degree to which societies and groups themselves share the cultural institutions of the majority.

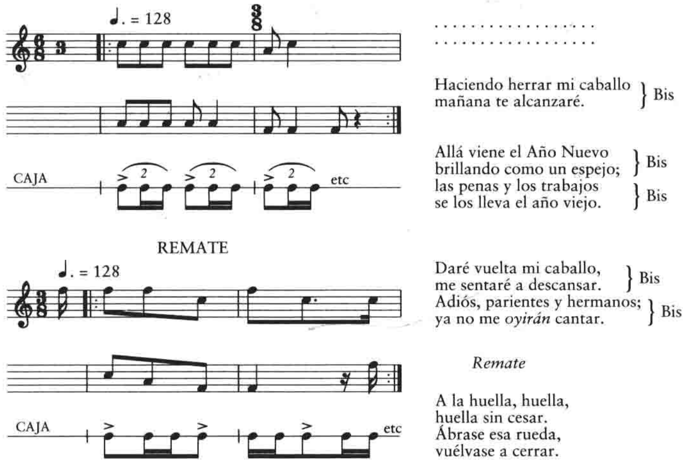
The imposition on the indigenous population of the Spanish language and of Roman Catholicism and its religious calendar prepared the ground for the development of a rural Creole culture, creating the environment for Creole music traditions, which later absorbed other incoming population influences. At the same time, in terms of language and religious belief, some pre-Hispanic indigenous cultures survived into the 20th century. In the 20th century the musical map was inevitably altered, and significant changes occurred due to the migration of population from rural to urban areas, the partial adoption of Protestantism by some indigenous groups and the increased popularity of Creole music. The Amerindian–Creole dimensions of traditional music, instrumentaria and dance vary according to region.

Ethnomusicological research has been carried out at the Instituto Nacional de Musicología (INM) since 1931. The research of the institute has included the analysis and classification of Creole music; the investigation of Amerindian indigenous music from 1965; and popular music (see §III, below), including the tango, from 1972. The INM has significant documental archives, including sound recordings and manuscripts of all areas of music.

1. The north-west. 2. The Chaco. 3. Mesopotamic region. 4. Central region. 5. Cuyo region. 6. The Pampa. 7. Patagonia.

1. THE NORTH-WEST (Jujuy, north-west Salta, Santiago del Estero, Catamarca, Tucumán, La Rioja). In this region, which largely follows Andean farming and shepherding patterns, the pre- and post-Hispanic cultural dynamic has been complex. The existing mosaic of Amerindian ethnic groups has been affected by a series of intervening influences, ranging from the Incas between 1480 and 1533; Spanish influence from 1543; Roman Catholic missionaries from 1580; and European cultural trends from Lima, Peru, until 1776. At the same time, constant movement across the northern border with Bolivia, maintained to the present day by those searching for work in the mines or in sugar-cane processing, has played its part. As a result, a combination of musical practices has evolved that uses tonal systems from various origins (e.g. the Diaguitan tritonic, Inca pentatonic and other scales adapted from European scales). Ceremonial or festive occasions combine both indigenous and Spanish cultural elements and coincide with those in particular areas of Peru, Bolivia and Chile.

The tritonic Diaguitan system, originating in the Calchaquí valley with the Diaguitan people who inhabited north-west Argentina at the time of the conquest, is present in the *bagualas* and *coplas* characteristic of this area. As a result of racial and cultural mixing, these songs, in duple or triple time, often accompanied by a CAJA (snared frame drum), have acquired *estribillos* (refrains), or octosyllabic *coplas*, verse forms of Spanish origin. Their main characteristics are the *kenko* (a portamento or mordent, sometimes associated with falsetto) and counterpoint between men and women. As they have spread unevenly northwards, some of these *coplas* and *bagualas* sung collectively in two parts, or individually, have acquired a livelier tempo (ex.1).



Tritonic music of different origin is found further north, in pieces for *corneta* or *caña* (*erke* in Peru), a pre-Hispanic transverse trumpet, used on religious occasions. It is also found in some pieces for ERKE or *erkencho*, a post-Hispanic clarinet, played primarily during Carnival celebrations, the player accompanying himself with the *caja*.

Traces of the pentatonic system of the Incas survive in the HUAYNO dance played by bands of *sikuris* (fig.1), in music for the *quena* (Andean open-notched flute) and in the *carnavalito* dance. The combined influence of the tritonic and pentatonic systems led to the adoption of the hexatonic range. This can be heard in the VIDALA (triple time) and in the *vidalita* (duple or triple time; *see* BAGUALA), carnival songs sung in parallel 3rds, or in unison, with *caja* accompaniment. There is further evidence of Andean influence in the division of Spanish quatrains by the insertion of local verses (or short refrains called *estribillos*). Some *vidalas* also include *motes* (pentasyllabic quatrains or sextets), which further condition the music structure. When both the *caja* and the guitar (the most widely played national instrument) are played together as accompaniment, the harmony of the *vidala* is centred on a major key and its relative minor, on which the song invariably ends. The *vidala* has specific characteristics in Santiago del Estero; within the Quecha-speaking area, song texts may be in Quechua or bilingual with Spanish.

Also particular to this province are popular liturgical songs, sung by women *rezadoras* (chanters). Typical to Santiago are the violin (also found in Salta) and the *bombo* (large drum), which together with the guitar and *bandoneón*, the key instrument of tango from Buenos Aires (*see* BANDONEON), make up the present-day village dance bands. The violin and *bombo* are also used to play the marches of the *Misachicos*, processions in honour of a saint or a Virgin, also popular in the furthest north-west region. These processions end at the church with sung prayers (the *Padrenuestro* and the *Ave María*), rogations or songs of praise, which begin as a solo by the *rezadora* and continue in unison. Unlike other *vidalitas*, the *vidalita chayera* or *Carnival vidalita*, sung in many provinces, is lively and is sung in unison in mixed procession accompanied by *cajas* and guitars.

Argentine dances illustrate well the indigenous Amerindian-Creole opposition in traditional music. Indigenous dances of the north-west include *huaynos* and *carnavalitos*, danced animalistic fertility pantomimes, such as those of the *suris* (*Rhea americana*), which often precede processions, and the *ronda* circle dances. *Rondas* are performed by mixed instrumental groups involving *erkencho* and either *caja*, *flauta* or *quenita*. Creole couple dances, such as the *chacarera*, *escondido*, *bailecito*, *cueca*, *zamba* and the most widespread of all rural dances, the *gato*, are each accompanied by song. Originating in urban dance halls and spreading to the countryside, music and

1. Four musicians, part of a sikuri band, composed of various sizes of sikus (panpipes) played in pairs, bombo (large military drum) and matraca (scraped idiophone), made in the shape of an aeroplane

texts have been adapted to form local versions (e.g. by the addition of *estribillos* to the *bailecito*, *cueca* and *zamba*). There are also many versions of the special dances called *adoraciones* for the Christ Child at Christmas time.

In Jujuy, the *sikuri* bands are made up of several pairs of *siku* (bamboo panpipes) of varying sizes, *matraca* (cog rattle), cymbals, *bombo* and one or two other drums or *redoblantes* (double-headed drum). Other traditional instruments are played in various combinations at musical performances for Christmas, Easter, festivities for patron saints, ceremonies related to vital life-cycle events, Carnival celebrations, the *mingas* (communal rural work) and the *señaladas* (ritual branding of livestock). These instruments include the *anata* (or *tarka* in Bolivia), the *pinkullo* and the post-Hispanic CHARANGO (a small guitar with five double strings and a soundbox usually made from the shell or carapace of the *tatu* or *quirquincho*, the armadillo). The European musical system is evident in the intervals and in the harmonies (IV–V–I), mainly in strummed guitar chords, and in the major and minor modes, or combinations of both. However, many such traditional instruments have gradually been replaced in popularity by resounding brass instruments, under the influence of bands from Bolivia who travel forwards and backwards across the border.

2. THE CHACO (Formosa, Chaco, north-eastern Salta, north-eastern Santiago del Estero, north-west Santa Fé). Due to its late colonization at the end of the 19th century, the Chaco has an Amerindian population of approximately 84,000. Its Creole population is more recently established, and as a result it lacks a traditional music with distinguishing characteristics. Some 71,000 people are Mataco, or Wichí and Toba Indians, and the remaining 13,000 or so belong to the Chorote, Chulupí or Nivaklé, Pilagá and Mocoví groups. The inter-ethnic cultural exchange that took place as a result of enforced and temporary co-existence in the sugar mills was followed, during the first half of the 20th century, by the activities of Protestant (Anglican and Pentecostal) missions, which prohibited and thus further undermined ancient musical practices, leading to the disappearance of these and of the accompanying rituals.

Around 1950 the Toba founded the United Evangelical Church, of Pentecostal origins (which later reached the Mataco). Some features of traditional musical and religious practices have been interwoven or disguised within the evangelical ritual. In the past, collective, but not mixed, dances were inextricably linked to homophonic songs sung by the dancers; dances were held at night with the object of forming couples by the end of the dance (ex.2). The shaman controlled atmospheric phe-

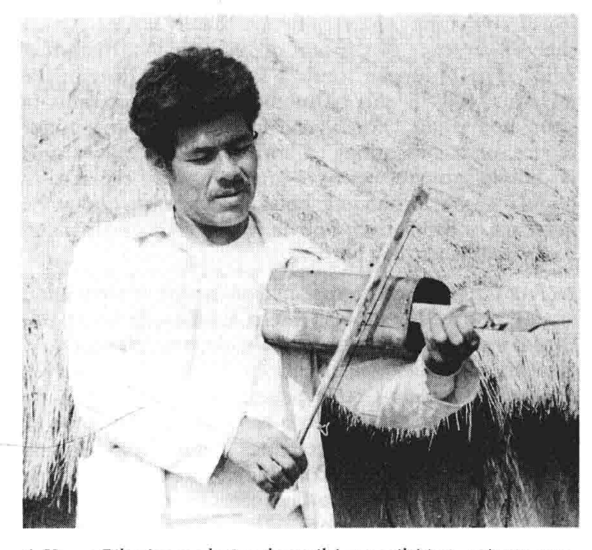
2. *Mataco shaman with cascabeles (bells) and tambor (ritual drum)*



nomena, hunting, fishing and illnesses by means of song (ex.3), sometimes accompanied by the *sonajero de calabazo* (gourd rattle), or *cascabeles* (metal hawk bells) in the case of the Mataco (fig.2). Among the most important communal musical occasions were the *fiesta de la algarroba* and the initiation rites at puberty of both boys and girls. In female rites, older women sang accompanying themselves with *palo-sonajero de uñas* (a stick rattle made of animal hooves). (*See* PARAGUAY, fig.1.)

Songs, dances and almost all instruments were specific to one sex or another, a characteristic that could not be maintained in Christian rituals. At night, young people got together to sing and dance, generally in a circle. Young Mataco or Wichí, Chorote and Pilagá bachelors played the *trompa* (jew's harp) or the musical bow (fig.3). The Toba and Pilagá played the *nwiké* (rustic one-string mango lute; fig.4) or the Andean *flautilla* (little flute), with the hope of being chosen by their loved one. Creole music is present in the form of types of music brought from neighbouring areas: mainly Paraguayan polkas and Andean *bagualas*.

The western border of the Chaco area, towards the foothills of the Andes, is inhabited by an ethnically mixed group of Chiriguano-Chané; who arrived from Bolivia at the beginning of the 20th century. This group displays Guaraní and Arawak cultural vestiges together with influences of the Chaco and Andean regions. In the *aréte avâti*, a fusion of the maize festival with Carnival, celebrated as a moment of reunion between the living and the dead, circles of men and women dance holding hands. The constant presence of flutes and drums bears witness to the dissemination of musical forms from eastern Bolivia. The Andean influence is represented by pentatonic instrumental melodies, such as those of the *pingúio* (*pinkullo*), and by Creole dances, such as *chacareras* and *bailecitos*. Chiriguano-Chané instruments are *anguagu-ásu*, *anguarái* and *michirái*, a family of double-headed

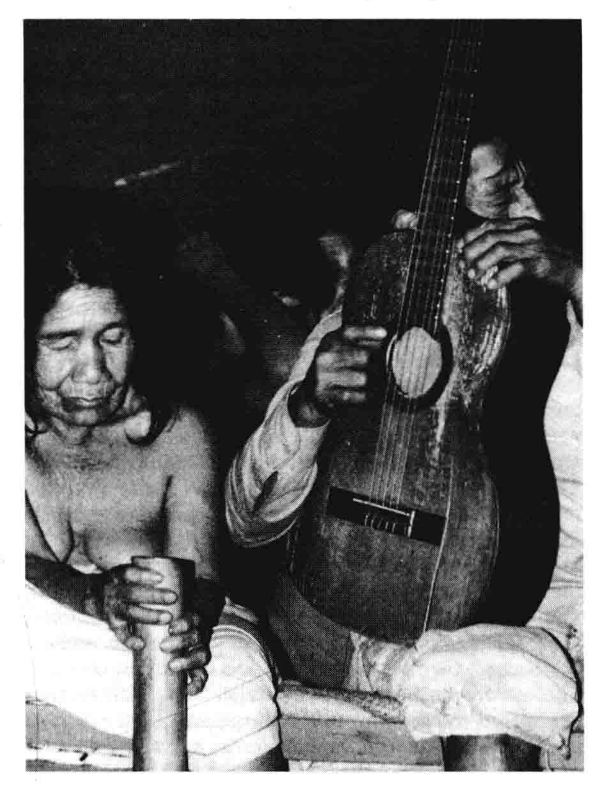
4. *Young Pilagá man playing the nwiké or noviké (one-string mango lute)*

drums; *turumi*, their particular violin; *temímbi guásu* and *pingúio*, flutes without air duct; and *temímbi ie piasa*, a side-blown flute; all of these instruments are played by men.



3. Mesopotamic region (Misiones, Corrientes, Entre Ríos). The indigenous population in this area, the Mbyá, live in the province of Misiones and came originally from Paraguay at the beginning of the 20th century. They have rejected any form of evangelization, and thus the basic principles of their culture have survived intact, although they have incorporated some use of European instruments. The Mbyá communicate with their gods, Ñamandú, Tupã, Karaí, Jakairá, through communal song and dance. Both sexes participate in daily rituals at dawn and sunset; in annual rituals, such as Ñemongaraí (the 'festival of first fruits'); and during funerals. The only men who sing are the *Pa'i* (religious leader) and his helper. For their part, the women usually repeat musical phrases two octaves higher, marking the rhythm with their sacred instrument, the *takuapú*, a stamping tube. Texts are brief, except in the initial phase sung in monotone by the *Pa'i* and in improvisations. The men's *mbaraká*, a gourd rattle, has gradually been replaced by a five-string guitar, also called *mbaraká*, which plays a rhythmic and harmonic role (fig.5). Another instrument that has been incorporated is the three-string rebec called *ravé* (ex.4). The Mbyá women

Ex.4 Mbyá-Guaraní *Arakupyta*, with accompaniment from three-string *ravé* and five-string *mbaraká*

play a type of panpipe (*mimby retá*), with seven loose pieces of cane which are shared by two players in different combinations, according to each melody.

Creole music has been adopted in the form of local versions of couple dances that arrived from Europe during the first half of the 19th century: the waltz, the schottische, the polka and the mazurka. The rhythmical melodies, often with sung verses, are played by accordion and guitar. The accordion arrived in the area around 1890 with immigrant colonial farmers from Europe. Modified to take account of local music, it has become the established instrument, largely replacing harp and violin. Examples of local creativity are two coupled dances: the

5. Religious leader Mbyá Pa'i and his wife playing the mbaraká (five-string guitar) and the sacred (takuapú stamping tube)

polka of Corrientes and its highly successful 20th-century successor, the popular *chamamé*. The *chamamé*, which has absorbed elements of *polka correntina*, achieved nationwide coverage in the 1970s through the work of urban folk groups. It is danced in cheek to cheek embrace, except during the men's *zapateo* (heel and toe footwork). This dance is often sung, sometimes in two voices in parallel 3rds, a traditional form of this region, and in bilingual Spanish-Guaraní verse. The music uses hemiola, with a basic 3/4 rhythm, and a melodic 6/8 rhythm; it is rooted in the sound of the accordion, which in local *conjuntos* (bands) is joined by the *bandoneón*, incorporated to play counterpoint, and the double bass or contrabajo.

4. Central region (Córdoba). This was a larger area in pre-Hispanic times. The early extinction of the Comechingón Indians means that the indigenous music of Córdoba has not survived. The *jota cordobesa* is the only creole music genre that can be recognized as peculiar to this region. In the last 50 years *cuarteto* has evolved to become a characteristic musical movement (*see* §III, 4 below).

5. Cuyo region (Mendoza, San Juan, San Luis). The Cuyo region belonged to Chile until 1778, and it continued to identify culturally with Chile until the beginning of the 19th century. For this reason, its musical genres are similar to those of central Chile. One characteristic dance is the *cueca*, Chile's national dance, the origins of which, like the *zamba*, are to be found in the Peruvian *zamacueca*. The *cueca* is more lively in rhythm than the *zamba*; it is sung to guitar accompaniment, generally in a major key. Another important dance is the *gato*, with its own

particular choreography. The *tonada* is the main vocal genre. According to Carlos Vega, it has peculiar melodic characteristics and reveals an unusual lightness for the modulation. Usually sung by two voices in parallel 3rds, it is accompanied by guitars, which play preludes and interludes often in elaborate style.

6. The Pampa (Buenos Aires, La Pampa, south of San Luis, Santa Fé and Entre Ríos). The dances of this area, such as the *ranchera*, *gato*, *vals* and *malambo* are all lively in character. In contrast, the songs of this enormous plain, such as the *milonga* (unrelated to the dance of the same name), the *estilo* and the *cifra*, where the verses in Hispanic *décima* form are constantly divided into ten-line stanzas, are melancholic and intimate. For all music the guitar is the predominant instrument, accompanied in various sized groups by the accordion, the *bandoneón* and harmonica, which play the melodies for the dances. The *milonga* has been the most popular genre since the mid-19th century and maintained its popularity in the 20th century thanks to the efforts of the traditionalist movement and the *payadores*, the popular musicians of the River Plate region. It is sung as a solo with guitar and, with the *cifra*, forms part of the *payadas de contrapunto*, an improvisatory contest during which two singers challenge each other to a singing duel on various subjects. The *estilo*, sung as a duet in parallel 3rds, with guitars, has spread throughout most of Argentina. The *ranchera* is also widely danced by couples in entwined style. It preserves elements of the European mazurka, from which it originates, but its melodic line has acquired other characteristics, and it is common for its text to be of humorous content. The *malambo*, originally associated with the *gauchos*, the horsemen of the plains, is a dance for men; accompanied by the guitar, it is danced alone or in competition with other dancers.

7. Patagonia (Neuquén, Río Negro, Chubut, Santa Cruz). Until 1884 this area was a battleground of one of the longest conflicts in the south of the Americas. The present-day indigenous population of 40,000 consists of Mapudungun or Mapuche ('people of the land'), originally from Chile and still found in southern Chile. In the north and south are Tehuelche families. The sacred songs of the Mapuche are sung by women. In the annual celebration of the *Nguillatún*, a collective prayer for fertility, health and well-being (also called *nellipún* or *kamaruko*), the most important expression is *tayil*. *Tayil* was also performed during the now extinct ceremonies of female initiation; it is still performed before or after the *veranada*, the herding of flocks to higher grazing land, and at funerals (Robertson-DeCarbo, 1976; Robertson, 1979). The dances known as *amupurrún*, *shafshafpurrún*, *rinkürrinkupürrún* are led by a female ritual leader who also sings and plays the *kultrún* (a hollow kettledrum in which pebbles are placed; it is usually hand-held and hit with a single stick; fig.6); the dances are performed either by women or by both men and women, in separate or mixed formations. The *puelpurrún* or *lonkomeo* is a men's dance, in five parts of varying length, marked by the withdrawal and return of the dancers. Each part of the dance is characterized by a different rhythmic pattern played on the *kultrún*. This instrument differs from the feminine version in that it is larger, rests on the ground and is struck with two sticks. Almost all the instruments are played by men. During the dance the *tayilqueras* sing

6. *Mapuche woman with kultrún (ritual kettledrum)*

the *tayil*, which corresponds to the *kimpeñ* of each of the dancers, understood as the voiced expression of the soul shared by members of a patrilineage.

Songs sung by men and women that have no connection to ritual are called *ülkantún*. In addition to instruments already mentioned, the Mapuche play the *pifilka*, a long end-blown whistle carved out of wood which plays a single note, as well as the *trutruka*, a very large long end-blown trumpet (2·5 to 6 metres), which has a resounding sound. The Mapuche have gradually incorporated Creole couple dances from the surrounding culture. Neuquén receives influences from the Cuyo and Pampa regions, while other provinces are influenced by the Pampa.

There is little written information on Tehuelche music, but it seems likely that the settlement of Mapuche in that area since the 18th century impinged on Tehuelche socio-cultural structures. This has resulted in a mixed culture with predominantly Mapuche characteristics.

III. Popular music

The beginnings of Argentine popular music can be dated to about 1890, when the tango emerged in Buenos Aires. Until the 1970s, three main areas of popular music were recognized: tango; 'folk' music (urban versions of rural genres of Creole origin, also categorized as nativist music); and *rock nacional*. Since then, the boundaries between these distinctions have become more complex as these musics have interacted and musicians have crossed over, playing more than one genre. Two other popular phenomena, *cuarteto* and *bailanta*, also deserve mention.

1. The tango. 2. 'Folk' music. 3. *Rock nacional* (Argentine rock). 4. *Cuarteto* and *bailanta*.

1. THE TANGO. This dance has become the musical identity of Argentina for the world at large. The TANGO emerged in the port and slums of Buenos Aires and the La Plata river area during a period when the population swelled, with 6 million immigrants (Italians, Spaniards, East Europeans) entering the country between 1870 and 1930. Whether instrumental or sung, the tango remained a dance until the end of the 1950s, when, due to social change, it was displaced among the younger generation in favour of foreign music, leaving tango largely as the music of older generations. Tango has enjoyed recurrent revivals, none of them major, the last and most important of which is the present one, which has given rise to countless dance classes, including an extra-curricular course at the University of Buenos Aires. At first there were many different types of tango that were played and danced in different social environments. Later on, the genre consolidated, acquiring a definite character. The only genres that can be considered true predecessors of the tango are the habanera and the *milouga*.

The history of tango has passed through three main stages. The first, between approximately 1890 and 1920, is called *La guardia vieja* (the Old Guard). During this period tango developed from a marginal dance associated with brothels, its language the *lunfardo* of the *arrabal* (the immigrant ghettos), to gradually gain acceptance among the middle and upper classes due to its international fame, notably its sensational impact in Paris and Europe (1910). The second stage, between 1920 and 1958, is called *La guardia nueva* (the New Guard). This most important stage comprised a period of consolidation in the 1920s and 30s, and the 'golden age' in the 1940s. The third stage, beginning in 1958, is called *La guardia tercera* (the Third Guard). This period began with innovations by the founder of 'new tango', ASTOR PIAZZOLLA, and his Octeto Buenos Aires and culminated with the worldwide success of the Tango Argentino show (1983–94).

2. 'FOLK' MUSIC. The first stage of this movement revalued traditional rural Creole genres, brought to the cities by migrants, for an urban public. It helped introduce recordings of folk music to various provinces during the 1930s, their success preceded by intense background work between 1915 and 1935 by the traditionalist impresario Andrés Chazarreta. Notable 'folklorists' included Antonio Tormo, Patrocinio Díaz, Martha de los Ríos, Margarita Palacios, Manuel Acosta Villafañe, Hilario Cuadros, Osvaldo Sosa Cordero, Julio Argentino Jerez and Edmundo Zaldívar. A second innovative stage, taking 'folk' music further from its roots in musical terms, took place in Buenos Aires, running parallel to the decline of tango at the end of the 1950s. It coincided with an influx of migrants from the provinces to the city searching for work at a time of economic expansion. Various musicians contributed to produce what became known as the '*boom del folklore*' (1960–70). ATAHUALPA YUPANQUI (Héctor Roberto Chavero), of rural origin and disposition, re-created most of the Creole repertory and sang his own deeply poetical and at times political messages, for which he was imprisoned. Other musicians from the provinces, such as the seminal groups Los Hermanos Abalos, Los Chalchaleros, Los Fronterizos, and the soloists Eduardo Falú, Ramón Ayala, Ariel Ramírez (notable for his *zambas* and Creole Mass), Gustavo Leguizamón, Suma Paz, Jorge Cafrune, *charango* player Jaime Torres and MERCEDES SOSA, are examples of this period. The 1960s and 70s were prolific years in terms of aesthetic experimentation, with *zamba*, *chacareras*, *cuecas*, *bailecitos*, *vidalas*, *milongas*, *estilos* etc. popularized by hundreds of non-professional groups and solo vocalists, their work stimulating the creation of hugely popular national folk festivals. The 1980s saw the emergence of new composers, but on the whole folk music was being overtaken by the success of *rock nacional*.

3. 'ROCK NACIONAL' (ARGENTINE ROCK). While the folklore boom subsided, *rock nacional*, a social and musical movement, was developing. From the beginning, Argentine rock was a fusion of different musical styles, related in different ways to pop and jazz, with an underlying Argentine sensibility. Argentine, Latin American, North American country and folk music, heavy metal, reggae, *nueva canción*, Brazilian *bossa nova*, tango and, above all, rock and roll all had an influence on it. The initial important phase was between 1965 and 1970 when the pioneers included musicians Litto Nebbia and Luis Alberto Spinetta. In 1970–75 new groups and soloists with different characteristics and messages emerged. Rock changed again during the military period 1975–81: orchestrations and harmonies became more complex. Serú Girán became one of the most important groups, its leader, Charly García, favouring lyrics dealing with social issues, their message enhanced by accompanying music. The playing of electronic instruments developed beyond the experimental stage. The climax of a national rock boom came in 1982, as a result of the total censorship of songs in English by the military government due to the war in the South Atlantic with the United Kingdom. García, Nebbia, León Gieco and Spinetta consolidated their position on the music scene, and new artists such as Fito Páez, Juan Carlos Baglietto and Adrián Abonizio emerged. *Rock nacional* had great significance during this time for many young people: during a period of great political repression and when young male conscripts were being sent off to fight in the war, many lyrics were opposed to the government position. Some musicians still gravitated towards tango and folk music. More recently bands have tended to follow and adapt imported models such as pop, reggae, ska, techno etc., with some composers and performers of fusion music more difficult to classify.

4. 'CUARTETO' AND 'BAILANTA'. The *cuarteto* emerged in the province of Córdoba in 1943. It moved beyond its borders during the 1980s when it became the taste of the popular dance halls of Buenos Aires and its suburbs. While it owes its origin and name to the music of the Cuarteto Leo (voice, piano, accordion and violin), it later acquired the status of a musical genre, with the development of broader definitions and different performance styles. The characteristics of *cuarteto* are the predominance of a solo singer, binary rhythm, a rigid and schematic rhythmic-harmonic structure and usually a minor mode. It was spurned for many decades because it was considered 'common', although paradoxically it has recently acquired a certain snob value among middle and upper classes.

The *bailanta*, a dance and also the term used for the Buenos Aires dance halls where migrants from the provinces met to dance, went through a similar process to the *cuarteto*. It is one of the most significant phenomena of the record industry in terms of sales. At its highpoint,

during the period 1989–92, approximately 200 groups dedicated themselves to playing this type of Latin American 'tropical music'. The preferred genres were the *cumbia* (Colombia), the *guaracha* (Cuba), the *merengue* (Dominican Republic) and the Argentine *cuarteto*.

GERARD BÉHAGUE (I), IRMA RUIZ (II, III)

Argentina, L'. *See* FILIPPINI, STEFANO.

Argento, Dominick (*b* York, PA, 27 Oct 1927). American composer. The son of Sicilian immigrants, his early musical interest was excited by the music of Gershwin, leading to piano lessons and a self-taught course in theory and analysis. After being drafted into the army and serving as a cryptographer in North Africa during World War II, he entered the Peabody Conservatory in Baltimore as a pianist on the GI Bill of Rights. His harmony teacher, Nabokov, urged him to focus on composition, and through this influence as well as contact with the Baltimore composer Weisgall, Argento's pronounced gift for vocal writing was furthered. After graduation (BM 1951), he went, on a Fulbright grant to study in Florence with Dallapiccola at the Cherubini Conservatory; this altered Argento's previous rejection of dodecaphonic composition. Returning to Peabody (MM 1954), he studied with Cowell and became musical director of the Hilltop Musical Company, a position which afforded him a practical foundation in opera. The group's stage director, John Scrymgeour, was to be Argento's librettist for seven operatic collaborations and was to co-found with him the Center Opera Company (1963), now Minnesota Opera. Their one-act *The Boor*, after Chekhov, was completed and produced while Argento was at the Eastman School (PhD 1957), where his teachers were Rodgers, Hovhaness and Howard Hanson.

In 1958 Argento began teaching music theory and composition at the University of Minnesota, Minneapolis; he was appointed Regents' Professor in 1979 after achieving a significant regional and national reputation, and he retired in 1997. He was awarded the Pulitzer Prize in 1975 for the song cycle *From the Diary of Virginia Woolf*, and was honoured by the American Academy and Institute of Arts and Letters in 1976 and elected to membership in 1980. During the 1980s and 1990s, his

Dominick Argento

international reputation widened with such works as the song cycle *Casa Guidi* for mezzo-soprano and orchestra (1983), the Te Deum (1987) and the opera *The Aspern Papers* (1987). Never severing his youthful connection to Florence, he returned on two Guggenheim fellowships (1957–8, 1964–5) and has used the city as his base for composition almost every summer since the mid-1960s.

During Argento's first years in the upper midwest, he received commissions from nearly every type of performing organization in Minineapolis and St Paul. *The Masque of Angels*, completed in 1964, for example, inaugurated the Center Opera Company. It contains some of his finest choral writing before the Te Deum; and, as in many of his works, a discreet serialism co-exists with a rich, harmonic palette and eclectic musical references, here chant-like vocal contours which match the libretto in which a group of angels promotes mortal romance in the face of contemporary defeatism. A particular success among these early works is the Variations for Orchestra (*The Mask of Night*), commissioned by the Minneapolis Civic Orchestra and given its première in 1966. One of few significant compositions for orchestra without origin in one of the operas, the work is cast as a theme and six variations, each inspired by a line of Shakespeare about night. Juliet's Act II soliloquy from *Romeo and Juliet* provides a text for the final movement's recitative and aria, performed at the first performance by soprano Carolyn Bailey, whom Argento had married in 1954.

In 1963 the establishment in Minneapolis of the Tyrone Guthrie Theatre led to incidental music for Shaw's *St Joan* and Jonson's *Volpone*, 1964, as well as fruitful discussions about the stage: Argento's compositional output in the 1970s is dominated by opera – the abstract, eclectic *Postcard from Morocco* (1971), the compelling one-act monodrama *A Water Bird Talk* (1974–6), on Argento's own libretto after Audubon and Chekhov, the full-length *The Voyage of Edgar Allan Poe* (1975–6) and the New York City Opera commission *Miss Havisham's Fire* (1977–8). Although sometimes grouped with American Neo-Romantics, Argento's idiom is more varied than this might suggest. In these operas, and up to *Casanova's Homecoming* (1980–4), he achieved his stated intention to create a distinctly different vocal idiom for each work, which would override harmonic considerations in distinguishing the piece. Even in the compact, chromatic, and rigorously syllabic idiom of *Poe*, his felicity for the voice is always apparent. In *Casanova's Homecoming*, again a work to his own libretto, Act 1 scene ii is set in an opera house during an 18th-century performance, and material from Jommelli's *Demofoonte* is overlaid with modern sonorities, illustrating Argento's keen awareness of operatic tradition. The other eight scenes in this theatrically vivid opera display wide-ranging, expansive vocal phrasing, full chromatic harmonies and orchestral writing notable for the colour and amplitude derived from relatively small forces.

Argento's song output is a significant contribution to the art song repertory. His work is marked by the frequent choice of prose texts and the creation of epistolary song cycles. *Letters from Composers* (1968) is based on the words of seven composers including Chopin, Mozart and Bach. *From the Diary of Virginia Woolf* (1974), written for the mezzo-soprano Janet Baker, traces Woolf's emotional life to the brink of suicide through eight songs drawn from lines in her journal entries. *The Andrée Expedition* (1982), composed for the baritone Håkon Hagegård, is based on the notebooks and diary entries of three ill-fated Swedish explorers who attempted to reach the north pole in a hot-air balloon, and *Casa Guidi* (1983), for the mezzo-soprano Frederica von Stade, consists of five songs with texts taken from ten different letters which Elizabeth Barrett Browning wrote to her sister Henrietta between 1846 and 1859. These last two song cycles, as well as the choral piece *Peter Quince at the Clavier* (1981) bear a family resemblance to the idiom of *Casanova's Homecoming*.

Of Argento's choral works, the extended Te Deum (Verba Domini cum verbis populi) of 1987 for chorus and orchestra is his foremost achievement. The liturgical prayer alternates with the *verbis populi*, anonymous Middle English texts of faith. The solemn, learned cast of the music in the Latin portions, such as the fugal Sanctus in the opening movement, contrasts with vigorous outbursts using full orchestral resources, as in the third movement's vivid refrain. One of Argento's most tonally grounded scores, the Te Deum's religious symbolism is founded on the unifying circle of fifths.

In writing the libretto for his opera *The Aspern Papers* (1988), Argento moved Henry James's setting from Venice to the shores of Lake Como in order to recreate the ambience of 19th-century operatic life as experienced by the artists who resided there. Most significantly, the papers sought by a scholar after the death of the hero, Aspern, are not love letters but an opera manuscript composed by Aspern and suppressed by his mistress. In flashbacks to the 1830s, Argento establishes but quickly dissolves period bel canto musical references. The psychologically powerful climax of the opera is reached through

a final series of scenes that culminate in the destruction of the unheard score.

Though greater seamlessness characterizes the works of the 1980s and 90s, Argento remained capable of juxtaposing stylistic elements as in the multi-media opera *The Dream of Valentino* (1993). The orchestral work *Valentino Dances*, drawn from the opera, captures the lush nuances of American film scoring in material that surrounds a central tango and creates a paen to the genre of film music. Scoring also plays an evocative role in the major choral work *Walden Pond* (1996), in which three cellos and harp support and illustrate the water images in the settings of text compiled by Argento from Thoreau's *Walden*. In these later works, more rhythmic energy and ostinatos are apparent without sacrifice of lyric power, a characteristic which is also evident in the duo song cycle *A Few Words About Chekhov* (1996) composed for von Stade and Hagegård. These songs, like so much of Argento's finest work, exhibit what can be considered his hallmark: the contrast between intimacy and grandeur, often occasioned by private desolation followed by self-discovery.

WORKS

OPERAS

Sicilian Limes (1, J. Olon-Scrymgeour [psued. of J. Scrymgeour] after L. Pirandello), 1954, Baltimore, Peabody Conservatory, spr. 1954, withdrawn

The Boor (ob, 1, J. Olon [Scrymgeour], after A. Chekhov: *The Bear*), 1957, Rochester, NY, Eastman School of Music, 6 May 1957, vs (New York, 1960)

Colonel Jonathan the Saint (comic op, 4, Olon-Scrymgeour), 1958–61, Denver, Loretto Heights College, 31 Dec 1971

Christopher Sly (comic op, 2 scenes, J. Manlove, after W. Shakespeare: *The Taming of the Shrew*), 1962–3, Minneapolis, U. of Minnesota, 31 May 1963, vs (New York 1968)

The Masque of Angels (1, Olon-Scrymgeour), 1964, Minneapolis, Tyrone Guthrie, 9 Jan 1964, vs (New York, 1964)

The Shoemaker's Holiday (ballad op, 2, Olon-Scrymgeour, after T. Dekker), 1967, Minneapolis, Tyrone Guthrie, 1 June 1967, vs (New York, 1971)

Postcard from Morocco (1, J. Donhuae), 1971, Minneapolis, Cedar Village, 14 Oct 1971, vs (New York, 1972)

A Water Bird Talk (monodrama, 1, Argento, after Chekhov and J.J. Audubon), 1974–6, Brooklyn Academy of Music, 19 May 1977, vs (New York, 1980)

The Voyage of Edgar Allan Poe (2, C. Nolte), 1975–6, St Paul, O'Shaughnessy Auditorium, 24 April 1976, vs (New York, 1979)

Miss Havisham's Wedding Night (monodrama, 1, Olon-Scrymgeour, after C. Dickens: *Great Expectations*), 1977–8, Minneapolis, Tyrone Guthrie, 1 May 1981, vs (New York, 1981)

Miss Havisham's Fire (2, Olon-Scrymgeour, after Dickens), 1977–8, New York, New York State, 22 March 1979

Casanova's Homecoming (ob, 3, Argento, after J. Casanova: *L'histoire de ma vie*), 1980–4, St Paul, Ordway, 12 April 1985, vs (New York, 1985)

The Aspern Papers (2, Argento, after H. James), 1987, Dallas, Fair Park Music Hall, 19 Nov 1988, vs (1991)

The Dream of Valentino (2, C. Nolte), 1993, Washington DC, Kennedy Center, 15 Jan 1994

OTHER STAGE

The Resurrection of Don Juan (ballet, 1), 1955, Karlsruhe, 24 May 1959, arr. orch suite, 1956

Royal Invitation (Homage to the Queen of Tonga) (ballet, 5 parts), 1964, St Paul, 22 March 1964, arr. orch suite, 1964

St Joan (incid music, G.B. Shaw), 1964

Volpone (incid music, B. Jonson), 1964

S. S. Glencairn (incid music, E. O'Neill), 1966

The House of Atreus (incid music, after Aeschylus: *Oresteia*), 1967

ORCHESTRAL

Divertimento, pf, str, 1954; The Resurrection of Don Juan, suite, 1956 [based on ballet]; Ov., 1957 [from op The Boor]; Royal Invitation (Homage to the Queen of Tonga), suite, chbr orch, 1964 [based on ballet]; Variations for Orch (The Mask of Night), S [last mvt only], orch, 1965; Bravo Mozart 'an Imaginary Biography', vn, ob, hn, orch, 1969; A Ring of Time 'Preludes and Pageants for Orch and Bells', 1972; In Praise of Music, 7 songs, 1977; Fire Variations, 8 variations and finale, 1982; Capriccio 'Rossini in Paris', cl, orch, 1985; Le tombeau d'Edgar Poe, suite, 1985 [based on op The Voyage of Edgar Allan Poe, 1975–6]; Valentino Dances, 1994 [from op The Dream of Valentino, 1993]; Valse triste, hp, str, 1996; Reverie (Reflections on a Hymn Tune), 1997: see CHORAL [Te Deum, 1987] and SOLO VOCAL [Ode to the West Wind, 1956; Songs about Spring, arr. 1960; Casa Guidi, 1983]

VIRGINIA SAYA

Argerich, Martha (*b* Buenos Aires, 5 June 1941). Argentine pianist. Her teachers were Ernestine de Kussrow, Vicente Scaramuzza, Gulda, Askenase, Michelangeli, Madeleine Lipatti and Magaloff. She made her début at the age of eight in Buenos Aires performing Mozart's D minor Concerto K466, Beethoven's First Concerto and Bach's French Suite no.5. She also played the finale of Beethoven's E flat Sonata op.31 no.3 for Gieseking, who expressed his unease at the possible dangers of such early precosity. Argerich achieved her first international recognition at the age of 16 when she won first prizes in the 1957 Busoni and Geneva international competitions. She made her London début in 1964, and in 1965 won first prize in the Chopin Competition in Warsaw, where her playing was described as 'volcanic'. Yet even before Warsaw she recorded, at the age of 19, an album for DG which included performances of the Prokofiev Toccata and Liszt's Sixth Hungarian Rhapsody sufficiently fluent and imperious to arouse Horowitz's wonder. Since that time Argerich's appearances have been notoriously unpredictable; perhaps surprisingly, she has been most frequently heard in chamber music, notably in partnership with Nelson Freire, Stephen Bishop-Kovacevich, Gidon Kremer and Mischa Maisky. Her appearances in the concerto repertory are rare, and her solo recitals even rarer, although such absenteeism is less the result of caprice than an instinct for survival and a refusal to compromise. She has remained wary of a return to a brilliant but fraught career which saw her making as many as 150 appearances a year and which increasingly left her more exhausted than elated. Argerich's recorded legacy is, however, surprisingly large and varied; and here her fiery virtuosity is invariably combined with an acutely poetic lyricism. Whether in her superbly disciplined Bach, her joyous, volatile early Beethoven concertos or her highly charged playing of the Romantic repertory – of Tchaikovsky, Skryabin and Rachmaninoff as well as Chopin, Schumann and Liszt – Argerich's performances are as inward as they are vital, of a unique musical intuition and charisma.

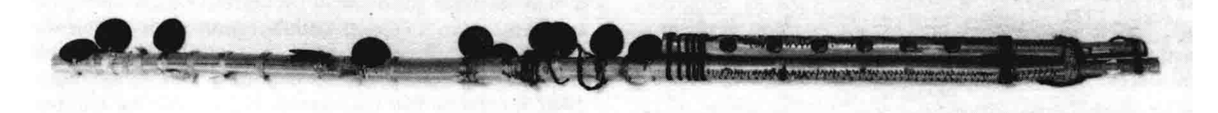
BRYCE MORRISON

Arghūl [argūl, argul, arghoul, yavghul]. Double clarinet with a cylindrical bore, composed of melody pipe and drone pipe each with single beating reeds; the drone is much longer than the melody pipe. The *arghūl* belongs to the family of idioglot clarinets, which includes the *zummāra*, *çifte* (Turkey), *launeddas* (Sardinia) etc.; its similarity to the double *aulos* of ancient Greece suggests a pre-Christian origin. Etymologically the term *arghūl* is a metaplasm of *urġun*, the Arabic word frequently used to describe the organ. Villoteau (p.967) mentioned three different sizes of *arghūl*: the 'arghoul el-kebyr' (big), 'arghoul el-soghayr' (medium) and 'arghoul el-asghar' (small). Elsner listed a variety of names applied to various types of *arghūl* (without reference to relative size) including 'el-argūl el-kebīr, el-argūl el-ṣoġair, arġūl ġāb (ġāb means pipe, reed-pipe), ġāb, sibs ġāb, sibs, and mizmār muzdawağ (mizmār is a general term for wind instrument, muzdawağ means double, in pairs)'.

The big *arghūl* is made in nine parts, each having a name, which may vary from region to region. It consists of a pair of mouthpieces which include the up-cut reeds; two short sections called *luqma* ('mouthful') as these first four parts of the instrument are all played from inside the player's mouth; the melody pipe; and the principal drone pipe and its three extensions. Elsner gave a detailed description of the proportions for the big *arghūl*, which are traditionally measured in basic body units (fist, finger breadth etc.). In the instrument he described, the entire melody pipe was 76·6 cm long and the entire drone pipe was 239·7 cm long. The *arghūl* is made from bamboo or some other suitable material and the two parts are bound together with string and tar or wax. The detachable sections of the drone are usually linked by lengths of cord to prevent them being lost.

The melody pipe is usually bored with five or six fingerholes, producing a diatonic scale. Either simple or cross fingering can be used when playing the instrument, and by partially covering ('shading') the stops, a wide range of pitches can be produced. The drone can be changed by varying the number of lengthening pieces; usually only three drone notes are used – that is, only the last two lengthening pieces are removed. Circular breathing is used.



The contemporary *arghūl* is essentially an Egyptian folk instrument and is used by a variety of people including Nile boatmen, shepherds and professional folk musicians. It is used to accompany folksongs, ballads and popular *mawwāl* songs, and can be heard at weddings, dances and other social gatherings.

WILLIAM J. CONNER, MILFIE HOWELL

Argilliano, Ruggiero [Roggerio] (*b* Castelnuovo di Garfagnana; *fl* 1612). Italian music editor and composer. He edited *Responsoria Hebdomadae Sanctae, psalmi, Benedictus, et Miserere, una cum missa ac vesperis Sabbati Sancti*, for eight voices and continuo (Venice, 1612^2). It includes pieces by 20 composers, among them Croce and Viadana, and two are anonymous; Argilliano himself, with 11 pieces, is the best-represented composer. □

Arghūl (double clarinet) (Horniman Museum, London)

Argillières. *See* D'ARGILLIÈRES family.

Argo. English record company. Founded in London in 1952 by Harley Usill and Alex Herbage, it produced many outstanding recordings such as those by the Academy of St Martin-in-the-Fields under Neville Marriner, King's College Choir, Cambridge, the Philip Jones Brass Ensemble and the Heinrich Schütz Choir under Roger Norrington. It also made many recordings of poetry, often read by the poets themselves, and a comprehensive recording of Shakespeare's plays and sonnets (on 137 LPs). Although the company was purchased by Decca in 1957, it remained autonomous until 1980 when Usill left the company. It was relaunched in 1990 with an emphasis on contemporary music and the composers represented included Mark-Anthony Turnage, Aaron Jay Kernis, Michael Torke, Michael Daugherty, Graham Fitkin, John Harle and others.

MAUREEN FORTEY

Argov, Sasha [Abramovich, Alexander] (*b* Moscow, 26 Oct 1914; *d* Tel Aviv, 27 Sept 1995). Israeli popular music composer. His family name was Abramovich, but he changed it to the Hebrew name Argov in 1946, 12 years after emigrating to Israel. He was known as Sasha. His mother was a professional pianist and his father a dentist. Argov began to play the piano at the age of three and a half, and when he was six he began composing songs which his mother wrote down for him. He had no formal training in music, and in his adult life music was not his main source of income – he worked as a bank clerk and later owned a bookshop – but composing was always his mission in life.

He wrote approximately 1200 songs including songs for military and civilian entertainment troupes, and songs with piano accompaniment. He accompanied some performances of his songs, and emphasized that in his music the piano plays an important part in creating an atmosphere and illustrating the meaning of the text; he ascribed considerable importance to the relationship between text and music, and attempted to represent words in music using frequent changes of rhythm and metre. He also composed several musicals and film scores; his most famous musical was *Shlomo hamelech ve'Shalmai hansandlar* ('King Solomon and the Cobbler'), first performed in 1964. His music is distinguished by characteristics such as unexpected melodic leaps, chromaticisms, dissonances, complex harmonic progressions and modulations to distant keys. In 1988 he won the 'Israel Prize' for his contribution to the Hebrew song. His style had a far-reaching influence on the work of a younger generation of Israeli popular music composers.

WORKS
(*selective list*)

SONGS

Songs for military entertainment troupes: Ha'Chizbatron, 1948; Nachal, 1950–*c*1960
Songs for civilian entertainment troupes: Bazal Yarok [Green Onion], 1958–60; Hatarnegolim [The Roosters], 1961–3
Kacha stam: sherei Sasha Argov [Just like that: Songs by Sasha Argov], 1979
Et ma sheraziti: mishirei Sasha Argov [All that I wanted: Songs of Sasha Argov], 1983

DRAMATIC

Rak lo be'Shabat [Never on Sundays] (film score, dir. A. Joffe), 1964
Harpatka bakirkas [Adventure in the Circus] (children's play, J. Ambrose), 1965
Androceles ve'ha'arie [Androcles and the Lion] (children's play, O. Harris), 1966
Ester hamalka [Queen Esther] (musical, N. Alterman), 1966
Shlomo hamelech ve'Shalmai hasandlar [King Solomon and the Cobbler] (musical, S. Gronemann), 1966
Hu halach basadot [He Walked through the Fields] (film score, dir. Y. Milo), 1967
Chagigat kaiz [Summer Celebration] (musical, Alterman), 1972
Doda Klara [Aunt Klara] (film score, dir. A. Hafner), 1977

TALILA ELIRAM

Argyropoulos, Isaac [Argiropulo, Isacco] (*b c*1450; *d* Rome, 1508). Italian organist and organ builder. He was the son of the expatriate Greek scholar, Giovanni, who taught Greek philosophy at the Florentine Studio from 1456 to 1471. He studied both organ playing and organ building under Antonio Squarcialupi, who recommended him to Duke Galeazzo Maria Sforza of Milan. He was employed at the duke's court from 1472 to 1474, and his keyboard virtuosity was as much admired there as it had been in Naples, Rome and Bologna. Though he maintained close ties with Florence, he later settled in Rome, where his knowledge of Greek gained him a post at the Vatican. His activities as an organ builder, repairman and consultant are recorded in, among other places, Milan (1472), Genoa (1475) and in Rome (1496). He has sometimes been confused with Heinrich Isaac.

FRANK A. D'ACCONE

Århus [Aarhus]. City in Denmark. It was a bishopric in 948; it is now the second largest city in the country. Early musical life revolved around the Domkirke (cathedral) and the attached Katedralskole. A significant musical figure in its early history was Morten Børup (*c*1446–1526), known for his Latin school comedies. The cantor for 1760 to 1789 was Henrik Ernst Grosmann (1732–1811), whose cantatas are in the Statsbibliotek.

The increasing middle-class influence in the 19th century brought a flowering of secular music. Amateurs and professionals appeared together in popular clubs, with concerts and music to accompany theatrical performances. The Aarhus Musikforening (Music Society, founded 1843) dominated musical life for many years. The Aarhus Sangforening (Choral Society) was established in 1843, followed by several other choirs. From the 1830s, public concerts were held in the Vennelyst-Parken. After Århus became a garrison city in 1867, regimental and other musicians collaborated for symphony concerts.

Opera performances began in about 1810 and continued with appearances by the Kongelige Teater from Copenhagen and travelling opera (and later operetta) companies. The Aarhus Teater was inaugurated in 1900; it had its own permanent orchestra, which also gave concerts, from 1919 in collaboration with the newly established Philharmonisk Selskab (Philharmonic Society). The Aarhus Byorkester (Municipal Orchestra, since 1982 the Århus SO) was established in 1935 by Thomas Jensen, who conducted it for the first 22 years. It provided concerts of all kinds and became the regular orchestra for

the Jyske Opera (Jutland Opera: see below), as well as broadcasting regularly on Statsradiofoni (now Danish Radio); it eventually reached a strength of 68 musicians. Later conductors included Ole Schmidt and Norman Del Mar. Among smaller ensembles are the Sinfonietta and the Bachorkester.

The Jyske Opera was founded in 1947. The company used the Aarhus Teater and from 1962 also gave summer performances in the Helsingør Teater in the Old Town. In 1977 it became a national touring company. It is still permanently based in Århus, since 1982 in the Musikhus Århus (inaugurated in that year); since 1983 it has given summer series of Wagner, directed by Francesco Christofoli. The Musikhus Århus is also a concert venue. Operetta and musicals were given mostly in the Vennelyst and Kasino theatres in the early 20th century, and later in the Aarhus Teater. MBT (Marie Brolin Tani) Danseteater has made a reputation in modern dance.

The Århus Unge Tonkunstnere (founded 1966) and the NUMUS festivals promote new music; key figures have been the composers Per Nørgård (*b* 1932) and Karl Aage Rasmussen (*b* 1947). The Dansk Institut for Elektroakustisk Musik was founded in 1982, directed by Wayne Siegel from 1986. From 1975 the Elsinore Players became internationally known for their performances of modern music.

The Jyske Musikkonservatorium (Jutland Conservatory) was founded in 1927 and taken over by the state in 1963. Per Nørgård became the main teacher of composition there in 1965. The Folkemusikskole was founded in 1932. An institute of musicology was established at Århus University in 1946, directed until 1957 by Knud Jeppesen; attached to it are the Sanghistorisk Arkiv (founded 1962) and the Arkiv for Ny Dansk Musik (founded 1990). The Statsbibliotek (founded 1902) holds a music collection of some 60,000 volumes, containing rare prints and 18th-century copies of Telemann cantatas; it also houses the Statens Mediearkiv, to which the Nationaldiskotek was transferred in 1989. The library's printed catalogue contains the most extensive list of the works of Danish composers.

Århus has more than a dozen amateur choirs and orchestras; the Landessekretariat for Dansk Amatørmusik, located in the city, helps support the amateur musical life of the whole country. Jazz and rock, important in Århus musical life from the 1970s, are now subsidized by the state, county and municipality. Jazz, rock and folk festivals include the Skanderborg Festival and the Århus International Jazz Festival. The Århus Festuge, held in September since 1965, has become one of the most important musical events in the country, accommodating both art music and popular music.

JENS PETER JACOBSEN

Aria (It.: 'air'). A term normally signifying any closed lyrical piece for solo voice (exceptionally for more than one voice) with or without instrumental accompaniment, either independent or forming part of an opera, oratorio, cantata or other large work. It has also been applied to instrumental music, particularly in the 17th and 18th centuries, implying a piece written on a vocal model, a subject suitable for variations or a piece of light dance music. Like AIR in English, 'aria' can also mean just melody or tune on the one hand, or on the other, a more general 'manner', 'way' or 'mode of proceeding' in a technical or stylistic sense; in either case it may be joined with geographical labels (*aria* (*alla*) *napoletana*) or with aesthetic qualifiers (a piece with 'good' or 'bad' *aria*).

1. DERIVATION AND USE TO THE EARLY 17TH CENTURY. The collateral forms *aer*, *aere* are derived from the Latin *aer* ('air, atmosphere'), which is a simple transliteration of the Greek. The expressions 'aer ytalicus' and 'aer gallicus' used by an anonymous 14th-century Italian theorist (see Ruf, 1993) are probably equivalent to Marchetto da Padova's 'modus gallicus' and 'modus italicus', and thus imply 'way' or 'manner'. A similar relationship between 'aiere' and 'maniera' occurs in the 15th-century dance treatises of Guglielmo Ebreo da Pesaro and Antonio Cornazano, and much the same thing is implied by a statement of Nicolò Sagudino (early 16th century) to the effect that certain English organists 'non eseguiscono la musica con troppo bono aiere'.

In the late 15th century Duke Sforza's chancellor proposed to ask for the music of two or three of the canzoni of the poet Leonardo Giustiniani, 'per intendere l'aere veneziano' ('in order to hear the Venetian type of melody'); a letter dated 1460 from a certain Nicolò Tedesco in Ferrara to the Marquis of Mantua recommends Giovanni Brith as singing master for his ability 'in cantare moderno massime arie alla veneziana' ('at singing in the modern way, and particularly Venetian-type songs'). Here 'aere' and 'aria' mean 'tune', but they also imply a strophic song or a scheme for singing strophic poetry. In particular, 'aria veneziana' referred to the *giustiniana* and like forms. The sense of scheme or formula for poems of a given form applies to several pieces in the fourth book of Petrucci's collection of frottolas (RISM 1505[5]), which has the title *Strambotti, ode, frottole sonetti, et modo de cantar versi latini e capituli*. No.62 in this collection is a textless piece by Antonio Caprioli entitled 'Aer de versi latini' (in the index 'Aer de cantar versi latini'). Similarly no.91 is an 'Aer de capituli' and the rubric to no.19, 'Modo de cantar sonetti', has an analogous meaning. Baldassare Castiglione (*Il libro del cortegiano*, 1528) preferred singing to the viol because thus 'si nota e intende il bel modo e l'aria'.

By the 1530s 'aria' was commonly used to describe simple settings of light strophic poetry in such terms as 'aria napolitana' (*see* VILLANELLA); in a related vein, it was probably the homophonic melody-dominated character of certain madrigals printed in collections from 1555 onwards that earned them the name *madrigale arioso* (*see* MADRIGAL, §II, 5). Arias as melodies or schemes for singing fixed poetic types – often sonnets or stanzas in *terza* and *ottava rima* – continued to appear throughout the 16th century in instrumental as well as vocal prints and manuscripts: the *Aeri racolti … dove si cantano sonetti stanze e terze rime* (1577[8]) and the Bottegari Lutebook (*I-MOe* Mus.C.311; ed. in WE, viii, 1965) are useful examples. The most familiar of these formulae (whether as melodies or bass patterns is sometimes unclear) are the *aria della romanesca* and the *aria di Ruggiero* (the latter after Ariosto), both often associated with *ottave rime*. They and others continued to be published in prints of monodies of the early 17th century: the five books of Antonio Cifra's *Li diversi scherzi* (1613–17) have numerous examples.

The 'arie della battaglia' of Andrea Gabrieli and Annibale Padovano (*Dialoghi musicali*, 1590[11]) are probably so called because they are paraphrases of an existing model or groundplan; whereas 'manner' or 'style' is the key to such pieces as M.A. Ingegneri's 'arie di canzon francese per sonar' (*Il secondo libro de madrigali ... a quattro voci*, 1579), Viadana's 'aria di canzon francese' (*Canzonette, libro primo*, 1590) and Banchieri's 'sonata in aria francese' (*L'organo suonarino*, 1605). Something of the same sort was doubtless intended by the 'concertini italiani in aria spagnuola' noted on the title-page of Montesardo's *I lieti giorni di Napoli* (1612).

From the last quarter of the 16th century 'aria' is found in close association with the (at least in origin) poetically more specific term 'canzonetta', in strophic pieces mostly for three or four voices (e.g. Orazio Vecchi, *Selva di varia ricreatione*, 1590; Bargnani, *Canzonette, arie et madrigali*, 1599). Vincenzo Giustiniani may have been thinking of canzonetta-related styles when he referred (in his *Discorso sopra la musica*, 1628) to the 'aria nuova et grata all 'orecchie' ('air new and grateful to the ear') as typical of the music of the 1580s onwards, but he was also following earlier theorists (including Gioseffo Zarlino and Vincenzo Galilei) in speaking in broader aesthetic terms as he attempted to rationalize the new technical and stylistic procedures associated with the so-called new music.

2. 17TH-CENTURY VOCAL MUSIC. Although around 1600 the term did not have a strong connotation of music for solo voice, 'aria' played a leading role in the early development of monody. Settings of such poetic forms as strophic quatrains (particularly in prologues) and *ottave* and *terze rime* appear frequently in opera and related genres from Peri's and Corsi's setting of *Dafne* (Ottavio Rinuccini, 1598) onwards. 'Possente spirto' from Monteverdi's *Orfeo* (Alessandro Striggio (ii), 1607) is a particularly elaborate example of an 'aria per cantar terza rima', though not so indicated.

The arias in Giulio Caccini's *Le nuove musiche* (1601/2), a collection that also includes non-strophic madrigals, are characteristic in range and type for the first two decades of the 17th century. Caccini called these pieces 'canzonette à uso di aria', suggesting a relationship between poetic and musical form. The poems, which are all strophic and set for solo voice with continuo accompaniment, reflect the metrical variety sought by Italian poets from the 1580s on and most notably by GABRIELLO CHIABRERA, whom Caccini acknowledged in his preface. Those arias whose verse remains closest to the mainstream of tradition by using lines of seven and 11 syllables are irregular in melodic and harmonic rhythm, have considerable ornamentation and differ from the madrigals only in that they have a strophic form. The verse types, such as lines of five or eight syllables, that most sharply depart from classical norms provoke the simplest tunes, the greatest regularity of rhythm and even, in some cases, triple metre.

One canzonetta is set without musical repetition, several are strophic variations in which the bass is substantially the same for each stanza and the rest are simply strophic. Caccini's second book, *Nuove musiche e nuova maniera di scriverle* (1614), contains a larger proportion of straightforward strophic settings of five- and eight-syllable lines in triple metre, however, and this trend is followed in other monody books of the time. Such pieces are at least not inconsistent with Praetorius's definition (*Syntagma musicum*, iii, 1618) of 'Aria vel Air' as 'eine hübsche Weise oder Melodey, welche einer aus seinem eignen Kopffe also singet' ('a pretty tune or melody which one sings by heart [literally 'from one's head']').

In general the defining distinction between solo madrigal and aria in the early 17th century is in the manner of repetitive – usually strophic – poetic form. A similar distinction between 'cantata' and 'aria' is apparent in the *Cantade et arie a voce sola* (four books, 1620–29) of Alessandro Grandi (i) and perhaps those of G.F. Sances (1633, 1636). Exceptionally, 'aria' is used in a more inclusive way, as in Kapsberger's *Libro primo di arie passeggiate* (1612). Frescobaldi, too, used the term in a general sense in the title of his *Primo libro d'arie musicali* (1630), since the collection includes pieces of other kinds; but in fact only the strophic songs for solo voice are called 'aria' in the body of the work. Sometimes settings of specific forms such as sonnets and *ottave rime* are set apart from arias, as in Borboni's *Musicali concenti*, the collection *Vezzosetti fiori* (1622[11]) and as late as Domenico Mazzocchi's *Musiche sacre, e morali* (1640).

Strophic variations are common throughout the first half of the 17th century, both in opera to early Cavalli and in printed books such as Vittori's *Arie a voce sola* (1649). Most are in recitative style, but some use more regular rhythms. These include pieces, often laments (*see* LAMENTO), built on ostinatos, particularly frequent in the 1630s and 40s. Monteverdi included strophic arias for one or more voices in a range of styles (from recitative to triple-time dance-song, with or without variation) in most of his later Venetian publications; one, the duet *Chiome d'oro* (Seventh Book, 1619), is in duple time over a quasi-ostinato walking bass with instrumental ritornellos.

Occasionally a series of strophes is distributed over two or more musical units, as in *Il carro di Madama Lucia* (1628) by 'Il Fasolo' (Franceso Manelli); many ensemble finales to acts of operas, from Landi's *La morte d'Orfeo* (1619) to Vittori's *La Galatea* (1639), are constructed in this way. There is a specially curious instance, actually marked 'aria', sung by Amor towards the end of Act 2 of Monteverdi's *L'incoronazione di Poppea* (Busenello, 1643). There are four verses, separated by the same ritornello. The first and the fourth have the same music, although in different notation; the second and the third, though not identical, are closely allied. If one accepts the ritornello as part of the structure the form is *ARBRB'RA*. Variation forms, including those built on ostinatos, except for modulating ones, are rare after 1650.

'Recitative' and 'aria' are not musically exclusive terms in the early 17th century: the former refers to style, whereas the most reliable implication of the latter is a formal one: hence the designation 'aria recitativa di sei parti' (six-strophed aria in recitative style) in Mazzocchi's opera *La catena d'Adone* (1626), which also continues to indicate strophic ensemble pieces as arias. In this work Mazzocchi introduces the term 'mezz'aria' to refer to passages having the lyrical character expected of an aria but lacking a clear strophic form, although several non-strophic pieces without ritornellos for solo voice, mostly using a walking bass, are called 'aria' in the score. Recitative intrusions into more regular movement occur in Cavalli's earlier operas, but went out of fashion in the early 1650s, as did recitative arias generally. The opposite phenomenon, a lyrical moment (arioso) in the setting of poetry meant for recitative, was to remain an essential

ingredient of Italian opera throughout the 17th century and beyond.

In Venetian operas before 1660 the majority of arias are in triple time or a mixture of triple and duple; the same pattern occurs in many aria books from Pesenti's *Arie a voce sola* (1636) to P.P. Sabbatini's *Ariette spirituali* (1657) and in Michelangelo Rossi's opera *Erminia sul Giordano* (1633). Before 1630, however, duple time often held its own (Domenico Crivellati, *Cantate diverse*, and Orazio Tarditi, *Amorosa schiera*, both 1628). Many early arias have four or five strophes, or even more; after 1650, in opera at least, two rapidly became the standard number.

Most 17th-century opera arias have continuo accompaniment to the vocal line and ritornellos for three to five parts between the strophes. In this respect they differ from those of printed songbooks, which mainly have no ritornello at all, a prescription for one (e.g. the 'riprese di ciaccona' of Crivellati's *Cantate diverse*) or a ritornello for continuo only. This difference is probably more apparent than real, since many manuscript collections of opera arias from late in the century give only the bass part or leave out altogether the ritornellos found in the full scores.

Arie concertate, in which an instrumental ensemble intervenes between vocal phrases within a strophe or accompanies the voice, first penetrated opera to any extent in the 1640s; early Cavalli works offer several examples. Although their number grew during the second half of the century, they remained a minority until the age of Metastasian *opera seria*. Their accompaniment nearly always consists of string orchestra and continuo, just as for ritornellos. The only wind instrument to gain currency before 1690 (except in such isolated court extravaganzas as Cesti's *Il pomo d'oro*, 1668) was the trumpet, used in dialogue with the voice from about 1670, apparently first in Venice and Bologna. The texts of trumpet arias express bellicose sentiments, and the voice imitates the instrument's characteristic figures.

Aria strophes exhibit great variety of form, but the same procedure of composition underlies most of them: the text is set line by line, by and large syllabically despite isolated flourishes, and often with modest repetition of single words or phrases; the end of each line (or sometimes couplet) is marked by a cadence, with or without a rhythmic hiatus. Two formal schemes, each corresponding to a distinct poetic type, account for the bulk of arias in the later 17th century. In the so-called *ABB* (better *ABB′*) aria, the last line or group of lines is rendered twice to similar music, having a cadence on the tonic only the second time; the repeat may involve anything from simple transposition to complete reworking of material. The form at its most complete consists of two strophes and ritornellos, for example, *ABB′–R–ABB′–R*, as in 'Adorisi sempre' in Cesti's *Orontea* (1656); some arias, however, have only a single strophe. The two poetic strophes often have parallel or identical final lines, with an epigrammatic or emphatic quality that justifies their musical repetition: an example is 'Frena il cordoglio' from Cavalli's *Ormindo* (1644). In the other type of aria the first line or couplet is repeated as a refrain at the end of the same strophe; the music for the repeated text is often varied in pieces of the 1650s and 60s (*ABA′*, as in 'Chi mi toglie' from *Ormindo*) but comes increasingly to be a literal restatement of the opening (*ABA*; or, giving the complete form, *ABA–R–ABA–R*). This is one source of the da capo aria.

An extension of the possibilities of prosody continued throughout the period 1640–80, yielding line lengths of nine, ten and 12 syllables and a range of internal rhythms, of which the anapaest was particularly favoured. The object of this extension was to inspire variety of musical rhythm, just as Caccini had sought inspiration in the poetic licence of Chiabrera. The generation of P.A. Ziani, Antonio Sartorio, Legrenzi and Carlo Pallavicino had to hand poetry of this sort, which moreover often changed pattern in mid-strophe – a procedure not unknown to the early 17th century, but less assiduously applied. These changes usually produced a corresponding change of musical metre. In general the range of figure and type of movement greatly expanded during these years.

Most arias even of the later 17th century are short and simple, commensurate with their number (30 to 50 per opera is a fair average; see, for example, Alessandro Scarlatti's *Gli equivoci nel sembiante*, 1679). Many have rhythmic patterns in which some writers have seen a relationship to contemporary dance music, but it remains uncertain to what extent the resemblance is a by-product of regular text accent in a syllabic setting. Perhaps the clearest evidence of a connection is in G.L. Gregori's *Arie in stil francese* (1698), which includes titled examples of vocal galliards, minuets and bourrées.

Passage-work, often associated with a conventionally placed text image, waxed during the 1670s. The aria with motto opening, or DEVISENARIE, came into vogue; in it a brief vocal proclamation is repeated by the accompaniment, then taken up again by the voice and given its continuation, as in 'Gigli alteri' (*Gli equivoci nel sembiante*). A parallel development is the 'tag' ending, or repeated final short phrase. The works of Legrenzi and his contemporaries afford numerous examples of these, and of bass lines built on a single melodic or rhythmic idea, or on a modulating ostinato, as in 'Onde, fero, fiamme e morte' (*Gli equivoci*). The sections of many arias are marked off, as if for repetition.

By 1680 the da capo aria had gained a dominant position, though its dimensions remained small into the early 18th century. The trend seems first to have taken hold in Venice, still the principal market-place of opera. It certainly does not have the connection with Alessandro Scarlatti that many writers, mainly out of a limited knowledge of the repertory, have suggested.

The cantata, earlier used as a term of contrast to 'aria', in the second half of the 17th century includes arias among its components. Their form and style obey the laws of contemporary opera: thus the majority of labelled arias in G.B. Mazzaferrata's *Primo libro delle cantate da camera* (1673) and Antonio del Ricco's *Urania armonica* (1686) are strophic pieces in a variety of forms, while G.B. Bassani's *Languidezze amorose* (1698) has mostly da capo arias. A small but surprising number of these 17th-century operatic and chamber pieces (not all arias), as well as some 18th-century ones and a few forgeries, became canonized as the 'arie antiche' of 19th- and 20th-century vocal anthologies and tutor books.

3. INSTRUMENTAL MUSIC. The use of 'aria' as a subject for variation in instrumental music has a history nearly coinciding with that of the vocal strophic variation. Antonio Brunelli's *Varii esercizii* (1614) contains an 'aria di Ruggiero per sonare', and Frescobaldi's first book of

Toccate e partite (1615–16) has 'partite sopra l'aria della romanesca'. As late as 1664 Bernardo Storace's keyboard book, *Selva di varie compositioni*, includes an 'aria sopra la Spagnoletta'. The aria in Bach's Goldberg Variations falls into a similar category. Mattheson, in *Der vollkommene Capellmeister* (1739), gave as a subordinate definition of aria 'a short, singable, simple melody, divided into two parts, which in most cases is so plainly drawn that one may turn it about, embellish it and vary it in countless ways'.

Pieces called 'aria' join company with 'sinfonie', 'sonate' and 'balletti' in Biagio Marini's *Affetti musicali* (1617), and are common in ensemble dance music of the second half of the century, particularly in the works of composers published at Bologna, such as Giuseppe Colombi (from 1668), Pietro Degli Antoni (from 1670), G.M. Bononcini (from 1666, Venice), Orazio Pollarolo (1673) and G.B. Viviani (from 1678). Most of these are brief binary forms with regular harmonic rhythm in crochets or quavers and patches of short-breathed imitation. In a similar vein, arias occur as movements of 'sinfonie' by Pietro Sanmartini (1688) and of sonatas by Corelli and B.G. Laurenti (1691). The earlier meaning of 'style' survives in G.F. Biumi's 'aria de correnti à 4' (*Partito delle canzoni alla francese*, 1627) and in Viviani's 'aria di gigha' (*Concertino per camera*, after 1687), similar to the sense of, for example, 'tempo di gavotta' in Corelli's op.2 and in many instrumental pieces of the 18th century.

4. 18TH CENTURY. The formal aria had by now become the chief means of emotional and musical articulation in theatrical, sacred and secular music in Italy. Other countries retained their own traditions (for France *see* AIR, §3, and for Germany *see* SINGSPIEL), but even here Italian or italianate models increasingly made their presence felt. Similarly, the opera house provided the chief focus for the development of such models, for all their influence on other spheres of musical activity.

(i) The da capo aria. The da capo form dominated the Italian aria by the beginning of the 18th century, but there was then still some fluidity in its relationship to the words. There is usually a binary construction of the setting of the first part of the text, although arias from this date tend to be so short that this binary structure often consists only of two periods with a half cadence, rather than a modulation, at the end of the first (and the second often repeated); see 'Penso far ciò che brami' in Scarlatti's *Eraclea* (1700). The text of this, the *A* part of the *ABA* da capo structure, usually consists of two to four lines of verse. If a couplet, it was nearly always repeated completely in the second part of *A* (which was in binary form), but with quatrains sometimes only the second couplet was repeated. The middle or *B* section of the aria was often treated exactly like the *A* section, even occasionally using the 'motto' beginning, which remained popular in the early years of the century – an example is 'Saper tu vuoi' in *Eraclea*. In many arias of this period the *A* and *B* sections of the aria are equal in length and musical weight, but in others (for example 'Chi lascia la sua bella', *Eraclea*) *A* is as much as twice as long as *B*, and when the text of *B* consists of a quatrain it is seldom repeated in full. The accompaniment of arias in this period also tended towards diversity. The continuo aria continued into the 1720s but became increasingly rare. In the works of conservative composers at the beginning of the century, independent ritornellos in several parts following a continuo aria are still occasionally found; and arias in which the voice is accompanied only by continuo, but with instruments playing between the phrases, are quite common. More individual textures, such as the accompaniment of the voice in unison and octaves or with several instruments weaving contrapuntal parts above the voice as lowest sounding part, also had periods of vogue. A considerable variety of instruments in combination or solo were used.

By the 1720s longer arias were favoured, but not to such an extent as to destroy the intimacy of the relationship between music and text. This might be called the 'classic' moment in the development of the da capo aria, especially as it was accompanied by the rise to prominence of a generation of composers – including Vinci, Hasse and Pergolesi – who were to be regarded as the originators of the modern style of 18th-century music, as well as by the appearance of a poet, Metastasio, who provided a body of aria poetry that was to be the main source for composers and the model for other poets until near the end of the century.

Metastasio codified a number of emerging conventions for the da capo aria, including its role as some kind of emotional climax to a scene (usually followed by the exit of the character delivering the aria) and the principle of presenting contrasted affective types in successive arias. Aria texts are normally in two poetic stanzas generally of equal length (quatrains are less common than often assumed) and similar rhyme scheme; each stanza normally ends with a cadential *verso tronco* (with the accent on the final syllable). The standard musical setting, although traditionally expressed *ABA* (where *A* and *B* have the first and second stanzas respectively), can more usefully be seen as a five-part form *AA′BAA′*, with each part delineated by ritornellos, hence *RARA′R–B–RARA′R* (see Table 1, section 1.a). In its mature form, the aria begins with an instrumental introduction varying in length but usually self-contained with a full close in the tonic, then a statement of the first stanza of the poem moving from tonic to dominant (or, in a minor key, to the relative major); the voice usually enters with the material heard at the beginning of the ritornello. A further ritornello in the secondary key, usually shorter, leads to the second setting (*A′*) of the first stanza. As in instrumental binary forms, this might begin with the opening vocal phrase transposed to the new key, or a transformation of it. *A′* moves sooner or later back to the tonic; in longer arias, *A′* will be developmental, and material previously heard in the new key in *A* will tend to reappear in the tonic in *A′*. A third ritornello in the tonic brings the section to a close (it will also close the aria after the da capo). The second stanza (set in the *B* section) is usually stated only once, with or without internal repetitions, and it is often in a contrasting key and/or style. The music usually develops material from the *A* section but the accompaniment is often reduced, while particular dramatic effects could be achieved by having the *B* section in a different metre and tempo. This section commonly moves through several related keys, often ending in the minor or on a Phrygian cadence preparing for a return to the tonic key and the introductory ritornello. The first section is then repeated. *Fioriture* often appeared in both statements of the final line of the first stanza; cadenzas could be inserted at the ends of both sections, and the da capo provided an opportunity for the singer to add ornamentation.

TABLE 1: Aria Forms in the 18th Century

1.a Five-part da capo

sections			*A*		A^1		‖ *B*	*da capo (A, A^1)*
		tutti	solo	tutti	solo	tutti	solo	
thematic			a		b(a^1)		x	
poetic lines			1–2, 3–4		1–2, 3–4		5–8	
tonal plan	I		I–V		I^1		related keys	
	i		i–III		–i^1		related keys	

1.b Da capo al segno

sections			*A*		A^1		‖ *B*		*da capo al segno (A, A^1)*
		tutti	𝄋 solo	tutti	solo	tutti	solo	tutti	𝄋
thematic			a		b(a^1)		x		
poetic lines			1–2, 3–4		1–2, 3–4		5–8		
tonal plan	I		I–V		I^1		related keys		
	i		i–III		–i^1		related keys		

1.c Dal segno

sections			*A*		A^1		‖ *B*		*either* {*dal segno, (A^1)*	(A^{11}) *dal segno*[2]
		tutti	solo	tutti	𝄋 solo 𝄋	tutti	solo	tutti	𝄋	(solo)
thematic			a		b(a^1)		x		*or*	(a, b, c)
poetic lines			1–2, 3–4		1–2, 3–4		5–8			(1–2)
tonal plan	I		I–V		I^1		related keys			(–I^1)
	i		i–III		–i^1		related keys			(–i^1)

2.a Through-composed, compound ternary, compound return

sections			*A*		A^1		*B*		A^{11}		A^{11}	
			exposition				development		recapitulation			
		tutti	solo	tutti	solo	tutti	solo	tutti	solo	tutti	solo	tutti
thematic			a		b(a^1)		x		a(c)		b (c,d)	
poetic lines			1–4		1–4		5–8		1–4		1–4	
tonal plan	I		I–V		V		related or V		–I^1		I	
	i		i–III		III		related or III		–i^1		i	

2.b Through-composed, compound ternary, compressed return

sections			*A*		A^1		*B*			A^{11}
		tutti	solo	tutti	solo	tutti	solo	tutti	solo	tutti
thematic			a		b(a^1)		x		a(c)	
poetic lines			1–4		1–4		5–8		1–4	
tonal plan	I		I–V		V		related or V		–I^1	
	i		i–III		III		related or III		–i^1	

2.c Simple ternary

sections			*A*		*B*		A^1	
		tutti	solo	tutti	solo	tutti	solo	tutti
thematic			a		x		a(b)	
poetic lines			1–4		5–8		1–4	
tonal plan	I		I–V		related or V		–I^1	
	i		i–III		related or III		–i^1	

3 Compound binary (with stretta)

sections			*A*		*B*		A^1		B^1		*(C)*[1]	$C^1)$[3]
		tutti	solo	tutti	solo	tutti	solo	tutti	solo	tutto	(solo tutti)	(solo tutti)
thematic			a		b		a(c)		b (c, d)		(c, d, e)	(c, d, e)
poetic lines			1–4		5–8		1–4		5–8		5–8(9–12)	5–8 (9–12)[4]
tonal plan	I		I–V		V		–I^1		I		(I)	
	i		i–III		III		–i^1		i		(i or I)	

1 The return to tonic is variable but usually near the beginning of the section.
2 The placement of the 𝄋 varies; it may be at the beginning of A^1 or within it (the beginning of A^1 is often rewritten following the *B* section, becoming A^{11}).
3 An additional section in a faster tempo may be added, as in the rondo.
4 Texts of variable length, either new or extracts from lines 1 to 8.
NB: tutti sections may not always be present.

Metastasio and many critics, particularly those who held that the opera belonged to the tragic genre, compared the function of the aria with that of the chorus in Greek tragedy. This accounts for the large number of aria texts in his works and those of his imitators that might be said to trope the action sententiously or imagistically (as in the so-called SIMILE ARIA) rather than forming a direct part of it. Such a function for the aria helped justify it for critics of a primarily literary orientation, but it was seen as a grave defect by reformers later in the century, who began to form a concept of the opera in which music was to take a more central role in the drama. Dramatic arias, however, are by no means lacking in Metastasio's work as a whole.

The da capo form was so universal, and its affective types so stereotyped, that arias could be transplanted from opera to opera, whether by the impresario, librettist or composer, or at the behest of singers (hence the 'suitcase aria'). However, a dramatic effect could be won by playing on its very predictability. Handel was a master of this technique. Thus the opening ritornello could be dropped if the dramatic situation suggested that the singer should begin impetuously without one. In some remarkable, and much rarer, cases the dramatic situation might cause the aria to be interrupted before its completion, as in Apollo's 'Mie piante correte' in Handel's early cantata *Apollo e Dafne*, where the second section has hardly begun before it breaks off into recitative, and there is no da capo; or Saul's aria 'A serpent in my bosom warm'd' in *Saul* (1739), where the second section stops abruptly as Saul hurls his javelin. In Micah's aria 'Return, O God of Hosts' in *Samson* (1743) the return to the first section includes the chorus, while the second section of 'Why do the nations' in *Messiah* (1742) is followed not by a return to the first but by a chorus, 'Let us break their bonds asunder'. A recitative could be substituted for the middle section (Elvira's 'Notte cara', in Act 2 of *Floridante*, 1722) or could be interpolated between the second section and the return to the first, as in Cleopatra's 'V'adoro, pupille' in *Giulio Cesare* (1724) or Susanna's 'If guiltless blood' in *Susanna* (1749).

During the 1730s and 40s the music of the *A* section of the da capo aria continued to expand in length. The text, however, did not; and that led to a weakening of the closeness of their previous union. The text had now to be much more repeated, in whole or in part, and this tended to dissolve it into the music. Perhaps partly for this reason, a chronological survey of Metastasio's arias reveals that while in his earlier work he had used a considerable variety of metres and stanza lengths, in his later ones arias in quatrains of *settenario* (seven-syllable) verse increasingly predominate. Even by the 1720s the first two solos each occasionally have a second statement of all or most of the text as a coda-like appendage to the main statement, with music that is an extension or reinforcement of the new key in the first or the return to the original one in the second. This became the standard format for the da capo aria, as a result of which the first stanza could be heard eight times in a complete performance of an aria, the second usually only once; by mid-century composers often set the middle section in a contrasting tempo and metre (for example a moderate 3/8 if the main section was an Allegro in common time, as it usually was) as if to emphasize it and relieve the sameness. The aria and the *opera seria* in general underwent increasing criticism after the middle of the century, both from those who felt that musical expansion was now out of hand in the arias and that the old balance should be restored, and from those, including Gluck and Calzabigi, who wanted an altogether new relationship.

(ii) The dal segno aria. By the middle of the century, however, a tendency to retrenchment had set in with regard to aria form. At first this was entirely mechanical, replacing the da capo with the dal segno, that is, the indication of a return not to the beginning of the piece but to a point marked by a sign within it. The dal segno (or 'da capo al segno') had been used earlier, with the sign placed at the first vocal entry, to eliminate the repeat of the opening ritornello or part of it (see Table 1, section 1.b). But from about 1760 composers used the sign to shorten the repeat of the *A* section substantially (see Table 1, section 1.c). Often it was placed at the beginning of the second solo, as in 'Al destin che la minaccia' (*Mitridate*, Mozart, 1770). Where the second solo began in the dominant, however, composers sometimes preferred to write out the beginning of the first solo after the middle section (with or without an intervening orchestral passage), indicating by the sign a return to that point in the second solo where the music had originally returned to the tonic in preparation for closure, as in 'Dopo un tuo sguardo' (*Adriano in Siria*, J.C. Bach, 1765). If the second solo had begun with new material, a similar procedure might be used to create a rounded form by providing a recapitulation of the first solo adjusted to remain in the tonic, as in 'Disperato mar turbato' from *Adriano* (*AA'BA*); but just as often only the second solo was retained (*AA'BA'*), as in 'Cara la dolce fiamma' (*Adriano*). Occasionally the setting of the opening words after the middle section would be different from either the first or the second solo though closely related rhythmically and melodically (*AA'BA"*); an example is 'Son quel fiume' from Jommelli's *Fetonte* (1768). There were also dal segno arias in which the first couplet of text never returned. When the final section was severely shortened, the formal proportions of the aria were so radically changed that the middle section had the effect of an episode within the second part of a binary structure.

(iii) Later aria types in 'opera seria' and 'opera buffa'. Early in the 1770s the dal segno aria gave way to a through-composed, compound ternary aria: *AA'BA"A'''* (see Table 1, section 2.a), as in 'Se dal suo braccio oppresso' (*Armida*, Haydn, 1784) and 'Se il tuo duol' (*Idomeneo*, Mozart, 1781); and *AA'BA"* (see Table 1, section 2.b), as in 'L'odio nel cor frenate' (*Mitridate*, Mozart). The form with the compound return has been viewed as coming close in tonal and thematic plan to both the contemporary instrumental sonata-form pattern and the classical concerto form in which the double exposition and ritornellos parallel those in the aria; the associating of aria types with instrumental models is somewhat problematic, however. Here the first solo moves to the dominant or relative major, the second presents new material in the newly established key, in which it closes, and the middle section provides thematic, textural and tonal or modal contrast before a return to the tonic for a recapitulation of the first or second solos, or both, adjusted to close in the tonic. An example is 'Se colà ne' fati' from *Idomeneo*. Unlike the instrumental sonata, the middle section of an aria is seldom developmental in the instrumental sense, usually consisting of melodically stable phrases; arias only rarely have large, tonally and motivically unstable transitional or development sections. By the 1780s arias frequently remained in the dominant throughout the middle section. After the initial statement of the opening lines of the first stanza, fragmentation of the text and the lack of articulating ritornellos sometimes make it difficult to talk of the number of complete statements of the first stanza. Depending on the style, there may be as many as three or four or as few as one preceding the middle section and the same or fewer following it. Unlike its instrumental counterpart, in an aria the recapitulation may not begin in the tonic, and the thematic material for one or both solos may be disguised, varied or totally new as in 'Se il tuo duol' with a new

second solo and 'Nò, la morte' with a new first solo (*Idomeneo*; see Table 1, section 2.a). The return usually presents a clear recapitulation of earlier material within a few phrases but it may be so heavily reworked as to qualify as another version of the material, as in 'L'odio nel cor frenate' (*Mitridate*, Mozart).

Operas now tended to contain only a few long arias, usually concentrated in the first acts. The rest were relatively short; the shortest dispensed with the second stanza of poetry and simply set the first stanza twice – the first moving to the dominant and the second returning to the tonic. The composer also might shorten the aria by reducing the number of statements of the first stanza (*ABA′*) as in 'Se tu seguir mi vuoi' (*Armida*, Haydn; see Table 1, section 2.c). For longer arias the composer had a number of options besides the compound ternary. The single-tempo rondo (*ABAB′(C)A*), introduced into Italian opera in the 1760s, appeared occasionally, as in 'Torna pure al cara bene' (*Armida*), and in the 1780s the da capo form returned to *opera seria* in the shape of the newly fashionable minuet ('minue' or 'minuetto'). Arias might also take compound binary form in which the composer simply sets two stanzas of text twice through in more equal proportions (*ABA′B′*; see Table 1, section 3) with a tonal plan similar to the first and second solos in a da capo aria (moving to the dominant for *B* and back during *A′*), as in 'Padre, germani, addio' (*Idomeneo*). The Neapolitan poet Saverio Mattei – who called this form 'shortened rondo' (*Elogio del Jommelli*, 1785), though this does not accord with modern terminological usage – advocated such a form because it maintained the original order of the poetry; he took credit for having persuaded Piccinni to use it in his *opere serie* by the early 1770s. The form may also be viewed as a borrowing from comic opera, where it had been in use since the 1750s. Arias in this form may carry little or no contrast between the settings of the first and second stanzas, or the stanzas may be set apart with changes of tempo, metre or style to produce strong contrasts, perhaps with a coda or a faster closing section in the tonic (stretta). The addition of the stretta produces the form *ABA′B′:CC′*, as in 'Non mi dir' (*Don Giovanni*, Mozart, 1787).

This form is similar to that of the two-tempo rondò (slow–fast) which was developing as a showpiece aria for the leading singers in *opera seria* during the 1770s and 80s. Its simplest and earliest serious form appears to be a two-tempo Mattei-type 'shortened rondo' (slow–fast–slow–fast) that avoids the return to the *primo tempo* for the reprise of the first solo (*A:BA′B′*); an example is 'Non ho colpa' in *Idomeneo*. Rondòs based on only two strophes of poetry persist into the 1790s, but those using three strophes are more numerous and offer an almost endless variety of textual repetition patterns. A reprise of the whole first stanza, or at least the first couplet, normally precedes the change of tempo: hence *ABC:C*. In the fast section, a resetting of the second stanza can appear between the initial setting of the third stanza and its reprise (*ABA′:CB′C′*), as in 'Dei pietosi' (*Armida*). As the fast section became longer and more complex, composers alternated texts from all three stanzas.

In the late 1780s and the 1790s composers of *opera seria* and related genres continued to prefer compound ternary forms (for example 'Torna di Tito a lato', *La clemenza di Tito*, Mozart, 1791) and the two-tempo rondò ('Non più di fiori', *La clemenza di Tito*). In the middle section the dominant began to be replaced by third-related keys of the flat major mediant and submediant, as in 'Tempra il duol' in Andreozzi's *Amleto* (1792) as well as by keys of the subdominant and supertonic minor and major, as in 'S'altro che lagrime' (*La clemenza di Tito*), thus placing this section in much starker contrast with the rest of the aria than had been the practice earlier. A few of the arias for the principals acquire yet a fourth stanza, presenting an even greater contrast in length with the rest of the arias in the opera. These were usually set in three or four tempos, either gradually growing quicker in tempo or in an alternating fast–slow–fast pattern (see 'A vendicar un padre', *Amleto*). Arias again acquire sections in recitative style, as in 'Non temer' (K490, a 1786 addition by Mozart to *Idomeneo*); and the combination of a slow cantabile, a 'tempo di mezzo' in recitative style and a fast final section akin to the cabaletta in 19th-century opera makes an appearance ('Caro è vero', *Armida*, Haydn). However, there are also steadily fewer independent solo arias in each opera until they almost disappear. Many incorporate *pertichini* (the name for other characters or chorus when they intrude into a solo number; see 'Ah chi mi dice mai' from *Don Giovanni*), and from about that period in centres where a chorus was available the use of the chorus in solo numbers increased (as in 'Deh ti placa', *Amleto*). Many solo pieces function as cavatinas in scene complexes that move freely from declamatory to lyrical sections without clear articulations; an example is 'Ah non ferir' from *Armida*.

Arias in comic operas were generally freer and more varied in form than in *opera seria*. Few comic operas are extant from the first half of the 18th century, but the da capo aria appears to have been widely used in them as well; see, for example, 'A Serpina penserete' (*La serva padrona*, Pergolesi, 1733). The *parti serie* sang in much the same style as well as in the forms of *opera seria* (for example 'Furie di donna irata', *La buona figliuola*, Piccinni, 1760), and arias developed to include compound binary forms (Table 1, section 3) with or without strong musical contrasts (compare 'Colla bocca, e non core' and 'Senti l'eco, ove t'aggiri' in Mozart's *La finta semplice*, 1769) and sometimes with a coda or stretta (for the latter, see 'Non sparate ... mi disdico' in Haydn's *La vera costanza*, 1779). It is in the arias of the more comic characters that texts tend to become longer, and the development of a rapid patter style for such characters, as in 'Già sento i cani' from *La serva padrona*, may have contributed to this. In the second half of the century the form in which the whole text is stated completely and then run through a second time, as in 'Che superbia maledetta' (*La buona figliuola*), became very common, as did multi-tempo arias, particularly those with a slow beginning and a conclusion in a faster 6/8 movement (for example 'È pur bella la cecchina' in *La buona figliuola*, or Despina's 'In uomini, in soldati' in Mozart's *Così fan tutte*, 1790). Extended text forms often consist, for example, of two or three regular stanzas, a longer middle section perhaps in a contrasted line length, and a final envoi (e.g. Bartolo's 'La vendetta' in Act 1 of Mozart's *Le nozze di Figaro*, 1786).

The range of aria types for both the *parti buffe* and the *parti serie* in comic opera expanded along the lines observed in *opera seria*, although simpler strophic forms and short cavatina-type pieces (whether or not so styled) could be used for special effects, for character delineation

or to maintain the dramatic flow. In terms of larger-scale arias, da capo types declined in favour of more through-composed forms with varying degrees of text repetition and musical recapitulation. Texts could range from one or two stanzas to longer sequences with or without clear stanzaic structures, and they could be handled musically in many different ways. Paisiello returned from Russia in 1783 with a setting of Goldoni's *Il mondo della luna* in which nearly all the aria texts are new; many have three statements of the complete text, the central one functioning as a development. Two-tempo rondòs become showpiece standards (for example 'Per pietà' in *Così fan tutte*), while in Cimarosa's *Il matrimonio segreto* (1792) many arias have either a short stretta or a sizable concluding fast section: the section preceding the tempo change may assume the characteristics of the old middle section by moving into a contrasting tonality or carrying developmental characteristics.

With the loosening of the boundaries between *opera seria* and *opera buffa*, and the generic cross-overs from one to the other, as well as the expansion of aria forms in the late 18th century, it is very hard to establish clear procedures and standard formal paradigms. Similarly, there is a great deal more research to be done on opera of this period and its relationship to instrumental music. The aria forms listed in Table 1 are certainly distinctive but cannot yet be regarded as all-embracing or definitive (for a different attempt for Mozart, see Webster, 1991).

5. 19TH CENTURY. The history of the operatic aria in the 19th century lies in various shifts from formal modes of virtuoso display and emotional articulation to more fluid, ostensibly naturalistic approaches to the creation of drama through music. The international nature of the opera industry – for all the strong presence of national traditions – and the fact that theoretical considerations of the aria (whether or not the Italian aria) tend to be found in French and German sources (Koch, Castil-Blaze, Reicha, La Fage, Marx; see Ruf, 1993, and 'Arie' in *MGG2*) encourage a broader focus for the following discussion of the genre in this period.

(i) Italy. In an age of vocal virtuosity the solo set piece continued to occupy pride of place in opera. The aria in two contrasting tempos, the first slow and expressive, the second fast and brilliant, prepared by a half close in the dominant key, survived as late as Rossini's *Semiramide* (1823; 'Ah, qual giorno'). By this time, the general practice was to separate the movements into two self-contained units, the 'cantabile' and 'cabaletta', the latter repeated at first in part (as in 'Io sono docile', *Il barbiere di Siviglia*, 1816), later complete, with an intervening orchestral ritornello which is resumed in the coda. The singer was expected to embellish the repetition with improvised decorations. Three-movement arias are occasionally to be found, such as 'Ah sì, per voi già sento' (*Otello*, Rossini, 1816). As the formal units of Italian opera expanded so it became usual to widen the gap between cantabile and cabaletta so as to allow the action to evolve in the meantime. Each aria would be preceded by a recitative, part declamatory, part arioso, described as 'scena'. The cantabile would end with a cadenza tailored to the means of the original singer. A 'tempo di mezzo' would follow, consisting of short phrases in strict time punctuated by instrumental figuration and leading to the cabaletta, the opening strain of which would be anticipated by the orchestra. Rossini frequently bridged the gap between scena and cantabile by starting the latter with a succession of declamatory flourishes that give way to a more periodic motion (for example 'Pensa alla patria', *L'italiana in Algeri*, 1813). His successors, especially Bellini, favoured a lyrical character from the start (again with orchestral anticipation). Choral intervention is common, particularly in the cabaletta. A classic instance of the grand aria is 'Casta diva' (*Norma*, Bellini, 1831), where the 'tempo di mezzo' includes a snatch of music from the stage band. The cantabile itself provides an instance of extended, non-repeating melody of which Bellini was a master (see also 'Ah! non credea mirarti', *La sonnambula*, 1831). A more common design may be summarized as *AA′BA″* followed by a coda, as in 'Ah! per sempre' (*I puritani*, Bellini, 1835), 'Io sentii tremar la mano' (*Parisina*, Donizetti, 1833) or 'Come rugiada al cespite' (*Ernani*, Verdi, 1844). Several arias feature an obbligato wind instrument – horn in 'Languir per una bella' (*L'italiana in Algeri*, Rossini, 1813), clarinet in 'Fatal Goffredo' (*Torquato Tasso*, Donizetti, 1833), trumpet in 'Cercherò lontana terra' (*Don Pasquale*, Donizetti, 1843). A variant is the *aria con pertichini* to which the occasional intervention by a minor character, as in 'Ah rimiro il bel sembiante' (*Maria Stuarda*, Donizetti, 1835) or even a principal, as in 'Cedi, cedi, o più sciagure' (*Lucia di Lammermoor*, Donizetti, 1835) gives the sense, if not the form, of a duet. When an aria marks the singer's first appearance it is termed a 'cavatina'; if it concludes the opera it is called a 'rondò finale', for example 'Era desso il mio figlio' (*Lucrezia Borgia*, Donizetti, 1833) or 'Sciagurata, in questi lidi' (*Oberto*, Verdi, 1839).

After 1850 aria patterns became more various. 'Ah fors'è lui' (*La traviata*, Verdi, 1853) has a cantabile in two strophes, each of which finishes with a major-key refrain in the manner of a French couplet. The same melody recurs in the ritornello and coda of the cabaletta as a *pertichino* allocated to a different voice. The cantabile of 'Come in quest'ora bruna' (*Simon Boccanegra*, Verdi, 1857) follows a ternary design with a modulating episode and a reprise of the opening section with its accompaniment elaborated. With the gradual disappearance of the cabaletta, single-movement arias start to prevail. An early instance is 'Cortigiani, vil razza dannata!' (*Rigoletto*, Verdi, 1851), articulated in three sections, each expressing a different sentiment. In 'Eri tu che macchiavi quell'anima' (*Un ballo in maschera*, Verdi, 1859) and 'Madre, pietosa vergine' (*La forza del destino*, Verdi, 1862), the minor–major design associated mostly with the *romanza* but also certain cantabile arias – such as 'Regnava nel silenzio' (*Lucia di Lammermoor*) or 'Ah sì, ben mio' (*Il trovatore*, Verdi, 1853) – is expanded into a unit of larger proportions. 'Ma dall'arido stelo divulsa' (*Un ballo in maschera*) offers an elementary species of bar-form with refrain, which Verdi defined more sharply in 'Piangea cantando nell'erma landa' (*Otello*, 1887). Until 1860 the rule was for all movements in the minor key to end with at least a cadence in the major; even in 'Addio, del passato' (*La traviata*) it is left to the oboe to bring back the key of A minor after the singer's last note. But in 'Morrò, ma prima in grazia' (*Un ballo in maschera*) the music, for the first time, remains in the minor key throughout.

Tradition allowed greater freedom of form to narrative arias, for example 'Nella fatal di Rimini' (*Lucrezia Borgia*), 'Un ignoto, tre lune or saranno' (*I masnadieri*, Verdi, 1847) and 'Condotta ell'era in ceppi' (*Il trovatore*).

With the invasion of Italian theatres by foreign works, especially French, during the 1860s, the same freedom came to be extended to those that depict a complex emotional state. In 'Ritorna vincitor!' (*Aida*, Verdi, 1871) and 'Dio! mi potevi scagliar' (*Otello*) the form is dictated purely by the ebb and flow of the singer's feelings. A varied strophic form is also common, as in 'Cielo e mar' (*La Gioconda*, Ponchielli, 1876), where the second strophe, initially abbreviated, is expanded into near-symmetry with the first by means of a codetta. Instances of couplet form abound: extended in Meyerbeer's manner in 'Son lo spirito che nega' (*Mefistofele*, Boito, 1868), subtly varied in 'Sul fil d'un soffio etesio' (*Falstaff*, Verdi, 1893). But in the age of Italian grand opera (1870–90) it is the French ternary form with modulating episode that prevails, as in 'Suicidio!' (*La Gioconda*), 'Mio bianco amor' (*Dejanice*, Catalani, 1883) and 'Ebben, ne andrò lontano' (*La Wally*, Catalani, 1892). With Puccini and his generation conventional formalism disappears from the aria, whose construction varies according to the sense of the text, as for example in 'Voi lo sapete, o mamma' (*Cavalleria rusticana*, Mascagni, 1890), 'La mamma morta' (*Andrea Chenier*, Giordano, 1896), 'È la solita storia del pastore' (*L'arlesiana*, Cilea, 1897) and 'Sola, perduta, abbandonata' (*Manon Lescaut*, Puccini, 1893). Only Leoncavallo, who wrote his own librettos, would often allow his verse forms to impose a similar regularity on his settings, as in 'Vesti la giubba' (*Pagliacci*, 1892) and 'Testa adorata' (*La bohème*, 1897). Puccini, who tended to organize his acts motivically, showed considerable skill in incorporating cardinal motifs into his arias, as in 'Che gelida manina' (*La bohème*, 1896) and 'Vissi d'arte' (*Tosca*, 1900). During the 19th century and the early 20th, with few exceptions – and those mainly by Puccini, such as 'Un bel dì vedremo' (*Madama Butterfly*, 1904), 'Ch'ella mi creda libero e lontano' (*La fanciulla del West*, 1910), 'O mio babbino caro' (*Gianni Schicchi*, 1918) and 'Nessun dorma' (*Turandot*, 1926) – arias become increasingly difficult to divorce from their context, and thus effectively cease to exist.

(ii) Other countries. In France the two most characteristic aria designs are the ternary with modulating central episode and the couplet. The first, inherited from Gluck and his contemporaries, remained the model for large-scale pieces for most of the century. Among earlier examples are 'Toi que j'implore avec effroi' (*La vestale*, Spontini, 1807), 'Ah quel plaisir d'être soldat' (*La dame blanche*, Boieldieu, 1825) and 'Quand je quittai la Normandie' (*Robert le diable*, Meyerbeer, 1831). Later, the central section might be set in a different tempo, as in 'Avant de quitter ces lieux' (*Faust*, Gounod, 1859, rev. 1862), or even a different time signature, as in 'Je dis que rien ne m'épouvante' (*Carmen*, Bizet, 1875). The same pattern, modified and loosened up, can be found as late as 'Reste au foyer, petit grillon' (*Cendrillon*, Massenet, 1899). The couplet, which originates in *opéra comique*, found its way into grand opera after 1830. It consists of two strophes, each ending with the same strain set to the same words, sometimes echoed by the chorus. It may form the basis of a narrative ballade, as in 'Jadis régnait en Normandie' (*Robert le diable*), a character piece, as in 'Piff, paff, piff, paff' (*Les Huguenots*, Meyerbeer, 1836), or even a love song, as in 'Plus blanche que la blanche ermine' (*Les Huguenots*). A classic instance of couplets with chorus is 'Votre toast' (*Carmen*). Offenbach's operettas depend on this form almost exclusively for their solo numbers; not surprisingly its last appearance in serious opera is with the same composer's 'Les oiseaux dans la charmille' (*Les contes d'Hoffmann*, 1881). Meyerbeer, in his later operas, enlarged both couplet and ternary designs with a multiplicity of ideas.

During the Rossinian ascendancy of the 1820s the cantabile–cabaletta pattern is sometimes found, as in 'A celui que j'aimais' (*La muette de Portici*, Auber, 1828). 'O beau pays de la Touraine' (*Les Huguenots*) has a slow movement followed by a fast one, both in ternary design. However, the two contrasted movements of 'Je vais le voir' (*Béatrice et Bénédict*, Berlioz, 1862) have no connection with an Italian form which had become obsolete even in its country of origin. As in Italy, the aria structured according to the text was soon making headway: an example is 'La fleur que tu m'avais jetée' (*Carmen*).

In Germany during the first two decades of the century opera was dominated by a mixture of Italian and French forms. In Beethoven's *Fidelio* (1805), 'O wär' ich schon mit dir vereint' is in couplet form, while 'Komm, Hoffnung' follows the current Italian bipartite pattern, as does 'In des Lebens Frühlingstagen', though the concluding movement in the revision, where the melody is shared between voice and oboe, blazes a new trail of formal freedom. Weber and his successors conceived the aria more dramatically from the start. The three small movements (ending in a new key) of 'Durch die Wälder' (*Der Freischütz*, Weber, 1821) are determined purely by the conflict of the singer's feelings; while 'Leise, leise' (*Der Freischütz*), though set out in two substantial contrasting movements, entirely avoids the formalism of the cantabile–cabaletta design. The tradition of ending an aria with a section in faster time persists as late as 'Die Frist ist um' (*Der fliegende Holländer*, Wagner, 1843). Both couplet and ternary forms are found in the early Wagnerian canon, together with the strophic aria, such as 'O du mein holder Abendstern' (*Tannhäuser*, 1845). In the music dramas of Wagner's maturity the aria has scant place (neither the Prize Song from *Die Meistersinger*, 1868, nor even 'Winterstürme' from *Die Walküre*, composed in 1855, can qualify as such), even if formal entities of lyrical and/or dramatic effusion may be identified. His contemporaries, operating within the more restricted area of Singspiel, mostly followed the path of Weber, while drawing sometimes on the aria forms of *opéra comique*. Only Nicolai, who had served his operatic apprenticeship in Italy, availed himself here and there of Italian techniques in *Die lustigen Weiber von Windsor* (1849). During the last quarter of the 19th century the term 'Arie' virtually disappears from German opera.

In English opera, which up to the mid-19th century mostly followed the pattern of *opéra comique* with spoken dialogue, the aria is usually cast in the form of the Victorian strophic ballad with *couplet* refrain, for example 'I dreamt that I dwelt in marble halls' (*The Bohemian Girl*, Balfe, 1843). In later, through-composed scores the detachable solo piece is still sometimes found, such as the recitative and aria 'Woo thou thy snowflake' (*Ivanhoe*, Sullivan, 1891). A late instance is Hugh's 'Song of the Road' (*Hugh the Drover*, Vaughan Williams, 1924). In the Slavonic countries, in spite of obvious folk elements, the aria was accepted as a natural form of expression, for example Lyudmila's aria (which even includes a cadenza)

in Act 4 of Glinka's *Ruslan and Lyudmila* (1842), Tatyana's Letter Song in Act 1 and Lensky's aria in Act 2 of Tchaikovsky's *Yevgeny Onegin* (1879) and Premsyl's 'Již plane slunce' ('The sun now burns') in Smetana's *Libuše* (composed 1872), even if Smetana's operas owe more to Wagner than to Italian models. The operas of The Five, however, tend to follow the continuous arioso-like pattern of heightened declamation found in Dargomïzhsky's *The Stone Guest* (written in the 1860s) except in the lyrical music apt to love scenes. This declamatory style is particularly well suited to the great contemplative monologues such as that of Musorgsky's Boris Godunov (composed in the late 1860s), which, like several arias by Borodin and Rimsky-Korsakov, keeps to a free, ternary design.

6. 20TH CENTURY. If Debussy's *Pelléas et Mélisande* (1902) brought the Wagnerian operatic model (and *Parsifal* in particular) to the brink of modernism, abandoning almost all distinctions between an organization based upon vocal set pieces and through-composed music drama, subsequent 20th-century composers did not forsake 'number opera' altogether. Diegetic arias (such as the tenor's song in Richard Strauss's *Der Rosenkavalier*, 1911) are presumably exceptional (if with a long history). But a heterogeneous collection of composers from Schoenberg (in *Von heute auf morgen*, 1930) and Stravinsky (*The Rake's Progress*, 1951) to Hindemith (*Cardillac*, 1926) and Henze (from *Boulevard Solitude*, 1952, to *Elegy for Young Lovers*, 1961) evoked the aria and other closed vocal forms in a selfconsciously historical, neoclassical sense. Berg, in *Lulu* (1935), on the other hand, utilized the aria so as to develop its function musically and dramatically in a way that was not compromised by a Wagnerian *durchkomponiert* symphonism: both the large-scale aria for Dr Schön in the second act and the 'Lied der Lulu' that interrupts it are embedded in a hierarchy of musical forms that are ramified through the operatic structure. Such examples bear directly upon Britten's operas, whose set pieces in works such as *Peter Grimes* (1945), *Billy Budd* (1951) and *Death in Venice* (1973) merge such ideas with Puccinian melodic rapture, and even Zimmermann's *Die Soldaten* (1965) contains passages that may be related back to the Bergian archetype.

Even in those examples, however, the dramatic function of the aria was blurred, and its purpose combined with those of monologue and narration: in the operas of Janáček, too, the distinctions between such constructions seem more concerned with terminology than musical effectiveness. In opera since 1945 especially the term 'aria' has come to signify any large-scale solo vocal item that could be distinguished musically and dramatically from the surrounding structure: in Birtwistle's *The Mask of Orpheus* (1986), for instance, the narration for Orpheus that provides the substance of the second act may not be an aria in any strict historical sense, but the term seems to describe its character and its dramatic effect more truthfully than any other.

Aria napolitana. *See* VILLANELLA.

Aribo [Aribo Scholasticus] (*fl* ?Freising, *c*1068–78). Music theorist. He was the author of a treatise *De musica*. There are only two pieces of substantial evidence relating to his life, both deriving from his treatise: the first is the dedication to Ellenhard, Bishop of Freising (*d* 1078); the second is a reference to Wilhelm as Abbot of Hirsau (1068–91). These place the date of the writing of the treatise between 1068 and 1078.

1. *Early diagram showing the gamut and its relationship with the modal tetrachords*

2. *Aribo's 'caprea'*

Aribo's association with Freising is supported by his knowledge of Wilhelm, who was previously a monk of St Emmeram at nearby Regensburg. A 12th-century anonymous author from Melk referred to Aribo as 'Cirinus' (*PL*, ccxiii, 981–2), an epithet given also to the 8th-century Bishop Aribo of Freising. Meichelbeck in 1724 referred to Aribo as 'Freisingensis' without documentation. Citing Aribo extensively, the 14th-century theorist Engelbert of Admont called him 'scholasticus Aurelianensis' (*GerbertS*, ii, 289): this constitutes a unique reference to Orléans. Smits van Waesberghe (1936–9, pp.23–111) presented extensive evidence in favour of Aribo's connection with Liège, with a sojourn at some time in Rome (in his edition of *De musica* this argument was considerably shortened); his evidence, however, consists largely of records of the name 'Aribo' that cannot safely be identified with the theorist.

Of the manuscripts listed in Smits van Waesberghe's edition, one, used by Gerbert (*GerbertS*, ii, 197–230) and now in Rochester, New York, is particularly corrupt.

Part of the treatise is devoted to two distinct commentaries on the difficult 15th chapter of Guido's *Micrologus*, which deals with plainchant rhythm, notation and textual metre. Aribo's main concern was, however, the establishment of a diagram showing the modal tetrachords superimposed on the gamut. This diagram, called the *caprea* ('goat') because of the speed by which music may be measured by it on the monochord (see Smits van Waesberghe, 1951, p.5), represents Aribo's improvement on earlier diagrams (called 'quadripartita figura modernorum') which he deemed unclear and incorrect (ibid., 2–3). In the latter diagram (shown in fig.1) four gamuts are staggered so that the tetrachords of plagal modes and of the finals are vertically aligned. Aribo objected to this scheme partly because the modal tetrachords appear in it to be disjunct. His *caprea* (fig.2) avoids this fault. Aribo explained the derivation from the monochord of the intervals of the gamut and the manner in which the measurement of organ pipes is affected by their diameter.

The succeeding section, concerning *musica naturalis* and *artificialis*, is an aggregate of passages from Cassiodorus, Boethius, Isidore and others; the treatise quotes Augustinian ideas to an unusual extent. Metrical patterns, for example, are likened to intervals (the pattern long–long–short is equivalent to the pattern tone–tone–semitone). Using a highly elaborate literary style, with

numerous scriptural quotations, Aribo frequently made symbolical analogies. Plagal and authentic are likened to poor and rich, female and male; the tetrachords signify Christ's humility, Passion, Resurrection and Ascension. There are numerous plainchant examples, quoted either in staffless neumes or by their text alone.

Arietta (It., diminutive of 'aria'). A song in an opera or similar work, shorter and less elaborate than a fully developed aria. The distinction did not become valid until the aria outgrew its simple origins: in Landi's *San Alessio* (1632), where the term 'arietta' is used apparently for the first time, it does not seem to have any special significance. Later examples are Mozart's 'Voi che sapete' (*Le nozze di Figaro*, 1786), Rossini's 'Quando mi sei vicina' (*Il barbiere di Siviglia*, 1816) and Verdi's 'A buon mercato' (*La forza del destino*, 1862). The term is often found in vocal chamber music, and was also adopted for instrumental pieces of a similar character, such as the theme on which variations are based in the second movement of Beethoven's Piano Sonata in C minor op.111.

TIM CARTER

Ariette (Fr.). An 18th-century French operatic term denoting different types of vocal solo or vocal ensemble. Its meaning evolved, however, and also changed with the context in which the music occurred. For Brossard (1703), for instance, it meant 'petit air, ou chansonette' with a simple binary (*AABB*) or a da capo structure. Although *ariette* is a translation of the Italian 'arietta' ('little aria'), an operatic *ariette* was ordinarily a substantial piece of composition accompanied by an orchestra.

The term came to apply early in the 18th century to music emulating the Italian da capo aria. Campra included five examples in his Italian-influenced *opéra-ballet Les fêtes vénitiennes* (1710). The *ariette* migrated quickly to the *tragédie en musique* with Campra's *Télèphe* (1713) and was later exploited by Rameau, starting with 'Rossignol amoureux' in *Hippolyte et Aricie* (1733). Unlike the French operatic *air*, which was not too long to be integrated within the flow of action and recitative, and did not allow music to overwhelm text, the *ariette* represented a licence to let music expand at the expense of text. As well as da capo form *ariettes* often employed a lively, regular metre, made use of sequential passages and often exploited vocal virtuosity and decoration; melismas on permitted words such as 'régnez' and 'briller' typically expressed joy or triumph. Naturally assigned to moments of relaxation, whether in a prologue, a divertissement or a main act (e.g. Mondonville's *Titon et l'Aurore*, Act 1 scene iii), they represented an equivalent to the movement and colour of dances. They could be given to main characters or to subsidiary ones. Composers of *ariettes* in this style include Dauvergne and J.-J. Rousseau. Rousseau's decorative *ariette* for Colette near the close of his *intermède Le devin du village* (1753) is a lengthy da capo using sonata form in its main section. Gluck included an *ariette* in *Orphée et Euridice* (1774).

From mid-century the term was extended (following the performances of the Italian troupe of Eustachio Bambini in Paris in 1752–4) to include newly composed numbers for one or more voices in *opéra comique*. For example, Dauvergne's *intermède Les troqueurs* (1753) ends with an *ariette en quatuor* (an action quartet), and F.-A.D. Philidor's *Blaise le savetier* (1759) opens with an *ariette en duo*, with the cobbler and his wife both acting and singing. This functional rather than decorative status is approved in Contant d'Orville's comment (1768) about the French version of Pergolesi's *La serva padrona* in 1755: 'the plain or duet type of *ariette* [*l'Ariette simple ou en Duo*], mixed with spoken dialogue, seemed to earn it the title of "operatic comedy" [*Comédie-Opéra*] rather than *opéra comique*'. When separate terms were adopted for vocal ensembles, *ariette* reverted to a general term for a vocal solo, in no fixed style (though never strophic), but in contradistinction to *romance*, *chanson*, *couplet* and vaudeville. The original signification, however, subsisted in the frequently found genre label *comédie mêlée d'ariettes*.

Writers after 1752 reflect these usages in part, conscious that the older, decorative meaning was diametrically opposed to the dramatically functional role of *ariettes* in many *opéras comiques*. A variety of opinions is seen in the writings of, for instance, F.-J. Chastellux (1765) and other supporters of Italian music who were opposed to functional *ariettes*, J.-J. Rousseau (1768), P.J.B. Nougaret (*De l'art du théâtre en général*, Paris, 1768) and N.E. Framery (*Journal de musique*, Aug 1770), who considered the term to be equivalent to the Italian 'aria'. The clearest historical account, published at a time when the term was falling out of use, is that of J.F. Marmontel (*Oeuvres complètes*, v, 1787), who confirmed the *opéra comique ariette* as typically containing 'du caractère et de l'expression' and as equivalent to an 'air expressif et passionné'.

The poet Verlaine revived the term in his collection *Ariettes oubliées*; some of these poems were set, with others, by Debussy in *Ariettes, paysages belges et aquarelles* (1888), republished in 1903 under Verlaine's original title.

Arimino, Abbas de. *See* VINCENZO DA RIMINI.

Arimondi, Vittorio (*b* Saluzzo, 3 June 1861; *d* Chicago, 15 April 1928). Italian bass. Gifted with a commanding stage presence and a sonorous voice, he studied singing while training for business. After his début at Varese in Gomes's *Il Guarany* in 1883 he sang in the provinces, going to La Scala in 1893, first as Sparafucile in *Rigoletto* and then as Pistol in the première of *Falstaff*. His international career dates from 1894, when he sang Don Basilio to Patti's Rosina at Covent Garden, with a New York début at the Metropolitan in 1896. From 1905 he spent most of his time in the USA, having sung in Russia, Poland and Austria. He joined Hammerstein's Manhattan Opera Company, singing Arkel in the American première of *Pelléas et Mélisande*, and at the Metropolitan appeared as Nero, originally a tenor role, in Jean Nouguès's *Quo vadis?*. His greatest personal success remained Méphistophélès in *Faust*. He joined the Chicago Opera Company in 1910 and later taught at the Chicago Music College. His few recordings suggest a voice more remarkable for bulk than beauty, though he was described in his prime as a graceful singer. (*GV*; R. Celletti: R. Vegeto)

J.B. STEANE

Arion (*b* Methymna [now Molyvos], Lesbos; *fl* 625–600 BCE). Greek singer to the kithara and choral lyric poet. He was associated with the beginnings of the dithyramb. None of his works has survived. According to Herodotus he spent most of his life at the court of Periander, tyrant of Corinth (*c*625–585 BCE); this account (i, 23–4) consists almost entirely of a legend that a music-loving dolphin saved Arion from drowning, but nevertheless describes him as 'to our knowledge the first man who composed a dithyramb and gave it a name and produced it in Corinth'. The *Suda* attributes to Arion the invention of the tragic mode or style (*tragikos tropos*; cf Aristides Quintilianus 1.12 [Winnington-Ingram 30.2–3]) and the introduction of 'satyrs speaking verses', but without citing its authorities. Proclus (412–85 CE), in chapter xii of his *Useful Knowledge*, claims that Pindar had said 'the dithyramb was discovered in Corinth', and that Aristotle had spoken of Arion 'as having begun the song' (*arxamenon tēs ōdēs*: see below on the compound *exarchein* in the *Poetics*). These are late sources, but a writer actually contemporary with Arion was cited very circumstantially by John the Deacon, whose date is unknown: 'the first performance [*drama*] of [?]tragedy was introduced by Arion of Methymna, as Solon stated in his *Elegies*' (text and translation in Pickard-Cambridge, pp.98, 294). John was familiar with several very early texts, and there is no adequate reason to reject his evidence.

It is therefore no longer possible to deny (with Crusius) Arion's historical existence. The evidence is confusing, but it seems that Arion may well have taken the free dithyrambic invocation, consisting of ritual cries hailing Dionysus (the rude form known to Archilochus and termed *dithyrambos* by him in Edmonds, frag.77), and made it into an art form, both literary and musical. He may have composed narratives on heroic subjects (the 'naming' ascribed to him by Herodotus) and have given the chorus a genuine sung part, rather than a mere refrain, in their exchanges with the *exarchōn* ('leader'). Aristotle's declaration (*Poetics*, 1449a11) that tragedy originated with 'those who led off [*exarchontōn*, the verb used by Archilochus] the dithyramb' can now be seen, thanks to the explicit reference cited by Proclus, to include Arion.

Aristotle cast Arion as a singer. If, as seems probable, Arion altered the music of the early dithyramb, the nature of the changes remains unknown. Whatever term Solon employed (*tragōdia* would have been unmetrical), it cannot have referred to anything like the developed genre of tragedy. He may have been describing as 'goatlike' the fat men and hairy satyrs of the dithyrambic choruses, if *tragikos* was taken to derive from *tragos*, 'he-goat'. The abundant evidence of Corinthian vase paintings contemporary with Arion supports such a conclusion. In that case, the *Suda* reference to satyrs 'speaking' is confused and the satyr-play is not in question.

It would seem likely that Arion gave the dithyramb its initial shape as a force in Greek poetry and music. Minor Hellenistic commentators credited LASUS OF HERMIONE with having done this, but Hellanicus and Dicaearchus (scholium on Aristophanes, *Birds*, 1403) put the considerable weight of their opinion behind Arion, and were probably correct. It appears equally likely that among the Peloponnesian composer-poets he was the first to provide the early Attic tragedians with 'models of choral lyric poetry', set to 'music appropriate to serious themes' (Pickard-Cambridge, p.112). No more precise description of that music can be justified from the evidence; Arion remains a major figure, indistinctly perceived.

Arioso (It.: 'melodious', 'like an aria'). A style that is songlike, as opposed to declamatory; a short passage in a regular tempo in the middle or at the end of a recitative; a short aria not so connected; an instrumental movement in similar style. The term can also be found in more local contexts, as in the 16th-century *madrigale arioso* (*see* MADRIGAL, §II, 5–6).

The declamatory style of early Florentine recitative was often mitigated by more lyrical passages with clearer-cut melodies and a stronger sense of harmonic direction that, however, are not arias in any technical or stylistic sense. The tendency continues in Roman opera of the early 17th century and especially in Venetian opera. Domenico Mazzocchi may have been referring to such passages when he spoke of the 'mezz'arie' in his *La catena d'Adone* (1626) that 'break the tedium of the recitative'. Unlike formal arias, shifts to songlike arioso tend to be cued not so much by poetic metre (ariosos are usually set to 'recitative' verse in the standard seven- and 11-syllable lines, although they can be associated with rhyming couplets) as by some need for emotional or rhetorical

emphasis. However, the boundaries are not always clear. Monteverdi's *Il ritorno d'Ulisse in patria* (1640) appears to contain an example of an arioso developing into an aria: when Minerva assures Ulysses in recitative that he will return to his homeland, he twice exclaims in arioso 'O fortunato Ulisse', with a musical idea that, at the end of the following scene, becomes the opening phrase of an aria. But to use such terms as 'recitative', 'arioso' or even 'aria' in this context would probably be too rigid for so fluid a style. Similarly, when commentators prefer the term 'arioso' to describe long recitatives – for example, Monteverdi's *Lamento d'Arianna* – or solo madrigals, thereby emphasizing their melodic plasticity or interest and their emotional intensity, this perhaps reflects a too narrow view of recitative unwarranted by the expressive range of early 17th-century song styles.

The term 'arioso' appears in Baroque usage as early as 1638 in the libretto to a chamber dialogue, but the word itself never became exclusively attached to the appearance of phrases or groups of phrases in aria style within recitative, for all the popularity of recitatives that break into lyric melodies in triple metre or into strongly profiled phrases over walking basses in the works of Cavalli, Cesti and Legrenzi. From the 1670s, the term CAVATA became associated with such passages. They continue to appear in Alessandro Scarlatti's operas, but when Scarlatti used the term 'arioso', he did so as a normal Italian word to mean 'in a flowing melodic style': hence, in the dedication of *Lucio Manlio* (1705), he notes 'Dove è segnato grave, non intendo malenconico; dove andante, non presto, ma arioso' ('where the music is marked *grave* I do not mean "melancholic"; where it is marked *andante*, not fast but "arioso"'). Handel used 'arioso' to mean a short aria, for example Melissa's 'Io già sento l'alma in sen' (*Amadigi*, 1715), where it is preceded by an accompanied recitative, Dorinda's 'Quando spieghi i tormenti' (*Orlando*, 1733) or Rosmene's 'Al voler di tua fortuna' (*Imeneo*, 1740). Again, however, the term is not always applied consistently: other similar solos in his operas are not so labelled.

Bach used 'arioso' in various ways: (i) as a passage in recitative, as defined above; an example is given in ex.1, from the cantata *O Ewigkeit, du Donnerwort* BWV60. Such passages are sometimes merely marked 'Andante' or 'Adagio' and sometimes have no indication at all. (ii) As the main body of a movement, for example the setting of the chorale 'Er ist auf Erden kommen' in the first part of the *Christmas Oratorio*, where the verses of the chorale are separated by short recitatives. (iii) As the description of a short aria, for example 'Fürchte dich nicht' in the cantata *Schau, lieber Gott* BWV153. (iv) As the equivalent of obbligato (accompanied) recitative, for example 'Mein Herz!' in the *St John Passion*, although the terminology is inconsistent. (v) As the title of the introductory movement, marked 'Adagio', of the *Capriccio sopra la lontananza del suo fratello dilettissimo* BWV992, with the inscription: 'Ist eine Schmeichelung der Freunde, um denselben von seiner Reise abzuhalten' ('his friends are trying by persuasion to stop him from travelling').

In the Classical era the term 'arioso' may still be applied to segments of recitative where the composer temporarily abandons the normally declamatory recitative style for a brief lyrical expression of one or more phrases. In Italian scores, short arias occurring within recitative are usually labelled CAVATINA and set apart in the score. Obbligato (accompanied) recitatives can often have the quality of arioso, although the two techniques are not necessarily dependent one upon the other (the recitatives in Mozart's *Idomeneo*, 1781, merit close study in this light). Since an arioso style remains a frequent option in 18th-century French opera, arioso passages appear particularly in Italian operas on French models such as 'Che puro ciel' in Gluck's *Orfeo* (1762). They grow more common in Italian opera during the 1780s and 90s as orchestrally accompanied recitative gradually becomes more extensive.

In the 19th century the term applies to a lyrical recitative, usually to be sung in strict time. Arioso passages that have the importance of an aria are especially common in Bellini's operas, for example 'Teneri, teneri figli' (*Norma*, 1831), while there are fine examples in Verdi ('Pari siamo' in *Rigoletto*, 1851) that combine arioso with declamatory elements. Mendelssohn wrote powerful ariosos such as 'I will sing of thy great mercies' (*St Paul*, 1836) and 'Woe unto them who forsake him' (*Elijah*, 1846), and the technique appears several times in Tchaikovsky's *Yevgeny Onegin* (1878) and *The Queen of Spades* (1890). The ever-closer integration of aria into the operatic texture might be said to mark the decline or

the triumph of arioso, depending on one's aesthetic viewpoint.

The use of arioso in Hindemith's *Cardillac* (1926) and Stravinsky's *The Rake's Progress* (1951) forms part of the neo-classical revival. In instrumental music the term is rare. Beethoven, in the last movement of his Piano Sonata in A♭ op.110, wrote 'arioso dolente' over a short songlike melody in slow tempo (*Adagio, ma non troppo*). When the passage recurs later in the movement it is marked 'L'istesso tempo di Arioso'.

Ariosti, Attilio (Malachia [Clemente]**)** [Frate Ottavio] (*b* Bologna, 5 Nov 1666; *d* London, before 3 Sept 1729). Italian composer. From about 1672 to about 1684 he was a *chierico* (altar boy) at S Petronio, where he most likely received his musical training. By 1682 he had substituted Clemente for his baptismal name Malachia. As Frate Ottavio he entered the monastic Order of Servites on 25 July 1688, and he served as organist at their basilica, S Maria dei Servi, in Bologna. He became a deacon in 1692, and he preceded his name with 'frate' in dedications and correspondence. Yet he was usually termed 'padre' by contemporaries, so he may have attained the rank of priest. He dedicated his first two oratorios (1693–4) and his *Divertimenti da camera* (1695) to noble patrons. These works presumably attracted the attention of the music-loving Duke of Mantua, since Ariosti entered his service by March 1696, when the libretto for a Mantuan oratorio names its composer as 'P[adre] Attilio Ottavio Ariosti, virtuoso della [duca di Mantova]'. In the autumn he was perhaps responsible for one act of the opera *Tirsi*, which was dedicated to the duke. After composing his first complete opera in 1697, he was sent by the duke to the Berlin court of Sophie Charlotte, Electress of Brandenburg, whom he served as *maître de musique* (according to his title in the text of the serenata *Mars und Irene*). Since her court was Protestant, the Servite Order was highly displeased by this move and repeatedly commanded his return to Bologna. He had, however, quickly managed to become Sophie's favourite musician, and she successfully manoeuvred to extend his visit, enlisting Italian dukes and cardinals as well as the German philosopher Leibnitz to support her cause. Leibnitz reflected that Ariosti was not easy to replace, because he could sing, perform on several instruments and write dramatic texts as well as music. For Sophie he wrote the music for two operas and three shorter works, as well as the text for Giovanni Bononcini's *Polifemo*. After Sophie capitulated, Ariosti prudently declared his readiness to return to his order by way of Vienna, even though – as she wrote to Leibnitz – 'he is dying for fear of returning to his monastery'.

Having contrived to extend his Berlin sojourn to six years (until October 1703), Ariosti stretched his time in Vienna to seven and a half years. While there, he composed one opera, three oratorios, five serenatas and at least 23 cantatas (those in *A-Wn* 17575 and 17591). He was greatly esteemed by Joseph I, who accepted 'P[adre] Attilio Ariosti' as his servant, according to the attribution in the libretto for *Nabuccodonosor* (1706). In 1707 Joseph gave him the portfolio of imperial minister and agent for all the princes and states of Italy. As such he was received by his order at Bologna in May 1708, and during the last four years of Joseph's reign he may well have spent more time as a diplomat in Italy than as a composer in Vienna. In June 1711, 12 composers wrote music for the conveyance of the relics of St Gaudentius to Novara, and 'Ariosti, Vienna S[ua] M[aestà] C[esarea]' is the first composer listed. A Bolognese memoir of 1711 (*I-Bu* 770) records indignantly that the monk Ariosti, on returning to Italy, wore a secular costume with gold brocade and a grandiose hat, and received visitors with such pomp that Wilhelmina, the widow of Joseph I, evicted him from the Austrian realm and asked the pope to evict him from all Catholic lands. Leibnitz provided a far better explanation of events in 1711: Ariosti's post as imperial agent in Italy ended with the death of Joseph I, after which he 'entered the service of the Duke of Anjou, with a huge salary'. This duke was none other than the future Louis XV, whose government Ariosti conjecturally served as a roving agent. All that is known about his career during these years is contained in a letter he wrote from Paris on 15 February 1716 to his brother Giovanni Battista (Frate Odoardo, *b* 1668): 'I have been received with great honour by all rulers wherever I went, that is, Bavaria, Württemberg, Durlach, Baden, Lorraine, and, at present, by the Duke of Orléans, regent of this realm, where I will not stay long ... I will go to England, and from there to Portugal and Madrid ... I could tell you a great deal of news, but I dare not, because – like all who act circumspectly – I must not convey it'.

Ariosti's career during the two decades before he sailed to England is thus filled with diplomatic intrigue, by means of which he sidled with surprising ease from one lofty court position to another. The extent of his output as a composer does not match that of his prolific contemporaries (Caldara, Vivaldi, G. Bononcini or Handel), undoubtedly because his attention was often focussed on teaching, religious and diplomatic duties, or on his vocal, organ, harpsichord, viola d'amore and cello performances. His stage works written before 1716 are effective dramatically, and von Besser related that the chromaticism and dissonance in the 'infernal symphony' of *L'Inganno vinto dalla Costanza* (1700) depicted the rage and despair of Atys so successfully that listeners were alternately overcome with horror and pity. In *La fede ne' tradimenti* (1701), *recitativo semplice* is rendered expressive by the occasional passage-work and triple-time sections; considerable variety is found in the accompanimental techniques, textures, instrumentation and aria forms; and the *ombra* and sleep scenes exhibit Ariosti's descriptive skills. When Ariosti was in Vienna novel effects produced by solo wind instrumentalists were common, and his scores exemplify them very well. *Amor*

tra nemici, his Viennese opera of 1708, was brought by the imperial ambassador to London, where, as *Almahide* (1710), it became the first opera sung entirely in Italian on the London stage. The editors, however, manifested their usual lack of reverence for an original score by replacing all but 11 of Ariosti's 43 arias, mainly with pieces drawn from recent Viennese compositions by Giovanni Bononcini. Thus Ariosti's score was not responsible for *Almahide*'s extended run of 25 performances in 1710–12, though its success perhaps paved the way for his arrival.

Ariosti's first appearance in London was on 12 July 1716, when he played his 'New Symphony ... upon a New Instrument call'd Viola D'Amour' between acts of Handel's *Amadigi.* On 27 May 1717 he wrote to Carl Philipp, the new Palatine elector, asking to be made his agent in England. His first dramatic work written in London was *Tito Manlio*, which ended the 1716–17 season. In addition to the typical genres (da capo arias alternating with *recitativo semplice*), *Tito Manlio* has nine long accompanied recitatives and five duets. All but four of the 35 arias and all the accompanied recitatives employ unusually colourful scorings to underline the affect in each scene, for example pizzicato and tremolos depict madness. This striking work presumably prompted the directors of the Royal Academy of Music to commission a new opera from Ariosti for their first season in 1719–20; but Ariosti was still active as a diplomat and did not write an opera for the Academy until its fourth season. (Even in 1733, four years after his death, an anti-popish pamphleteer wished that 'his mischievous Negociations could sleep with him'.) At the beginning of 1720 he was in Paris for a state wedding, and he might have stayed there until a few months before the production of his *Caio Marzio Coriolano* in February 1723. This was by far the most successful of the operas he composed or reworked for the Royal Academy, and it was the only one revived in London. Its original success owed a great deal to the prima donna, Francesca Cuzzoni, who had made her sensational London début one month earlier (in Handel's *Ottone*), but it likewise owed much to Ariosti's expressive setting of Pariati's excellent libretto. The dramatic peak is the prison scene for the title character (portrayed by Senesino) in the middle of Act 3. The chromatic accompagnato with which it begins was cited by Rameau in his *Génération harmonique* (1737) as an admirable example of the 'enharmonic genre'. The ensuing aria, in F minor, begins with a *largo* section, but continues with a furious, modulatory Presto. Hawkins found this scene 'wrought up to the highest degree of perfection that music is capable of' and noted that it was 'said to have drawn tears from the audience at every representation'. The success of the work led Ariosti to publish an almost complete collection of its numbers; in 1724 he did the same for his next opera, *Vespasiano*.

In 1723–4 Ariosti was at the height of his popularity in London, and he took advantage of it by publishing a collection of six cantatas and six lessons for the viola d'amore, dedicated to George I (brother of his former patron Sophie Charlotte). Even though the cost was 'a fiendish two guineas' per volume, there were 764 subscribers, including 42 dukes and duchesses, 105 earls and countesses and 146 other lords and ladies. 133 of them were subscribers to the Royal Academy, presumably for the 1723–4 season. All the pieces in the volume are clearly Baroque rather than pre-Classical in texture, and they 'abound with evidences of a fertile invention, and great skill in the art of modulation and the principles of harmony' (Hawkins). The six lessons are printed in a unique scordatura system designed to allow their performance with violin fingerings on the viola d'amore. 15 similar, but untitled, pieces survive (in ordinary staff notation) in a manuscript copied in England about 1718 by the Swedish composer Johan Helmich Roman.

A 'renowned triumvirate' (Burney) of composers was employed by the Royal Academy: Handel during all eight seasons, Ariosti during six (1722–8) and Giovanni Bononcini during five (1720–24 and 1726–7). Ariosti's success was already on the wane during his second season, when he wrote *Vespasiano*. It marked a significant turn away from the vigour of the Baroque (which the British favoured, as demonstrated by their fondness for Handel), towards the languor of the pre-Classical idiom. The satirical *Session of Musicians* expressed Londoners' disappointment: 'Of *Ti[tu]s Ma[nli]us* you may justly boast, but dull *Ves[pasi]an* all that Honour lost'. Among his later operas, only *Artaserse* received more than six performances. The 'Favourite Songs' that John Walsh published from these works display either plaintively sweet melodies or extremely tempestuous roulades, which incorporated 'all the furbelows, flounces, and vocal fopperies of the time' (Burney). In spring 1727 the directors of the Royal Academy resolved to commission operas in turn from Handel, Ariosti and Bononcini, so that their theatre, which could 'boast of the three best Voices in Europe [Senesino, Cuzzoni and Faustina], and the best Instruments', would likewise have 'three different Stiles of composing'; but the Academy closed one year later, when it was insolvent, and may have paid Ariosti poorly, because he was reportedly living in poverty at the beginning of 1728. He may, however, have been a spendthrift, for Paolo Rolli declared in his mordant epitaph: 'Here lies Attilio Ariosti, he'd borrow still, could he accost ye. Monk to the last, whate'er betide, at other's cost he lived – and died'.

WORKS

STAGE

music lost unless otherwise stated

Erifile (dramma per musica, 3, G.B. Neri), Venice, S Salvatore, carn. 1697

L'Inganno vinto dalla Costanza [Atys, Atide] (pastorale, 3, O. Mauro), Berlin, Lietzenburg, 6 June 1700

La fede ne' tradimenti (dramma per musica, 3, after G. Gigli), Berlin, Lietzenburg, 12 July 1701, *GB-Lbl*

Il bene dal male (trattenimento carnavalesco), Vienna, Hof, ?1704, Act 1 *A-Wgm*

Amor tra nemici (dramma per musica, 3, P.A. Bernardoni), Vienna, Hof, 4 Sept 1708, *Wn*, Act 3 *Wgm*; rev. as Almahide, London, Queen's, 10 Jan 1710, incl. arias by G. Bononcini, Songs (London, 1710); Bayreuth, carn. 1715

Tito Manlio (dramma per musica, 3, ?N.F. Haym), London, King's, 4 April 1717, *GB-Lbl*

Caio Marzio Coriolano (dramma per musica, 3, Haym, after P. Pariati), London, King's, 19 Feb 1723, arias *US-BEm*, 26 arias (London, 1723/*R*1984 in BMB, iv/75); London, King's, 25 March 1732

Vespasiano (dramma per musica, 3, Haym, after G.C. Corradi), London, King's, 14 Jan 1724, arias *CA*, 35 arias and lib (London, 1724/*R*1977 in IOB, xxvi and lx); rev. and Ger. trans. G.C. Schürmann, Brunswick, wint. 1732

Aquilio consolo (?Haym, after F. Silvani: *Arrenione*), London, King's, 21 May 1724, 6 arias (London, 1724)

Artaserse (dramma per musica, 3, after Pariati ?and Zeno), London, King's, 1 Dec 1724, 7 arias (London, 1724)

Dario (dramma per musica, 3, ?Haym, after Silvani: *L'inganno scoperto per vendetta*), London, King's, 10 April 1725, 10 arias (London, 1725)
Lucio Vero, imperator di Roma (dramma per musica, 3, ?Haym, after Zeno), London, King's, 7 Jan 1727, 6 arias (London, 1727)
Teuzzone (melo-drama, 3, ?Haym, after Zeno), London, King's, 21 Oct 1727 [possibly arr., rather than composed by, Ariosti]

Doubtful: Tirsi (dramma pastorale, 5, A. Zeno), Venice, S Salvatore, aut. 1696, arias *B-Bc*, collab. A. Caldara and A. Lotti [according to Allacci (1755)]
Elisa (dramma per musica, 3, ?Haym, after ?: *Annibale pacificatore*), London, King's, 15 Jan 1726, arias mainly by N. Porpora, 6 arias (London, 1726)

SERENATAS

music lost unless otherwise stated

La festa del Himeneo (balletto, O. Mauro), Berlin, 1 June 1700, *D-Bsb*; collab. K.F. Rieck
Le fantôme amoureux, Lietzenburg, 1701
Mars und Irene (Spl, C. Reuter), Lietzenburg, 12 July 1703
La più gloriosa fatica d'Ercole (poemetto drammatico, P.A. Bernardoni), Vienna, Hof, 15 Nov 1703
I gloriosi presagi di Scipione Africano (trattenimento musicale, D. Cupeda), Vienna, Hof, 19 March 1704, *A-Wn*
Marte placato (poemetto drammatico, Bernardoni), Vienna, Hof, 19 March 1707, *Wn*
La gara delle antiche eroine ne' campi Elisi (S. Stampiglia), Vienna, Hof, 21 April 1707, *Wn*
La Placidia (poemetto drammatico, Bernardoni), Vienna, Hof, 15 July 1709, *Wn*, arias *GB-Lbl*

ORATORIOS

La Passione (C. Arnoaldi), 5 solo vv, chorus, orch, Modena, 6 March 1693, *I-MOe*; rev. Vienna, 1709, *A-Wn*
S Radegonda, reina di Francia (G.B. Taroni), Bologna, Arciconfraternità de' SS Sebastiano e Rocco, 10 Dec 1694; Ferrara, Chiesa de' Servi, 19 Feb 1695
Dio sempre grande (A. Gargiera), Mantua, 20 March 1696
La madre dei Maccabei (after G. Gigli), Vienna, imperial chapel, 1704, *F-Pc*, parts *CH-E*
Le profezie d'Eliseo nell'assedio di Samaria (G.B. Neri), Vienna, imperial chapel, 1705, *A-Wn*; Bologna, S Filippo Neri, 1705
Nabuccodonosor (R.M. Rossi), Vienna, 1706, *Wn*

CANTATAS

† – *doubtful*

for soprano and basso continuo unless otherwise stated

dates are of earliest known MS copy unless otherwise stated

6 cantatas (London, 1724): Ahi qual cruccio, qual pena (La gelosia), A, bc; Da procella tempestosa (La rosa), S, 2 vn, bc; Freme l'onda e fischia il vento (Il naufragio), A, 2 vn, bc; La dove d'atre tenebre vestito (L'olmo), S, 2 vn, bc; Pesan troppo su l'alma (Libertà acquistata in amore, A, bc; Ritrosetta pastorella semplicetta (L'amor onesto)
Quanto è possente Amor (Diana in Latmo) (P.A. Rolli), S, vn, bc (arias only) (London, 1719)

Abbastanza delusa hai la mia fé Licori, S. Fileno, S. Licori, bc, *US-LAuc*; Al tribunal d'Amore ove correan gl'amanti, *S-Uu*; Al voler del bene amato, *A-Wn*; †Amarissime pene svenate omai, *D-Bsb*, *S-L* (attrib. G. Bononcini); Amo Clori che mi fugge, A, bc, *A-Wn*; A piè dell'alto monte (Il ratto di Proserpina), *I-Bc*; Ardo ne so per chi (A. Ottoboni), 1709, *GB-Lbl*; A te bella cagion de miei sospiri, *D-DS*, *S-L*; Augelletto garruletto (A. Ottoboni), A, bc, 1709, *GB-Lbl*; Aure o voi ch'accogliete, *I-Rc*; Belle stille che grondate, *A-Wn*, *D-Bsb*; Che dura pena è questa, *DS*, *GB-Cfm*; Che fiero tormento, S, S, bc, *D-Bsb*; Che mi giova esser regina (P.A. Bernardoni), S, vn, bc, *A-Wn*; Che più mi resta oh Dio, *D-SHs*; Che sento Irene amato, *Bsb*, *SHs*; Che si può far già sono amante, *A-Wn*; Che ti fece mai quest'alma, *D-Bsb*, *SHs*, *US-NH*; Cieco dio foss'io quel fiore, 1714, *GB-Ob*; Cieco nume alato arciero, *A-Wn*, *B-Bc*, *D-Bsb*; Ciò che trova amore lega, lost, listed in B.S. Brook, ed.: *The Breitkopf Thematic Catalogue ... 1762–1787* (New York, 1966, 190–191); Con troppo rigore la pace al mio destin, *DS*; Così tosto o mio bel sole, *A-Wn*, *D-Bsb*, *MEIr*, *GB-Lbl*
Dirmi ch'io non adori, A, bc, *I-Nc*; Di valle in monte, *D-Bsb*; D'una rosa che mi punse, *GB-Lbl*; Ecco che già ritorna il Tauro eterno, *D-DS*; E in sen mi resta core, S, ob, 2 chalumeaux, 2 vn, va, bc, *DS*; E pur dolce a un cor legato, S/A, bc, *A-Wn*; Erbe nuove e nuovi fiori, *D-SHs*; Eurilla vel concesso cara, 1v, bc, *B-Bc*, *D-MEIr*, *GB-Lgc*, *I-Fc*; Fileno che le frodi, A, 2 vn, va d'amore, bc, *US-LAuc*; Filli gentil nel tuo bel fior degli anni, *A-Wgm*; Furie che negl'abissi, A, bc, *Wn*; Genio che amar volea, *Wn*, *D-Bsb*; Già che intender non vuole, A, bc, *A-Wn*; Già per il tuo rigore (P.A. Rolli), S, 2 vn, va, bc, *B-Bc*, *GB-Er*; Il mio cor sin'or fu mio, 1714, *Ob*; Il più fiero dolor, *A-Wn*; Il zeffiretto che tutto amore, 1v, bc, *B-Lc*; Incolte piante erbe odorose, *D-DS*; Insoffribile tormento, *A-Wn*; Io parto ma ben presto, S, S, bc, *D-Bsb*
L'idol mio de pianti, A, bc, *A-Wn*; Lisetta mi tradisti ma forse ancor, *D-DS*; Lontananza crudel quanto m'affanni, *Bsb*, *DS*, *GB-Lbl*; Luci voi siete quelle, *D-Bsb*, *DS*; Lungi son io dal caro mio bene, *DS*; Lungo un placido rio porto il fianco, *Bsb*, *SHs*; Mentre dorme a Nice al dolce mormorio, *DS*; Mi convien soffrir in pace, S/A, bc, *A-Wn*, *D-Bsb*; Mio ben mia vita t'adorerò, S, S, bc, *Bsb*; Mio nemico pensier perché alla mente infido, *GB-Lbl*; Mirate occhi mirate, *D-Bsb*, *GB-Lbl*, *I-MOe* (attrib. G. Bononcini); Morto è Amor ninfe piangete, *D-DS*; Ne' spatiosi campi, A, bc, *A-Wn*; Nice quella severa amabil ninfa (Bernardoni), *Wgm*, *D-DS*; Non han più gl'occhi, lost, listed in *EitnerQ*; †Non torni mai quella funesta notte, *B-Bc* (attrib. F. Conti), *D-Bsb*; Non v'è pena maggior del mio tormento, *A-Wn*, *D-Bsb*, *I-MOe* (attrib. G. Bononcini); Non voglio udirti o core, *US-LAuc*; Occhi belli ma troppo superbi, *B-Bc*, *D-SHs*, *SWl*; O Filli o dolce, lost, listed in *EitnerQ*; O miseria d'amante core, S/A, bc, *A-Wn*, *D-Bsb*, *SHs*; Or vantatevi o pupille (A. Ottoboni), 1709, *GB-Lbl*
Pasce al suono, S, 2 vn, bc, *US-LAuc*; Pastori o voi ch'in pianto stillate, *A-Wn*; Pastor pastore hai vinto, A, bc, *Wn*; Poiché Fidalbo amante da Clorinda, *D-SHs*; Pur al fin gentil viola, S, va d'amore, bc, *Bsb*, *DS*; Qual cara fiamma io senta, *DS*; Quando Nice era fide, *A-Wn*; Quanti sospiri quanti crudel martiri, *D-Bsb*, *DS*; Quell'augel che sciolto vola, *DS*, *GB-Cfm*, *Lbl*, *Lgc*; Questo mar di vita infido, B, str, bc, *D-Bsb*; Qui dove ai colpi di nemica sorte, S, 2 vn, bc, *US-LAuc*; †Qui dove il fato rio, 1v, 2 ob, 2 vn, va, bc, *J-Tn*, *D-Bsb* (attrib. L. Mancia), *S-Uu* (attrib. Mancia); Risolvo ad adorarvi, *D-Bsb*; Se lontan sta l'idol mio, *DS*; Semplicetta farfalletta, *I-Rc*; Sento dirmi con placide forme, *D-DS*; Senza te dolce tiranno (Lontananza), *A-Wn*; Se t'offesi o bella Irene, *Wn*; Sia con me Fillide irata, A, bc, *Wn*, *D-Bsb*; Simbolo del mio ben rosa gentile, *MEIr*; S'io rimiro quel bel seno/S'io vagheggio quel bel viso, S. Silvio, S. Filli, bc, *GB-Er*, *US-LAuc*; Sudor del foco è il pianto, 1v, bc, *D-MEIr*; Tante e tante del ciel sono le stelle, *A-Wn*, *D-DS*; Un barbaro rigor, *A-Wn*; Voti offersi al cor, A, bc, *Wn*

OTHER WORKS

Sacred: Mass, 1699, lost, mentioned in Casimiri and Vicentini; Salve regina, 4vv, *I-Fa*; O quam sauvis, cantata, T, str, ob, org, *D-Dkh*
Inst: [12] Divertimenti, vn, vc (Bologna, 1695); Concerti da camera (?Amsterdam, 1700; see Casimiri and Vicentini); 6 lessons, va d'amore, bc (London, 1724); 57 pieces [?=15 sonatas], va d'amore, bc, *S-Skma*, 6 sonatas ed. G. Weiss (Kassel, 1974–7), 2 sonatas (Mainz, n.d.)

LOWELL LINDGREN

Ariosti, Giovanni Battista (*b* Bologna, 1668). Italian composer, brother of ATTILIO ARIOSTI. He was a member of the Order of servites at Bologna in which, under the name Odoardo, he was a music teacher. In his mother's will of 4 February 1716 he was named 'erede universale' of her estate. He is known only by a collection of 44 dance-tunes, *Modo facile di suonare il sistro nomato il timpano* (Bologna, 1686, 2/1695/*R*), printed in a simple number notation; the 'timpano' or 'sistro' was a 12-bar glockenspiel played with wooden hammers. Brief instructions on how to play the instrument precede the tunes. The second and third, enlarged editions of the collection appeared as the work of Giuseppe Paradossi who, under the name of Troili, published another work for the instrument in 1705. While the musical significance of the publication is slight – the dance-tunes are of the common type well-known from contemporary manuscripts of guitar and violin tunes – it is one of a series of publications for the 'sistro' issued within two decades that point to the local popularity of the instrument around the turn of the century. (A. Rosenthal: 'Two Unknown 17th-Century Music Editions by Bolognese Composers', *CHM*, ii, 1956–7, pp.373–8)

ALBI ROSENTHAL

Ariosto, Ludovico (*b* Reggio Emilia, 8 Sept 1474; *d* Ferrara, 6 July 1533). Italian poet and playwright. After moving with his family to Ferrara in 1484, he spent some time studying law (1488–93); but his interests lay in the field of literature, especially that of Latin antiquity. Forced as the eldest son to support his family after his father's death in 1500, he entered the service of Cardinal Ippolito d'Este, to whom *Orlando furioso* is dedicated, in 1503. Combining the life of a courtier and civil servant with literary work, Ariosto wrote lyric poems and a series of comedies, the first of which, *La cassaria*, was performed in Ferrara in 1508; like several other plays of his, it was originally written in prose, later recast in verse. The plays were presented with *intermedii* containing music.

By 1505 Ariosto had begun work on *Orlando furioso*; in 1509 the first redaction of the poem, described as an 'addition' to Boiardo's *Orlando innamorato*, was substantially complete. On several occasions, including one in 1512, Ariosto read portions of his work to Isabella d'Este; in 1516 the first version of the poem was published. The next year Ariosto entered the service of Alfonso I, Duke of Ferrara; except for a difficult period when he served as Governor of Garfagnano (1522–5), he now led a more tranquil life, devoting much time to revising his great epic poem, new editions of which appeared in 1521 and 1532.

Einstein's long (but incomplete) list of printed madrigal settings of Ariosto's verse shows that *Orlando furioso* clearly was immensely popular with 16th-century musicians. Tromboncino's setting of 'Queste non son più lagrime' (xxiii.126), the earliest known piece, appeared in 1517, at a time when settings of *ottave rime* by *strambottisti* were still circulating in Petrucci's publications. During the decades 1540–70, a period of experiment and stylistic change in the madrigal, Ariosto's popularity among composers was at its highest peak. The practice of selecting continuous or nearly continuous groups of stanzas such as Bradamante's plaint beginning 'Dunque fia ver' (xxxii.18ff) became common, resulting in cyclic madrigals of half-narrative, half-expressive character. By combining a number of such cycles Jacquet de Berchem assembled in his *Capriccio ... con la musica da lui composta sopra le stanze del Furioso* (1561) over 90 stanzas arranged in narrative order, with summaries of the poem's action.

In the last quarter of the 16th century Tasso's *Gerusalemme liberata* rivalled and to some extent eclipsed Ariosto's popularity among madrigalists; but settings of favourite stanzas were made well into the 17th century. Among composers of the monodic, accompanied madrigal, Antonio Cifra (*d* 1629) was particularly fond of Ariosto's verse. In all over 200 stanzas (about one twentieth of the poem) were set. Of individual stanzas those of a pastoral, descriptive quality, such as 'La verginella è simile alla rosa' (i.42) were favoured. For cyclic groups impassioned laments such as those of Orlando (xxiii.126ff), Bradamante (xxxii.18ff, xliv.61ff), Olimpia (x.19ff) and Isabella (xxiv.77ff) were often chosen.

The first setting, by Ruffo, of the most famous single stanza among musicians, 'Ruggier, qual sempre fui tal esser voglio' (xliv.61) appeared in 1545. In Valderrábano's *Silva de sirenas* (1547) 'Ruggiero' has for a melody a simple pattern used by Corteccia and Hoste da Reggio (both in 1547) for other stanzas; and in 1553 a 'Ruggiero' appeared among the bass melodies of Ortiz's *Trattado*, starting a long period of use like that of the romanesca and passamezzo patterns. As early as the 1530s Ariosto's verse, particularly that of famous scenes, was parodied and rewritten either in serious style or as villanellas. From *Orlando furioso*'s first appearance, singers strumming their own accompaniment performed it to stereotyped melodies such as the one given by Valderrábano – a practice described by Zarlino (*Le istitutioni harmoniche*), Montaigne (in his *Journal de voyage en Italie*, Paris, 1744; Eng. trans., San Francisco, 1983) and G.B. Doni (*Trattato della musica scenica*).

A new musical life for Ariosto's epic verse began in the 17th century with the fashioning of opera librettos from episodes in *Orlando furioso*. Tales of love (Orlando-Angelica-Medoro, Olimpia, Ariodante-Ginevra) and of sorcery (Atlante, Alcina) were especially popular in Italian opera of the early 17th century, in French dramatic ballet later in the century, again in Italy and in England in the

early 18th century (e.g. Handel's *Orlando*, 1733, *Alcina*, 1735, and *Ariodante*, 1735). Operas on Ariostan subjects continued to be written well into the 19th century. A comprehensive list of *Orlando*-based operas is given in Carter, *Opera Grove*.

JAMES HAAR

Aristides Quintilianus [Aristeidēs Koïntilianos] (*fl* late 3rd and early 4th centuries CE). Author of a substantial treatise *On Music* (*Peri mousikēs*) written in Greek and arranged in three books.

1. Identity and dating. 2. The treatise *On Music*.

1. IDENTITY AND DATING. There has been considerable debate about the author's identity and *floruit*, but the outer limits within which Aristides Quintilianus's treatise could have been written are clearly defined: book ii refers to MARCUS TULLIUS CICERO, who died in 43 BCE, and book ix of the *De nuptiis Philologiae et Mercurii* of MARTIANUS CAPELLA composed between 410 and 439 CE appropriates a substantial section of book i of Aristides Quintilianus's treatise. The work must therefore date from no earlier than the 1st century BCE and no later than the 4th century CE.

Various arguments have been advanced for dating the treatise to the 1st or 2nd centuries CE. First, in some of the manuscript sources for the treatise the author's name is given as *Aristeidou Koïntilianou*, while in others it appears as *Aristeidou tou Koïntilianou*. The latter form, considered together with Aristides Quintilianus's emphasis on rhetoric and grammar, led to the supposition that Aristides might have been the son or freedman of QUINTILIAN (30/35–*c*95 CE), the author of the *Institutio oratoria*. Secondly, both the Christian apologist Marcianus Aristides, who lived during the reign of Hadrian (117–38 CE), and Aelius Aristides (117/29–*c*181 CE) have been proposed as alternative identities for Aristides Quintilianus, largely on the basis of similar interests in metaphysics and medicine and the similarity of names. Thirdly, although Aristides Quintilianus mentions many names in his treatise, he does not refer to PTOLEMY (*fl* 127–48 CE), the author of the *Harmonics*, another extensive treatment of ancient Greek music theory arranged in three books. Since Aristides Quintilianus states that he was writing his treatise because there was no other complete and systematic treatment of the subject, Meibom, the first editor of the treatise, proposed that it must predate Ptolemy.

The contents of the treatise itself, however, make a date in the 1st or 2nd century CE unlikely. First, at the beginning of the treatise (i.1), Aristides Quintilianus addresses his friends Eusebius and Florentius, typical Christian names that would not have been employed in Greek literature before the 3rd century CE. While it has been tacitly assumed that such an address was merely a literary device, there are numerous letters written to Antiochenes named Eusebius and Florentius between 355 and 393 by Libanius of Antioch (314–*c*393 CE), influential rhetorician and literary figure. In a letter of 357 to Aristainetus (Epistle 591 [W506]), Libanius refers to an admired fellow citizen Mariades, whom he characterizes as a rhetorician, agreeing that Aristainetus rightly called him Aristides. Thus, a Eusebius, a Florentius and the rhetorician Aristides were all located in Antioch and connected to one another in the mid-4th century through Libanius. Moreover, in conservatism, antiquarianism and stylistic terms, there are numerous similarities between the writings of Libanius and Aristides Quintilianus. Secondly, the vocabulary of the invocation of i.3, the several sections dealing with the soul (especially ii.2, 8 and 17; and iii.7 and 25–7), the differentiation between the sublunar and ethereal regions (ii.17 and 19, iii.7, 12 and 20) and the overall vocabulary and style are decidedly Neoplatonic and reflect specific passages in the *Enneads* of Plotinus (205–269/70 CE), the writings of PORPHYRY (232/3–*c*305 CE) and the *De communi mathematica scientia* of Iamblichus (*c*250–*c*325 CE). Thirdly, the treatise refers (iii.27) to the doctrine of the soul's escape from the cycle of reincarnations through the power of philosophy, a doctrine associated especially with Porphyry rather than with Plotinus. Fourthly, the 'helicon', which was first described by Ptolemy (ii.2) and explained at greater length by Porphyry in his commentary, appears in Aristides Quintilianus's treatise (iii.3): the author refers to 'those who' use this type of harmonic canon to demonstrate the various harmonic consonances, thereby making it clear that his description was derived from an earlier source. Lastly, references to the Mysteries (iii.21 and 27) suggest the *De mysteriis* of Iamblichus.

Although the treatise shows strong evidence of 3rd- and 4th-century literature, Neoplatonic and Neopythagorean themes certainly predate Plotinus, Porphyry and Iamblichus. Both the *Manual of Harmonics*, 3 of NICOMACHUS OF GERASA (*fl* mid-2nd century CE) and Ptolemy's *Harmonics*, iii relate music and Platonic or Pythagorean cosmology. Their treatments, however, are very different from Aristides Quintilianus's treatise, and it cannot be determined whether Aristides Quintilianus knew these works. It is almost certain that he did draw on such 2nd-century authors as THEON OF SMYRNA, Ptolemy, PLUTARCH and Hephaestion. *Loci paralleli* can be found among the later Greek musical treatises, including those of CLEONIDES, GAUDENTIUS and BACCHIUS, but as the *floruit* of these figures remains conjectural, they offer no evidence useful in dating Aristides Quintilianus.

Aristides Quintilianus remains unmentioned by name in any datable source earlier than Martianus Capella, or indeed in any early source at all, with a single exception: his name appears in connection with a passage from his treatise (i.5) cited in a scholium *On Prosody*, which is ascribed to Porphyry in a number of manuscripts (*GB-Ob* Baroccianus gr.116, dating from the 14th century, and *F-Pn* gr.2452, from the 16th century; the scholium also appears, but without the attribution to Porphyry in *I-Rvat* gr.14, from the 13th century). If this scholium were indeed written by the Neoplatonist, it would place Aristides Quintilianus between Plotinus and Porphyry and perhaps as a contemporary of Porphyry in the late 3rd century. The scholium, however, is also ascribed to George Choeroboscus (*fl* 8th century CE) in at least one manuscript (*Dk-Kk* gr.1965), and as Choeroboscus was a grammarian, this attribution may well be correct. In this case, it would not add to the limitation of Aristides Quintilianus's *floruit* already provided by Martianus Capella.

Taken as a whole, the evidence supports the *floruit* assigned at the head of this article. Within this range, however, it is not possible to place a more precise date on the composition of the treatise itself.

2. THE TREATISE 'ON MUSIC'. Aristides Quintilianus's *On Music* is preserved complete in 56 manuscripts; the earliest is *I-Vnm* gr.app.cl. VI/10 (RISM, B/XI, 273), dating from the end of the 12th century. Excerpts appear in nine other manuscripts, and part of the treatise is embedded in the treatise of Cleonides in six additional manuscripts (see Mathiesen, 1988). Unlike other treatises in the tradition, *On Music* is neither a handbook (an *encheiridion*) nor an introduction (an *eisagōgē*) on the technique or science of music. Rather, a wide range of materials – musical, philosophical, medical, grammatical, metrical and literary – are woven together into an intricate and elaborately unified philosophical discourse in which music provides a paradigm for the order of the soul and the universe. The language of the treatise is rigorous, systematic and highly complex, enabling the author to develop implicit and explicit relationships among all the disparate types of material.

The design of the treatise is stated in the proem (i.1–3): book i defines the science of music (*mousikē*) and its parts (harmonics, rhythmics and metrics); book ii provides an explication of music's paideutic role; and book iii culminates with an exegesis of number, the soul and the order of the universe. The proem concludes with an invocation to Apollo, who is associated with the Neoplatonic notions of unitary proportion (*logos heniaios*) and pure form (*eidos euages*).

After reviewing traditional definitions of music (i.4), Aristides Quintilianus formulates his own definition – 'knowledge of the seemly in bodies and motions' – by which he establishes his approach of Neoplatonist epistemology. He then defines (i.5) the various subclasses of music (Table 1), each one of which is explored and interrelated in an ever more complex fashion as the treatise progresses.

The treatment of harmonics (i.6–12) largely follows the Aristoxenian model, perhaps derived in part from the treatise of Cleonides, but many points differ in specifics. Various notational diagrams are included, one of which (i.9) purports to preserve scales of 'the exceedingly ancient peoples' (it is a matter of debate among scholars whether

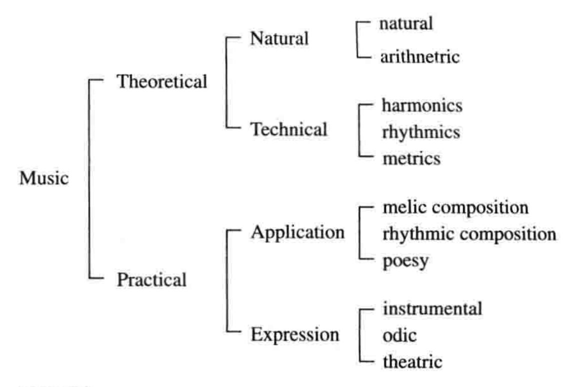

TABLE 1

Aristides Quintilianus said that these are the scales of Plato's *Republic*, although they are often described as such in the scholarly literature). Another diagram (i.11) illustrates the fifteen *tonoi* laid out 'akin to a wing', a description and pattern preserved in the *parapteres* in a number of Latin music treatises of the 9th to 11th centuries. The treatments of rhythmics (i.13–19) and metrics (i.20–29) once again draw on Aristoxenus, but there are also apparent *loci paralleli* with Hephaestion's *Handbook* and Dionysius of Halicarnassus's *On Literary Composition*. In his vocabulary and development of definitions, Aristides Quintilianus carefully conjoins harmonics, rhythmics and metrics.

In the second book, which was conceived in three sections, Aristides Quintilianus applies the definitions of the first book to larger considerations. The first section (ii.1–6) includes a treatment of the soul, an explanation of the views of 'the ancients' on the influence of music on character and a demonstration of the validity of these notions based on ethnic stereotypes and the use of music in the Roman empire. Aristides Quintilianus identifies Cicero as one of his sources, but close parallels can also be identified with PLATO (especially *Phaedrus*, *Timaeus*, *Republic* and *Laws*), Aristotle (*Nicomachean Ethics* and *Politics*), Plutarch (*Table-Talk*) and the Neoplatonic school. The second section (ii.7–16) deals with the way in which ethical notions can be developed through the proper union of text, pitches, rhythm and instrumental accompaniment, thus supporting the paideutic value of music throughout life, as the disciples of DAMON, which certainly included Plato, are credited (ii.14) with proving. The section is much concerned with the relationship of souls and bodies (human and otherwise) and the association of masculine, feminine and medial natures with each detail of the technical subclass of music as described in book i. The third section (ii.17–19) expands on the affective power of instruments, gained through their conjunction with the soul and their association with the Muses and the gods.

The third book of the treatise is devoted to the two subclasses of music that remain unexplored: the arithmetic (iii.1–8) and the natural (iii.9–27). These are now related to all the others, revealing music as a paradigm for cosmic order. The review of the traditional mathematical-musical affinities is probably drawn from Plutarch (*On the Generation of the Soul in the Timaeus*), Porphyry's commentary on Ptolemy's *Harmonics* and Theon of Smyrna (*Exposition of Mathematics Useful for Reading Plato*), but Aristides Quintilianus expands it with material

that may have been derived from Plotinus, Galen, Pliny (*Natural History*) and perhaps Plato (*Phaedrus*, *Republic* and *Laws*) and Aristotle (*Physiognomics*). The final section is intended, Aristides Quintilianus states, to 'work through the particulars of what is discussed in music, making quite plain the similarity of each particular to the universe altogether'. Nearly every particular of the preceding material is now related in a grand Neoplatonic cosmology based not only on Plato (especially *Republic* and *Timaeus*) and Aristotle (*On the Heavens*, *Physics*, *Metaphysics* and *History of Animals*) but also on Plotinus, Ptolemy (*Tetrabiblos*), Porphyry and Theon of Smyrna.

After Martianus Capella, the treatise of Aristides Quintilianus was used by later writers, including Georgios Pachymeres, Manuel Bryennius, Franchinus Gaffurius, Giorgio Valla, Conrad Gesner, Francisco de Salinas, Vincenzo Galilei, Girolamo Mei, G.B. Doni, Marin Mersenne, Athanasius Kircher and others in the Greek, Latin and Arabic traditions. With the publication of Meibom's edition in 1652, the author and the treatise became widely known.

THOMAS J. MATHIESEN

Aristobulos Eutropius. *See* FEIND, BARTHOLD.

Aristophanes [Aristophanēs] (*b c*450 BCE; *d c*385 BCE). Greek dramatist. The chief poet of Athenian Old Comedy, he wrote more than 40 plays, of which 11 have survived.

1. Aristophanes and music. 2. Later treatments.

1. ARISTOPHANES AND MUSIC. Of the works of Aristophanes' first period (427–421 BCE), the revised *Clouds* includes many references to music; the most noteworthy are the mockery of DAMON for his concern with technicalities of metre (647ff) and a description (961ff) of 'the old-fashioned education' (*hē archaia paideia*) provided by the *kitharistēs* (not merely a teacher of the kithara but more properly a schoolmaster). The *Knights* (also from the first period) similarly shows a special concern with music. A criticism of grotesque MIMESIS in drama leads to a parody of the Pythagorean theory of the soul as a *harmonia* (521ff, 531ff). There are also passages on lyra tuning and modality (989ff), and on the *nomos orthios* (1278ff).

The plays of Aristophanes' early period exemplify with particular aptness the structure of Old Comedy, especially in the use of *parodos* (entrance song) and *parabasis*, a long passage in the middle of the play in which the chorus would come forward (*parabainein*) and address the audience directly, sometimes as spokesmen for the poet. It is generally thought that during his middle period (415–405 BCE), beginning with the *Birds*, a major change took place: choral songs and dances became less relevant to the action, as the stage direction *chorou* suggests (for another view, see Beare).

The *Frogs* is the only comedy from the middle period in which Aristophanes deals particularly with music, the central action being a contest between Aeschylus and EURIPIDES for the chair of poetry in Hades. Aristophanes considered that the ideals of *mousikē* which he upheld – poetry with music – were perfectly exemplified in Aeschylean tragedy (cf 1500ff). While admitting the brilliance of Euripides, he indicted him on many counts of musical malfeasance, such as making melismatic settings of individual syllables and deriving lyric choruses from unlikely and unsavoury sources, and he introduced for a Euripidean lyric Muse, summoned to appear as pseudo-accompanist, a dancing girl rattling her crotala (clappers or 'bones'; 944, 1281–2, 1301ff, 1314). Nor was Socrates spared: Aristophanes charged him with having advocated the destruction of the musical and

literary traditions of tragedy (1493, *apobalonta mousikēn*).

During his final period (392–388 BCE) Aristophanes continued to diminish the relevance of the chorus to the exposition; its presence in the revised *Plutus* actually constitutes a problem. Topical references also decrease steadily in the plays of both the middle and the later periods.

See also ETHOS, and GREECE, §I.

2. LATER TREATMENTS. Of the surviving comedies, only the overtly political *Knights* seems not to have attracted music of more recent times. The most ambitious works have been based on the *Lysistrata*, from Schubert's one-act Singspiel *Die Verschworenen* or *Der häusliche Krieg* (composed 1821–3; making some use also of the *Ecclesiazusae* or 'Women in Parliament') and an operetta by Henry Hiles (1885) setting the same Castelli libretto, to Paul Lincke's operetta *Lysistrata* (1902) and Raoul Gunsbourg's musical comedy of the same name (1923). *Lysistrata* has inspired ballet music by Mark Brunswick (1930), László Lajtha (1933), Richard Mohaupt in his dance comedy (1941; rev. 1955 for orchestra as *Der Weiberstreik von Athen*) and Boris Blacher (1951), whose music also produced an orchestral suite.

To take incidental music in the chronological order of the plays, H.A. Clarke (1886) and C.H. Parry (1914) composed for the *Acharnians*; Parry for the *Clouds* (1905); Tertius Noble (1897) and Vaughan Williams (1909) for the *Wasps* (the latter arranged into an 'Aristophanic suite'); Dennis Arundell (1927) for the *Peace*; Parry (1883), J.K Paine (1900), Humperdinck (1908), Diepenbrock (1917), Walter Braunfels ('lyrisch-phantastisches Spiel', 1920), Georges Auric (1928, rev. 1966), Varvoglis (1942) and Petrassi (1947) for the *Birds*; Glier (1923), Sten Broman (1933), Wilfrid Mellers ('play in music', 1948) for *Lysistrata*; Charles Cushing (1933) for the *Thesmophoriazusae*; Humperdinck (composed 1879–86), Percival Kirby, Parry (1891), Walter Leigh (1936) for the *Frogs*; and Milhaud (1938) for the *Plutus*.

C.T. Walliser wrote early settings of choruses from the *Clouds* (after 1599). Orchestral works have included Humperdinck's overture *Der Zug des Dionysus* (composed 1880–81), adapted from his *Frogs* music; a *Lysistrata* suite by Ornstein (1930); comedy overtures by Bantock to the *Frogs* (1935), the Women's Festival (*Thesmophoriazusae*; 1941) and the *Birds* (1946). Chamber works include three duos for two sopranos and string quartet by Jean Françaix (1934), a violin and piano *Aristophanes* suite by György Ránki (1947), and the Aristophanic *Extravaganza* of Mellers (1949) for countertenor and chamber group.

WARREN ANDERSON/THOMAS J. MATHIESEN (1), ROBERT ANDERSON (2)

Aristoteles, Pseudo-. *See* LAMBERTUS.

Aristotle [Aristotelēs] (*b* Stagirus, 384 BCE; *d* Chalcis, 322 BCE). Greek philosopher.

1. THEORIES OF SENSE PERCEPTION AND ETHICAL BEHAVIOUR. In order to consider Aristotle's views on music, it is necessary to make some reference to the theories of sense perception and ethical behaviour on which they are based. His treatise *On the Soul* defines perceiving as the process of acquiring the form, or mental image, of an object. Considered in subjective terms, it is a developing of the potential into the actual, since a thing cannot become what it is not (424a18–19, 425b23–4, 417b2–7). The attitudes that characterize an individual have thus always existed potentially within him; music can evoke them, but it cannot implant them.

According to the same treatise, every affection (*pathos*) of the soul involves a concurrent affection of the body (403a16–19). Bodily affections, however, cannot cause movement in the soul, which is the unmoved mover. This definition of the soul occurs in *On the Movement of Animals*, which includes an account of how it initiates action. In matters of conduct the object of desire or of the intellect causes movement. Here the motive is at best a relative good; true beauty and goodness cannot be relative, hence the soul moves but is not moved (700b17–701a2). Nowhere in Aristotle is there a sufficiently full explanation of the complex relationship between soul and body, nor is active reason ever adequately accounted for, particularly as a factor in sensation and reaction. The main outlines of his doctrine, however, can be discerned in this broad area of theory.

Ethical attitudes, defined in the *Metaphysics* (1022b4–14) as dispositions towards evil or good, are expressed through actions of a corresponding nature. Virtue and vice come under close examination in the second book of the *Nicomachean Ethics* (1103a14–1106a24; abbreviated below to *Ethics*); certain statements may be taken as representative. Moral virtue (or 'excellence') is described as being a result of habituation. 'Like attitudes arise from like activities', and virtues are created and fostered by observing due measure rather than excess or deficiency, and by thus keeping to the principle of the mean. Aristotle held that an action is meaningful and may be termed unequivocally just only when it expresses the pre-existing inward nature of the agent.

Accordingly, an action undertaken by accident, or at the suggestion of another person, does not qualify; and yet this second possibility touches upon the central nature of PAIDEIA. The point has vital importance for music, which was accorded so prominent a role in elementary schooling that masters were known as *kitharistai*, 'teach-

ers of the kithara'. Here the difficulty is only a seeming one: in the *Physics* (247b18–248a2) Aristotle showed his unwillingness to hold restless children accountable by adult standards such as those of the *Ethics*. In later life a man does become accountable; and by that time, both Plato and Aristotle believed, his taste should have become properly formed.

The argument of the *Ethics* goes on to set forth the criteria of a just or wise act. Unlike a fine work of art, which is required merely to have its own self-contained excellence, such an act must satisfy the three further requirements of deliberate intent, disinterestedness and constancy of disposition. Virtues are therefore different from skills; as one example of a skill Aristotle cited music, using a neuter plural form (*ta mousika*) for which the English term 'music' provides a general equivalent. This example of the way in which Aristotle attenuated the old concept of *mousikē*, in which music and literature were joined together, is unobtrusive but far from insignificant.

Aristotle thus prepared the ground for a definition of virtue in general. Together with the individual virtues, it must be an attitude of the soul rather than a capacity or feeling – specifically that attitude which causes a man to become good and to perform his special function well. At this point the relevant arguments of the *Ethics* conclude. It remains to note the definitive comments in the *Physics* on the nature of alteration (*alloiōsis*): neither acquired states nor the process of acquiring or losing them may properly be considered instances of alteration. These states are either examples of excellence, or defects; and 'excellence is a perfection ... while a defect is a perishing of or departure from this condition', whether of body or of soul (245b3–247a8).

2. Symbolism, number, harmonic theory. Unlike Plato, Aristotle avoided musical symbolism, chiefly because of his quite different attitude towards Pythagorean number theory. This theory, he said, had developed out of the discovery that the ratios of the *harmoniai* or modes could be expressed numerically. Unfortunately it had led to the claim that 'the whole heaven is a *harmonia* and a number' and to the charming but untrue notion of the harmony of the spheres. In its debased popular form as numerology, it produced such fantasies as the belief that the number of notes on the aulos, 24 in all, 'equals that of the whole choir of heaven'. All this, according to Aristotle, proceeds out of the mistaken fundamental idea that real things are numbers (*Metaphysics*, 985b32–986a2, 1090a20–23, 1093a28–b4; *On the Heavens*, 290b21–3).

The fact that harmonic relationships such as the 5th and octave can be expressed mathematically is quite another matter. Aristotle often referred to this, and he classified harmonics, the technical theory of music, as a physical science. Although the *harmonia* itself is usually presented as fact, there are noteworthy exceptions to this rule. In the *Politics* (1254a32–3) it illustrates the idea of a ruling principle even in inanimate things, and according to the *Metaphysics* (1018b29), in the lyra this principle is the note called *mesē* ('middle') – a statement which never has been satisfactorily explained. Pseudo-Plutarch's *On Music* (1139) cites Aristotle as having called the *harmonia* 'celestial' because its nature is 'divine, noble and marvellously wrought', but also as adding that in operation it is quadripartite and embodies two kinds of mean, the arithmetic and the harmonic. These added comments show his characteristic position; it becomes unmistakably clear in the flat statement that the *harmonia* consists of notes alone, and again in his equally flat denial that either of its main meanings ('arrangement', 'ratio') may properly be used to describe the soul (*Topics*, 139b37–8; *On the Soul*, 408a5–10).

When he discussed mode as such, Aristotle seems to have had in mind not the *harmoniai* of the 5th century but instead the complex of interchangeable sequences that by this time had probably replaced them. He noted that the Dorian and Phrygian were considered by some to be the chief modal categories, subsuming the other modes (*Politics*, 1290a19–22). This happened in the case of the Aeolian and Iastian modes, renamed, during the process of systematization, Hypodorian and Hypophrygian respectively. It is also a familiar fact that the Lydian, with its related modes, was for a long time in disfavour. Two points seem noteworthy here: Aristotle relied on the opinions of others, as he often did when discussing modality; in this deference to authority, moreover, he was willing to grant the Phrygian a place of chief importance, even though he criticized Plato for having allowed it in the ideal city-state of the *Republic*.

3. 'Paideia' and ethos. Like his great teacher, however, Aristotle often stressed the importance of the role of music in education, and he agreed with the Platonic definition of correct education as a training to experience pleasure and pain in the right way. His own definition (*Politics*, 1340a15) follows it closely. When he took up in the *Ethics* the question of the manner in which pleasure relates to goodness and happiness, he supported his answer with a parallel involving music. The case is the same, he said, with the man who is musical: such a person enjoys good melodies and is pained by bad ones (1170a6–11). Here the adjectives are not ethical but refer to technique (cf 1105a27–33). They express the trained responses of an expert. The appearance of such a figure, like that of the polymath, foreshadows the beginning of the Hellenistic age. Yet Aristotle belonged to the Hellenic period, as its last great representative. Normally, therefore, he directed his attention not to the scholarship of music but to the much broader field of musical and literary training known as *mousikē*. Examining the role of music in education, he saw that it had a good or bad influence according to the attitude it fostered. The postulates of his system kept him from applying such terms to the actual hearing of music, for the latter is not an attitude of the soul but only an affection (*pathos*), something that one experiences.

The one extended examination of the paideutic aspects and values of music, unique not merely in the vast body of Aristotle's works but in the whole of surviving Hellenic literature, is to be found in the final chapters of the *Politics* (1339a11–1342b34). It is preceded by a brief attempt to determine why 'the ancients' made music a part of *paideia*. This ends with the explanation that it is 'useful for rational enjoyment [*diagōgē*] in leisure' (1338a22–3). Nowhere is there a recognition of its liturgical use; one will look in vain for the devoutness of a Plato. In both respects the prelude evokes something of the tone that marks the central discussion of music. From that long and complex examination a limited number of arguments will be cited, normally in the order of the text.

Aristotle set out to determine whether the proper paideutic end of music is amusement, moral betterment or the enriching of cultivated leisure and practical wisdom (*phronēsis*). He found all three possibilities promising but unequal in merit. At length he returned to the original question and shaped it in a slightly different form, omitting wisdom: education, amusement and cultivated leisure are now the possibilities; the paideutic function of music has become one of them. Its effectiveness, he concluded, presumably applies to all three. The proofs which he then added, however, touch only upon the second and third, and show the pleasure that music gives naturally and indiscriminately. Surmising that its essential nature might be more honourable than this incidental aspect would suggest, he raised the possibility that it somehow also reaches the character and the soul. Obviously it influences us in this way, he continued; and at this point an intricate series of statements and conjectures begins, concerned in every instance with aspects of ETHOS theory.

Especially challenging is the claim (1340a12–14, as emended by Susemihl) that purely instrumental music possesses ethical force through its rhythms and melodies. The mimetic aspect of his theory emerges in the claim that these contain 'likenesses' (*homoiōmata*) or imitations of all the emotions and ethical states. Proof is found in the varying effects of individual *harmoniai* and rhythms as propounded by certain experts; the latter are described but not named, and their identity remains uncertain. Children must therefore be educated in music, Aristotle concluded. It is naturally pleasurable, and we 'seem to have a certain affinity with modes and rhythms'. His presentation, taken as a whole, raises many questions. The attribution of ethos to instrumental music without a sung or recited text (a clear attempt to refute Plato) can be defended on several grounds. The proofs throughout are strikingly empirical, however, with very little theory of any kind as a balance; the evidence is derivative; and the reader is left with no explanation either of the 'likenesses' or of the affinity of the soul with mode and rhythm (asserted also in the *Poetics*, 1448b20–21). It is true that Aristotle's death cut short the task of completing the *Politics*, and that the treatise devoted to music remains tantalizingly among the lost works.

Passing to the consideration of music lessons and the choice of an instrument, Aristotle counselled that actual performance be limited to childhood. Maturity should bring ethical discretion, based upon this early training. His next point, the admission that some kinds of music may be vulgarizing, seems a digression. It is linked to what has preceded it, however, by strong though implicit reservations about the role of instruments, especially in solo performance. To play the aulos or kithara as a soloist required some degree of professionalism and virtuosity, qualities associated with the vulgar rather than the freeborn man. This had even influenced lyre study in the schools: Aristotle sought to abolish from the curriculum showpieces that demand 'marvellous and extraordinary' displays of technique. He also believed that the aulos must be banned, on the ground that it is distracting and exciting rather than morally beneficial. When he therefore described it as belonging to occasions which produce purgation (*katharsis*) rather than instruction, he was in a sense denying ethical effectiveness to tragedy as well. Although he raised the further point that learning to play the aulos has nothing to do with the intellect, he never said that the case was different with other instruments used alone. It will be recalled that when the question of the purpose of music is reintroduced, the furthering of practical wisdom no longer appears among the possibilities. Aristotle's strong belief in the ethical power of purely instrumental music has also been noted. This, and the fact that he regularly spoke of music in connection with the ethical rather than the intellectual virtues (although he classified it as a skill), suggests his attitude concerning its relation to the active reason.

4. RELATIONSHIP TO PLATO. Several points that have been mentioned illustrate the ways in which Aristotle's approaches differed from those of Plato. Besides clashing deliberately with his teacher on the subject of the ethos of instrumental music, Aristotle went beyond him in seeking to ban the kithara from education. This may be a sign of an increase in professionalism, with its emphasis upon solo playing. The apparent denial of any ethical potential to tragedy furnishes another instance of disagreement. In every case, the difference may be ascribed to differing concepts of *paideia*.

For Plato it was a lifelong process. His consequent belief that audiences ought always to be exposed to an ethic higher than their own made him object to vulgar dramatic performances as well as vulgar music. Probably the same concern underlay his remark in the *Gorgias* that tragedy is primarily hedonistic; this description is certainly an ethical one (502b1–c1).

For Aristotle, however, *paideia* had its restricted sense of elementary schooling, valuable for mature life; and he no longer felt the unity of literary text and musical accompaniment that had been central to the idea of *mousikē*. It was possible for him, therefore, to look calmly at the reality of solo instrumental music performed in public. He could even say that such music should be no better than its audience. Where music and morals are concerned, this marks the extreme point of difference between the two philosophers.

5. MODES. The closing section of the *Politics* deals exclusively with the modes; a promised treatment of the rhythms is not found in the extant portion of the text. Leaving detailed analysis to the experts, Aristotle accepted their division of melodies into three categories and their assignment of individual modes to each category. The types are the 'ethical', productive of moral betterment; the 'practical', productive of action; and the 'enthusiastic' or 'passionate', productive of emotional excitement. Also, and for the fourth time, he listed the proper ends of music: education, purgation and the cultivation of leisure. Once again the possibility of wisdom has been passed over; and the inclusion of leisure on all four occasions is an unmistakable step towards the recognition of a distinctively aesthetic province of judgment.

A discriminating use of all the modes is proper, Aristotle concluded. The proposal that follows shows his pragmatism and his avoidance of Plato's moral criticism: he recommended that the most markedly 'ethical' types be used for education and the other two types for public performances by professionals. He advocated separate competitions and public spectacles for freeborn, educated men and for the common crowd, supporting his contention with the remark already noted. His added explanation that all men enjoy what is naturally suited to them further

emphasizes his great divergence from Platonic ideals. Moreover, the triple division of melodies and modes allows much more freedom than Plato ever permitted. Probably an important purpose of this freedom is to provide for the range of moods in the aulos music used to accompany performances of tragedy. To be sure, the theory does not seem consistent with a recognition of only two modes and a corresponding view of the others as composite rearrangements of them (1290a19–29, part of which has been discussed above); but the latter view is merely mentioned, not espoused.

The last 18 lines of the *Politics* may be passed over as probably the work of a late interpolator. There can be no other explanation, at any rate, for the praise of Lydian modality as particularly suitable for *paideia*. Immediately before these lines, Aristotle attacked Plato for allowing the use of the Phrygian in the *Republic*. He himself was, of course, willing to have Dorian used in the schools, together with whatever other modes the experts might recommend. Everyone agrees that Dorian is outstanding for its sedateness and manly ethos, he noted. Adding a comment of his own, he characterized its relation to the other modes as that of a mean between extremes. The reference here may be to the system of octave species, in which the Dorian does occupy such a position.

6. General characteristics of Aristotelian thought. Broadly considered, Aristotle's comments on music create a mixed impression. As one would expect, the theoretical basis is difficult but impressive. Occasionally its principles lead to ostensible anomalies, as occurs when tragedy apparently proves to be both ethical and non-ethical: tragedy deals with problems of character, unquestionably, yet it is cathartic rather than paideutic, and it lacks the vital element of habituation. Apart from such exceptional instances, his theory provides a sound foundation.

The resulting structure has a number of valuable features. A sane and tolerant recognition of the value of music as a part of the good life – the life of cultured leisure – is certainly one of them; and they include many points of useful detail. Yet the whole is somehow less than the sum of the parts. It must be admitted that music makes no significant contribution to Aristotelian doctrine. When modality and rhythm come under discussion, much of the theoretical material proves to be derivative, and central questions such as the purpose of music receive shifting answers. Superstition and loose thinking are demolished; whether any adequate system replaces them may be questioned. It is essentially as a supplement to the more committed and ethically sensitive thought of Plato that Aristotle's contribution to the history and analysis of Greek musical culture is significant.

7. Influence on his successors. Although he had no comparable link with any successor, Aristotle established for the future not only general techniques of argument but also specific views on music. The Pseudo-Aristotelian *Problems*, a later collection concerned in part with music, reflects these views, together with the doctrines of his pupils, especially Theophrastus. Aristoxenus, the most outstanding music theorist trained by Aristotle, demonstrated that training by the use of categories for the analytical definition of musical concepts, and in particular by reliance upon the ear. Even his counterbalancing belief that serious students must also rely upon 'right judgment' probably draws upon the concept of 'right reason', familiar from the *Nicomachean Ethics*.

During the two centuries that followed, the Stoics turned to the Aristotelian corpus for an analysis of emotional response to music. They elaborated these beginnings into a highly detailed system which underlies the arguments employed by Diogenes of Babylon, a philosopher of the 2nd century BCE whose views on music survive through his Epicurean contemporary and adversary, Philodemus. The emphasis that Diogenes placed upon the role of the listener may perpetuate a genuinely Aristotelian view, hinted at in the *Problems*.

By the late 9th century CE the *Problems*, together with *On the Soul* and *History of Animals* (unquestionably authentic), had become well known to Muslim philosophers and music theorists through translations into Arabic and Syriac.

In the West, Aristotle's works largely (though not entirely) faded into obscurity until the 12th century, when figures such as Abelard and especially Thierry of Chartres (in his *Heptateuchon*) undertook to revive and apply Aristotelian logic in their writing and teaching. By the end of the 12th century a large selection of Aristotle's logical, metaphysical, ethical and scientific treatises were available in Latin and were being studied in Paris. At the beginning of the 13th century the Paris Council of 1210 condemned Aristotle's works on natural philosophy, but this condemnation was quickly modified and by the early 1230s Aristotle was again the focus of intense study. In the Statute of the Faculté des Arts (dated 19 March 1255), the logical, metaphysical and scientific treatises of Aristotle formed the greater part of the texts to be studied (see Huglo, pp.152–60), and Aristotelian methods and terminology appear prominently in the music treatises of Johannes de Garlandia, Magister Lambertus, the Anonymous of 1279, Franco of Cologne, Anonymous 4, Johannes de Grocheio, Hieronymus de Moravia and Elias Salomo, all of them written after 1255 in or under the influence of Paris. By the 14th century Aristotelianism was fully established in music theory, and in one form or another it has continued to exert an influence to the present day.
